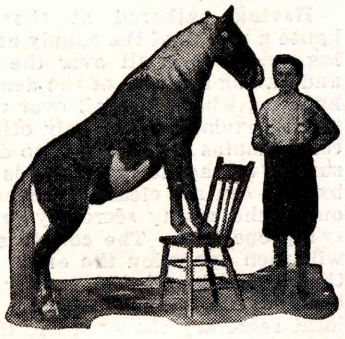
"I live seven miles from Decatur, Ind. I won a pony in The Farmer's Wife Contest. My pony's name is 'Roine.' When I go to the gate and whistle 'Roine' will come to me. I drive him to school with my three sisters. Before The Farmer's Wife gave 'Roine' to me I was absent



"Roine," Clarence Busick, Adams Co., Indiana.

from school for more than a year because I was sick and it was too far for me to walk. When the doctor heard I had won a pony he said it was one of the finest things I could have for my condition. This was quite interesting to me, and I am glad to say I am now well again, and the doctor says 'Roine' has done his share in it, and also The Farmer's Wife of St. Paul."

Your true friend, Clarence Busick.

SEND YOUR NAME TODAY.

Our ponies are given away so quickly that you will stand a better chance to get this one if you sit right down and write us a letter or a postal card or send us the coupon below filled out with your name and address (either way will be all right). The work we require you to do to become a contestant for "Sultan" is very easy, and any child who enters will win a fine prize, even if he fails to win "Sultan," which is the best prize of all.

WE HAVE ALREADY GIVEN AWAY 85 PONIES

HERE'S WHAT FOUR LUCKY WINNERS SAY

"Bob," John B. Corn, Jr., Pulaski Co., Arkansas.

" 'Bob' is a beautiful pony, so cute and smart. He loves me dearly and for fun he is the best chum I have. He is fond of eating sugar and I taught him many cute things, for he learns so easily. He will lie down and play asleep, shake hands, nod for yes, and shake his head for no, will walk on his hind feet, kneel and say his prayers. In the morning when he awakes he always nickers for me.

"I have been offered $300.00 for 'Bob' but I would not sell him for any price, for I have more pleasure out of my pony and buggy than to have so much money and no pony. My dog and I would be so lonesome without 'Bob.' I know he would cry much if taken away."

Your little friend, John B. Corn, Jr.

Fred Hagerman, Du Page Co., Illinois.

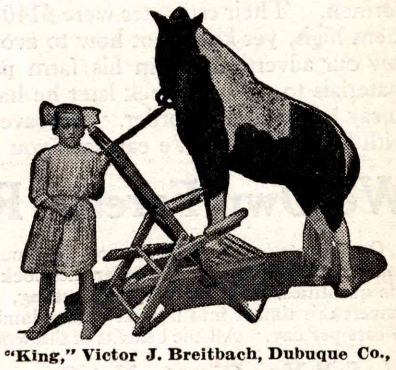
"I am a litte boy 12 years old. I live on a farm about 3 miles from Naperville, Ill. I won a fine little pony called 'Sport' in The Farmer's Wife Pony Contest. 'Sport' is a good playmate and everyone who sees him likes him very much. Every morning after breakfast I clean him so he looks his very best and then go for a ride to see some of my little friends.

"We spend many happy hours together cleaning and decorating our little playmate. I often ride him to school and the little boys and girls all try to get to him first to give him his dinner. He is as gentle as a kitten and makes friends with every one. I wish all boys could get one like him." Your faithful friend, Fred Hagerman.

"I saw in a paper that The Farmer's Wife would give away 'King,' so I entered the contest.

"After the contest closed, I received a telegram, 'You win King.' I was so overjoyed I couldn't speak.

" 'King' is gentle as can be and my



"King," Victor J. Breitbach, Dubuque Co., Iowa.

little sister and brothers play with him all they like. We often take him into the house and feed him candy or other things. 'King' can climb stairs, put his front feet on a chair, or jump over it; and perform all kinds of tricks. My little 'King' is the cutest pony in the world. I wouldn't part with him for anything.

"As a close to my letter I cannot say too much to praise the honesty and fair dealing of the Webb Publishing Co."

Your friend, Victor J. Breitbach.

EVERY CONTESTANT WINS A PRIZE.

All contestants will surely get a prize of their own choosing from a list which we will send you. Beside the Pony Outfit and Twenty-five Grand Prizes we shall offer Gold Watches, Base Ball Outfits, Gold Bracelets, Fountain Pens, Hand Bags, Flash Lights, Rifles, Shot Guns and dozens of other desirable prizes. If you become an enrolled contestant in this Pony Contest you can't lose, but you can win "Sultan" if you write us.

Address all Letters or Postal Cards to THE FARMER'S WIFE 549 Webb Bldg., St. Paul, Minn.

The Problem of Marketing Crops

By J. A. Everitt

These articles have been prepared to answer ever-occurring questions how a sound and enduring farmers' organization, equipped with a practical marketing system to protect the producers of crops, can be established. And the problems considered in this article are not solely farmers' problems, but problems that concern every individual in the United States. They are nation-wide problems, therefore they must have an interest for all the people. A careful reading of the entire article is urged.

Chapter II

(Concluded)

Only One Place to Engage Apples

For instance: if the produers of apples in the heavy producing sections will report their crops to heir own local unions, and they report to the county unions, and they report to the national clearing house and authorize it to market them, then, since there will only be one place where apples can be engaged, all of the handlers and consumers will quickly place their orders at such place. There can be no question about this.

And it will be exactly the same way with all crops, whether grain, fruit, potatoes, live stock, hay, cotton, vegetables, dairy products, eggs, poultry, etc.

The demand will go to the supply just as soon as the supply quits chasing after the demand, or if it does not, people must starve.

Getting a Report of Demand

But getting a report of the supply is only one-half of the plan. We must also know where the demand is and also how much it is. This will be obtained very much after the manner of getting the report of supply. Each market will stand as a unit in reporting the demand, as each county is a unit in reporting supplies. A representative of the farmers will be on each considerable city or market, then all of the people in that market or city or district who want any farm produce must place their orders with the farmers' representative. The representative will then mail, wire or telephone a summary of the demand of his market, for each farm crop, to the national clearing house daily.

It will not be necessary for the representative to do any soliciting or peddling, because the supply can only be reached through him and the people can't do without what the farmers have, the necessaries of life.

To illustrate this further:

The Real Bread Line

Frequently in the history of ours and other countries, there has been what was known as the "Bread Line," usually it was the line where poor, hungry people came to receive food provided by charity. A notable bread line, and one never to be forgotten by those who marched up to it daily, was in San Francisco, several years ago, following the great earthquake disaster. Then, rich and poor met on a common footing, thankful to receive the food passed out to them by the authorities.

But how many people have thought of the real bread line, that imaginary line that divides people in the cities and towns from the people on farms; or the people who have farms from those who have none. As things go along their usual way, year after year; as long as the farmers produce plenty and throw it on the markets, and as long as the people who have no land of their own can go down to the market or grocery store and buy the necessaries of life, we are not going to give much thought to the real bread line.

But suppose the people who have the land and who produce all the necessaries of life would decide some day that they would feed the balance of the world only at prices of their own making, and they would really quit moving the products off of the farms because fair prices were not being paid, or for any other reason. Then the imaginary line would become the real bread line and it would be absolutely necessary for every person on the other side to approach it with the price the farmers ask and deal on the farmers' terms. This would be no more than fair either, because it is just exactly what the other people have been doing to the farmers for many years. They put the prices on their goods and when the farmer steps over the store line he knows he must pay the price or do without.

High Prices Not the Intention

But we do not want the broad and comprehensive principles of this movement of the Farmers Society of Equity to be misunderstood. It is not the intention to form a trust to maintain and make high prices for food. But the intention is to organize the producers and formulate and put into operation a system of marketing farm crops in such a way that they will go as directly as possible to the consumers at the least expense and insure to the producers what they are entitled to received, and, while insuring to the producers a just return the consumers will enjoy such equitable prices as they have not enjoyed for many years. We simply give this illustration of the "bread line" to awaken the farmers to a realization of a power they possess if they would only assert it and when such power is exerted in equity, as this Society guarantees, and for which it is being organized, none of the grim realities that usually associate with the bread line will be present. Every fair-minded person will freely grant to the producers of the necessaries of life a fair and equitable price. In other words a living wage and a fair profit.

Directing Supply to Demand

But there is still one more step. It is the one of directing the supply to the demand.

Having gathered at the clearing house a report of the supply and knowing where it is all over the country, and having a report of the demand and knowing where it is all over the country, as explained, the only other thing that remains to be done is to direct the supply to the demand. This is done by the central clearing house wiring out to the county secretary each county's proportion. The county secretary will then apportion the order amongst the local unions in the county and tell each one what market to ship to. The local secretary then notifies the members who reported supply to bring it in and the secretary looks after the shipping as it is brought in.

Enormous Saving in Transportation

By this plan no supply ever need be sent past a demand, but the shortest haul can always be made. This in itself will result in an enormous saving over the old system which often sent supplies to cities hundreds of miles away only to return to the county where it was produced for consumption or be reconsigned to markets in quite different directions. To simplify the system all shipments to a market will be made in the representatives' names, who, with his assistants, will attend to the details of apportioning to the various purchasers. With such a system results in grading and packing can be secured that it is useless to think of under the present methods.

Expense Comparatively a Trifle

True, there will be some expense, but it will be a trifle compared to the expense by the present system, or when

Dealer's Estimate $1400--Ours $700

This is a true story—the name only is changed. Bill Jones, a Dakota farmer, sent the bill of materials for his new house to three nearby lumbermen. Their estimates were $1400, $1672 and $1382. Jones thought them high, yet knew not how to avoid being held up. Fortunately, he saw our advertisement in his farm paper. At once he sent his bill of materials to us. A week later he had our estimate of $700. Needless to say he sent us his order. He saved $700, and was more than delighted with his lumber. We can save you money just as we did "Bill Jones."

We Own Forests, Railroads and Mills

Our forests cover thousands and thousands of acres. Billions and billions of feet of standing timber—fir, spruce, cedar, hemlock and western soft pine, in almost inexhaustible quantities. We do our own cutting, logging and railroading. Six great mills convert this timber into highest quality lumber and millwork. Their output is 20 to 30 cars per day. All the benefits of this wonderful cost reducing organization is yours.

We Sell You Direct—Not One Middleman gets a Profit

Lumber as purchased from your local dealer costs too much, because there are too many profits included in its cost. Five middlemen—wholesaler, jobber, commission man, salesman and dealer—all get a fat profit, and it all is included in the dealer's price to you.

40% to 60% Saved on Lumber of Celebrated Quality

Our lumber comes from the famous "Puget Sound" Region. It's beautiful stuff! No sap or large knots. Resists decay. Lasts years and years. Comes clean and straight. No warping or twisting.

Immediate Shipments—Quick Delivery

We carry immense stocks. Can ship you anything you want in the way of lumber and materials. Make all shipments within an average of 24 to 48 hours. Seven great transcontinental railways hurry our shipments to destination—reach points west of Mississippi within an average of two weeks. Deliver our shipments at your station at 40% to 60% saving over prices of every competitor, local or otherwise.

We Guarantee You Satisfaction

We take all the risk of pleasing you. We back every shipment with the guarantee that it will grade better than trust or combine standards and satisfy you in every way, or money refunded.

One Estimate will Win You

We ship everything for building complete; lumber, sash, doors, shingles, millwork and paint. *Send us your bill of materials.* Our prices, delivered your station, will open your eyes with wonder. Let us show you in actual figures, how much we can save you on the building you're planning. If you're not ready for actual figures, post yourself on our prices anyhow.

Mail This Coupon Today for Catalog and Price List

Hewitt-Lea-Funck Co., 687 First Avenue Seattle, Wash.

Important Notice to Farmers East of Mississippi

We have obtained control of two big mills—one at St. Louis—one in the heart of the Rose Mary Southern pine district—famous for soft, short leaf, yellow pine. Makes best casing, base, interior finish. Works fine. Takes beautiful finish.

These new mills offer you 40% to 60% saving, prompt shipments, guaranteed satisfaction. Write for prices and particulars.

I am planning to build as follows: _____

_____

the results accomplished are considered. For instance, a 50-word night message will report the summary of the crops of a whole county. (If it will not a telegraphic code can be used.) A 50-word night message will cost only $1 from the most remote part of the country—the Pacific Coast states—to Indianapolis. Seventy-five cents is the cost from the most southern shipping point, Brownsville, Tex., 60 cents from central Texas, Alabama, Mississippi, Florida, Maine, Colorado, North Dakota, etc.; 50 cents from North Carolina, Tennessee, Virginia, Pennsylvania, Wisconsin, Kansas, etc., and from nearer places 25 cents to 40 cents. If we estimate the average cost at 50 cents, then two thousand telegrams, from two thousand counties, will cost $1,000.

That is, at a cost of about $1,000 a daily report of all farm crops in the whole country can be sent to the national clearing house for registration and marketing.

Add the Expense to Price

But farmers don't need to be very particular about the cost of running their marketing machine, except as they want to reduce the cost of living to the consumers as much as possible. For instance, when farmers are able to control the supply they positively will be able to make the price. Then enough can be added to the selling price to cover the cost of marketing. This is what others do and farmers have been paying the marketing cost of everything they bought. Farmers can be more independent about such things, when they have their organizations, than any other class of people, **because what they have can not be done without a day, while everything else can be done without part of the time or all of the time.**

Local and National Marketing Compared

Has it occurred to you that what is proposed in this plan does not call for much more than a local or district marketing association is doing now, but the national clearing house deals in larger units? A local association is really handicapped, because it must hunt the demand while in the F. S. E. system the demand will go to the supply. It will be easier, under such conditions, for the national clearing house to market a thousand cars of produce that it is for a local association to market a few cars, or easier for it to direct the distribution of a million barrels or boxes of apples than for one local association to market a thousand boxes or barrels. Besides, under the new system all the uncertainty about markets and prices, and heart-breaking disappointments over returns will be unknown.

Farmers Want to Be Relieved of Marketing

But do you ask, will farmers use such a system?

The very fact that farmers have organized thousands of local marketing associations, local unions of the Farmers Society of Equity, and local associations of other national societies, all over the country to be relieved of individual marketing is the answer. When the plan of organization and marketing is extended to a national scope and made so definite in results that no crop will ever need to sell at unsatisfactory prices again, which partial co-operation does not and cannot insure, and when every such organized body can use this system at an inconsiderable entrance fee, every farmer will be glad to embrace it. A central clearing house is the only way to conserve scattered individual energy and expense, prevent glutted markets, obviate waste of food products, and insure against exorbitant prices to consumers.

Work Nearly Automatic

When the organization such as we have described is built and when the machine is operated as we have recommended, it will work nearly automatically. For instance: As soon as the principal producers in a community are organized into the Farmers Society of Equity, or all are federated, and market their crops through its clearing house, buyers will no longer go out to such country community because there will be comparatively little produce for sale there. But for a greater reason, it will be cheaper for them to place their orders at the central clearing house where the great volume of supply is represented. So when the buyers discontinue going to the country points, the remaining producers who first stand aloof will see that they must join the organization.

It will also be practically automatic as far as obtaining reports of crops is concerned, because if any member neglects to report his crop, it will not be recorded and it will not be sold. Knowing this, the plan becomes practically automatic with regard to the supply side. On the other side, it is clear that it will be automatic, because the people off the farms must have food, and cotton, and wool, or they will starve and go naked. We will say again: The demand will go to the supply just as soon as the supply quits chasing after the demand.

Dealing With the Absolute Necessities of Life

We have explained how farmers must and can organize in each community, how the local unions will organize the county unions and how all of them will work with the National Union and the clearing house. Also how the report of supply will be secured and how the report of the demand from every place where there is a call for consumption. We have shown the great advantages of this system and how it will be practically automatic in its workings in every part. There is nothing heavy, complicated or impossible about anything we have recommended.

The very fact that we are dealing with the absolute necessities of life makes the farmers' marketing problems much simpler than the marketing of any other commodity that is produced by any other class of people anywhere. This organization is partially completed already and the system of marketing is already in operation. True, not with perfect results, but farmers are getting wonderful results in hundreds of districts even in its partially completed stage.

Glutted Markets at an End

Let the orange growers of California and Florida; or the potato growers of Maine, New York, Michigan, Wisconsin and other producing states; or the grain growers of a dozen or more of the chief producing states, think what it will mean to have their crops all set down in the same column at the central clearing house and have the people who want the oranges, or the potatoes, or the grain, send word in, just how much they want, with all chances eliminated of any other producing section butting in on the markets, unexpectedly glutting them and destroying the prices. Let them think about whether it is worth $2 a year to register all their crops at the central clearing house and be guaranteed against gluts and price demoralizing competition.

Members Are Reaping Great Benefits

Such is the organization and system recommended for agriculture. We have said that it is partly organized and established already. But marketing farm crops can not be revolutionized in a few months by printing plans or issuing proclamations. Such a movement naturally grows slowly at first. Education must precede organization. The main thing to know is that we are on the right track now. That we have the right plan and system. Knowing this, then the producers can complete the organization in a few months, or they can procrastinate and continue to suffer the losses of the old system and miss the blessings of the new for several more years. As an encouragement for unorganized communities to organize and for independent associations to affiliate with the Farmers Society of Equity, we will say that even in the partially completed organization, and party established system members are reaping many and great benefits.

Local and county unions that have organized and that use the Equity System of Marketing are getting sufficient benefits to interest and hold their members until the organization is completed with its national clearing house.

Some of the Advantages

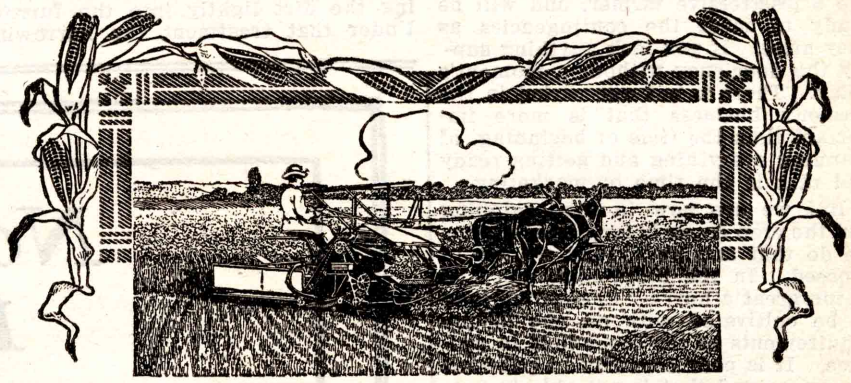
The Society now gives its members personal, responsible representation on over one hundred of the large markets of the country. Some of the advantages members and local unions enjoy are direct shipping to the final market, guarantee against misrepresentation, proper grading, the highest market price and many toll gates avoided. Consequently more of the final prices paid by the consumers go to the producers.

These advantages should impel all the producers of grain, live stock, cotton, hay, broom corn, rice, fruit, vegetables, poultry, eggs, butter, etc., to organize into local unions and to use the system without delay.

The organization is developing rapidly and we confidently believe that it will not be long until enough crops are brought under control to accomplish the great objects of the Society in full. Each local union is a link in the chain that is being forged.

Such a plan has never been offered the farmers before and such services were never performed for farmers before.

(To be continued)



How We Help You Harvest Your Crops

THERE are at least two good reasons why you should buy I H C harvesting and haying machines and tools. One reason is that we sell only the most efficient machines, the other that we render the service necessary to keep those machines at work all the time during the harvest. You can afford to delay almost any other farm operation, but the harvest you cannot. If the grain is to be marketed at the top price it must be cut, bound and shocked all in the space of a few days.

The machines and tools used for work of this nature must be efficient. If for any reason they should not do the work you demand of them, the greater part of your season's effort would be wasted. You can avoid any chance of failure by investing your money in the time-tried, field-developed machines which bear the following well-known names:

Champion Deering
McCormick Milwaukee
Osborne Plano

An I H C harvesting machine will always reap the full crop, whether grain be tall or short, standing, down, or tangled—that is part of its efficiency. But when the unforeseen accident occurs, the unavoidable breakdown which may happen even to the best machine, that is the time when you appreciate to the full the prompt service given to all I H C machine users by our organization. If an accident does happen to an I H C machine, somewhere within easy reach, either at the local dealer's place of business, or at an I H C general agency, seldom more than 50 miles away, you can secure promptly any part or parts that may be needed to put your machine back into commission again. This is I H C service—a service organized and maintained for no other purpose than to assist you in harvesting your crops.

Now is the time to decide whether or not it will be wise to buy new machines. It certainly is not wise to take the risk of waiting until the harvest is ready before knowing whether a new equipment is needed or not. Visit the local dealers, get I H C catalogues, see the machines, and make up your mind now which machine will be best for you to buy.

While you are looking at machines, remember also that good grain binding requires good binding twine. The best machines will not bind satisfactorily unless a strong, smooth binder twine of uniform size, strength and quality is used to tie the bundle. A twine of this description is sold under the trade names of **Champion, Deering, International, McCormick, Milwaukee, Osborne, Plano,** each brand made in four grades, manila, pure manila, sisal and standard.

Your local dealers have catalogues which explain thoroughly all the best points of the different machines. They will give you full information, or, if you prefer, write the

In and About the Fields

Production and Marketing

THE FARMER AND HIS PLANS

IT IS difficult for UP-TO-DATE FARMING to make itself timely in all the localities where it circulates, for its field is practically North America, and covers almost all latitudes. But over all the great central regions the beginning of the work for the season's crops comes with March. Are you ready with matured plans, machinery all in good shape, and teams in good condition? Then you are a progressive farmer, and will be ready to meet the contingencies as they arise. If you lack anything supply the deficiency without a moment's delay. There is but one period in the farmer's business that is more important than the time of beginning, of planning everything and getting ready and that is the time of marketing.

But we are now in the beginning and the crop depends largely upon how we do that and how ready we are to proceed. In the first place, don't be in too great a hurry. Choose the land to be cultivated with an eye to the requirements of the crops it is to produce. It is poor economy to put seed in any ground that is not able to produce the crop. In the next place, see that the soil is well prepared. Farmers sometimes get in a hurry, and rush the seed into the ground, promising themselves they will finish putting the ground in condition later, when they think they will have more time. It is a mistake. Seed should never be put in the ground until the ground is ready for it. Better plant late than plant prematurely. We have always contended that half the work required by the crop should be done before the planting. This is particularly true of corn.

In the next place, don't plant inferior seed. Like produces like. You can't expect to grow better stuff than you plant. Think what a poor stand means. The entire row must be cultivated whether plants are growing in every hill or in only a portion of them, and vacant hills scattered over the field are as diminishing of the yield as if they were gathered together in one part of the field, and that part left with nothing but weeds growing in it. Do not allow any excuse to induce you to plant bad seed.

The planting accomplished, the crop is begun—if well done it is half made. The remainder of the work is very likely to take care of itself, provided the farmer has not over-cropped. There is a temptation to do that, and some very good farmers fall into that error. Don't do it. No matter what your ambition, hold yourself within bounds.

BREAKING THE LAND

WE HAVE known fields actually ruined by the method of breaking the land year after year. The irrepressible dead furrow is to invite the making of a washout or a ditch. Often this furrow is made in the same place from year to year because it seems convenient to begin at the same side of the field and to lay off lands of the same size. The field in ridges or beds, with ditches between them, is the inevitable result.

But some farmers, to avoid that result, cross break the land each year. As a rule, though, no matter which way they plow, they begin at what seems to be the most convenient side, and plow lands of the same size each year. This brings the dead furrows to cross each other at the same place every year, and soon the field is in gently elevated squares, and at each corner of the squares is a depression that has lost its fertility, and that holds water almost like a pond. The damage to that field can scarcely be estimated.

This picture is not at all overdrawn. Such cases are entirely too frequent. Especially is it so on farms occupied by tenants, who, too often, are reckless of the future of the farm.

What is the remedy? Avoid as much as possible the dead or finish-up furrow. If you must have it, plow lightly as you finish the land. If there is much of a furrow left, go around it once, plowing very shallow, and throwing the dirt lightly into the furrow. Under that treatment the harrowing to follow the breaking will almost obliterate the furrow and leave the field level.

Break the field according to its surface. Throw the dirt into and toward the lower places. If undesirable ditches are washing in the field, throw a few furrows into those ditches no matter how crooked they may be nor what direction they may take. Then break the field the same as if those furrows had never been made. No use to take that much trouble? We have heard farmers say that, both land owners and tenants. They don't think it is too much trouble, though, to give medicine to a sick horse. It is just as important to doctor a sick field.

If the field is square or rectangular, and comparatively level, we prefer to begin in the middle, and plow from the center outward, throwing the furrow all the time inward. Do not plow to the ends of the field, for after the first few furrows you will plow across the ends of your land as well as up and down the sides. Measure so that you will finish at the ends with corresponding furrows that finish the sides. This will bed up the entire field, and give every portion of it a gentle slope outward. It does not require a single additional furrow nor an additional turn, but it is the hardest matter in the world to get farmers to plow that way.

Of course, if the field is not level the plowing must be done according to the slope. This calls for the exercise of good judgment, and to plow it in the best way may be a little more tedious than to plow it in the most convenient way, but it will pay whether you own the land or whether you only have it rented. It is entirely safe to say that more land is injured in the breaking than in any other part of the process of cultivation.

No-Rim-Cut Tires
10% Oversize

Not Built Like Old-Time Tires

Goodyear tires of today are not built as they once were, nor as others build tires now.

Goodyear success is due to ceaseless advancement. Every increase in sales came through increasing mileage.

And now, after fourteen years of betterments, scores of our experts spend all their time on research and experiment.

How They Work

These men wear out, on a metered machine, hundreds of Goodyear tires.

To get our tread as we make it today, 40 formulas were compared—by actual metered mileage.

To get a fabric which would stand all strains, 200 fabrics were tested out, and mileage results recorded.

These comparisons have gone on for years and years. And they still go on night and day. For we know that no tire can lead in sales unless it also leads in mileage.

What They've Done

This research department cost us about $100,000 per year. On this year's output that's about five cents per tire.

But note the result:

All the remarkable mileage you get from Goodyear tires is due to this ceaseless improvement.

No-Rim-Cut tires—the tires that end rim-cutting—were developed in this shop. With the old-type tires, 23 per cent met with rim-cut ruin.

And from this shop came the 10 per cent oversize, which adds one-fourth to the average tire mileage.

Men Not Misled

In these days of odometers, men know which tire serves best. And that tire alone can outsell all others.

Under this test Goodyear tires have outsold every other tire in existence.

And the sales have doubled over and over, as the tires became better known. Last year's sale by far exceeded our previous 12 years put together.

That's the result on actual use, on hundreds of thousands of cars. And you'll adopt them, like the rest, when you once try them out.

Average Profit $2.90 Per Tire

Here's another reason why you get so much in a Goodyear tire. Our average profit last year was but $2.90 per tire.

Goodyear tires cost all the way from $15.55 to $104.95, according to size and type. The most popular size—34x4—costs from $32.95 to $37.90, differing with type and treads. And our average profit on all these tires was exactly $2.90 per tire.

That's why you get at the Goodyear price tires with so much mileage. Tires that can't rim-cut—oversize tires. This is due to the fact that so much of the cost goes into things that count.

No other tire in all the world offers you equal value.

The $2,000 loan will help you in erecting your buildings, and you are given twenty years in which to fully repay this loan. You pay only the banking interest of 6 per cent.

Advance of Live Stock on Loan Basis

The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle, sheep and hogs up to the value of $1,000 on a loan basis, so as to enable the settler to get started from the first on the right basis of mixed farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 20 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based on Good Land

Finest land on earth for grain growing, cattle, hog, sheep and horse raising, dairying, poultry, vegetables and general mixed farming, irrigated lands for intensive farming—non-irrigated lands with ample rainfall for mixed and grain farming. These lands are on or near established lines of railway, near established towns.

Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps with full information *free.* Write today.

CANADA'S OFFERING

To The Settler The American Rush to Western Canada is Increasing

Free Homesteads In the new Districts of Manitoba, Saskatchewan and Alberta, there are thousands of Free Homesteads left, which to the man making entry in 3 years' time will be worth from $20 to $25 per acre. These lands are well adapted to grain growing and cattle raising.

Excellent Railway Facilities

In many cases the railways in Canada have been built in advance of settlement, and in a short time there will not be a settler who need be more than ten or twelve miles from a line of railway. Railway Rates are regulated by Government Commission.

SOCIAL CONDITIONS. The American Settler is at home in Western Canada. He is not a stranger in a strange land, having nearly a million of his own people already settled there. If you desire to know why the condition of the Canadian Settler is so prosperous write to any of the Canadian Government Agents and send for literature, rates, &c., to

PREPARING FOR CLOVER

THERE is an awakening interest in growing leguminous crops as soil renovators, and the average farmer turns to clover, because he sees in it a crop of hay, a crop of seed, and the good effects on the soil also. Such farmers have rather "too many irons in the fire," but all may be made to work to at least a degree of profit. If the improvement of the land is the leading idea, however, the result will be much more pronounced if the clover be turned under, at least the after-growth after the early hay crop has been cut.

The question is to get a start of the clover, or of alfalfa either. In the first place, be sure that the land is not acid. If there is any danger of that a treatment of lime is the first essential. Neither clover nor alfalfa will grow in acid land. This point settled, we prefer to work the land the spring before seeding to clover. Grow a crop of field peas (cow peas) the season preceding the clover. If this growth be turned under early in the fall the result will be great soil improvement—aeration, gathered nitrogen, some potash and phosphorous, and a valuable addition of humus. But the peas may be cut and valuable feed saved if the ground was fertile enough to produce much growth, and then the after growth turned under with moderate results as above. If the ground is rich enough to justify it, a winter wheat crop may follow the peas, and the clover may be sowed among the wheat next spring. In rich lands having both fertility and humus this is a common practice, but in compact or clay lands that are pretty badly run down the plan is not very successful. If clover and timothy is desired, an ideal course is to turn the pea growths under, work the land well, and sow the timothy early in the fall, and early the next spring sow the clover. But if the main purpose is to build up the land and to get a stand of clover to do it, turn under the pea growths in the fall and let the land lie until early spring, as early as it is possible to harrow it. Then harrow it down, sow the clover, and harrow lightly afterwards. Some sow oats in the spring and sow the clover with the oats. Good results are usually obtained thus.

RE-ADAPTATION OF CROPS

THE necessity for increased growth of livestock on the farms requires a somewhat re-adaptation of crops. More lands must be devoted to pasture, and the pastures must be made richer and kept so. This is no addition to the work required on the farm. On the other hand, it really amounts to a conservation of soil fertility, and the farmer who avails himself of it, and rotates his pasture and cultivated lands, may always have richer soil for his crops.

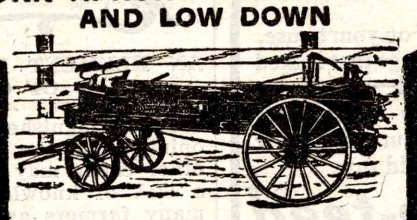
Also more forage must be grown and there must be a greater saving of forage crops. Again we have a lessening rather than an increase of farm labor. Not so many acres need have summer cultivation. Altogether the readjustment of the farms to the growth of live stock will make the work easier for the farmer, make the maintenance of soil fertility easier and more certain, and insure as good or better income.

This change, therefore, may easily be made a benefit to the farmers, and, on the whole, an advantage to the country in general, especially to agriculture. We advise readers to accept this situation and prepare at once to meet it—to adapt themselves and their plans to it. In many respects it will present new phases of agricultural life, and solve many problems that have heretofore been rather puzzling.

APPLETON

RETURN APRON ENDLESS APRON AND LOW DOWN

MANURE SPREADER



Solid oak, trussed frame; worm and worm gear apron drive, encased, runs in oil; wood or steel wheels.

So simple a boy can run them. Apron works over chilled rollers. Wide seat, comfortable foot rest.

Insist on having the "Stewart." It's the easiest to turn, does the fastest work, stays sharp longer and is more durable than any other clipping machine made. Get one from your dealer, price only..... **$7.50** or send us $2.00 and we will ship C. O. D. for the balance. Satisfaction guaranteed.

The Greatest Power in the World

If all the winds of the world could be hitched to dynamos they would furnish heat, light and power enough to supply all the needs of the whole human race. It would be a big job to harness all of the winds for they are very numerous and decidedly restless.

But it is easy to catch enough wind to pump all the water you require for your home and for your stock. Just set up an Aermotor over your well and your job of pumping is as good as done. The Aermotor will work away faithfully night and day with very little attention from you.

Power Without Expense

It costs nothing for power if you do your pumping with an Aermotor. The running expenses are trifling—just a little oil now and then is all. An Aermotor which receives reasonable treatment will require no repairs for 10 or 15 years. Many of them have run longer than that without a cent's worth of repairs. They just simply keep right on about their business day after day without bothering you in any way. For the past 25 years the Aermotor Co. has been supplying the world with efficient, durable and reliable steel windmills for pumping water, and has enabled hundreds of thousands of people to enjoy the comfort of a good water supply with a very small initial investment and with practically no expense for upkeep. Perhaps we can do as much for you. We surely can if you are in need of power for pumping.

The Windmill of Greatest Merit

Aermotors are built on honor and are sold on their merits. The great Aermotor factory of today has grown out of very small beginnings because of the superiority of the output. The Aermotor is the windmill with a record behind it. The record started in Chicago in 1888 and it has left its trail around the world. Aermotors are as numerous today in South America and South Africa as they are in Illinois. There are villages in the Argentine which are literally shaded by Aermotors. They pump all the water required for all of the needs of the community. Great herds of cattle depend entirely upon Aermotors for their water and they never go dry.

Running Water in House and Barn

We have a booklet—called "Water Supply Bulletin"—which contains a large amount of information in condensed form. It tells what size of Aermotor to use, what kind of pump is best under different conditions, shows various kinds of tanks and other things of interest to anyone who is planning for a better supply of water. The booklet is yours for the asking. Just write "Bulletin" with your name and address on a postal and mail it to us today.

AERMOTOR CO.,

AN ELEMENT IN THE SCARCITY OF CATTLE

A distinguished writer is of the opinion that the shortage of beef and other cattle may be accounted for by a lack of knowledge on the part of many farmers as to intelligent feeding. There may be, and doubtless is, some truth in that. If the farmer does not know exactly what it costs him to produce an animal there are chances that he may produce the animal at a loss. Therefore, the thing for farmers to do is to study up on the question of feeding and learn how to bring the stock to market at the least cost. We do not mean a stinting of feed, or a resort to cheap feeds, or allowing the stock to come to market in any other than the very best condition. The most profitable stock, the only profitable stock, in fact, are those that are made to do their very best all the time. But there is such a thing as feeding to a purpose, and it is important to know what feeds are best for the accomplishment of that purpose. If the animals are growing or giving milk or breeding the most profitable feeds are those rich in protein—clover, pea or alfalra hay, or rich pastures, merely supplemented with light grain feeds. If the purpose is to fatten the stock the grains or other feeds rich in the carbohydrates must have the ascendant. Raising cattle for market is a continuous period of growth, with the exception of a brief time just before marketing. Hence the principal feed for live stock should be forage, which is always cheaper than grain, and the stockraiser should provide an abundance of forage feed, most of which may be grown quite cheaply. This provision should always include pastures during the growing season, as rich and abundant as it is possible to provide. And this course applies to hogs as well as to cattle.

SELLING THE BREEDING STOCK

GOOD prices are a temptation, and the prices that have prevailed for sometime have reduced the number of breeding stock in the country. It is a mistake, and unfortunately it is such a one as farmers are too liable to make. We concede the temptation to accept good prices when they are offered, but it is wise to consider the probable future. Unless something entirely unforeseen takes place, prices will remain good for some years at least, and nothing increases income faster than growing stock. They beat money in the bank or interest bearing notes all to pieces. Good breeding stock, even at present high prices, will double their value in two or three years. The first year is the yearling calf, worth a third as much as the cow. The second year is a two-year-old heifer or steer and another calf, worth more than half as much as the cow. The third year is a three-year-old heifer or steer (if a heifer there is possibly another calf), a two-year old heifer or steer, and another yearling calf, all worth double what the cow is worth. Meanwhile it is presumed that the cow has paid for her keep and is worth as much as she was before. No other investment of like amount can make such returns. Don't sell the breeding stock.

SPRING PIGS

HOW ABOUT IT? Are not the spring pigs a little scarce this year? The brood sows have been sold off a little too close; and even as it is some feel that they are a little scarce of corn and are tempted to sell what pigs they have. Don't do it. Keep them in a pasture lot if you can do no better, and share the corn with them. Manage in some way to get them plenty of feed, feed that will make them grow, and keep them on the boom. Whatever the feed costs you it will be a good investment. Women may do without hats and men without coats, but neither can do without meat—pork, bacon and lard. Spring pigs should make all these things next fall. Keep them and give them a chance.

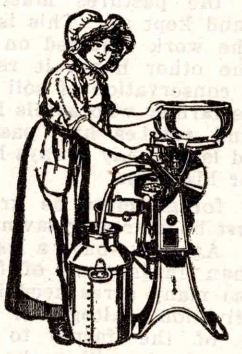
DE LAVAL
CREAM SEPARATORS

Cheapest As Well As Best

Every sensible person wants the **best** of everything, but in many things the best is beyond their means and they must necessarily be content with something less.

In case of the Cream Separator, however, the **best** is fortunately the **cheapest** as well, and it is of the greatest importance that every buyer of a separator should know this.



Moreover, the **best** is of more importance in the case of the Cream Separtor than in anything else, since it means a saving or a waste **twice a day every day in the year** for many years.

It is true that DE LAVEL Separators cost a little more in first price than some inferior separators, but that counts for nothing against the fact that they **save their cost every year over any other separator,** while they last an average twenty years as compared with an average two years in the case of other separators.

And if first cost is a serious consideration a DE LAVAL machine may be bought on such liberal terms that it will actually **save and pay for itself.**

These are all-important facts which every buyer of a Cream Separator should understand and which every local DE LAVAL agent is glad to explain and demonstrate to the satisfaction of the intending buyer.

If you don't know the nearest DE LAVAL agent simply address the nearest of the main offices as below.

Northern Grown Seed Potatoes

Grown in Conrath Gardens. We make a specialty of seed potatoes. Send for our new circular. It's free.

NORTH WISCONSIN SEED COMPANY
Box 2, Conrath, Wis.

INCREASED CHEAP FORAGE

THE cow pea figures conspicuously as a means of increasing the forage crop in a large section of the country. Sowed alone and looked to for a single crop it is profitable and may yield a quantity of valuable forage—as good stock feed as can be produced. If feed is the main object the vining sorts are preferable, but the seed commands so high a price that profits may be derived from threshing, the threshed vines still being a good article of feed.

As a side crop peas may be sowed on land from which oats or wheat has been cut; but such cutting and sowing must be done as early as possible or the peas will not have time to do their best, especially as we pass to the northward.

One of the very best forage crops may be produced by sowing oats and peas together. This is done in early spring, and as the oats begin to ripen, the crop is cut and cured like a hay crop. A Kentucky farmer has thus produced four tons of excellent feed to the acre. Where stock feeding is an object and late pastures are desirable, it is a good plan to drill peas between corn rows just after the corn has been laid by. These generally make a fine growth, and unless too far north mature pods. Gather the corn and turn the stock in at once. The field may be almost like a cane brake, and the stock should not be allowed to stay in all the time until they become accustomed to it.

THE EWES AND LAMBS

WE WISH there were more sheep on the farms than there are, but at this time of year the ewes and lambs must have a little extra attention. In good weather all must be out in the open, but there are still liable to be sudden heavy rains, and possibly chilly rains and winds. Young lambs should not be exposed to these. Besides, lambs are liable to make their appearance at any time, and often attention is required just then. The flock should be kept so that they may be under constant observance.

If the flock is required to pass out at a door ewes and lambs are often injured in that way. When the door is opened it seems to be the nature of the sheep to rush out. Lambs are often trampled thus, and ewes may be squeezed and injured, especially before lambing.

Frightful Losses from Disease

Every year the farmers of this country lose many millions of dollars worth of hogs, sheep, cattle and horses, most of which might be saved if proper means were used in fighting off the causes of these tremendous losses. For instance, take the stomach and intestinal worm. These deadly pests multiply by the millions in the stomach and intestines of all farm animals, especially hogs and sheep, sap the vitality and strength and render their victims easy prey to disease. Not only this, but they steal the best part of the animal's food and literally cause starvation.

Millions of hogs, pigs, lambs, sheep and other farm animals are killed off every year by the deadly attacks of these unseen parasites. Millions of dollars worth die from incurable plagues such as hog cholera, swine plague, horse plague, etc., yet it has been proved over and over that stock free from worms do not take these diseases as a rule, even when such epidemics are raging all about them. Thus, it would seem to be the better part of wisdom for every farmer to put forth special effort to rid his stock of the treacherous stomach and intestinal worms.

There is at the disposal of the farmers today a preparation for killing and expelling worms that leaves little to be desired, so thorough and dependable it does the work. Its use is becoming surprisingly widespread, with the result that the losses from these destructive pests are being cut down at a wonderful rate.

We refer to "Sal Vet," now so widely known and recommended by leading stockmen, farmers and agricultural colleges. With this efficient weapon no farmer need fear scourges, plagues, etc., as of old, and since it is offered on a guarantee to do all that is claimed for it before you are asked to pay, there is no excuse for not giving it a trial. All you need to do is write to the manufacturers, The S. R. Feil Co., Dept. —, Cleveland, Ohio, tell them how many head of stock you have—hogs, sheep, cattle and horses, and they will ship you enough "Sal Vet" to last your stock sixty days. If it proves satisfactory you pay for it, if not, the charge is cancelled. Also read their advertisement on page of this issue.

SUCCESSFUL EGG FARMING

200 Eggs a Year Per Hen

HOW TO GET THEM

THE seventh edition of the book, "200 Eggs a Year Per Hen" is now ready. Revised, enlarged, and in part rewritten, 96 pages. Contains among other things the method of feeding by which Mr. S. D. Fox, of Wolfboro, N. H., won the prize of $100 in gold offered by the manufacturers of a well-known poultry food for the best egg record during the winter months. Simple as a, b, c,—and yet it will start hens to laying earlier and to induce them to lay more eggs than any other method under the sun. The book also contains a recipe for egg making food used by Mr. Fox, which brought him in one winter day 68 eggs from 72 hens; and for five days in succession from the same flock 64 eggs a day. Mr. E. F. Chamberlain, of Wolfboro, N. H., says: "By following the methods outlined in your book I obtained 1,496 eggs from 81 R. I. Reds in the month of January, 1902." From 14 pullets picked at random out of a farmer's flock the author got 2,999 eggs in one year—an average of over 214 eggs apiece. It has been my ambition in writing "200 Eggs a Year Per Hen" to make it the standard book on egg production and profits in poultry. Tells all there is to know, and tells it in a plain, common-sense way.

You can get this book with a year's subscription to the AMERICAN POULTRY ADVOCATE, both for 75 cents; two years' subscription and book for $1.00, or given free as a premium for two yearly subscriptions at 50 cents each. Book alone for 50 cents.

Our paper is handsomely illustrated, 44 to 124 pages, 50 cents per year. 3 months' trial, 10 cents. Sample Free. CATALOGUE of poultry books free.

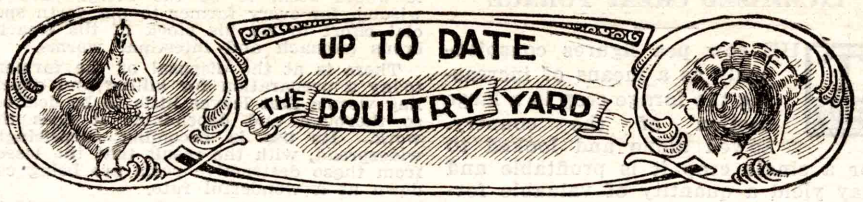
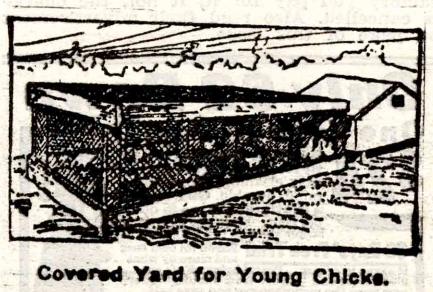
POULTRY SCHOOL, 418 Capper Bldg., Topeka, Kan.



PROTECT THE YOUNG CHICKS

THE illustration gives an idea of how to build a yard for young chicks. Put together some thin boards or slabs in the form of a crate at least two feet high and tack fine mesh wire netting over the sides and top. A small door should be put in one side



Covered Yard for Young Chicks.

to allow operator to care for feed and water dishes. The wire yard should be placed tight to the entrance of brooder or coop, and made secure at either side by hooks and staples. Thus the whole outfit may be easily detached and moved about as the runs become stale, writes Charles R. Bushnell. You also have protection for the chickens from crows, hawks and cats, etc.

MUCH DEPENDS ON THE FEED

MUCH of the unsatisfactory results with poultry grow out of a lack of variety in feed. The living machine within the hen, the egg factory, must have material to work upon or it cannot produce the egg. The article we quote below may be a little too specific to fit the case of the flock that runs at large on the farm, but still what is said is along correct lines and should have thoughtful attention:

Grain is the staple food for poultry, and will be used for that purpose as long as fowls are kept on farms, but hens cannot give good results on grain alone. It is beneficial to them and will be at all times relished, but the demands of the hens are such as to call for a variety. In the shells of eggs as well as their composition are several forms of mineral matter and nitrogen, which can only be partially obtained from grain.

Even grains vary in composition, and when fowls are fed on one kind for a long time they will begin to refuse it, as they may be oversupplied with the elements of the food partaken and lack the elements that are best supplied from some other sources. For this reason they will accept a change of food, which is of itself an evidence that the best results from hens can only be obtained by a variety of food. Corn and wheat may be used as food with advantage, but must be given as a portion of the ration and not made exclusive articles of diet.

THE BUSINESS OF SUREST PROFITS

WE AGREE with the writer quoted below. There is no question of profits in poultry. When mother used to sell eggs at five cents a dozen, and hens, big and little alike, at $2 a dozen, there was profit in them even then. True, at that time little attention was paid to the fowls, and what was obtained was nearly all profit; but now with the increased care and attention there are increased prices, and the profits likewise have increased:

No one can tell just how much a certain person can make from a certain flock of fowls. A great deal depends on various conditions, not the least of which are the energy and good judgment that the poultry keeper puts into her work. Cases are on record where several dollars per hen have been made annually for some years by women who have produced the finest quality of poultry and sold it at the highest prices for exhibition and breeding. Many women make from $1 a hen up by producing market eggs.

A lady in Iowa not only paid for her farm, but sent her children to college by taking up the poultry business after the death of her husband. This much is sure, that the poultry business has never proved unprofitable to any farm woman who gave it a reasonable amount of care and applied to it one-half the judgment of which she is capable.

OLD TIME LIME WASH THE TICKET

REMEMBER the time you yelled bloody murder when lime got into your eye while whitewashing the fence palings and the chicken coop? Pity folks don't use lime as they did in the old days. There would be less microbes after humans, less bughouse in the hencoop and fewer nasty smells.

Yes, there are those modern awful, odoriferous disinfectants that kill a bad smell with a "worser" one."

We like old time lime wash; it's cheaper, hits the spot, makes the henhouse white and light and makes the place sweet, fresh and like new.

We just take fresh unslacked lime, pour hot water on it, cover while it slacks and steams, let it stand till perfectly slacked and becomes like fresh putty. Then mix with hot water and strain into the sprayer and let the sprayer go, and soon all's as white as snow.

Enough crude carbolic to make it sting and sprayed into every crevice makes the wash even more effective.

How to make government whitewash? Here's the tip:

Slake half bushel of lime in hot water, cover, let steam, then strain, add a peck of salt that has been dissolved, pour in three pounds of ground rice boiled to thin paste, add a half pound of Spanish whiting, a pound of glue that has been dissolved, and add five gallons of hot water to the mixture.

Stir, cover, let stand a week and apply like paint. This is the best and most brilliant lime wash made. It may be colored to suit your fancy, and a quart of carbolic acid should be added when applied inside the poultry house.

Send For It—Do you see anything advertised in this paper you would like to have? We are sure it is entirely safe to send for it.

STEEL Shingles Will Save You a Pile of Money

When you think how cheap Edwards Steel Shingles are, how much longer they last, how much easier they are to put on than commonplace roofing, it's hard to tell just how much we do save each buyer. It's a **big pile of money.**

They Beat Wood Shingles

The best wood shingles to be had nowadays seldom last 10 years, and it's a **long, slow, tedious** job putting them on. Besides, any building with wood shingles is a regular "fire trap"—apt to burn up **any moment.** Edwards **Steel** Shingles last over twice as long as wood, and as they come in big clusters of 100 or more, anybody can put them on in almost no time. Furthermore, they are **absolutely fire-proof** and are **guaranteed** so by a $10,000 Cash Bond.

No Chance of Rust

Unlike ordinary iron roofing, Edwards Steel Shingles never rust. With the Edwards Steel Shingle, the nails are completely covered by our patented interlocking device, and the edges are made absolutely **rust-proof** by the famous Edwards Tightcote Process. No chance for rust.

Remember, too, that Edwards Steel Shingles are much easier to put on than any other roofing.

Write for Factory Prices, Freight Paid

Edwards Steel Shingles are not only the **longest lasting** and **easiest laid** roof in the world, but their cost is amazingly low. That's because we sell direct from factory to user. And with 100,000 good customers, we only want a small 9% profit per sale. And we pay the freight. **Just send a postal** for our latest Roofing Book 491 and Special Factory Prices. Then see for yourself what astonishing prices you can now get on the World's Finest Roofing Material. Give size of your roof, if possible. Write today and our proposition will come by return mail. Ripe Berries In 4 Months

This wonderful EVERBEARING Tree Raspberry is a valuable variety; nothing like it grows; a strong, handsome bush literally loaded with berries and should be grown in every garden in the country. It yields a crop of fruit the same summer and fall from plants set in April or May. Plants set in April, gave ripe fruit July 4th and continued to produce ripe berries until the end of October.

Berries are large and beautiful, as large as the largest Red Raspberries, brilliant crimson color, firm, and fine flavor. The plants are perfectly hardy even in the coldest regions and do well on any soil. A dozen plants are worth several dollars in any garden, and we want every reader of this paper to try them. Strong plants which we guarantee will fruit this summer, now ready to set in Garden, **15c each —3 for 30c—12 for $1.00, postpaid.**

Bureau of Mushroom Industry, Dept. 37, 1342 N. Clark St., Chicago

Garden *and* Orchard Deparment

for Up-to-Date Farmers

THE FARM GARDEN

The farm home that has not an abundant garden is not in line with its best opportunities. There is not a plot of ground of its size on the farm that contributes so much to the pleasure and support of the family as the garden does. We use the word pleasure advisedly, for it is a pleasure to plant and cultivate the garden, and note the development of the vegetables, each day and night bringing them nearer to the table.

In the first place, be sure that the garden is well located; that it is convenient to the house; that it is well drained, and that it is fertile. Add to its fertility by the application of an abundance of manure. Barnyard manure is good, but it should be well rotted. Spread thickly all over the ground in the fall and deeply plowed under is a good way to apply it. Such plowing should be begun in the middle and all the time turned inward, so that the last furrow will be all around the garden. Not many farmers can be induced to plow that way. They protest that there is too much turning in the middle; but many times the adoption of that plan in breaking the fields, would prevent the cutting of ditches, the washing away of soil, and result in better crops. At all events, the garden can be commenced in the middle and back-furrowed, turning at the ends without plowing, if necessary. This beds up the entire garden and makes it get ready for work in the spring earlier than it otherwise would.

The one objection to barnyard manure in the garden is the seeds it so often carries from the hay fed to the stock. The manure from the poultry house is exceptionally good for the garden, and it may be applied at any time just as it is taken from the house. If wood is used for the winter fuel, or for cooking, the ashes should always be taken to the garden, or first to the hen house and thence to the garden. The chickens will pick out from it all the bits of charcoal, and it will do them good.

Work well before planting, but be sure the ground is in good condition for work. Begin to plant as early as the climate will allow. Some of the most important products may be had earlier than otherwise by planting the seeds in boxes and permitting them to grow in warm and sunny places within the house. We fully appreciate hot beds, but they are not very general on the farms as yet.

Plant all the common vegetables, the more the better. Make onions a prominent feature. It is pretty well established that free use of onions is conducive to health. So also are tomatoes. Get an early start of these, and have enough of them to abundantly supply the table. Celery is another plant whose use is said to be conducive to health, but though not very difficult of production, it is not often found growing in farm gardens. On the other hand, some of the commonest vegetables are neither nutritious nor healthful. Cucumbers, for instance, especially after they are pickled. Most people like pickles, but every one eaten is a task on the stomach that it would better not be required to perform. Cabbage is also a favorite garden vegetable, but when cooked in the ordinary way it is the most difficult of all to digest.

But in spite of all this, fill up the garden. Have an abundance for the table, and possibly some to give to less thoughtful neighbors. Peas, beans, beets, lettuce, asparagus, pie plant—many of these of different varieties. Plant at different times so as to lengthen their season. Then there are the old-fashioned parsnips and carrots that used to be grown more than they are now. And a bed of early turnips will come handy, and often make an acceptable dish on the table at a time when not usually expected. A row or two of peanuts may be profitable also, if not too far north. And the chufa, or ground almond, not worth very much, but worth the ground a few hills of it may occupy.

We must say a word about the planting and cultivation of the garden. It is just as much the work of the field hand as are the acres that produce the corn. The vegetables in the garden will be needed much before the corn will, and they will add much more to the home living than will the corn that grows on a plot of equal size. Never leave the making and cultivation of the garden to the women and children at the house. Make it a part of the farm work, and see that it is done timely, and done right.

The Winged Message

Noah's messenger was a dove. In Solomon's time, pigeons were trained to carry messages. Brutus used them at the siege of Modena. They served the Turks in their fights against the Crusaders. In mediæval wars they were more useful than ever before.

France had a carrier-pigeon mail service, with messages reduced by photography and read through a microscope.

Even today carrier pigeons are utilized as news-bearers in isolated parts of Europe.

In America, the land of the telephone, the carrier pigeon is bred only for racing. The winged word has taken the place of the winged messenger.

Pigeons may fly more than a mile a minute, but the telephone is as quick as speech itself.

The dove is the emblem of peace. The telephone is the instrument of peace. The telephone lines of the Bell System unite a hundred million people in one national family.

A Busy Time

A bouncing time is with us now,
And every one is on the go;
The ground to plow, the seed to plant,
And then the work to make it grow.
But who's to get the pay for this,
This constant early work and late?
The farmers would without a doubt,
If all would act with UP-TO-DATE.

THE CHILDREN AT HOME

WHAT is the matter with the people in the country? We hear so much now-a-days, mostly from the cities, however, about the need of a rural uplift. Country life commissions and similar concerns are all that are talked about in some places.

Measured by the city standards, country people may be uncouth, awkward, unaccustomed to society revels, and possibly not so refined in thought and sentiment as they might be. We are in favor of everything that is elevating in its character, and that tends to make humanity broader, nobler, gentler and more like the high idea of the Creator. It is a little contradictory though when we read in one column of the public press a glowing account of what the city people are doing for a rural uplift and in the next column a harrowing tale of wickedness, traffic in human souls, poverty, degradation and suffering in the cities. But we will not say "Physician, heal thyself." Go ahead with your work for rural betterment. There is room for improvement everywhere. But the place where the apportunity centers is the home. The good people, those who, as it is said, make their mark in the world, and leave behind them a record for good, came from well ordered homes. The parents both in city and country are the real moulders of the future. Disobedience of parents is the seed which grows into disobedience of law. Unrestrained liberty to take whatever the childmind craves ripens into the adult habit of taking what belongs to another. Tender hearted parents as well as weak ones feel that they must not be hard on or severe with their children, and this so often grows into over indulgence. There must be a clearly defined ruling power, and that power must be constant. Indulgent today and severe tomorrow is worse than a farce, and cultivates in the child a contempt for authority.

Don't lie to the children. Say to them what you mean. When a command is given see that it is obeyed, unless on consideration and discussion with the child it may for reasons given be changed or withdrawn. This is no evidence of weakness or that you do not mean what you say, but it shows you are governed by reason as you wish the child to be. Give commands whenever necessary, but do not accompany them with threats. If the child knows you mean it threats are unnecessary. If your previous conduct has taught that you do not mean it threats will not add anything to its strength. As a rule, mothers indulge most in threats—threats of what the father will do. The child soon learns to pay no attention to them, and a bad seed is planted in the fertile soil of the tender mind. There need be very little scolding and no whipping. Be truthful and in earnest. Talk to the children and teach them as you would sensible beings. Begin at the beginning and truly understand each other. Bringing up children is the most responsible task that devolves upon American citizens, and it is in the home where the dangerous seeds are planted and the thoughts and habits formed that develop into unworthy men and women. Good people thoughtlessly plant these seeds and cultivate these habits, not realizing what kind of fruit they may bear. Once in a while a child may grow into evil in spite of the best and wisest management at home, but we are glad to believe that is the exception. Obedience in the home leads to obedience in the country; truthfulness in the home grows into truthfulness in men and women; honesty in the home insures honesty in business; refinement in the home lives through all the vicisitudes of after life.

Those good people who want nobler lives, broader views and more refinement in the country, should plant the good seeds in the home, and they may find as fertile and even more neglected fields in the city.

Pineapple Delight.—Take fresh or canned pineapple and cut into eighths. Pare sweet, juicy oranges and remove each section, freeing each from the membrane and seeds. Sprinkle lemon juice over the pineapple. Arrange the orange sections and the pineapple pieces in a dish, sprinkle with powdered sugar or a mixture of it and maple sugar. Over this sprinkle a layer of cocoanut. Any canned fruit may be used with the oranges; peaches and pears are especially good.

THE art of cooking cannot be learned out of a book any more than the art of swimming or the art of painting. The best teacher is practice; the best guide is sentiment.

Ants will not return where tartar emitic has been sprinkled. It is poisonous, and must be kept away from pots and food.

To clean real lace, sprinkle it with French chalk or calcined magnesia and let it lie under a weight for several days, then shake it out and it will be found quite clean.

Slip the shoes when packing into stocking legs, the whites ones in white stockings and other colors to correspond, then they are kept free from other things and are easily found when needed.

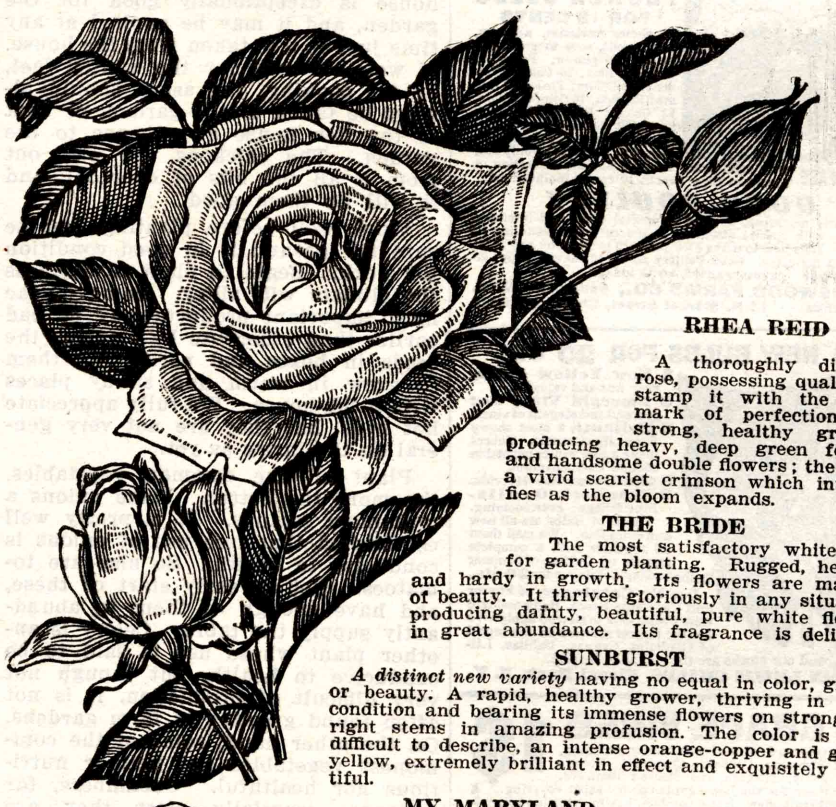
Dry bran is an excellent cleanser. Delicate suits, furs and rugs, if scoured with it and then are well brushed, are wonderfully freshened by the bran bath.

Apricot Short Cake.—Prepare a rich shortcake in the usual manner, using stewed apricots for the filling. A sauce made of the juice, slightly thickened and enriched with butter, may be served with it.

Fried Sardines.—Drain the sardines from the oil, dip them in lemon juice and crumbs and fry in deep fat. Serve in threes thrust through a lemon ring.

Beautiful Roses Free!

Knowing that at this time of the year the thoughts of all turn to the beautiful things that may be had next summer we know that no offer by us to our readers will be more acceptable than some plants of beautiful roses. We have obtained the best varieties for our subscribers. These roses will bloom every month of the growing season, thriving vigorously with ordinary care. We guarantee safe arrival by parcels post and in each package will be enclosed printed instructions for their planting and care.



RHEA REID

A thoroughly distinct rose, possessing quality to stamp it with the hallmark of perfection. A strong, healthy grower, producing heavy, deep green foliage and handsome double flowers; the color a vivid scarlet crimson which intensifies as the bloom expands.

THE BRIDE

The most satisfactory white rose for garden planting. Rugged, healthy and hardy in growth. Its flowers are marvels of beauty. It thrives gloriously in any situation, producing dainty, beautiful, pure white flowers in great abundance. Its fragrance is delicious.

SUNBURST

A distinct new variety having no equal in color, growth or beauty. A rapid, healthy grower, thriving in every condition and bearing its immense flowers on strong, upright stems in amazing profusion. The color is most difficult to describe, an intense orange-copper and golden yellow, extremely brilliant in effect and exquisitely beautiful.

MY MARYLAND

A rare combination of a poetic name and exquisite beauty. A great outdoor rose of extreme hardiness. Flowers are of indescribable charm, of a brilliant lively shade of pink which deepens as the flower expands until it fairly glows with its warm, rich color and delightful fragrance.

RED DOROTHY PERKINS—Climber

A perpetual source of wonder. Perfectly hardy, its growth is rapid and vigorous, producing dark, glossy foliage which remains intact to unseasonable weather and attacks of disease and insects which causes the foliage of other climbers to rust and look shabby. The bloom is produced in great clusters; the color being deep intence scarlet-crimson, which retains its vivid brilliancy as long as the flower lasts.

Our Offer Send 50 cents, the regular subscription price for one year, and we will send the collection of five rose bushes, all prepaid, by parcels post. Bushes will be sent at right season for planting. New or renewal subscribers.

Yours Free Send a club of 4 subscribers at 50 cents each—$2, and we will send you Up-to-Date Farming one year and the five roses for your reward. This is five yearly subscriptions and five sets of roses for the price of four.

What is Now the Fashion

All Up-to-Date Patterns are 10 cents each, post paid

4830, LADIES' ONE-PIECE KITCHEN APRON—The busy woman will no doubt appreciate this apron design as it is one of the simplest ever offered besides being neat looking and practical. The apron is cut in one piece and fastens by a single button.

It can be made of gingham, percale, linen or seersucker.

The pattern, 4830, is cut in sizes 32, 36, 40 and 44 inches bust measure. Medium size will require 4¼ yards of 27-inch goods or 3 yards of 36-inch material.

5502, LADIES' KIMONO—This illustrates one of the prettiest empire kimonos. It is made with the seamless shoulder and the sleeves are left in the flowing style, reaching a trifle below the elbow.

For making the kimono, such material as silk or cotton crepe, challis, sateen, etc., will give the best of results.

The pattern, 5502, is cut in sizes 32, 36, 40 and 44 inches bust measure. Medium size requires 5¾ yards of 36-inch material.

5872, THE NEW TWO-PIECE SKIRT—In this design we have a charming two-piece skirt which can be developed for separate wear or as part of a coat suit or complete costume. The skirt closes at the left side and represents one of the most fashionable models of the season.

Serge, cheviot or broadcloth can be used to make this skirt.

The pattern, 5872, is cut in sizes 22 to 30 inches waist measure. Medium size requires 2¾ yards of 36-inch material.

5660, CHILDREN'S ROMPERS—No article of wearing apparel is so useful for the small child as the popular rompers. The design here illustrated is simple to make so that the amateur needleworker can fashion them with no difficulty. The little garment is cut in one piece. It has long plain sleeves and high neck completed with a tiny band collar.

Chambray, madras, or flannelette may be used.

The pattern, 5660, is cut in sizes for the child one, two and three years of age. Medium size requires 2⅛ yards of 27-inch material.

5478, MISSES' TAILOR MADE DRESSES—One of the fashionable one-piece dresses. It is simple and will be becoming to the majority of figures The dress is made to close at the front and the skirt consists of four gores. style suitable for all mannish tailor fabrics and also serge, cheviot and novelty woolen goods as well as velveteen.

The pattern, 5478, is cut in sizes 14, 16 and 18 years. Age 16 requires 5⅛ yards of 36-inch material, with 1⅛ yards of 27-inch contrasting goods.

4615, CHILDREN'S ONE-PIECE APRON—The simplicity of this little apron will appeal to the busy mother as the garment can be run together in less than an hour. The apron is cut in one-piece and fastens at the back by a small strap and at the shoulders with buttons and buttonholes. Pink and white gingham with trimming of pink button braid or bands of plain pink gingham results in a neat and pretty apron.

The pattern 4615, is cut in sizes 4 to 12 years. Medium size requires 1½ yards of 27-inch material.

4635, BOYS' SHIRT WAIST SUIT—The shirt waist suit is a favorite with all boys. The blouse is made with a back yoke and with or without a fly and with legbands or elastics.

Serge or cheviot can be used to make this suit.

The pattern, 4635, is cut in sizes 4 to 12 years. Medium size requires 2¾ yards of 36-inch material.

These patterns are guaranteed; there are none better at any price. **Full directions** accompany each. All you have to do is to give number and the size you want write your name and address plainly and send 10 cents for each. Address Pattern Desk.

UP-TO-DATE FARMING, Indianapolis, Ind.

Fashion News

ONE noticeable feature of the new fashions is the simplicity of the construction of the various garments. We are striving for simple effects in every department of wearing apparel and this aim has been realized this spring to a great degree.

The new fabrics are alluring. Printed materials, wash goods and rough weaves, such as ratine and sponge cloth in plain shades and stripes are very popular.

Crepe cloths, or crystal crepes, in plain shades or narrow stripes with embroidered effects are new and are fashionable. Deep borders on zephers, ratines and voiles are extremely effective and stylish and plain voiles, as well as with neat silk stripes both woven and printed, are much in evidence.

The new neckwear is charming to say the least. The Medica collar in some form or another is still popular, as is also the flat collar with the long points. There is the new vest effect, often shaped like the bosom of a shirt and with a Beau Brummel frill upon it.

The finest lace and chiffon are used. There are flat double jabots, long double frills, satin vests on lace, lace or chiffon vests with satin front plaits, and everywhere, somewhere, an added touch of beauty in buttons, purple, crimson, scarlet, clear as crystal and gleaming like jewels, oddly shaped, even of jet.

Among the drawings is a dainty frock for the young girl in which the simple lines above spoken of are prominent.

This dress is made of light blue cashmere and has shawl collar and turned-back cuffs of blue and white corded silk. The front closing so popular is noted and the skirt is a four-gored model with panel front and back.

At the bottom of the front panel there is a trimming of the blue and white corded silk and at either side is a row of tiny blue glass buttons; these buttons also appearing on the upper part of the skirt outlining the closing. The neck is collarless and a lace guimp may be worn with the frock. However, if high collar is desired it is provided for by the pattern and long sleeves are also included, these being finished at the wrist with a turned-back cuff.

One of the new style skirts is shown in design No. 5872. Here we have simple lines and clever effect. The garment is a two-piece empire model easy to make and appropriate for separate wear with different waists or as part of a complete costume when combined with a pretty and becoming waist of the same material.

The skirt closes at the left side and measures two and one-half yards around the bottom. This is the conventional width of the new skirts. The general effect is graceful and the type will be found to be becoming to most every figure.

For the woman who loves dainty negligee—and who does not—there is a charming empire kimono that may be made by the home needleworker in a few hours.

This pretty garment is developed in pink and tan crepe with pink satin ribbon trimming. The application of this trimming is very effective. The kimono is made with the body and sleeve secton in one piece which adds to the ease of its construction.

A new and attractive kitchen apron is likewise presented. This apron is quite simple to put on and off as it fastens with a single button. The apron is in one piece and while generously protective is good-looking. It may be made of checked gingham, plain chambray, figured percale or of plain white lawn. Cotton braid or a narrow banding of contrasting material may be used to trim the neck and armholes.

NEW SPRING AND SUMMER FASHION BOOK FREE

Our New Spring and Summer Fashion Book, "Every Woman Her Own Dressmaker," shows 175 latest fashions; also gives full directions for cutting, fitting and making them at home. This book usually sells for 25 cents, but we give it FREE to customers of our pattern department who send 4 cents to cover cost of packing and mailing. Address

LUCKY GIRL WINS PONY

Gladys Houx, Saline County, Mo., Tells How She Got a $300 Pony, Buggy and Saddle Free.

I ALWAYS thought it would be nice to have a pony and now that I really have one that the Webb Publishing Company gave me I find that it is much nicer than I ever imagined. I know if you ever get a pony that you will feel the same way about it as I do about my "Evangeline." All the boys and girls in our town think almost as much of "Evangeline" as I do and I can't begin to tell all of the good times I have had with her, I have had so many since she came.

I couldn't begin to tell you all the adventures I have had when out driving. Once I got stuck in the mud and "Evangeline," my pony, pulled me out and then another time when coming home we got on the wrong road and we did not know what to do until we remembered reading that horses always knew the way home so we let "Evangeline" have the reins and she brought us safely home.

GLADYS HOUX RIDING "EVANGELINE"

One day some girls came by in their pony cart and my brother and I went driving with them and had lots of fun. My pony will carry double and my brother takes all of his friends riding, so do I. Sometimes when it is nice I get up early and go out horseback riding before breakfast and when a girl is spending the night with me we both go and that's more fun. Sometimes we play Indian and dress up in our Indian suits and ride "Evangeline" bareback like real Indians.

I find "Evangeline" very useful and what do you think, she is really making me rich. You see the Webb Publishing Company really gave me two ponies. First they sent "Evangeline" to me in October and then one morning in April, Dan, the hired man, called mamma and said a little stranger was at the barn. You can imagine my surprise and delight to find that "Evangeline" had the dearest little colt. We gave her the name of "Beauty." Pony colts are worth stacks of money so that's one way I am getting rich. Then I showed "Evangeline" at our fair and won first premium with her. I also ran all kinds of errands with her. Sometimes my papa sends me to town to get him cigars and he always pays me for it, and my mama sends me just lots of times to buy groceries and she pays me too. Then my grandma gave me an old rubber hose and lots of rags and I took them to the ragman with my pony and cart and he bought them from me. My uncle has a farm near our town and one day last winter he wanted to see about some cattle and pigs he had and he didn't have any way to go. You see we always send our horses away every winter and so does he, so he didn't have any horse to drive and it was too muddy for an auto. So what do you suppose he did? He hired "Evangeline," and she took him out there in a little while.

I know I could hire "Evangeline" out to boys and girls for so much an hour and then I'd get rich quick for they are all crazy about her, but I am not going to because I am afraid some of them might be unkind to her and that would break my heart, for I love her so.

TheWebb Publishing Company has already given away eighty-five ponies and outfits to boys and girls and is going to give away another one just as good as "Evangeline." You will see more about their big offer in this issue, and, if you write to The Farmer's Wife Pony Contest, 549 Webb building, St. Paul, Minn., and say, "I want to own 'Sultan,'" they will tell you just how you may win him for your very own.—(Adv.)

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

MORE letters crowded out than we can print! We know it is a great disappointment to the writers, and we are sorry, but we can't help it. Each writer is enrolled as a Cadet of Equity, and the letters crowded out are as good as those printed, and persons wishing correspondents in those localities may write to those in the crowded out list with the same confidence they do those whose letters are printed.

DEAR CADETS: I am a Maryland girl 20 years old. I have just finished reading the Cadet letters and take great interest in them. We have taken UP-TO-DATE for a year, and think it is grand. I am very fond of amusement and pleasure, but often find it lonely in the country. I would like to become a friend of all the Cadets. To that purpose I would like to exchange letters and cards with all of them.—Lillie M. Ingersoll, Princess Anne, Md.

DEAR CADETS: I am a farmer's daughter and love the country. Jenny Jump mountain lies in front of our home, only an eighth of a mile away, and we go up on it every summer to gather raspberries. It is certainly grand. It is very rocky and hilly in upper New Jersey. There is a large rock only two miles from here where Washington took tea. I am 18, and will answer all cards and letters I receive. —Josie VanHorn, Blairstown, N. J.

DEAR CADETS: I am a country gawk from Missouri. I have been afraid to write during the winter because the frost bites green things then, but I guess I can risk it now that spring it here. My business is to "do" everybody I can, and I am 18 years high, 5 1-2 feet of age, have brown eyes and blue hair, and weigh as much as I can push down on the scales. I am red complected; in fact my face is so red that when I get up they think the son is rising. I have told you all I know, for I don't know much and can't think of that half the time. I want all the Cadets to write to me, and would be glad to exchange photos. I always wrap mine in asbestos so it won't set things afire.—Naomi Robb, Highbee, Mo.

DEAR CADETS: I am a farmer's daughter, and we have a farm of 237 acres. We think UP-TO-DATE the best of all farm papers, and I enjoy reading the letters from all over the states. My mother is dead, and I live with my father, three brothers and one sister. I was 26 years old in March. I'm a member of the Lutheran church. Hope to hear from some of the Cadet girls and boys—will answer cards or letters.—Lizzie Hass, Newton,N. C.

DEAR CADETS: I am a North Carolina boy of 22 years, and have taken UP-TO-DATE for several years. It contains many interesting farm helps. Our main crops are corn, wheat, oats and cotton. I live 5 miles from town, but I get my mail every day, and will try to answer all cards or letters I may get.—Macon Hass, Newton, N. C.

DEAR CADETS: I live on a farm of 500 acres right close to the ocean. We have fine weather here all the year round; it is never too cold and never too warm. I am almost a man shrdl mfwy mfwyp wy am almost 20, and suppose I am nearly a man. Our main crops are wheat, barley, oats and potatoes, and we are in the dairy business. I will take great pleasure in answering all letters I receive.—Lino Donati, Cayucos, Cal.

DEAR CADETS: I have been reading your letters and think they are fine. I think UP-TO-DATE FARMING is an excellent paper. I live on a farm myself, and can do most any kind of work. I am 17 years old, and I think it is a grand thing for the young people to exchange thoughts with one another from all over the United States. I live one mile from the Ohio river, and they are building a dam in it, which, when completed will be the largest ram in the United States. They work a thousand men there, and people come there from all over the country to get employment. I will be glad to hear from the Cadet boys and girls, and will answer all cards and letters.—May Killingsworth, Geneva, Ky.

DEAR CADETS: I live in Indianapolis, where this paper is printed. My brother runs the press for it, and we think it is the best paper there is. I am 15 years old, and I would like to receive cards from other Cadets; will answer all.—Clarence Moore, 1236 Lee street, Indianapolis, Ind.

DEAR CADETS: I am a 140-pound country pumpkin of 18 seasons growth, and I was grown on a 640 acre farm owned by my father in the southwest part of Oklahoma, which we farm on the UP-TO-DATE system. We have 120 acres in alfalfa and the rest in Kaffir corn, maize and cotton. Eastern boys might call this a baby ranch, as we have a hundred horses and cattle, and a carload of 3-year-old mules ready to sell, and also 140 head of hogs. We expect to have 250 pigs before the first of May. My sympathies are with Mr. Gray, and I would gladly take part of his letters and cards; I will answer all. Now, girls and boys, just for fun, write for full particulars and a photo of this wonderful pumpkin.—Roy D. Walter, Elk City, Okla.

DEAR CADETS: I am a stock dealer's son, but I work in a grain elevator, and we sell flour, feed and coal. I am also agent for the United States Express Company. I have been reading UP-TO-DATE FARMING for two years, and enjoy its pages very much, for we get different points and views from all over the United States, and we often find things that help the farmer and others, and that brings us all to a better understanding and makes us better friends and neighbors—help to bring farming to a higher standard and to regulate prices. We all have to work for what we get, unless we cheat and steal, and that never pays. I also read the Cadet page with great interest, and enjoy the letters from the different parts of the United States. My age is 24, and I will answer all cards and letters.—S. R. Meyers, Overton, Ohio.

DEAR CADETS: Have you any objection to a Badger slipping in among you? I would like to become a Cadet now, and hope soon to become a Pioneer. I have been interested in UP-TO-DATE for nearly two years, though I am not a farmer, yet I read every article printed in this truly progressive paper. I am 19 years old and a student in the R. C. high school. I would like to hear from the Cadets by card or letter from every state in the Union.—Earl Parfrey, Richland Center, Wis.

DEAR CADETS: I am a farmer boy 16 years of age and live in Central Missouri. My father is a seed corn breeder, and has bred a variety of yellow corn and has named it for the county, Boone county. We are busy now (February 20), shelling seed corn. Our farm consists of 190 acres, and is 18 miles from California, the county seat, and also the location of the University of Missouri. It is a nice city of about 10,000 inhabitants. The farm we now own was once very heavy timber. One tree in particular, a cottonwood, made 100 feet of lumber per lineal foot; it was 70 feet tall and made 7,000 feet of lumber. Would gladly exchange post cards with the Cadet boys and girls.—John Yeager, Rocheport, Mo.

DEAR CADETS: I am a jolly farmer girl just at the age of 17. I think UP-TO-DATE ought to be in every farmer's home. I enjoy reading it very much, and would like to hear from the boys and girls in other states. I haven't had a letter for two months. So write, and I will gladly answer all I can.—Dicey E. Landis, Bardley, Mo.

DEAR CADETS: I am a farmer, and would like to become a Cadet of Equity. The people in North Carolina are becoming more and more interested in farming. Land that 20 years ago brought $1 an acre now sells at from $20 to $100 an acre. I am 18 years old and I like to read UP-TO-DATE FARMING, and I would like very much to hear from all the Cadets, and would gladly give them a description of the country in which I live.—Shuford E. Reynolds, Okeeweemee, N. C.

DEAR CADETS: My papa has taken this paper for over two years, and we like it fine. Ie helps us a great deal in our farming and raising stock. We live on a farm of 160 acres, and we have lots of chickens, hogs, horses and cows. I am 11 years old, and will exchange letters and postals with all the Cadets if they like.—Hazel Plummer, Lawton, Okla.

DEAR CADETS: I live in a state of which I am proud, Indiana, the Hoosier state, and near the city where this paper is printed, Indianapolis. UP-TO-DATE is by far the most successful and independent paper published, and it strives for the betterment of farmers, drawing them together so as to get better prices for their crops. I am a constant reader, for the messages it sends out are news that every farmer should read. I am 24 years old, and enjoy reading the letters. If any of you girls or boys care to write, you have found the lucky chap right here.—Will Spier, New Palestine, Ind.

DEAR CADETS: I wonder if all the farmers in the United States are taking this splendid paper. If not they are missing one of the very best papers published in America. I thinw Mr. Everitt is kind indeed to make room for the Cadets, and to publish so many letters. The most valuable crop of Kentucky is corn, though the state produces about one-third of the tobacco raised in the whole country. Wheat, hay and hemp are also characteristic crops. Kentucky also raises much live stock, and is noted for its fine horses. I will be 19 May 20, and would be pleased to have a post card shower; will answer all cards or letters.—Oma Dickinson, Smith's Grove, Ky.

DEAR CADETS: Here is a girl from the good old state of Maine. I will be 16 April 11, and would like to have a card shower at that time. My home is on a farm, but I work about five miles away from home. I would like to hear from all the Cadet girls and boys, and will answer all.—Isabelle D. Walker, Harmony, Me.

DEAR CADETS: Talk about a bunch of boys and girls that are real. That's the Cadets. How do I know? By reading UP-TO-DATE FARMING in which their letters are printed. That is why I want every one of them to write to me. I am 18 years old, live on a farm, have a team of my own, and am always ready for a good time. And I have it, too, and hope all the Cadets do. Will answer all I receive. —Samuel Manning, Elizabethtown, Pa.

DEAR CADETS: I ave become very much interested in UP-T -DATE FARMING. I always read the letters written by the Cadet boys and girls. They are very instructive as well as interesting. I am a farmer girl, and think there is no place on earth half so nice as my little country home. I am 19 years old, graduated out of high school last June, and since October 1 I have been teaching in a little log school house in the eastern part of Newaygo county, but there are only three pupils in school, two girls and one boy. I would like to receive cards, letters and photos from the Cadet boys and girls; will answer all I receive.—Alma Long, Newaygo, Mich.

DEAR CADETS: I would like to join your happy band, for I live on 100 acres of land. We raise corn, wheat, potatoes and oats; chickens calves, lambs and shoats. We have apples, peaches and other fruit, and two big dogs that are awful cute. My age is simply seventeen; am not very good looking, but decidedly mean. I know how to take a photograph, and can make some that would make you laugh. Hoping to hear from many a Cadet, but this may find the waste basket yet.—Reuben E. Shumaker, Galion, O.

DEAR CADETS: I am a ranchman, 20 years old, and have read your interesting letters for some time. I like UP-T -DATE better than any farm paper I ever read, and I would not be without it. This is a livestock country, and I am some horseback rider and can throw the lasso to perfection. But I was not blessed with an opportunity to get much education; but it is the size of a man's heart and not his head that counts.—Jack Johnson, Miller, Mo.

DEAR CADETS: I believe the most of us are farmers. Isn't that nice? Our principal crops are cotton and corn and vegetables. We are going to try to make a large cotton crop this year. How many of you girls have an aim in life? The world needs workers. You have a talent. Cultivate it. Be ambitious to do something and do it well. Your time will not be lost. It will develop you. It will make you worthy of living, and you will get more out of life. Uniformly kind, courteous and polite treatment of all persons is a mark of the true woman. I would like to exchange letters with some of the Cadet boys and girls.—Edna Ricks, Mt. Vernon, Tex.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

"As a man thinketh, so is he."

—o—

Mr. Farmer, what are you thinking about?

—o—

The season for active work in the fields, gardens and orchards has come again. As you go through the routine of plowing, preparing the soils, sowing the seed and cultivating the crops you enjoy the IDEAL CONDITIONS FOR THOUGHT.

—o—

All of the spring work is calculated to suggest thoughts of the weather that will follow, what insects or diseases may later threaten and what the harvest will be. It is well to consider carefully every step taken in production and to meditate on contingencies that may arise and how they will be met. But how many of you THINK and REASON beyond the harvest time to the marketing of the crop?

—o—

The PRODUCING SIDE of agriculture is of paramount importance, because if no crops were produced there would be none to sell. But it is foolish to consider only production, because of the possibility that the crop may be a total failure, so when a crop is produced the SELLING SIDE becomes of tremendous concern. The manufacturer who THINKS and REASONS only to the point where he has produced his goods is headed straight toward bankruptcy, and the farmer who thinks only in that limited area is doomed to disappointments in marketing. Some crops are produced each year and placed on the market at less than they cost. No farmer is justified in doing this. The farmer who does a season's hard work and then turns the crops over at prices that return less than fair wages with the value of the plant food consumed by the crop, interest on investment and enough for replacement of machinery, added, IS SIMPLY WASTING HIS TIME AND ENERGIES.

—o—

But how often this very thing is true with farmers. They have all allowed a system, or lack of system, to continue year after year that TAXES THEM BILLIONS OF DOLLARS just because they did not know how to protect themselves. But if they continue the old conditions another year it will be because they have not enough gumption to reach out their hands and get a system that will protect them in every crop they sell.

—o—

This article is written especially for members of the Farmers Society of Equity, but every farmer in the country is welcome to profit by it. In fact, we write it with the hope that every farmer who reads it will take immediate steps to organize his community to use the EQUITY BUSINESS SYSTEM. And we invite every independent local association to federate with us to bring about concert and unity of operation in marketing crops to overthrow the system that keeps farmers WORKERS ONLY AND NOT BUSINESS MEN.

—o—

There is not another class of people that have taken as little concern about marketing as you. But this was because you did not know how to protect yourself as we have said. While you are busy in the fields producing the crops, your self-appointed marketing agents are meeting to decide what they are going to pay you. But farmers are not meeting many places yet to decide what they will take. For instance, on March 10 and 11 a thousand handlers of eggs met in St. Louis to decide what they would pay for the 1913 crops of eggs produced in Missouri. Following are some of the resolutions passed unanimously:

1. That we believe a price of fifteen cents at shipping point; sixteen cents at the Mississippi river, and seventeen cents at seaboard for storage packed eggs, of 1913, is the TOP price that storage stock should cost.
2. That we will market 20 per cent. or more of our receipts of eggs, should prices be above seventeen cents at seaboard on storage eggs, for immediate consumption.
3. That we ask all other state organizations of handlers to co-operate with us to establish a seventeen-cent price.

—o—

It is not our intention to argue as to the fairness of these prices. We present the case for our readers to THINK ABOUT IT. Seventeen cents f. o. b. Boston, New York, Philadelphia, Baltimore, etc., and fifteen cents f. o. b. shipping point in Missouri will mean ten to twelve cents to the producer in Kansas, Oklahoma and Texas. The point we want to emphasize is that the hanlers will have the absolute power to make the price producers will receive if other state associations of handlers adopt the same resolutions and they carry out the plan of marketing one-fifth or more when the price goes over seventeen cents.

—o—

What do you THINK of this matter. Nearly every farmer sells some eggs, hence nearly every one is interested in this matter of price-making for the year's egg crop. A year ago we printed the following, which is worth repeating here. It is from an address by J. A. Long, of Indiana, at the Indiana and Ohio Egg and Poultry Association, held in Indianapolis on April 4, 1912:

I bought thousands of cases of eggs last season at around twelve cents a dozen and shipped them to New York and put them in storage. By holding them off of the market I sold them for thirty-five cents a dozen. At one time last winter I owned practically every egg in Indianapolis and controlled the egg market in New York City. I MADE THE MARKET PRICE AND I SOLD MY EGGS AT A BIG PROFIT. I cleaned up more than $75,000 on the deal. That was business. If I can buy eggs at ten cents a dozen and sell them for $10 a dozen I am going to do it.

—o—

That was BUSINESS for J. A. Long. But the only reason he could do such business was because he was dealing with a class of people who were not business men. Will any person admit that Long would have bought those eggs at twelve cents, which meant ten cents or less to the producers, if the producers could have helped themselves. Also, would the consumers have stood for such extortion and have enriched this man Long by more than $75,000 in one season if they could have helped themselves?

—o—

This was a case of one BUSINESS MAN in an organization of a few of his kind pitted against thousands of WORKERS who could not help themselves because they were not organized and could not stand together to protect themselves. Note that Mr. Long said: BY HOLDING THEM OFF OF THE MARKET I MADE THE MARKET PRICE AND SOLD THEM AT THIRTY-FIVE CENTS A DOZEN." In that way he forced the price up after the harvest season, and when the producers did not have enough eggs to break the corner.

—o—

Now note again the second resolution, above: "We will market, for immediate consumption, 20 per cent. or more of our receipts should prices be above seventeen cents, seaboard, for storage eggs." This means nothing else than the proposal to throw eggs, intended for storage, on the market should the price go over seventeen cents, to break the price and keep it down to a ten to twelve-cent basis in the country. And by doing that the supply in storage will be reduced and the chances for extremely high prices between seasons will be increased.

—o—

It is perfectly clear that the farmers' agents, whom you have employed to do your BUSINESS of marketing, are learning new tricks each year. It will not be long, if farmers continue to be WORKERS only, when these people will have the handling of crops reduced to such a science that the country will be apportioned among the buyers and all the farmers in a district will be just so many men working for the handlers of the crops in that district. Unless farmers themselves will complete their own organization and become BUSINESS MEN as well as WORKERS, they will soon come to a condition very similar to the slaves on the large southern plantations before the war.

—o—

This is not an idle assertion. For a fact, such a condition prevails to an astonishing extent already. Buyers of grain, cotton, live stock, poultry, eggs, butter, etc., have their zones now, where they are supreme, and if an independent buyer goes in he is forced out through tactics these people know very well how to employ. And the same is true as regards supplying sections with farm produce. There are operators in the large cities who control the trade in certain districts and by agreement others keep out.

—o—

So, we say, what are you THINKING about, this spring, Mr. Farmer?

—o—

Are you willing to go on doing all the hard work of producing and continue your self-appointed marketing

"My Absolute Guarantee"

Direct from the Factory to You for $54.50

Stands back of Every Vehicle I Manufacture" —D. T. Bohon

And This Is What I Mean By My Guarantee:

I will ship you any Buggy or Harness in my catalog and let you use it right on the road for 30 days and submit it to any reasonable test in actual use. If it is not exactly as my catalog states, I will refund every cent of your money and pay the freight both ways besides. And there won't be any argument about it either.

BOHON'S "BLUE GRASS" BUGGIES

are sold with this understanding and a lithographed guarantee for two years goes out with every job. Behind that guarantee is a $30,000 bond deposited by me in the Mercer National Bank of this city. I want to convince the most skeptical that they are taking no chances when they send me an order. Now, let me send you

My Big Book of Buggy Bargains FREE,

which shows you not only the latest styles in Buggies but also how they are made and how carefully everyone is inspected and tested before it is shipped. It shows tests of strength which no "cheap" Buggy could stand. And yet my Buggies are not high-priced because I sell them

Direct From The Factory To You,

cutting out all salesmen's salaries and expenses as well as the middle man's profit. You can't buy a better Buggy for the same money nor as good a Buggy for any less, anywhere in the world. I can furnish you exactly the Buggy YOU want, giving you your choice as to color, finish, upholstery, etc. All this is explained in my book. I'll be glad to send it and pay the postage on it. You need not write a letter, just use a postal card, but send it TODAY.

D. T. BOHON, 204 Main Street, Harrodsburg, Ky.

agents to do YOUR BUSINESS of selling and pay them about $7 for marketing $6 worth of your stuff?

—o—

You are a rational being—capable of reasoning. Will you go on WASTING YOUR TIME while others coin it into money?

—o—

Do you know that your farm IS A GOLD MINE? Do you realize that you are mining gold from it every year but you don't retain the gold? You haul the crude ore to town and turn it over to those other people who have built a machine to extract the gold.

—o—

What you need is a machine of your own to extract the gold before the stuff leaves your farm. This is what we have been preaching and many machines have been built all over the country. But there must be such a machine for each agricultural community, and each county.

—o—

We said that this article was written especially for members of the Farmers Society of Equity. It is also to answer the question that local and county union secretaries are constantly asking us "How shall we use our organization?"

—o—

The -plan is simple. First understand that the F. S. E. is a BUSINESS organization. Second, if it is not used for business there can be no good excuse for it existing. And, the chief businesses for which your local union was organized are marketing the members' crops, and, if desired, buying their supplies for farm and home, in COMMUNITY UNITS. To do this you need a live secretary, or business agent. Don't pay him a salary unless there is a good reason why you should, but allow him a commission on all the business of marketing and buying he does. By this plan he will hustle to get business as only by doing business for the members can he get any pay for himself. If the elected secretary cannot give the business the necessary time then select a business agent. This man need not be a member of the Society. He may be a merchant or a shipper of produce. Business experience is a valuable asset in this position.

—o—

If you have a county union then the business plan broadens and selling and buying is done in COUNTY UNITS. That is, the members report to the local union and the local union secretary or business agent reports to the county business agent, who will offer and sell county quantities of crops. It is of the greatest importance that a good man be selected for the county business agent as his will be the most important position in the county.

—o—

Now let me ask what would happen if the producers of eggs, and other crops, too, were largely organized and federated and doing BUSINESS on the F. S. E. plan, that is, accumulating their crops into local and county units, and through their own business agent sell or store such crops? By employing a competent business man there is no reason imaginable why the producers of these crops cannot market them or store with less trouble to themselves and higher prices than through the self-appointed agents. THINK ABOUT THIS.

—o—

You may say, we have not the facilities to store, or we cannot wait for the money.

—o—

Bless your heart, when you control the crops the same elevators and store houses become available for you, or if the owner of an elevator or warehouse is stubborn, buy or build your own and let him keep his shell of a building, which will be an elephant on his hands with no crops to put through it. Also the present handlers have not enough money of their own to store and hold the crops. They use your crops as security to borrow money. With a good business agent you can do the same.

—o—

How many farmers there are who have put in a life time of work on the farm for others to profit by. THINK OF THAT, TOO!

—o—

If we were asked which caused more misery and mortgages, working to excess on farms without the ability to compel a fair return for the effort, or drinking to excess, I would say the former.

—o—

We appeal to every reader to not work through this whole summer without thinking of the BUSINESS PLANS taught by this paper and doing the thing that will make your work worth while and bring you INDUSTRIAL FREEDOM.

—o—

Working and producing without the ability to put your own price on your labor or its result, is slavery.

—o—

A small number of organized speculators will always beat a vast army of unorganized farmers. So the thing for you to do is to ORGANIZE.

—o—

If you will not accept our advice and act on it, will you that of the inspired writer who said this:

—o—

22. But be ye doers of the word, and not hearers only, deceiving your own selves.
23. For if any be a hearer of the word, and not a doer, he is like unto a man beholding his natural face in a glass.
24. For he beholdeth himself, and goeth his way, and straightway forgetteth what manner of man he was.
25. But whoso looketh into the perfect law of liberty and continueth THEREIN, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed.—Bible.

—o—

Be a DOER, as well as a WORKER and THINKER.

—o—

If you are an officer or a member of a farmers' association, local, district or national, now, send this blank for further particulars:

—o—

If you are not a member or officer of an association now, but believe that your community and county should be organized, send the two column blank on this page.

A DISCLAIMER

Several letters of like import with the following have come to headquarters from members in the northwest:

Farmers Society of Eq uity
Indianapolis, Ind.
I enclose a clipping from our newspaper which is an account of the conditions uncovered at Minneapolis in an investigation of the Society of Equity. I want you to look it over and explain why such as this is going on in a society that claims to be for the betterment of the farmers' condition. Perhaps there is no truth in the report, but, however it is, I want the exact truth of the entire proceedings from headquarters. Yours truly,
S. B. HASSAN, Berthold, N. D.

Reference to the article shows that the concern under investigation is the American Society of Equity. Note the difference in name. Our Society has no relationship to or connection with that organization and must not be held responsible for any of its acts. In former numbers of this paper we warned farmers against those people who were using the names "Equity" as a cloak to deceive, hoodwink and bunco farmers into putting money into wildcat capital stock schemes where the only beneficiaries would be the promoters. We have exposed them a hundred times and thought they had been driven out of their nefarious business until we heard of them lately operating in the northwest. The fact that this concern could, for years, play its game of buncoing the farmers without detection and prosecution by state and federal authorities is one of the saddest comentaries on the inefficiency of our government to protect its citizens. The Farmers Society of Equity has never deceived farmers, on the contrary it practices equity as well as preaches it.

THE OHIO CARRIAGE MANUFACTURING CO., Station 99, COLUMBUS, OHIO

Relief For Rupture Without Operation

We Allow a 60-Day Test
Entirely at Our Own Risk—To Prove It

No longer any need to drag through life at the mercy of leg strap and spring trusses. No reason in the world for letting them force you to undergo a dangerous operation.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City

You Rupture Sufferers

CAN BE PERMANENTLY CURED

By the "Schuiling Rupture Lock," the wonderful, scientific discovery of the age, its holding power can be regulated by yourself at will. Endorsed by leading physicians as Nature's true method. No leg straps or other annoying features. It's worn with the same comfort as a pair of old suspenders. Nature's healing process never interferred with, etc. **Price within reach of all and it is sent on trial.**

Write our Institute today, for our free booklet, if you want to forever rid yourself of rupture.

Schuiling Rupture Institute
17 West Market Street Indianapolis, Ind.

Stop Using a Truss

STUART'S PLAPAO-PADS are different from the truss, being medicine applicators made **self-adhesive** purposely to hold the parts securely in place. **No straps, buckles or springs**—cannot slip, so cannot chafe or press against the pubic bone. Thousands have successfully treated themselves at home without hindrance from work, and conquered the most obstinate cases.

Reduced Fac-Simile Gold Medal. Grand Prix.

Soft as velvet—easy to apply—inexpensive. Awarded Gold Medal and Grand Prix. Process of recovery is natural, so no further use for truss. We prove what we say by sending you Trial of Plapao absolutely FREE

Write us TODAY. Address—

Plapao Laboratories, Block 856, St. Louis, Mo.

Don't Wear a Common Truss or Appliance!

Dr. Appley's wonderful invention for the cure of all forms of rupture. The only truss in the world to receive the universal endorsement of the medical profession. Grape Vines on Every Farm

WHY NOT? READ EVERY WORD OF THIS

THE FIELD

UP-TO-DATE FARMING will print in this department short letters from its subscribers on any subject of general interest and calculated to further the mission of the paper.

$2 for Marketing; $1 for Producing

DEAR EDITOR:

Last fall when marketing our apples, we placed a note in one barrel of Baldwins asking whoever bought the apples to write us and inform us what they paid for them. We received a card from Mr. F. E. Salley, of Arlington, S D., about January 15, stating that he had bought the barrel of apples and was well pleased with them and wanted to know if we could send him more and at what price. He said he paid for the barrel $3.75. We sold those apples at $1.25 including the barrel, f. o. b. the cars at Hopkins, Mich.—Laurin V. Hunn, Hopkins, Mich.

Your Plan is Right

DEAR EDITOR:

I will answer your letter that you wrote me a while back under Mr. George Rush's instructions. I am sorry to say that when I received your letter I cast it aside and paid no more attention to it as there are so many traps set for the farmers, but yesterday I put in all day reading the UP-TO-DATE FARMING paper and your booklet and I am sure your plan is right? So you can send me some of your literature and I will scatter it around here and insist on them reading it and then I will see if I can organize them all.—W. D. Wilkerson, Dodge, Tex.

A Maine Farmer's Views

DEAR EDITOR:

I like your paper. I consider it the farmer's best friend. If enough farmers would only heed the good advice they get from UP-TO-DATE FARMING they would soon be more prosperous. But many of them are so discouraged and worn out with hard work and little to show for it, that they just have not the ambition to change things. But this is another mistake they are making. I believe I understand the Equity plan and all we need to do is to organize and appoint our business agent and let him do the work. This way we will be relieved of all the work of looking after the markets, which means that the F. S. E. organization makes less work instead of more.

I have been a farmer on as good a 240-acre farm as you will find down in Maine. With the low prices we must take for potatoes and other produce and the high prices we must pay for labor, fertilizer, farm implements, and taxes doubling up, we are not much better off than the poor laborer. The handlers in our large cities make more money on our produce than we do. But if the farmers would stop shipping one week prices would go where they ought to be and then if we would market gradually, profitable prices could be maintained—Asa T. Griffin, Lincoln Center, Me.

DEAR EDITOR:

I send my subscription for three years. I think UP-TO-DATE FARMING is the best farm paper published. It is doing the greatest work, viz., teaching us how to market. The way this paper teaches is the only way for relief from our bad marketing conditions. Washington said in his day: "United we stand, but divided we will fall." It is the same way now. As long as we farmers let the speculators do our business so long we will be in bondage. So I say, cut loose from them and stand up for our rights, boys. Hurrah for our good UP-TO-DATE! Come one and all to its standard. I for one will carry it forward.—J. B. Holman, Donlap, N. Mex.

In the Keystone State

Brothers in Equity:

Had I more time I would write you of our local and our store venture. Suffice it now to say both are working. We are doing very well in our buying. The degree team is getting ready for the Second Degree, and I have purchased an extra supply of pepper for the goat's nose, so if in Hoosierdom you hear sounds unusual coming from the east, ascribe it to the Equity goat and the boys in their clubhouse in Keystone.—E. M. Switzer, Manager of Equity Store Company, Frogtown, Pa.

I congratulate you, Brother Everitt, on espousing so noble a cause of educating and leading the way for the farmers to a higher plane of living. The farmer is justly entitled to the returns from his toil, no matter what he would do if he had a chance. The fact is, he has not the chance to oppress, rob or steal and no one else should have. Every producer and every consumer should appoint himself a committee of one to help along in this work to eliminate this pernicious system of marketing. It takes toll both ways "er-gwine and er-comin' "—robs producer and consumer.—J. B. Hatcher, farmer, Seibert, Col.

Question Box

This column is for members and subscribers. Use it to ask questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered dependable. If a direct reply is wanted, enclose two stamps.

QUESTION: (1) *At our meeting I was instructed to write national headquarters and ask them if they will use their best efforts to get a law to prohibit firms from buying or selling at higher or lower prices in one place than at any other, except as the price is affected by freights.* (2) *There is an elevator here that is one of a line of elevators owned by one company. We expect them to make us some trouble—Best Wolfe, Sec., Burley, Idaho.*

ANSWERS We will support such a bill, as we can, wherever it may be introduced in state legislatures, or the national Congress. (2) Extend your organization until it has all grain growers in its membership. Then you will be in control of the grain and the elevator owner will probably meet you on fair terms. It might be well to incorporate your local and get ready to build up an elevator if the company that owns the local one is unfair. We do not however, recommend multiplying utilities.

Q. *At our last meeting the question came up whether to organize and pool our crops to hold for a fair price would be a violation of the Sherman law. I enclose a clipping which shows that President Wilson vetoed the measure that exempted farmers' and laborers' pools from prosecution under the Sherman law.—Jacob Bretz., Sec., Bretzville, Ind.*

A. There is no law against farmers or any other people organizing or pooling their business interests unless such combine or pool is *in restraint* of trade. The Farmers Society of Equity contemplates doing nothing in restraint of trade. Wherever the Society organizes it is not to restrain trade but to promote it—to find markets for crops that heretofore spoiled and to secure profitable prices so farmers will be encouraged to grow more, instead of being discouraged by low prices and give up the production of unprofitable crops. Also, steady prices, as we seek to establish, will remove the element of risk and farm crops will be dealt in with a freedom never known before. It is not restrained trade that the F. S. E. desires, but greater trade. And as the farmers extend this organization every thing will work to that end. Therefore it is not a violation of the Sherman law. You may pool your crops to market co-operatively to secure fair, equitable, profitable prices.

WE WERE surprised when we read in the report of the 1910 census that there were grape vines on only 14.5 per cent. of the farms in the country. Grape vines are inexpensive to start with. They can be planted fall or spring; they are sure to grow. They are almost proof against injurious insects and diseases. They are attractive in almost any situation and can serve a good purpose in covering unsightly places or furnishing needed shade. No permanent vine grows quicker and lasts longer. And in addition to all these things, grapes bear fruit practically every year and the fruit is valuable and desirable almost second to none that grows.

Considering the sum of these advantages for the grapes, when we received the census report we were in doubt as to its correctness. We thought nearly every farm had some, so we wrote to the Director of the Census and received this reply:

Up-to-Date Farming:

Your letter requesting information regarding the number of farmers reporting grape vines in our recent report on the "Production of Grapes," received. As you probably know, the census reports on agriculture are based on a farm to farm canvass, and if a farmer grew but one grape vine, he would be reported. The intention is to get a report of every farmer who grew a grape vine in 1909.

Very respectfully,

E. D. DURAND, Per W. J. B.

The fact is that only one out of seven farms has a grape vine. Then there are hundreds of thousands of town homes that have until this time neglected this handsome vine and universally desirable fruit. There is no yard or garden that does not have room for a few grape vines, so we have set ourselves the task to place

ONE-HALF DOZEN GRAPE VINES ON EVERY FARM

and in tens of thousands of other smaller places, and at the same time employ the vines as a means to greatly increase the circulation of UP-TO-DATE FARMING.

This is Our Offer

Send 75 cents and you will get UP-TO-DATE FARMING a full year and will also receive by mail or express, all charges paid, one-half dozen (6) strong two-year-old grape vines with full directions for planting. The varieties are Niagara, Moores Early, Concord, Diamond, Worden and Catawaba. This collection covers extra early to late varieties and the three colors, black, white and red. No better sort can be planted.

All vines will be sent at proper season for planting, no matter where you live.

Yours Free

Send a club of four at 75c—$3, and we will send you the paper one year and the collection of six vines free. That is, five for the price of four, or we will send you the paper five years delivered. Paper and vines will be sent to separate addresses if requested. Up-to-Date Farming, Indianapolis, Ind.

Organizers

THE Farmers Society of Equity wants an organizer in each community.

A local union must be organized at each market town and city or shipping station. We have an exceptionally good proposition for the right person. The right person is any man who stands well among his neighbors and wants a better marketing system established.

Hundreds of organizers who succeed locally will be given a larger field. If you want to employ part, or all of your time profitably, write for our terms.

A post card or letter will bring full particulars by return mail. Don't delay. Every field should be occupied.

APPLICATION BLANK

Farmers Society of Equity,
Indianapolis, Ind.

I hereby make application for a commission to organize at the following towns in the counties named. (Regular local unions are organized at the market town. Subordinate locals may be organized at remote outlying places) .....

55 BREEDS PURE BRED CHICKENS, ducks, geese, turkeys, collie dogs. Catalog free. Belgrade Poultry Farm, Mankato, Minn.

You Can Grow More Corn and Better Corn this Year

No Other Corn Has Such a Record---Read These Reports Selected from Many Received

NOTE: We do not give complete address as that would divert trade from our house. Every testimonial is guaranteed genuine and the original may be seen on file in our office.

Indiana—The Farmers Interest corn is yielding 100 to 120 bushels an acre all over my field Nothing like it ever seen in all this section before.—L. C.

Kentucky—We thought we grew good corn, but your Farmers Interest is yielding 110 to 120 bushels an acre, beating our best native corn 25 to 30 bushels an acre.—C. W. W., Breckenridge Co.

Illinois—Farmers Interest astonished us. A field of such mammoth corn ears I never saw before. I don't think there can be better. It is good for over 100 bushels an acre.—W. P. R., St. Clair Co.

Kansas—I visited my brother in Kansas and saw his field of Farmers Interest corn. I never saw its equal all my way to Kansas and return. The ears look like arms of giants. He wrote me it yielded 114 bushels an acre.—A. M. T., Knox Co., Ind.

Indiana—I grew 50 acres of Farmers Interest corn, and the yield over the whole field was 90 to 105 bushels an acre. The 50 acres yielded 4,948 bushels. Matured early; ears mommoth.—C. A. Helm.

West Virginia.—The Farmers Interest is the finest corn in this county; it beats all the rest of them. I raised 75 bushels per acre; a cyclone destroyed lots of it or it would have made 100 bushels or more. Everybody wanted seed.—B. P. B., Woodland.

Indiana—I had three varieties of corn this year and found Farmers Interest my best and it was on my worst ground, being in corn last year. I always get highest price for F. I. It is the yieldiest corn I ever grew.—C. B. D., Orleans.

Kentucky—Farmers Interest is far ahead of any other corn I ever saw.—B. P., Chilton.

Oklahoma—There is nothing better than Farmers Interest. Farmers should not stand back because the seed cost is a little high. It is cheap at any price. Don't fail to try some of it and you will not regret it if you plant your whole crop of Farmers Interest.—C. M. B., Jefferson Co.

Tennessee—I can make from two to three times as much corn with Farmers Interest as any other kind. It is the best filled corn at the tips I ever saw. I won first prize on quality corn in Lincoln County.—Carlton McD, Lincoln Co.

Tennessee—I planted ¼ bushel of Farmers' Interest corn on one acre of ground and it yielded a little more than 100 bushels. It yields more than one-third as much as my other corn. It is superior to any corn I ever planted. It is nearly all uniform style. I can say it has but few equals and no superiors.—Carl Mallard, Humphrey Co.

Tennessee—Farmers Interest beats other kinds 30 to 40 bushels an acre. It is as far ahead in appearance and quality as it is ahead in yield. I can say it beats anything in the corn line I ever saw.—E. C. H., Cumberland Gap.

Tennessee—I planted 20 acres of Farmers Interest corn and it is the best I ever raised. It is ahead of all others in appearance, quality and value. It will yield more on fertile lands or in dry season than any other corn.—G. S. T., Davidson Co.

Virginia—I planted ½ acre of Farmers Interest corn and it yielded fine. I can say it gave me a better crop than any other corn I ever tried. The ears filled out the end just fine. —A. M. Lacey, Campbell Co.

West Virginia—One acre of Farmers Interest corn gave me 75 bushels yield. This was twice as much as my other corn yielded. I think it will prove to be the finest corn that was ever in the country.—G. W. H., Wise County.

What do all these farmers' reports mean to you? Do you get yields like they report? Do you want such big crops? Don't fail to send for our Corn Circular; it describes other high bred corn that we sell. You may prefer a yellow corn. This circular will give you full information. It will pay you big to plant your entire crop of Farmers Interest.

Missouri—I planted 6⅛ acres of Farmers Interest corn and the yield was about ½ better than another variety of white corn. It is ahead of all in quality and value.—J. M. G., Nodaway Co.

Missouri—I planted 4 acres of Farmers Interest corn which yielded about 1-3 more than any other.—I. R., St. Clair Co.

Ohio—One acre of Farmers Interest corn produced 75 bushels. I think this corn is alright and a good yielder.—W. V., Washington Co.

Ohio—I never saw anything in the corn line like Farmers Interest.—Harry A. Miller, Franklin Co.

Ohio—The Farmers Interest is the best corn. D. D. Landis, Miami Co.

Ohio—I bought a peck of Farmers Interest corn in 1911 and from ½ acre it yielded 70 bushels. This year I planted 22½ acres on very high hill ground. The yield was as good as we had in the country. We raised 15,000 bushels of corn this year and the Farmers Interest was the finest of all. Every one that has looked at the corn says it is the finest they ever saw. On this 22½ acres we had a yield of 80 2-3 bushels per acre.—J. I. Winner. Athens Co.

North Carolina—The Farmers Interest corn is a very pretty corn and is far the best corn in the country. It was much better than any other variety of corn I planted.—J. Brown, Northampton Co.

North Carolina—Farmers Interest is far superior to any other corn and out-yielded the others 15 bushels an acre. I consider it the best I ever raised.—W. R. Jenkins, —Guilford Co.

Alabama—It is the finest corn I ever planted.—W. O. H., Franklin Co.

Alabama.—I never saw the like in my life. Farmers Interest grew 12 feet high and ears like a churn.—W. L. McGahey, Clarion Co.

Georgia—Farmers Interest is fully 1-3 ahead of other varieties I raised on the same kind of land.—C. W. Harvey, Catoosa Co.

Arizona—Farmers Interest corn more than doubles the other varieties that I planted. On account of it standing the hot sun better. I grows much better than the other varieties.—J. S. Russell, Gila Co.

South Carolina—Farmers Interest corn is far better than any other varieties and about 20 bushels more to the acre. It is a fine yielder.—W. F. Hodges, Colleton County, S. C.

Missouri—I consider Farmers Interest corn far superior to others. I am well pleased with my seed and treatment of the O. K. Seed Store.—C. I. Godwin, Polk Co.

Indiana—My Farmers Interest corn is the best corn I ever raised.—W. E., Martin Co.

By Planting Farmers Interest Corn

It Starts You at Once Where Successful Corn Breeders Have Developed this Corn After 17 Years of Breeding for Improvement.

FARMERS INTEREST is the Highest Bred Seed Corn in the World

If you want more corn and better corn you must look to the seed. A few dollars invested in Farmers Interest Corn will return the investment many fold in the resulting crop. Read in the other column what others have done.

Get 100 Bushels to the Acre

It is done every year with this corn. Read the testimonials. What is not in the seed you can not bring out in the crop. Plant this productive seed corn for big crops. This corn has taken more prizes than all other kinds together.

Largely because of this variet y Indiana's corn yield in recent years has averaged 20 bushels an acre more than Kansas, 15 bushels more than Nebraska, 6 bushels more than Iowa, 16 bushels more than Tennessee, etc. Indiana raises more corn to the acre than any other state.

Farmers Interest White Dent Corn

has been bred for improvement for 17 years. Every farmer who sends for some of this corn will at once reap the benefit of all these years of labor by expert corn breeders.

If you want large crops of corn; if you want a big price for seed corn, plant this corn in 1913. We advise prompt orders.

Mr. C. P. Hartley, physiologist in charge of Corn investigation, the Department of Agriculture, Washington, D. C., said: "Improvement of the quality of seed is the **least expensive** method of increasing the yield per acre," and "well conducted corn breeding requires **special methods** that general farmers have not time to apply. * * * The general farmer is a propagator rather than a breeder of corn. He **profits** by the careful work of the breeder by **adopting the higher yielding strains** and propagating them. Corn breeders are improving corn as cattle breeders have improved cattle. **Five Dollars a bushel will be a profitable bargain for both parties for such corn."**

The photograph shows one bushel of Farmers Interest Corn; 56 ears weighed 70 pounds and when shelled weighed 58 pounds.

DESCRIPTION—Color, white; class, dent; ears, large, uniform diameter and rounded with grains at both ends; about one-fifth the weight of dry ears is cob, four-fifths corn; cob white, medium size; grain deep, often grains measure three-fourths of an inch long; a strong grower, roots strike deep and wide; stalk tall and thick; often two ears are borne on a stalk; season about 110 days; withstands dry weather and winds remarkably; territory, adapted to all the corn belt south of the 41st parallel. Corn growers over a wide territory find in Farmers Interest their ideal variety. We believe it is to the interest of every corn grower to embrace our offer and start with this corn this year. Read the testimonials from growers about its great yielding qualities.

Price: **By mail, postpaid, 1 ear, 30c; 1 lb., shelled, 30c; 4 lbs., 75c; 10 lbs., $1.50. By freight or express, 1 peck, 75c; ½ bu., $1.50; 1 bu., $2.50; 5 bus., $2.25 per bu.; 10 bus. or more, $2 per bu. Bags free. All orders filled at once.**

If you prefer to know more about this corn send for circular before you order.

O. K. Seed Store

Dept. 10, Indianapolis, Indiana

For 33 years we have been introducing new and improved varieties of field and garden seeds.

READ THESE REPORTS:

Iowa—On 28 acres I raised 2,430 bushels of Farmers Interest corn. It's the finest white corn in this section.—C. F. Pearson, ———, Co.

Maryland—Farmers Interest corn has taken our section by storm. It is the greatest ever seen here.—S. B. O., Prince George, Co.

Kentucky—Farmers Interest corn yielded about one-third more than other corn. It is Al in quality and much better than the other corn I planted. The ears were large and were filled out at the end.—J. N. G., Boone Co.

Illinois — The Farmers Interest corn was ahead of all other varieties I raised this season.—G. A. L., Jasper Co.

Illinois — The Farmers Interest made about 10 bushels more than yellow corn we had to the acre. I will plant almost all my corn with Farmers Interest.—F. W. W., Mason, Co.

One Bushel of Farmers Interest Corn, 56 Ears, weight 70 pounds.

SIDNEY R. FEIL, Pres.
Registered Pharmacist
Graduate of the National Institute of Pharmacy

Tell Me How Many Head of Stock You Have and—

I'll feed them 60 days before you pay. I'll show you how to make your farm animals grow faster—thrive better—put on more flesh on no more feed—make you more money.

I'll Rid Them of Worms or No Pay

I'll drive out the blood-sucking, life-sapping, disease-breeding parasites which multiply in the stomach and intestines, killing off your hogs and sheep, starving your horses and cattle and stealing your feed and profits. I'll send you enough Sal-Vet to last all your stock 60 days. Simply put it where all your farm animals can run to it freely and they will doctor themselves. Send no money—just the coupon.

Sidney R. Feil President.

What SAL-VET Is and Does

Sal-Vet is a wonder-working medicated salt which completely rids farm animals of their greatest enemies — the stomach and intestinal worms. These deadly pests are the cause of 90% of all live-stock diseases. They keep farm stock in a poor, weakened, money-losing condition—they are the first step to hog cholera, swine plague, horse plague and other contagious diseases.

How SAL-VET Prevents Diseases

Sal-Vet prevents heavy losses when disease breaks out in your neighborhood because it kills and expels these deadly, life-sapping pests and puts every animal on your farm in a healthy, vigorous, worm-free condition—enabling them to better resist these deadly plagues. It sharpens the appetite, improves digestion and makes all stock grow fast into profit because it helps them get the good of all their food. Being a salt, animals like it and run to it freely—and

THEY DOCTOR THEMSELVES!

It requires no starving—no drenching—no dosing—no trouble at all. Leading agricultural colleges and all prominent live stock authorities endorse it.

Let me send you a 60-day supply without a penny of pay in advance.

Send No Money—Just the Coupon

SIDNEY R. FEIL, Pres.
THE S. R. FEIL CO.
Dept. UPF 4-1-13 Cleveland, O.

Ship me enough Sal-Vet to last my stock 60 days. I will pay the freight charges when it arrives, report results in 60 days and will then pay for it if it does what you claim. If it does not, you are to cancel the charge.

*Name*_____

*P. O.*_____

*Shipping Sta.*_____ *State*_____

*Number of Sheep*_____ *Hogs*_____ *Cattle*_____ *Horses*_____

All I ask you to do is to fill out the coupon, tell me how many head of stock you have and mail it to me today. I'll ship you enough Sal-Vet to last all your stock 60 days. You simply pay the freight charges when it arrives and at the end of 60 days report results. If Sal-Vet does not do what I claim you won't owe me a penny. Send the coupon NOW. Address

1091

SIDNEY R. FEIL, Pres.
THE S. R. FEIL CO. Dept. UPF Cleveland, O.

60-day shipments are based on 1 lb. of Sal-Vet for each hog and sheep and 4 lbs. for each horse and head of cattle, as near as we can come without breaking regular pkgs.

Proof That Proves
From Actual Users

"I find Sal Vet a fine remedy for hogs and horses out of condition."—O. M. Burbage, Churubusco, Ind.

"My experience is that Sal Vet is the best and greatest conditioner ever fed to sheep and hogs."—Charley Higgins, Route 1, Rouchdale, Ind.

"I can say that, in my opinion Sal Vet cannot be beat as a conditioner and worm destroyer."—J. B. Hughes, Dupont, Ind.

"I find Sal Vet just as good for hogs as you claim."—Thos. Secrest, Monrovia, Ind.

"Fed Sal Vet to my hogs with good results, although they were in pretty bad shape when I received it. I am well satisfied with it."—Jacob Klem, Sr., St. Anthony, Ind.

"Sal Vet is great for hogs; there is nothing like it. It saves its cost many times."—Bert Rusenburg, Route 1, Box 67, Mentone, Ind.

"I am glad to say Sal Vet proved to be all that you claimed for it, and I can honestly recommend it to anyone. In my herd I had one pig in particular that did not seem to get any good from its feed and I would have taken $3.00 for it. After feeding Sal Vet for six weeks I sold it for $11.50."—Harry Babb, Route 1, Goshen, Ind.

"I cannot find words to express how much I think of Sal Vet. Hogs all around my place had cholera, but I did not lose a single one of mine, and all winter they continued to look just fine. They had been on Sal Vet, of course."—Wm. Campbell, Route 1, Decatur, Ind.

"Cows from which we have been obtaining 26 pounds of butter a week show an increase in production to 36 pounds while on Sal Vet."—Tobias Weaver, Route 6, Elkhart, Ind.

"I am satisfied that Sal Vet is the best conditioner and worm destroyer I have ever used. It certainly is fine for getting hogs in shape to fatten."—Archie Patten, LaGrange, Ind.

"Sal Vet is a wonder. I had fourteen shoats that would not fatten. I fed them Sal Vet and I was very much surprised to see come from them rolls of worms from 12 to 14 inches long. These shoats began to mend at once and are now doing finely."—J. E. Snell, Flora, Ind.

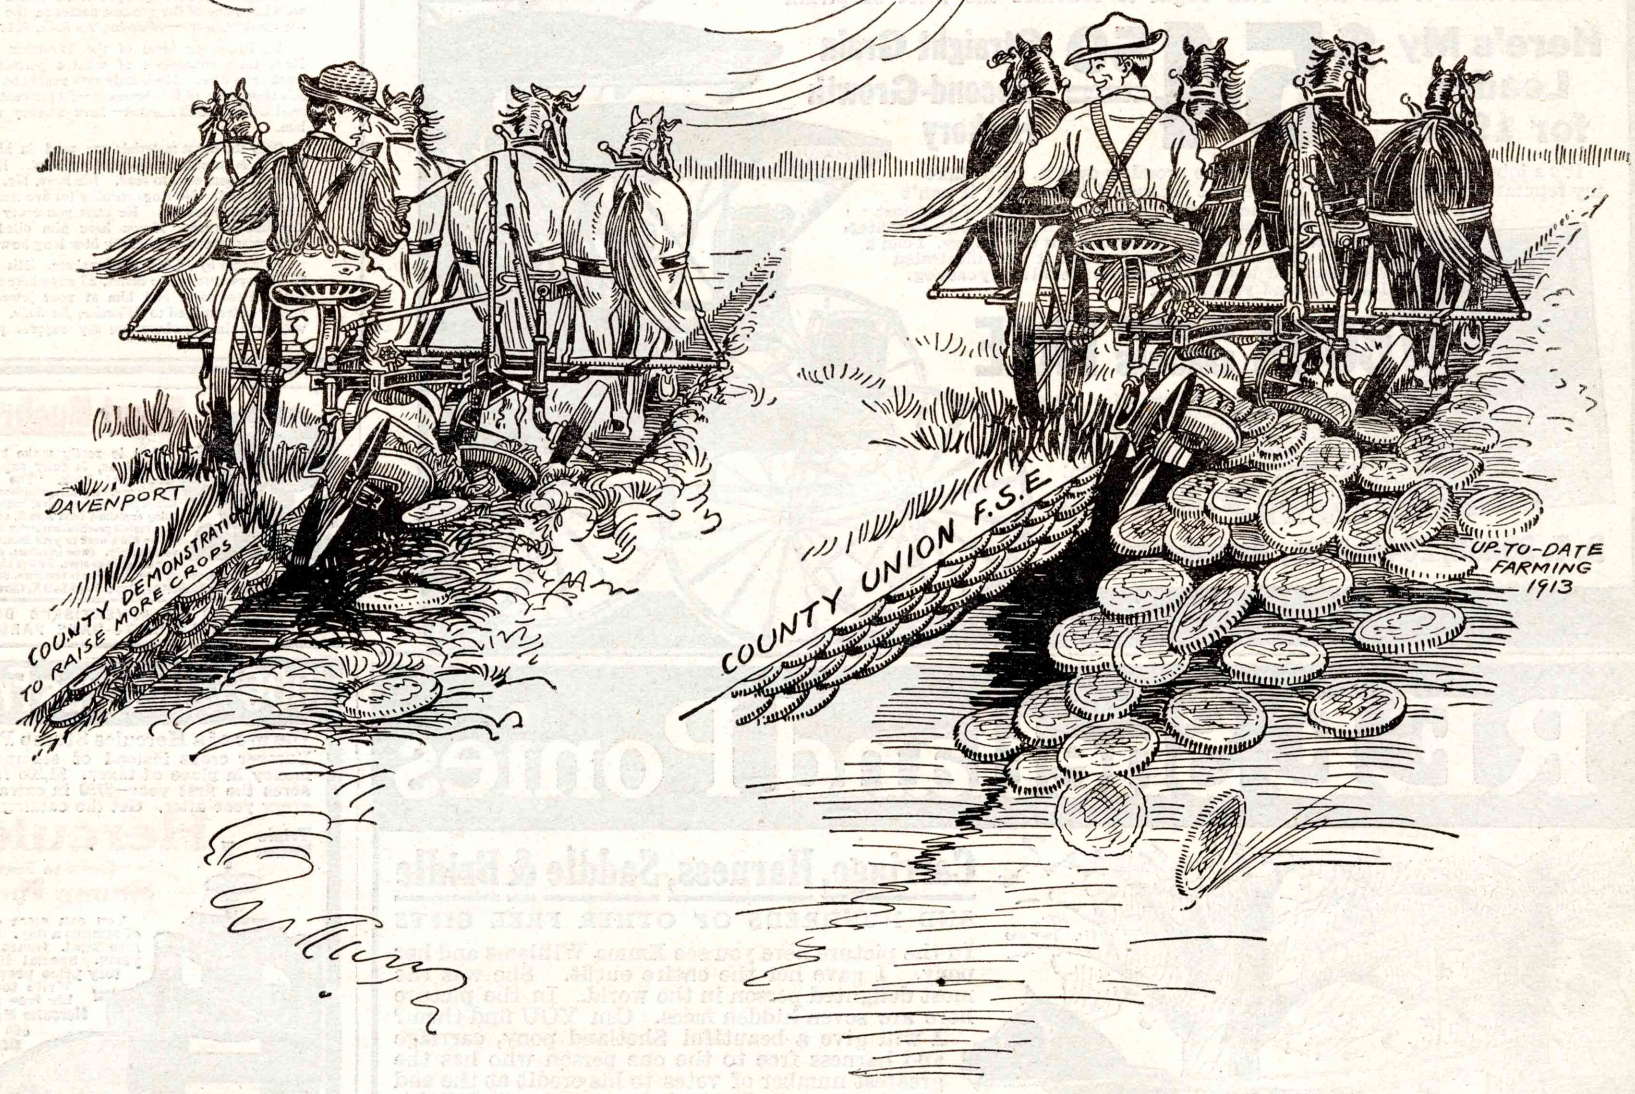
"I have given your Sal Vet the best test possible, feeding it to our sheep, hogs, horses and cattle. While none of my stock was actually sick when I began its use, still some sheep were somewhat 'off'—some of them coughing and running at the nose, and I am quite certain that they had stomach worms. Since keeping Sal Vet before them I have had no losses and the sheep are in much better condition than when I began. I am also feeding Sal Vet freely among my hogs, feeding it to brood sows, just before and after farrowing; it has greatly improved the appearance of the herd, given them ravenous appetites, and not one of my sows has had any trouble in farrowing. My horses and cattle are always well, but I give them Sal Vet to keep them so. It is a fine laxative, and a good preventive of disease."—S. Jett Williams, Route 20, Wadesville, Ind.

PRICES 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00: 500 lbs., $21.12. No orders filled for less than 40 lbs. Never sold in bulk; only in Trade-Marked Sal-Vet packages.

UP-TO-DATE FARMING

APRIL FIFTEENTH, 1913

Let the Farmer Become a Business Man as Well as a Worker A Business System Makes Him Such



The exclusively greater crop farmer, taking his instructions from the government or other demonstration agent, wonders why his soil produces him so few dollars and looks, with astonishment mingled with disgust at his own halfway methods, on his neighbor who brings system and science to the marketing. Mr. C. A. Lozier, County Business Agent of the Farmers Society of Equity for Baldwin County, Alabama, wrote this April 5, 1913:

> In selling our 1912 sweet potato crop, which is now drawing to a close, there has never been a time that we have not led all others, outside of the F. S. E. system, by from 5 to 10 cents a bushel, and a few times 12 cents a bushel. Never, for a single instance, has the Equity price been lower or even on a level with independent organizations.

Money, and not large crops alone, is the measure of success in farming. What Up-to-Date Farming teaches is how to put two dollars of profit in the producer's pocket where one went before. There is a lesson in this picture for every farmer in the United States.

BOHON'S "BLUE GRASS" BUGGIES

D. T. Bohon

"DIRECT from the Factory to YOU."

That means that I have cut out all heavy and unnecessary selling expense. I have no agents, no dealers, no salesmen. My only traveling-man is my catalog, and Uncle Sam's mail brings it to you at only 2c a trip. All wholesalers', jobbers' and retailers' profits are cut out and the saving given to you in my rock-bottom prices. You can't buy a better Buggy for the same money nor as good a Buggy for less money anywhere in the world. You can easily see how by being satisfied with my factory profit (which is all I would get if I sold to the dealer), I can sell you a Buggy at a saving of from $25 to $50. As to the quality of it, and the service it will give you, there can be no risk on your part because I ship every Buggy on

30 Days' Road Trial—2 Year Guarantee

Under this guarantee I will ship you any Buggy or harness in my catalog and let you use it right on the road for 30 days and submit it to any reasonable test in actual use. If it is not exactly as my catalog states I will refund every cent of your money and pay the freight both ways besides. And there won't be any argument either. And then if you keep the Buggy after 30 days' trial you are protected by my written guarantee for two years against any defect of material or workmanship. Behind my guarantee is a $30,000 bond deposited by me in the Mercer National Bank of this city. This ought to convince the most skeptical.

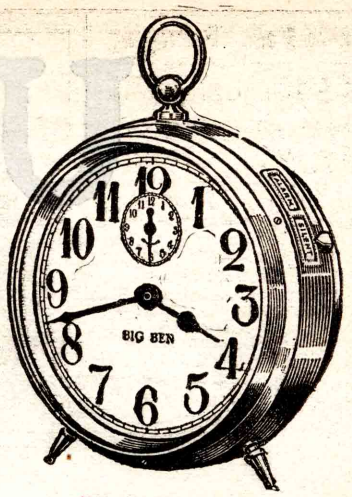
Here's My Leader for 1913 **$54.50** **Straight Grain Second-Growth Hickory**

It's a job I am proud of—and you will be proud to own it. I'll stake my reputation on it for quality and service because I know that it can't be beat for the price anywhere. All the brains and skill of the most expert workmen are combined with the highest grade materials that money can buy in turning out this Buggy. I can't tell you all about it here, but I've got it fully illustrated and described down to the smallest detail in my catalog. I want to send you this big

BOOK OF BUGGY BARGAINS FREE

Illustrated in colors and shows actual photographs of the Buggies I make. It will show you not only how the Buggies are made but how carefully every one is inspected and tested before it is shipped. Tells you how to select **your own choice** as to color, finish, upholstery, etc. I want you to have this book whether you buy a Buggy this year or not. Send me your name and address on a postal card, and DO IT NOW.

D. T. BOHON, 204 Main St., Harrodsburg, Ky.



The Men Who Make Big Ben

About 26 years ago a German clockmaker came from the East to La Salle, Illinois.

His only baggage was an idea—the plan of an automatic process he had invented, and which would make more alarm clocks and better alarm clocks than hand labor could ever hope to turn out.

With the backing of some local merchants and with a handful of clockmakers, a small factory was started on the edge of the town. —Beginnings were hard, competition intense. They weathered storms that would have knocked the fight out of weaker hearted men.

But when success at last came in sight they had built one of the best equipped clock plants in the world and one of the greatest names in the American clock industry—*Westclox, La Salle, Illinois.*

Big Ben is the ideal of the Westclox people. He is their conception of what a perfect alarm clock should be. He is only two years old, but in this short time 18,000 jewelers—70 per cent. of the total United States number—have already adopted him.

Only the finest materials are used in his making—he is strong, massive and punctual. His face is frank, open, easy to read. His keys, big, handy, easy to wind. He rings steadily for five minutes or intermittently for ten. He calls you every day at any time you say. If you have him oiled every other year, there is no telling how long he will last.

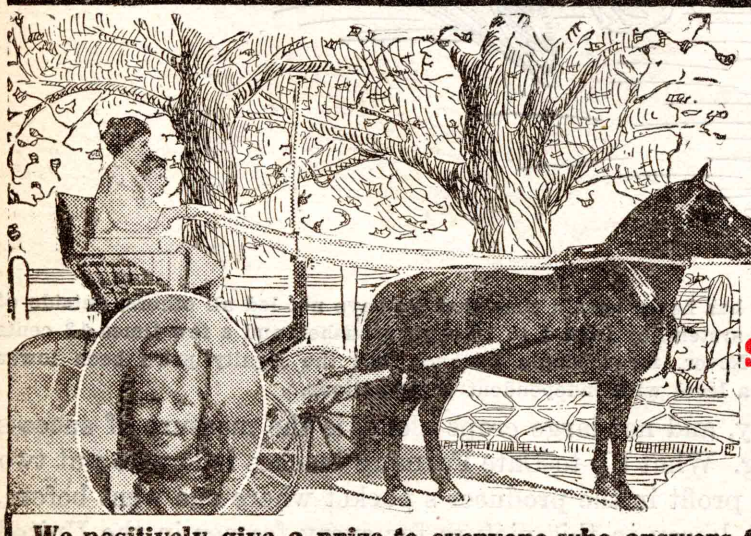
He's sold by 18,000 watchmakers. His price is $2.50 anywhere in the States, $3 anywhere in Canada. If you can't find him at your jeweler's, a money order mailed to *Westclox, La Salle, Illinois,* will send him anywhere you say express prepaid.

About Mushrooms

How to really make big money in mushrooms, is fully explained in the wonderful book, "The Truth About Mushrooms," a great revolutionary improvement, things many growers never knew before. Everything explained from A to Z, at first hand, from the greatest practical authority in America. Add $10 to $70 a week to your income. Demand exceeds supply. Grow in cellars, sheds, boxes, etc. Small capital to start. Profits bigger and quicker. Any one can do it. Women and children, too. Now is best time. Send for free book. Bureau of Mushroom Industry, Dept. 37, 1342 N. Clark St., Chicago

WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING

FREE Shetland Ponies



Carriage, Harness, Saddle & Bridle

AND HUNDREDS OF OTHER FREE GIFTS

In the picture here you see Emma Williams and her pony. I gave her the entire outfit. She was the most delighted person in the world. In the picture here are seven hidden faces. Can YOU find them? I will give a beautiful Shetland pony, carriage and harness free to the one person who has the greatest number of votes to his credit at the end of this contest. For each face you can find in this picture I will give you 1000 votes as a starter. Now this is YOUR chance.

SEND NO MONEY— Just Your Name and Address

Mark the location of the faces with an X plainly, and we will immediately enter you as a contestant for this magnificent Shetland pony outfit, which includes pony, carriage, harness, saddle and bridle; all sent direct to your home, all charges prepaid. A more beautiful pony you never saw than this one. As soon as we hear from you we will send you his picture, also full particulars telling how you can easily secure him—besides the pony we have hundreds of other presents we give away.

We positively give a prize to everyone who answers this advertisement! So be sure and send your name in today with the hidden faces all plainly marked and get the free pony votes. It is the easiest thing you ever saw. I have given away over thirty Shetland ponies to boys and girls all over the United States, besides thousands upon thousands of other beautiful presents. Be sure to write today.

Address, MATT. YOUNG, Pony Man, 546 La Salle Avenue, CHICAGO, ILL.

1000% Returns From

the use of a Hercules Stump Puller. Bumper crops instead of stumps. Big money in place of taxes. $1,200 from 40 acres the first year—$750 in extra crops every year after. Get the catalog of the

Agreements as to Selling

THE only way that farmers can acquire the common right denied to nobody else, the right to price their own property, is by means of agreements as to selling; and none are disposed to deny them that right except those who benefit by buying the products at the buyers' price and then holding and selling them to the consumers at the sellers' price. Yet it is a fact that the monopolistic concentration of trade in the higher circles of commercial affairs has worked so disastrously that legal efforts have been resorted to to suppress the evils of such monopoly.

But, as is usually the case, such efforts are made too sweeping and punish the innocent more than the guilty. For instance, a bill in the New Jersey legislature while President Wilson was governor of that state, provided that persons who "make any agreement by which they directly or indirectly preclude a free and unrestricted competition among themselves in the sale or transportation of any article or commodity, either by pooling, withholding from the market or selling at a fixed price, or in any other manner by which the price might be affected," shall be subject to three years' imprisonment and $1,000 fine."

Of course, this is only in the state of New Jersey, but it shows the drift of such things and the reckless wording of measures that seek reform. We do not know that Governor Wilson favored the measure, but we trust as President his views are more liberal, that he can discriminate between wrong and reason, and that he will favor in all things the use of such language as will fix the blame and punishment where it belongs.

Others view this important matter as we do. It is an error in the use of words rather than an intent to injure innocent people that seek only fairness to themselves and a chance to do business on a business basis, without harm to their real customers. We quote from a prominent eastern publication on this same measure:

> Apparently this would hit all co-operative associations among farmers for the marketing of fruit and vegetables. Practically all such associations are pools—all of them are entered into for the express purpose of preventing competition among the members in the selling of their produce; the primary object of all of them is to affect the price.
>
> In various instances these co-operative associations have been the farmers' salvation. So long as they marketed their fruit or vegetables competitively, each grower acting for himself, they got no return for their labor and investment. It was only when they marketed through a co-operative pool that they made any profit. At the same time these co-operative associations, in nearly all cases, have raised the grade of the fruit, introduced better packages, and as a net result have increased the price to the ultimate consumer very little, if at all.

Under present business systems farmers must co-operate or there is little in the future for agriculture. Already farming is surrounded by so many business difficulties and discriminations that farmer boys scarcely wait to become men before they leave the farm, and the most unfortunate thing of all, the farm girls do the same. When a man produces something in a shop, or offers something for sale over a counter, he names the price at which he will sell; but when he produces something on the farm, though that something may be to prevent the starvation of man or beast, the buyer offers the price, and the business conditions of agriculture compel the farmer to accept it.

The only hope for agriculture is a different system of selling; not the creation of a monopoly, not the fixing of exorbitant prices, not the obstruction of trade or the withholding of supplies, but the reasonable, sensible business agreement that will take farmers from the helpless, subservient class and give them a just business relation to the world; and, as quoted above, "increase the price to the ultimate consumer very little, if at all."

Will the lawmakers forbid it?

A Vital Question Everywhere

REFERRING to the problem of price and marketing in the great southwest, the Business Farmer says it is indeed a vital question, and should have the best thought of every man who has the good of the country at heart. It is a poor policy, the paper declares, to bring settlers to the southwest, dump them down on a quarter section of land, and pay no further attention to them. A farmer is busy working his crop, and in studying how to care for it, and cannot, therefore, devote much time to seeking for it a profitable outlet after it is made. In fact, not many farmers have had the training or experience to be successful business men. There is no question, admits the publication referred to, but what farmers are making wonderful strides in developing business ability, but there is yet much for them to learn before they will have reached a point where they can market their stuff at such profit as they are entitled to.

This condition is not alone in the southwest; it is all over the country. As a business matter farmers have the poorest chance of any other class of people. Practically, they have no show at all. When they plant a crop they can only guess what the yield will be, and they can make no estimate as to what price they will receive. So-called market bulls and bears, conscienceless speculators and gamblers, determine that, and the farmers, under the present system, must bow to their dictum and accept whatever price is offered. Why should these things be so? There is a great cry going up from every city and populous center about the increased cost of living, and, on the other hand, the farmer is begging for a market at which he can sell his products at a price which will give him enough to pay for raising them. Thousands of people are clamoring for an opportunity to buy foodstuff at a price within their means, and if they could get the stuff that is practically going to waste in all the producing centers, at prices the farmers would be glad to accept, they would joyfully "eat and be filled." In my opinion, says a writer, the great trouble is the cumbersome method we have of marketing our products. The producer and consumer are too far apart. There are too many tolls to be taken from the time the article leaves the farmer before it reaches the consumer.

All who have studied the situation agree to these truths. Could a more important question appeal to state or national leaders? Producers and consumers are not necessarily so far apart. They are often in adjoining counties, sometimes on adjoining farms, but the stuff must go in bulk to the city markets, and then return to consumers with costs and immense profits added. If this is not true, show us that it isn't. It is strange the builders of Panama canals, the irrigators of millions of dry acres, can do nothing to remedy an evil like this.

Planning a Bureau of Marketing

THE new Secretary of Agriculture, the press tells us, is planning a bureau of marketing in connection with the Department of Agriculture, and that President Wilson approves the plan, the object being to bring the products of the farm to the homes of the consumers at reduced cost.

The first work of the bureau, we are told, will be to get farmers to form co-operative societies for the marketing of their products. They may thus, the authorities say, as we have argued for years, not only receive better prices for their stuff, get lower freight rates by shipping in bulk, and be able to sell cheaper to the users. A prominent feature of the work is to have the products pass through fewer hands, and thus get more directly to the consumers. This must necessarily reduce the cost of living; for it is declared that the handlers, or dealers, now in such excessive numbers, increase the cost to the consumers almost a hundred per cent.

Another matter that could thus be easily worked out, and that has been the foundation of our argument for all these years, is bringing the supply and the demand in touch with each other. In the self-constituted, profit-accumulating system, the supply is gathered in a few great centers, and the demand must seek the supply from these centers. Often this takes the supply so far away from the demand that it becomes wholly impractical to return it thereto. This reduces consumption and contributes to the oversupply that the marketing system is so eager for, as it enables them to knock down the price to the producers, but does not interfere with the price charged the consumers.

We do not know how efficient this bureau may become, but farmers should note that the authorities consider the organization of the farmers one of the first essentials to success. Without organized co-operation farmers can neither sell nor buy collectively, and if they cannot do that they cannot get benefits even from an established bureau of marketing in the Department of Agriculture. And since our crops are practically nation-wide, that co-operative organization must be nation-wide. Since it would entail too great a delay to await the completion of a nation-wide organization, it is up to those already organized to federate and act together.

Agricultural Fairs

THE first agricultural fair ever held in this country for the competitive exhibition of stock and farm products was held at Georgetown, near Washington City, May 10, 1809, under the auspices of the Columbian Agricultural Society. A newspaper report at the time, says the fair was "attended by the President and his lady, the Secretary of State, the Secretary of the Treasury, the Secretary of War, and many other ladies and gentlemen of respectability." This fair was held twice a year until the British war of 1812 broke it up. The oldest agricultural society that still exists and is still holding fairs is the Berkshire Agricultural Society at Pittsfield, Mass., whose first fair was held in the fall of 1810.

Foreign Investigation

THE national government joins with the southern commercial congress in an extensive investigation of various conditions in foreign countries. The recent Congress appropriated $25,,000 for the expenses of several commissioners to be appointed by the President and who are to co-operate with the American commission. The plan of the southern commercial congress was only to investigate the rural credit systems in vogue in the various countries, but the administration adds to that subjects of far greater importance. As we have said in other articles, no investigation of the money question in other countries could be of much benefit to us. So far, little is proposed in the way of monetary reform which does not in some way involve the lands and farms and homes of the people, providing a range of so-called rural credits which will bring real estate securities into the stock markets, and make it possible for a system of land bond or mortgage speculation that would be fatal to the independent ownership by the farming masses of the lands they cultivate and live upon.

But the national government has enlarged the scope of the commission so as to make it include a thorough investigation of all forms of co-operative production and distribution in the agricultural field. This includes co-operative purchasing organizations, co-operative and municipal markets where farm produce is sold by agents at a fixed commission, the entire balance of the proceeds going to the farmer direct, and also co-operative associations for packing and distributing farm products.

This may easily be made to include the entire farm marketing system. In fact, it does include that and it is well known that an immense system of co-operative organizations is spread all over Europe, and that there is no such toll-taking system in any of the European countries as we have here. President Wilson, it is said, takes a keen interest in this subject, and any proposition looking to more business-like marketing and better distribution will have his support. Secretary Bryan has instructed the American ambassadors in Europe to secure for the commission "such courtesies and assistance in the line of its endeavors as it may be possible to obtain." This gives the commission a semi-official standing, and assures to them not only the courtesies but the assistance of the foreign governments in their investigations.

Supply and Demand Must Know Each Other

AN appeal comes to the Business Farmer from a farmer in New Mexico. "If possible," says the writer, "I want you to help us find a way out of the dark place and confusion in which we find ourselves." He says most of the pioneer difficulties in that strange new region have been overcome, but their greatest need is as much out of their grasp as ever it was, and it is involved in the question, "What shall we raise, and what shall we do with it after it is raised and ready for the market?" We quote:

> The majority of the farmers are not able to wait on alfalfa and fruit crops. Pink beans have been cheap for the last two years, and hardly pay the cost of raising them. Maize and cane do not pay good profits, and are hardly the crops to raise by irrigation in this valley, so the great question is, what shall we raise that will return a reasonable profit for the money expended?
>
> We could unite and raise enough cantaloupes to ship a car daily, if we only knew where to ship them, and where to sell them at a price that would leave us a little profit. We could also unite and grow cabbage, potatoes, onions, broom corn—in fact, a number of things, if we only knew where we could find a reliable and profitable market. As it is now, suppose we raise a good crop, we are at the mercy of commission men, and, more often than not, fail to receive a price for our produce that will in any way compensate for the trouble and expense of raising it.

Our friend in New Mexico is not by himself. Practically the same problem is before every farmer in the United States. It would be easy to determine what to raise everywhere, and all could raise big crops if they only knew how and where they could dispose of the surplus at a profit. The government opened up western lands, and offered farmers homesteads if they would go and settle there, and open up farms and increase farm production. The railroad companies that wanted more freight to carry seconded the motion, and urged bigger crops. Great manufacturing corporations that were anxious for more customers joined in the refrain and showed how to make the farms larger so it would take more machinery to work them. Fertilizer makers concluded the lands were not so rich as they should be, and urged that it would be easy to make the acres produce double.

So it has been through the entire list, not even leaving out the United States government. Let us be more than fair, and concede that these people wished to benefit the farmers as well as themselves. But they stopped at more and larger farmers and increased production. Not a thought or a word as to what should be done with the stuff. They felt there would be a demand for it somewhere, and supposed it would get to the demand. At the same time the cry was going up from the farms, "We can raise it, if we can find a reliable and profitable market," and the still more pleading cry came back, "We need it all if we could get it." Supply and demand must get together. Farmers fear to produce because they don't know what to do with the stuff, and people do without, often suffer for it, because they don't know where it is. Whoever brings these two in touch with each other will be the greatest modern benefactor of the race. He will solve the production problem, and give agriculture such a boost as it has never had, and he will open a never-failing stream that will supply every demand for things that grow from the ground or that develop in the feed lots or pastures.

And it can be done. How easy does it seem to be to report the acreage and prospective yield of every crop; the cotton that goes from every gin, the livestock on every farm, and even the weather that is to be. Would it not be just as easy to get the information and report to the producers where every demand for their various products is, and to those who need them exactly where they can most easily and cheaply find the supply. This would require no more machinery than is now employed in matters of far less moment.

And how easy it would be to make this information available. A central bureau of direct information—information of like value to supply and demand—would accomplish the purpose. But as in so many other things, to make it available requires co-operative union—agreement, compliance and action; the two classes in touch with each other and getting together in mutual interest.

Smile Awhile

Ham and Eggs

"It seems that you just can't keep negroes from stealing chickens. Why is it?"

"They are so closely related; the negroes descended from Ham and the chickens came from eggs."

Best Not to Put Off

Late Stayer—Good gracious! It is nearly midnight. I'd better be going.

Miss Patience—After midnight, you know, will be tomorrow, and it is never best to put off till tomorrow what can be done today.

Couldn't Judge From Her Looks

She—Everybody says you just married me for my money.

He—Yes, everybody that sees you thinks so, but they are mistaken.

Different from Most Things

"The funniest thing about me," said the cucumber, "is that I do my best work after they get me down."

Sure Enough

They were up late. They should long since been at home and in bed. But they were discussing the question, "Do fish sleep?" and they were interested. The cheerful idiot was there, but he had not spoken. At length he rose with a yawn, and declared he must get himself home. "But before I go," he said, "I would like to ask one question; if a fish don't sleep why do the rivers and creeks have beds?"

Wanted Better Evidence

"Why don't you want me to marry your daughter?"

"Because you have no money."

"But I've got brains."

"Wanting to marry my daughter is no proof of it."

Straight and Crooked

Isn't it a little strange that a man is most likely to go crooked when he gets in straitened circumstances?

Didn't Need to Be Told

"Your hair is falling out," said the barber.

"Yes," replied the customer; "my head is so hard it couldn't fall in."

Most Essential

"They say they have at last discovered a means of making a surgeon's operation not painful."

"Does it take off his bill?"

One or the Other

"Yo' can't git ahead of a woman, Mistah Johnsing."

"How so, Mistah Whitish?"

"Ef dey can't cry yo' out of it dey'll use de flat iron. Pass me de liniment, suh, I need it on my haid."

Increasing His Business

"I understand Bilkins is going to marry old Million's daughter, and thereby enlarge his business."

"How so?"

"Instead of merely pleading law he'll plead son-in-law."

It All Depends

"What kind of a season are we going to have, Uncle Joe?"

"It is rather hard to tell. You see, it depends a great deal on the weather."

A Laggard

De Roads—I'm doin' me best t' relieve th' unemploy'd.

De Barns—Wot are youse doin' fer 'em?

De Roads—I'm trying ev'ry day not to git work.

Mr. Dooley and the Floods

"Good mahrnin', Hinnissy!"

"Good mahrnin', Mister Dooley! How are yez falin' after th' flood?"

"Hinnissy, I fale as if I'd bin run through a wringer. It's goin' to take more than wan day iv soonshine to dry me out."

"I thought ye wus always dry, Mister Dooley."

"Not always, Hinnissy, though most iv th' toime I'm so hoongry that I could avin ate a breakfust food an' not know it frum rale vittuls. I have a grate rayspict f'r Ooncle Noah an' th' way he managed that ould ark iv his. A mon nivir knows what momint his house will disappear an' his fam'ly be carried away whin th' ragin' rivers git on a rampage an' shoove ivrything before thim."

"Th' bist thing about it all, Mister Dooley, is th' riddiniss with which ivrybody has given hilp f'r th' sooferers. It shows that after all we're all made iv th' same flish an' blood an' that blood is a whole lot thicker than water. Th' mon with good red blood in his vanes is th' mon that has th' stringth to open his pocketbook an' give to th' sooferin'."

"Hinnissy, th' saycrit iv it all is co-operashun. Whin th' floods come thin wan mon is hilpliss before thim, but whin a hoonderd min work togither they can save thimselves. Sooner er later min will lahrn that they can' shtand alone. What do we do in a big city, Hinnissy? We live off iv wan anither. Wan bizniss supports anither an' daypinds on a third. Instid iv lapin' at wan anither's throats we ought to be shtandin' foot to foot an' shoulder to shoulder an' workin' togither in a common cause. Th' projucer an' th' consumer have bit as fur apart in th' past as th' North Pole is from th' South Pole. I tell ye, Hinnissy, it's wrong, all wrong, whin th' mon that raises crops an' th' mon that ates thim are so fur apart that ye have to sind a Commydore Peary off in wan dirickshun an' a Cautain Amundsen off in th' ither an' till them not to come home unliss they bring in th' projucer an' th' consumer dead er alive, with their boots on er their sox off."

"There's th' wireliss, Mister Dooley."

"Hinnissy, did ye ivir hear iv two min carryin' on avin a daysins conversashun over a splutterin' little wire that ain't a wire at all? Did ye, Hinnissy?"

I nivir did, Mister Dooley, but I think they might try."

"Hinnissy, I tell ye, min must git so close togither that there won't be room enough baytween th' projucer an' th' consumer to git th' wires twisted. Do ye see, Hinnissy?"

Crop Prospects *and* Market Reports

Semi-Monthly Review of Crops, Market and Trade

This page contains a statement of crop conditions and prospects with a review of the markets, visible supplies and valuable comparisons, with advice about whether to market or hold. -:- -:- -:-

CROP conditions are generally good barring the overflowed districts in the flood zone and the fact that frequent rains in some sections are delaying the spring seeding. But last spring's work was also delayed very much, over a very wide extent of territory by bad weather, yet nearly every crop broke all previous records. Therefore, there should be no cause for alarm. Winter wheat, except where damaged by the floods, is in almost perfect condition. Where winter wheat and grass were lost by the floods the ground will be planted to summer crops. Spring wheat seeding is under way under only fair conditions. Last year a record-breaking crop of spring wheat was produced, but a short crop of winter wheat was harvested. Will this be reversed this year? Very likely.

We cannot see anything in sight on which to base an improvement in wheat prices. It all depends on the future weather. The visible supply scored a good decrease, but what is left puts control quite beyond the farmers, even though they could act

in concert. The table shows that wheat is now worth slightly more than a year before, and under the chart we see that the cash prices for No. 2 red winter wheat went below $1.00 about the middle of March.

Corn visible supply decreased slightly. The movement to market will probably be less because of spring work in the fields, and a moderate advance in price may be looked for. The price a year ago was about 20 cents a bushel higher. The lowest in March was 49 cents and the highest was on the last day of the month, 53¼c. Corn that is held will only trickle to the market, as it is being held for live stock.

That oats has its friends is evidenced in the visible of only 17,000,000 bushels, which is only a trifle more than the two preceding years, although the crop was greatly in excess. There is an immense amount of oats still in farmers' hands, and a spring or early summer drought will turn it into gold. As the price is down to cost of production we believe it's worth a gamble to hold it. The price is higher than two weeks before, but, like corn, is 20 cents lower than a year before.

The final estimate of the 1912 cotton crop is 14,000,000 bales. The crop of 1911 was about 16,000,000. Reports from the cotton belt indicate an increased acreage this year over last.

Early vegetable and fruit crops of the south are competing with heavy surpluses of the north carried over. This is against values for both. Apple and onion prices are demoralized. It's a question of getting anything for them. Think of fine old onions at 25 to 30 cents per sack after keeping them in storage all winter. The loss in this case falls mainly on the speculator, although the grower got practically nothing last fall. Losses on apples, onions, cabbage, eggs and some other things will make storers more cautious in the future, and the farmer will suffer in reduced prices this season.

The following tells the balance of the market story:

VISIBLE SUPPLY

The visible supply of grain in the United States by Bradstreet's reports on March 29, 1913, with comparisons, are shown in the following table. (The sign — before figures means decrease, X indicates increase.)

	Mar. 29 1913 Bushels	Change from 2 wks. before Bushels
Wheat	65,192,000	—3,246,000
Corn	25,052,000	— 118,000
Oats	17,058,000	X 314,000
Barley	5,931,000	— 246,000

The visible supply of wheat in Canada on the same date was 43,922,000 bushels. This is 645,000 bushels less than two weeks before and 11,359,000 bushels less than a year before. The visible supply of oats was 9,912,000 bushels on the same date, which is 1,346,000 bushels more than two weeks before and 440,000 bushels less than a year before.

CLOSING PRICES OF CASH GRAIN

Cash grain closed in the leading markets on April 5, two weeks before and a year before as follows:

WHEAT, NO. 2 RED

	April 5	2 Wks. before	A yr. before
Chicago	1.03 @1.06	1.02 @1.07	1.04 @1.04½
St. Louis	1.07	1.01½@1.08	1.04 @1.05
K. City	1.01 @1.06	1.01 @1.07	1.01½@1.02½
Cincinnati	1.08 @1.11	1.08 @1.11	1.04 @1.06
New York	1.11½@1.13		

MINNEAPOLIS—Spring Wheat: No. 1 hard, 88⅞c; No. 1 northern, 86⅜@88c. Two weeks before, 86⅜c and 85@86¼c respectively.

CORN, NO. 2 WHITE

Chicago	56 @56½	53	76 @77
St. Louis	56	54	79½@80½
K. City	55	51½	78 @79
Cincinnati	57½@58	55 @56	81 @82
New York	59		

OATS, NO. 2 WHITE

Chicago	37¼@37½	34¾@35½	56¾@57
St. Louis	36½	34½@35½	58 @58½
K. City	35½@36	34½@35½	56 @56½
Cincinnati	37½@38	36½@37½	56½@57

FUTURE PRICES OF CASH GRAIN

Chicago grain futures closed on April 5, 1913, and two weeks before as follows:

WHEAT—May, 99¾c; July, 90⅞c; September, 90¾c. Two weeks before, 90½c, 90c and 89⅝c, respectively.

CORN—May, 54¾c; July, 55⅞c; September, 56¾c. Two weeks before, 53⅜c, 54¾c and 55⅜c respectively.

OATS—May, 34¾c; July, 34¾c; September, 34⅞c. Two weeks before, 33⅞c, 33⅞c and 33⅝c respectively.

COTTON

NEW YORK, April 5 ,1913.—Cash cotton closed as follows: Middling upland, 12.60c; middling gulf, 12.85c. The price is the same as two weeks before. It is $1.35 higher than a year before.

LIVE STOCK

Indianapolis Stock Market, April 5, 1913.

CATTLE—Range of day's quotations for steers ..... $6.75@8.75
Range of day's paying prices for steers.. 7.75@8.45
Good to choice steers, 1300 lbs. and up.. 8.25@8.75
Good to medium steers, 900 to 1250 lbs.. 7.60@8.00
HOGS—Range of day's quotations..... 8.50@9.40
Range of day's paying prices..... 6.50@9.45
Best heavies, 200 lbs. and up..... 9.35@9.40
Common to choice lights, 130 lbs. up..... 9.35

The prices of cattle are the same as two weeks before. The prices of hogs are unchanged to 50c higher than two weeks before.

CHICAGO PRODUCE MARKET
April 5, 1913

For advice about markets other than Chicago, write to the Farmers Society of Equity, Indianapolis, Ind. Chicago must not always be taken as indicating what produce will actually sell for when sent to the best market. Frequently there are much higher markets. We use Chicago quotations in our reports for the sake of uniform comparisons.

POTATOES—Arrivals by cars, with comparisons, follow.

	This week.	Last week.	Last year.
Monday	102	81	80
Tuesday	66	55	125
Wednesday	43	51	65
Thursday	54	47	71
Friday	75	39	104
Saturday	55	50	108
Total, 6 days	395	323	453

Market again had a weak undertone and stock of poor quality sold down to 38c. Trade was of fair volume for Saturday, but receipts of 55 cars were ample for all needs. Arrivals this week aggregated 395 cars, being 72 cars more than received last week, but 58 cars short of the total a year ago. More nice Rurals were included in this week's run, and they declined with the ordinary stock.

Sales reported were: Wisconsin, white stock, in bulk—2 cars at 38c, 3 cars at 40c, 3 cars at 42c, 3 cars at 43c. Rurals—2 cars at 45c, 2 cars at 46c, 1 car at 47c. Sacked—1 car dark at 39c, 2 cars at 40c, 1 car mixed at 44c.

Per bushel, bulk or sacked. Wisconsin, Kings or Burbanks, ordinary mixed to good sound ..... $ .38@ .43
Dusty Rurals, outside fancy..... .44@ .47
Minnesota, round white, bulk or sacked.. .40@ .46
Seed Potatoes in 2½-bu. sks., Early Ohios .43@ .48
Rose ..... .43@ .45
Triumphs ..... .40@ .45

NEW POTATOES—A carload of Florida white came in yesterday and met with good sale.
Per barrel, Florida, White No. 1.....$6.50@7.00
No. 2 ..... 4.50@....

The price of old potatoes is 1 to 3c lower than two weeks before. Two weeks before Florida Whites were, barrels, No. 1, $4.50; No. 2, $3.50.

ADVICE—Sell old potatoes at best prices obtainable. Northern holders should correspond with representatives of the F. S. E. in middle and southern states. Northwestern producers must take into consideration the freight and not ship too far. We expect prices to be lower.

SWEET POTATOES—Less have come in since there has been high water in a large section of the country. Supply shows decrease. Demand reported as moderate.

Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 yrs. before Bushels
3,490,000	X 9,296,000	X 24,295,000
557,000	X 6,141,000	X 4,337,000
978,000	X 1,152,000	— 974,000
657,000	X 3,251,000	X 4,262,000

Barrels, Illinois, fine stock.....$4.50@5.00
Hampers, Illinois, good ..... 1.00@....
A few really fine, straight packed, quoted a shade over.
Stock a little scabby or stock topped off.. .75@ .85
Poor ..... .50@....
Alabama, good ..... .90@1.00
Yams, Louisiana ..... .50@ .60

ONIONS—Market is dull and weak under excessive offerings of domestic and imported.
Sacks, 55@68 lbs., home-grown, yellow..$ .25@ .30
Red ..... .25@ .30
Poor no market.
White, choice ..... .25@ .50
Boxes, 1 bu., Spanish..... .90@....
Cases, Valencia ..... 2.65@....
New—Texas, cummer crates ..... 1.50@....

ADVICE—There can be no comfort offered the holders of onions. The crop was just too large for the abominable system of handling in vogue.

BEANS—The market is fairly firm for Pea Beans of good color. Not many of these in sight and demand fair. Stained, ordinary to common rule steady and easy. More of these than are cared for. All other varieties of Beans have been very quiet and slow for a long time. There is a small trade in Red Kidney, but little or nothing doing in Brown Swedish.

Pea Beans—Hand-picked, choice .....$2.15@2.25
Really fine, bright ..... 2.35@....
Prime ..... 2.05@2.10
Stock faulty ..... 1.25@1.90
Mediums nominally about same as Pea Beans.
Red Kidneys—Choice ..... 2.10@2.20
Prime ..... 1.90@2.00
White Kidney nominal.
Brown Swedish, long ..... 1.25@1.50
Round ..... 1.25@1.50
Limas, per 100 pounds..... 6.40@6.50

The price of Pea Beans is 15c to 25c higher, and other kinds are unchanged.

ADVICE—Put in fine condition and market gradually.

HAY—Receipts, 558 tons.. Timothy Hay scarce and firm. Demand good. Prairie hay quiet. Offerings moderate and demand only fair.
Choice Timothy Hay .....$18.00@18.50
No. 1 Timothy ..... 15.50@16.50
o. 2 Timothy ..... 14.00@15.00
No. 3 Timothy ..... 10.00@11.00

ADVICE—Sell gradually, but sell on the final market. Local shippers usually take $2 to $5 a ton for the part they do.

STRAW—Rye Straw quotable at $8.50@9.00. Oat Straw at $6.50@7.00. Wheat Straw, $6.00@6.50.

BROOM CORN—Demand just moderate.
Per ton, Illinois Corn.....$100@120
Oklahoma ..... 50@ 65
The price is unchanged from two weeks before.

ADVICE—The market is sick. The low prices will discourage many growers, and we will probably see better prices for a couple of years.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week. Cases.	Last week. Cases.	Last year. Cases.
Monday	14,156	16,820	15,066
Tuesday	26,855	23,395	17,489
Wednesday	24,212	17,867	16,959
Thursday	21,843	18,337	14,700
Friday	20,548	21,985	15,412
Saturday	25,921	19,535	14,414
Total	133,535	117,939	94,040

	Cases.
Receipts April 1, 1912, to Mar. 31, 1913	3,416,876
Receipts April 1, 1911, to Mar. 30, 1912	2,778,293
Receipts April 1, 1910, to Mar. 31, 1911	3,418,835
Receipts April 1, 1913, to April 5, 1913	119,379
Receipts April 1, 1912, to April 6, 1912	94,040
Receipts April 1, 1911, to April 8, 1911	157,955
Receipts April 1, 1910, to April 9, 1910	252,698

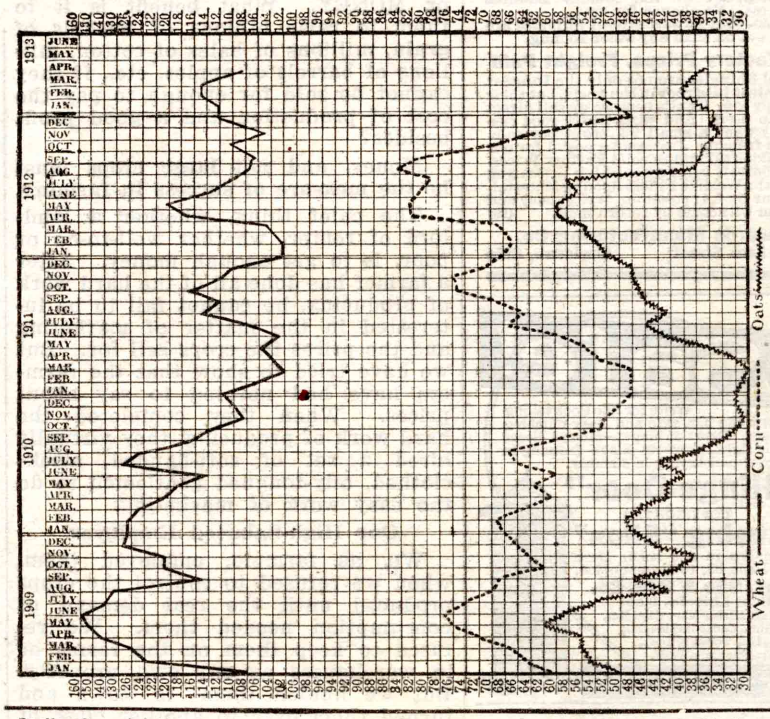
A firm feeling exists and quotations ½c higher.

General conditions remain about the same in this market. Supply large and trade good. The receipts are heavy and Eggs are offered freely, with buyers discriminating against some of the southern and southwestern lots—Tennessee and Oklahoma stock. There is a good demand from different sources, consumption being large, the outside order fair, and what surplus stock remains is being rehandled and placed in storage. Some speculative demand exists, and storage-packed are in good demand and firmer.

Miscellaneous lots—by this is meant Eggs as they arrive from the country—cover a wide range; cases returned, 16@16½c, depending on quality.
Ordinary firsts quotable at 16@16½c.
Firsts quotable 16¾@17¼c.
Checks—Fresh quotable 14½c per dozen.
Dirties—Fresh quotable 15@15½c.
Duck Eggs—A few offered; quotably about 20c per dozen.
Goose Eggs—Quotably about 40c per dozen. Very few on sale.
Storage packed firsts in some demand, and 18¼c bid, with a sale at 18⅜c.

The price is practically unchanged from two weeks before.

ADVICE—Organize. Decide on your price and store for your own account when the price will not be paid.



This chart shows the highest monthly cash prices for the three leading grains at Chicago, for a period 1909 to March, 1913, inclusive. The figures on right are prices in cents. The highest prices in March were as follows: Wheat, March 1, $1.08. Corn, March 31, 53c. Oats, March 7 and 24, 36 cents. The lowest prices were: Wheat, 90½c on March 17 and 18. Corn, 49c on the 15th, and Oats 32½c on the 18th.

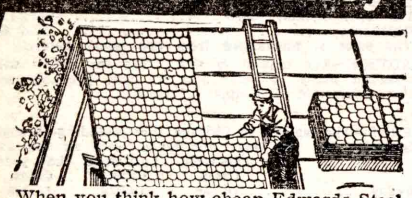
STEEL Shingles Will Save You a Pile of Money



When you think how cheap Edwards Steel Shingles are, how much longer they last, how much easier they are to put on than common-place roofing, it's hard to tell just how much we do save each buyer. It's a **big pile of money.**

They Beat Wood Shingles

The best wood shingles to be had nowadays seldom last 10 years, and it's a **long, slow, tedious** job putting them on. Besides, any building with wood shingles is a regular "fire trap"—apt to burn up **any moment.** Edwards Steel Shingles last over twice as long as wood, and as they come in big clusters of 100 or more, anybody can put them on in almost no time. Furthermore, they are **absolutely fire-proof** and are **guaranteed** so by a $10,000 Cash Bond.

No Chance of Rust

Unlike ordinary iron roofing, Edwards Steel Shingles never rust. With the Edwards Steel Shingle, the nails are completely covered by our patented interlocking device, and the edges are made absolutely **rust-proof** by the famous Edwards Tightcote Process. No chance for rust.

Remember, too, that Edwards Steel Shingles are much easier to put on than any other roofing.

Write for Factory Prices, Freight Paid

Edwards Steel Shingles are not only the **longest lasting** and **easiest laid** roof in the world, but their cost is amazingly low. That's because we sell direct from factory to user. And with 100,000 good customers, we only want **a small 9% profit per sale.** And we pay the freight. Just send a postal for our latest Roofing Book 491 and Special Factory Prices. Then see for yourself what astonishing prices you can now get on the World's Finest Roofing Material. Give size of your roof, if possible. Write today and our proposition will come by return mail. WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING

The Problem of Marketing Crops

By J. A. Everitt

These articles have been prepared to answer ever-occurring questions how a sound and enduring farmers' organization, equipped with a practical marketing system to protect the producers of crops, can be established. And the problems considered in this article are not solely farmers' problems, but problems that concern every individual in the United States. They are nation-wide problems, therefore they must have an interest for all the people. A careful reading of the entire article is urged.

Chapter III

FARMING MUST BE A MONEY-MAKING BUSINESS

Some Losses Under the Old System and Some of the Benefits Under the New

AMERICAN farmers are naturally proud of the fact that they raise the greatest crops in the world. But what are they working for? CROPS, or MONEY. What benefit is it to them to raise billions of bushels of grain, millions of bales of cotton, millions of barrels of apples, etc., if they cannot be sold for enough to pay the cost of production and a good profit besides?

Money, and not large crops must be the measure of success in farming.

The chief thing, whether a landlord of renter, whether well-to-do or poor, is to get enough money. After a farmer has done all of the hard work of producing, he cannot fail to be interested in the matter of marketing and the prices the crops sell for. But we have tried to show that the farmers have had nothing to say about prices. When they completed the hard work of producing, they virtually hired a set of soft-handed, sleek-clothed, oily-tongued gentlemen to do the easy work of marketing.

Our High-Salaried Employes

We, as farmers, employed them, when we refused to control the crops produced until the real demand of consumption needed them. We refused to keep them on the farms or in warehouses as our own property. But we hauled them to town and turned them over to another class of people to store and hold until the consumers were ready for them. The world could not consume them as fast as they were dumped and we would not hold them, therefore the other class of people were employed to hold them, and they took them in and stored them up and for such service we have been paying about $7,000,000,000 annually, according to the figures compiled by the Department of Commerce and Labor.

This is a sum greater than all the crops of a year bring to the producers. That is, the present system of marketing farm crops costs more to run it than the producers receive for all of the crops. We have been paying more to have the easy work of marketing done than we received for all the hard work of producing.

An Example in New York City

Under the present system the producers suffer appalling losses. To illustrate: A state committee investigated the prices and market facilities in the city of New York recently. It reported that the consumers paid about $500,000,000 for food at the kicthen. The cost of this food at the receiving terminals was about $350,000,000, showing a cost of about $150,000,000 for delivering and handling in the city. The committee did not report on the cost of transportation, packing and commission of country buyers, which probably amounted to as much as handling in the city. If we assume that this is correct, then, of the $500,000,000 that the consumers paid, the producers received only $200,000,000. In other words, it costs $300,000,000 for marketing $200,000,000 worth of farm produce in the city of New York.

Is it any wonder that within a half hour's ride of greater New York, with a combined population of over 4,500,000, there are fruit and vegetable farmers who hardly make a good living, while in the city the prices to the consumers are so high that many of them cannot afford the necessaries of life.

Stop Complaining

Talk about not being able to hire help on the farm, when we are paying this enormous sum to have our produce passed down to the consumer's kitchen? What right have we to complain of the lack of profits in farming? Or our inability to build up the fertility of the farm, or to make any needed improvement, or the lack of money to educate our children, or anything else, while permitting this enormous leak to exist?

We have shown how it can be ended.

As sure as the world gets hungry every day, farmers have it in their power to end this condition just as soon as they want to end it.

A Local Union at Every Town

There is not an agricultural community in the whole United States where a local union cannot be organized now, and such organization will give to the farmers of that community great benefits immediately, through using the Farmers Society of Equity System of Marketing and in buying supplies co-operatively. To show what may be done in almost any community, we make the following illustration:

Profits in Selling

Let us assume that one hundred farmers join together in a local union at your place. On a conservative basis each farm will sell in a year an avage of $1,200 worth of produce. The total business of selling then will be $120,000 for that local union. We can state from experience that 10 per cent is a low estimate of the gain that can be gained by co-operative selling, but this will amount to $12,000 to the local union, or $120 per member.

Savings in Buying.

Another activity is buying. We will

The Most Coveted Trophy Ever Won By Any Motorcycle

THIS diamond medal was awarded a Harley-Davidson when it won the National Endurance Contest held by the Federation of American Motorcyclists. So exceptional was the showing the Harley-Davidson made that the judges not only awarded it a diamond medal and a perfect score of 1000 points, but in addition, because of the super-excellent performance, gave it a plus five, or 1000 + 5 score in all. This is the first and only time any motorcycle has been so honored. It was a fitting tribute to the quality of the

HARLEY-DAVIDSON

and proved its absolute reliability and durability, as no amount of minor records could.

Harley-Davidson dealers everywhere are demonstrating its many features, among which are the *Ful-Floteing Seat* and the *Free-Wheel Control,* exclusive patented features, which make the Harley-Davidson "the comfortable motorcycle."

Ask your dealer for a demonstration, or write for catalog.

Phelps' FREE BUGGY BOOK

Write today *sure* for Phelps' new book on Split Hickory Vehicles. Shows largest selection in America—over 140—full and complete line of harness styles. 167,000 regular customers already. Phelps ships *direct* to you from his mammoth factories—no dealers' profits. You ought to have this fine book whether you buy now or later. It is buggy authority. Then too—

PHELPS Guarantees to Save You $25 to $40
Gives You a 30 Days' Free Road Test

Don't buy a buggy without Phelps book and low prices. Auto Seat Buggies, Runabouts, Surreys, Carts, Carriages, Spring Wagons, etc.—all of the famous *genuine* Split Hickory construction. Write immediately and get free book by return mail. Phelps pays the postage, too.

Address H. C. PHELPS, President
The Ohio Carriage Mfg. Co., Station 99 Columbus, O.

H. C. PHELPS *2 Years Guarantee*

assume that the average member buys $600 worth of supplies for the farm and farm home in a year. Then the business of buying will amount to $60,000 for the local union. A conservative estimate of what can be saved in buying co-operatively, we will place at 10 per cent. This will be a saving of $6,000 in a year for the local union, or an average of $60 per member. Assuming that our illustration is fair, or that it is an illustration for an average community, then a local union will be worth $180 a year to the average member. This will be $18,000 to the community. Counting only twenty such local unions in a county, it will mean $360,000 to a county.

A Sample of Hundreds

To show clearly just what others are doing, we publish the following letter. The only reason why we publish this letter and not some other one out of hundreds that come to National Headquarters, is because this letter came to the writer's desk at the moment he was writing this part of the article:

New Bethlehem, Pa.

Farmers Society of Equity,
Indianapolis, Ind.

Gentlemen—Received supplies for the county union O. K.

New Bethlehem local shipped one carload of buckwheat to the Larrowe Milling Company at Cohocton, N. Y., at $1.25 per hundredweight. The best price that our local people would offer was $1.10 per hundredweight. Our net gain on the carload was $80 to $85. This week the Limestone local will ship two carloads of buckwheat to the same company. Our local secretary is shipping chickens and veal to Pittsburg. Chickens net us 13 cents a pound and veal 14 cents a pound. The best price that we can get locally is 8 and 10 per pound, respectively. This is a good time to organize, as the results and profits from our business talk for themselves.

Fraternally yours,
R. M. FORRINGER.

There are tens of thousands of communities where the farmers do not know what a big spread there is between the prices they have been taking for their stuff and the prices that can be secured on the final market; or the prices they are paying and what the supplies can be bought for in large lots, and they will not know until they have a business organization to investigate into these matters.

Other Advantages of a Local Union

And then a local union will be valuable in other directions. For instance, besides selling and buying co-opertively, a local union makes the ideal condition for co-operation in farm work amongst neighbors, for hiring help, for protecting property from trespassers and thieves, for co-operative stock breeding, etc. The women can make the local union highly valuable and entertaining in a social way, while helping the husbands and fathers and brothers in their marketing problems. Even the young folks find the local a means of getting better acquainted, and any local union can be made the means of much entertainment for them.

Accomplish the objects of the Farmers Society of Equity through such an organization as we outlined, and the serious problem of keeping the boys on the farm and all other serious problems can easily be solved.

Farmers Alone Without a Selling Organization

We have shown that an average community does a business of about $180,000 a year. Now can you find any other set of people doing an equal amount of business that does not have a sales and buying organization. You cannot find one, yet the farmers in most communities have produced all they could and then blindly dumped the crops into the speculation hopper and thus employed another set of people to do the easy part of their work—the marketing.

For this service farmers and consumers of their products pay about $7,000,000 a year—a staggering sum—while farmers receive only about $6,000,000 for all they sell.

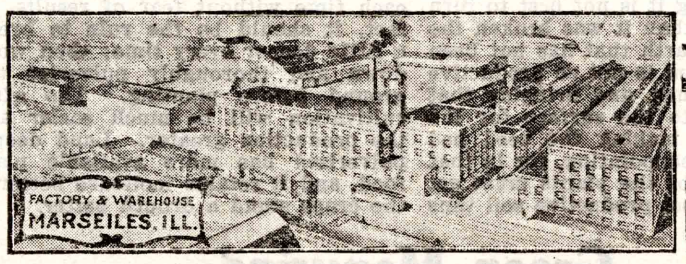
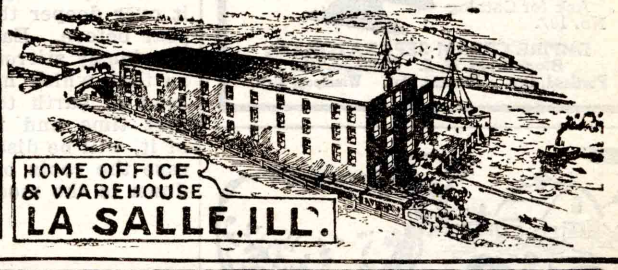
O'NEIL IMPLEMENT CO., LaSalle, Ill





Pigs Without Worms

S. R. Feil, Pres. . Reg. Pharm.

I'll Stop Your Losses From Worms
I'll Prove It 60 Days Before You Pay

I'll drive out the deadly pests that steal your profits. I'll make every animal on your place worm-free, thrifty, and put them in condition to get the full benefit of their feed—make them bring you the most profit—if you will just send me the coupon below.

Sal-Vet is not a stock food, but a medicated stock salt. It is saving farmers hundreds of thousands of dollars by breaking the grip of deadly worms on the live stock industry. No dosing, no drenching, no bother—just let your stock doctor themselves 60 days before you pay. You will be astonished at the results. **Prominent breeders endorse Sal-Vet.**

SAL-VET

"I write to say that I have been a free user of Sal-Vet ever since its introduction, and find that it is the most perfect worm exterminator on the market today. It will positively do all that you claim for it. There is nothing within my knowledge as good and reliable or as cheap."—E. O. STONE, Peoria, Ill., Sec. Amer. Hampshire Swine Record Ass., Pres. Ill. Swine Breeders' Ass.

"Please send us two more barrels of Sal-Vet at once. This is the best preparation we have ever used. We give all our sheep, horse, and over 100 hogs free access to it. It is all you claim."—A. J. LOVEJOY, Roscoe, Ill., Sec. Berkshire Breeders' Association.

Little Pigs only a few weeks old are often found loaded with worms. Hogs of all ages suffer from these parasites. They become run down, weak, then cholera gets in its deadly work. Read these letters. See what it means to have healthy, worm-free hogs when cholera breaks out in your neighborhood. Protect your stock at my risk.

"The hog cholera is all around us in this neighborhood, but so far there is not a single case among the hogs belonging to the men who are feeding Sal-Vet." -THOMAS CANNEDY, Roodhouse, Ill.

"Since giving our hogs Sal-Vet, all of them are well and doing finely, although hog cholera is all around us."—ED. COLLINS, Delphos, O.

All farm animals need Sal-Vet to make them big profit makers. I offer you Sal-Vet on a plan that makes it easy for you to try. You don't risk a single penny

Don't Send Any Money—Just the Coupon

If you will fill out this coupon—tell me how many head of stock you have—mail it to me, I will ship you enough Sal-Vet to last them 60 days You simply pay the small freight charge when it arrives and when the 60 days are up, report results. If Sal-Vet does not do what I claim—if it does not rid all your stock of the deadly stomach and free intestinal worms—I'll cancel the charge—you won't owe me a cent. Send this coupon today.

PRICES: 40 lbs. $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 500 lbs. $21.12. No orders filled for less than 40 lbs. Never sold in bulk; only in Trade-Marked "Sal-Vet" Packages. 60-day trial shipments are based on 1 lb. of Sal-Vet for each hog or sheep, and 4 lbs. for each horse or head of cattle as near as we can come without breaking regular packages.

WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING

Deep Breaking

"PLOW deep while sluggards sleep, and you will have corn to sell and keep," said Benjamin Franklin a hundred years ago. Dr. Franklin was like a good many of our farm "experts" today; he never had much practical experience on a farm, but he told a truth which perhaps he did not himself realize. Ground will become fertile, productive, as deep as it is stirred. In other words, the field that is habitually broken deep and worked deep can be depended upon for better crops year after year than can the one which is broken and worked shallow. The deeply plowed field not only absorbs and retains moisture better, but the air penetrates it, chemically acts favorably upon the plant food elements it contains, and leaves in it much of its own plant growing qualities. Soil to be productive must have air effects, and these it can not have until its native compactness is broken up, which is mostly the work of the breaking plow, though other means are now being introduced in some places.

This being the case, it is clear that the deeper the breaking the better, but there is one fact to be guarded against. In breaking ground for immediate planting it is not best to turn it over deeper than it was broken the year before. Earth that has not been previously stirred is not so productive as that which has, and bringing that kind of earth to the surface for the first time and making the seed bed of it, will be disappointing, for in that case the roots of the plants must get down to the most productive soil thus turned deeply under before they can make desirable growth. That is why we advocate the deep plowing in the fall. A field that has never been plowed deep and that seems to be exhausted from shallow culture, may be turned no matter how deep in the fall, allowed to lie and take the weather during the winter, freezing and thawing and thorough aeration, and then be turned again and worked well down in the spring, is in an ideal condition for production. Not so when broken much deeper than usual in the spring and the seed planted in the fresh upturned earth.

In these remarks we are discussing the compact clay lands. The deep black loams may be broken more deeply than usual at any time of the year without much fear of results. It is this difference in soil that makes some favor and some oppose deep plowing; but deep breaking is good for all lands, and the farmer that plows deep, whether he does so when the sluggard sleeps or not, is the one that will have corn as well as other products to sell and to keep. It only behooves him to adopt the time to the nature of his land. And after the first deep breaking and aeration, the compact lands may be broken a little deeper each time without fear of results. In fact, it should be the rule to break a little deeper every time; then work down and thoroughly pulverize the ground before planting. The after cultivation will be much easier and the production greater. Land deeply pulverized has more available plant food, and it retains moisture better—the crops stand a drouth better.

Green Manuring

The question of maintaining fertility on the farm is one that will not down. Plants must have food to live and grow upon, and if they grow and produce they will draw fertility from the soil, and that fertility must be restored or, ere long, the land will refuse to produce. Good cultivation, judgment in the rotation of crops, barnyard manure and commercial fertilizers—these are all elements in the maintenance of fertility. But they are not enough, and they cannot be made enough.

The plowing under of suitable crops must supply the deficiency. To be tillable and productive the land must have humus as well as fertility. Humus is decayed vegetable matter. It is not really a plant food, but it prepares the soil to furnish the plant food. Crops turned under supply this in an ideal manner. For this purpose there is nothing better than the leguminous crops, the clovers and kindred plants. These plants store nitrogen from the atmosphere, and they also gather some potash and phosphorus. When they are turned under the vegetables fiber quickly becomes humus, and all their other elements of fertility are added to the soil.

Yes, we agree that it takes courage to turn under a crop of clover or field peas, but it takes money to ricly treat with commercial fertilizers, or with the elements bought separately and mixed at home; or to get enough barnyard manure to accomplish the purpose. Barnyard manure furnishes humus, but the chemical elements do not. So the farmer is up against it. He can't so well afford to buy the stuff in sufficient quantities as he finds it on the market, nor can he afford to cultivate land that cannot produce. About all there is before him, then, is to grow crops and turn them under.

Predicted Bumper Crops

OF course, our readers noticed that, during the latter part of March, the press was full of predictions of great crops for the approaching season. These predictions were based on alleged investigations in all the leading agricultural states, and many of them quoted official reports from state and national agricultural authorities.

Who knew at that time what was likely to be? Since then the great farming sections, north and south, have had the most destructive storms the country ever knew, and these storms and floods, early as they came,

must unfavorably affect production, to what extent no one can tell.

But why these proclamations of approaching great crops? If it were an actual fact, what benefit would the knowledge be to the farmers? Would it induce them to plant less or more? Could it enable them to more wisely choose the crops they would grow, or would it make cultivation any easier?

Are there any whom such reports would benefit whether true or false? Let us see. A large percentage of last year's crops, a larger percentage than usual, is still in the hands of the farmers. Farmers have been slow to sell, and are still not rushing their stuff to market at the reduced prices the market manipulators persist in offering. If these holding farmers could be made to believe that great crops were at the door, they would be more inclined to sell, wouldn't they? They would think it better to unload before the new bumper crops came in. This is the secret of the whole thing. The speculators want to buy, and this plan has been devised to scare the farmers into selling. The press has lent itself to the scheme, whether purposely or ignorantly only themselves know. We make no friends in telling it, but farmers look to us for facts they cannot get elsewhere, and we propose to give them those facts.

ANOTHER WORD ABOUT SEED

APRIL 15. Our readers are not all done planting corn yet; in fact, not many in the corn belt have commenced. How about the seed? You know as well as we that the crop depends upon the seed. You can't raise better corn than you plant, and you can't make acreage yields unless the acres have growing corn upon them. Missing hills scattered over the field have the same effect on the yield that an unplanted strip would have. Yet you must cultivate the whole field. Do you believe you could get better seed than you have, but you hesitate at what it may cost? A slight additional cost of seed is not to be compared with the value of a full yield of superior corn. As the first and greatest element of success, we urge good seed.

WATCHING THE SHEEP

A GOOD average flock of Shropshires that have been well wintered, should yield an average of nine to ten pounds of good wool. Letting the sheep run down in condition injuriously affects the wool.

Sheep should never be allowed to drink from stagnant pools, and they should not have to wade into the mud to get water. In such case they are very likely to take into their system insects or larvae that will be harmful to them.

Don't keep sheep too long on the same pasture, especially if it is so small they can nip it close. Arrange so that they may have frequent changes. This may be made advantageous to the farmer as well as to the sheep. Let the flock get into the worst weed fields about the time the weeds are beginning to grow. It will not be so bad a weed field next year. Good fences, making it convenient to change the sheep from field to field has a tendency to put the hoe out of commission.

Shearing time is a good time to thin out the flock. Keep none but the strongest and most profitable sheep. The handling necessary in shearing enables the owner to pick them out. Mark the light fleeced ones and those that have unthrifty lambs.

Guided By It

"I am sure any farmer who will accept Up-to-Date Farming as his guide will soon be better off than he ever was before."—Allen.

DE LAVAL
CREAM SEPARATORS

Save Their Cost Every Year of Use

If you are thinking about buying a cream separator, and have only a small amount of ready cash to invest, don't be tempted to put your money into one of the so-called "cheap" machines.

Why pay your hard-earned money for a "cheap," trashy machine, when you can buy a reliable De Laval upon such liberal terms that

It will more than save its cost while you are paying for it.

When you buy a De Laval you have positive assurance that your machine will be good for at least twenty years of service, during which time it will save every possible dollar for you and earn its original cost over and over again.

If you purchase the so-called "cheap" separator, you must pay cash in advance and then take the chance of the machine becoming worthless after a year or two of use, to say nothing of the cream it will waste while it does last.

More De Laval machines are in use than any other make. There is a reason. Be sure to see the local De Laval agent and SEE and TRY a De Laval before you buy any cream separator.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

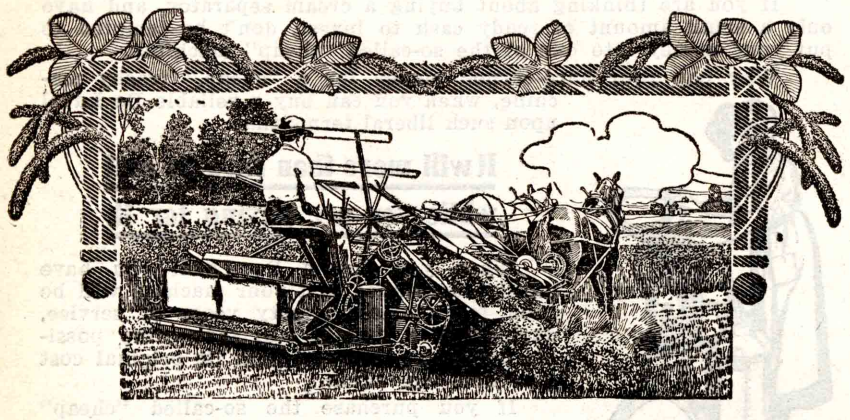
Why Incubator Chicks Die

The book entitled "The History of White Diarrhoea, or Why Incubator Chicks Die," will be sent absolutely free by return mail to anyone sending us the names of seven to ten of their friends that use incubators. This book can save you $100 this summer. It describes white diarrhoea or bowel trouble. The cause and tells of a cure. BOOK ABSOLUTELY FREE FOR THE NAMES.

Raisall Remedy Co., Blackwell, Oklakoma



Safety at Harvest Time

ALL your work leads up to the harvest. At that point you plan to coin the season's labor.

Are you ready for the harvest? Are your machines all in good working order? If there is any doubt, now is the time to look into your machine shed and see.

It is far better to buy a new machine before harvest than after. Get your new machine with the I H C trade-mark and with one of these time-tried names on it—

Champion Deering
McCormick Milwaukee
Osborne Plano

Any one of these will save delays and insure a speedy harvest without loss of grain.

Now is the time to look over your equipment. If it takes a new machine, order now. Nothing is gained by waiting till the last minute when you cannot expect the service you can command now.

Remember the dealer can give you more time now. The machine you buy now has been made before the rush. You are safer with the machine at home properly set up early than hauling it home after the grain is ready to cut.

If repairs are needed, order them now. If your dealer does not have what you need, he will be able to secure it in time so that you can put it on at your leisure.

Be sure you get I H C repairs and not imitations. The I H C repair part is made the same as the original on your machine except that it is strengthened if found necessary.

Buy your twine early, then you will be safe against a possible shortage. Better have a few balls extra than not enough. You can always use it.

Buy **Champion, Deering, McCormick, Milwaukee, Osborne, Plano, or International**—Sisal, Standard, Manila, or Pure Manila twine—and know that it will work satisfactorily in your binder.

The best is always the cheapest in binder twine as in machines.

Captain Anson used to say, "It is good playing at critical moments that wins ball games." The harvest is the critical moment of the year for you. Play safe on all points by equipping your farm with I H C harvesting and haying machines and binder twine. Catalogues and full information are yours for the asking.

THE SETTING HEN

THE incubator is coming more and more into general use, and we commend it on the farm where conditions are favorable, by which we mean suitable room for the incubator itself and brooders, and suitable quarters for the care of the young chicks. And there is no place where these can be more cheaply and perfectly arranged than on the farms. But still the hen will be used mainly for the hatching of chicks in the country. Never set a hen in any but a new and clean nest. The hen is likely to commence setting in a laying nest that may possibly be used in common by herself and others. When her broodiness is well established it is well to move her to a new nest in a room entirely for setting hens. Make a new nest in a clean box, put one or two eggs in it, and move the hen to it just before night, and cover the hen so she can't get out, but be careful to have sufficient ventilation. Give her a little feed and water before putting her on the new nest. About the same time the next day, take her out and give her plenty of feed and water. If she can now be put in a slatted coop where she may have free movement for half an hour or so, and then put back on her nest, the condition is ideal. Give her the same treatment next day, and if she seems contented the eggs may be put under her when she is returned to her nest. If there is any indication of mites or lice on the hen, give her a thorough treatment of some good insect powder, which should also be sprinkled in the nest. She may be taken off for feed and a little exercise each evening, but if the room is a closed one, her nest box may soon be left open for her to come off at her pleasure.

It is an excellent plan to set three or four hens at the same time, and when they all hatch give the chicks to one and turn the others out to become layers again.

THE SEASON'S HATCH

THE incubator is more nearly doing the work of the hen than the auto and the motor car are that of the horse. Still the setting hen is not yet out of business, and many chicks this season will be warmed into life in nature's old way, and will listen to the cluck of the hen to guide them in the pursuit of feed.

In such cases the way next to the incubator is to set several hens at the same time so that the chicks will come off together. Then there may be a "doubling up." Take all the chicks and give them to one of the hens. This, of course, makes large broods, and gives the hen more than she can properly care for in nature's way, and she must have help with her excessive family. There must be conveniences quite like a brooder for night service, and during the day she should have a run of reasonable dimensions that she cannot get out of. She should also have coops or shelter easily accessible where she may house her chicks in case of sudden storms. Thus may a faithful hen safely bring up a brood several times larger than she would be able to hatch.

In return for this extra care and provision, the hens that assisted in the hatching will become layers in a few days, and practically restore the laying flock to its former numbers.

Poultry Notes

Lice increase very rapidly on the setting hen.

The chicks should not be fed the first day after hatching.

A variety in feeding is one way of keeping the flock in good condition.

Cleanliness is the most important factor in the successful raising of poultry.

A little salt in the food for the hens is an aid to digestion, and so keeps them well and vigorous.

Lack of grit and overfeeding will cause idleness and stop the egg yield as quickly as anything else.

In One hour I learned to Play the Piano at Home

Without Lessons or Knowledge of Music Any One Can Play the Piano or Organ in One Hour.

Wonderful New System that Even a Child Can Use.

He—"You surprised me! You told me yesterday you couldn't play a note!"
She—"I couldn't; I learned to play in one hour by the wonderful 'Easy Method Music!'"

Impossible, you say? Let us prove it at our expense. We will teach you to play the piano or organ and will not ask one cent until you can play.

A musical genius from Chicago has invented a wonderful system whereby anyone can learn to play the Piano or Organ in one hour. With this new method you don't have to know one note from another, yet in an hour of practice you can be playing the popular music with all the fingers of both hands and playing it well.

The invention is so simple that even a child can now master music without costly instruction. Anyone can have this new method on a free trial merely by asking. Simply write saying, "Send me the Easy Form Music Method as announced in

FREE TRIAL

The complete system together with 100 pieces of music will then be sent to you Free, all charges prepaid and absolutely not one cent to pay. You keep it seven days to thoroughly prove it is all that is claimed for it, then if you are satisfied, send us $1.50 and one dollar a month until $6.50 in all is paid. If you are not delighted with it, send it back in seven days and you will have risked nothing and will be under no obligations to us.

Be sure to state number of white keys on your piano or organ, also post office and express office. Address Easy Method Music Company, 303 Clarkson Bldg., Chicago, Ill.

THE CLIPPER

THE HOME ON THE FARM

A WISER FARMER

I know some things I'm glad I know,
And everybody else is glad.
If we had known them years ago,
We'd have more cash than e'er we had.
It is that people need our stuff,
And gladly pay us Eq'ty's rate,
If they could get it; that's the point;
And we learn how from UP-TO-DATE.

AS IT OUGHT TO BE

THE well kept home on the farm ought to be a beauty spot. The lawn is at its greenest and the flowers will soon be at their brightest, and the trees are putting on their most delightful green. All the surroundings have awakened from a long and troubled sleep, and it is pleasant now to go where only a few weeks ago there was nothing inviting.

We love the home on the farm, but its beauty depends much upon its occupants. If things are allowed to get out of repair, the paint on the buildings to become faded and rough, the lawn to become ragged for lack of care, and weeds to grow where flowers ought to be, then, of course, the beauty so pleasing to both eye and soul, makes its abode in some more favored and better cared for place.

Flowers bloom for those who plant them,
But give their sweets to one and all;
Green lawns grow for those who want them,
And beauty comes to those who call.

THOSE CITY COUSINS

COUNTRY children are given a mistaken idea of the children and young people in the cities—of city life. So much is said of this that the young people in the country long for the city, and in recent years they have become inclined to avail themselves of the first opportunity to leave the country and make their home in a town or city.

The city has attractions. We concede that. And it has opportunities in many lines that the country has not. There is society there and a refinement that is not expected in the country; but, after all, that society and the refinement so much boasted and envied is no more enjoyed than are the social rounds of country life. So much of that society goes to an extreme which real intelligence does not reach, and so much of the refinement is outward show rather than intelligent polish, that the young people of the country do not lose much in not having it.

There are opportunities to see beautiful and strange things in the cities that cannot be had in the country. But there are like opportunities in the country that cannot be enjoyed in the cities. The great book of nature is constantly open before the people in the country. Its reading and illustrations may be so familiar as not to attract much attention from day to day, but the wonders are there, and the inquiring mind will find them. Moving pictures, changing scenes, wonderful developments, are everywhere. In this respect the country is far ahead of the city; and the poets and philosophers, and even the statesmen, have read in the book and availed themselves of the opportunities, for most of them grew up in the country.

On the other hand, ignorance, poverty, distress and crime have their home in the city. None are so poor as the city's poor; none suffer so keenly as the city's distressed; no criminals are so devoted to crime, making it their business, as the criminals of the cities. Yes, there are laws that forbid crime, and there are policemen to prevent it, but crimes are committed all the same. People could not live in the cities without policemen to protect them from criminals; these officers are not necessary in the country. There are great and benevolent movements to relieve the distressed, but still the cry of distress floats out on every breeze. Funds are raised to help the poor, but still the poor, the suffering poor, dwell in poverty, in dirt, and too often in shame.

Give us the independent country home, the home on the farm, where nature sings her sweetest songs and shows her prettiest pictures, painted by the hand of God rather than of man; where progress floats on every sparkling brook, and refinement, intelligence, promotion and success come on the winds that blow, and linger with the seasons.

"Children Teething

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

To Read and Think About

THE men and women who are not doing their best are not doing all they could and should do.

Think of last year and the years that are gone. Have you been going backward or forward? How will it be at the close of the present year?

The children in every country home should have at least a small patch of popcorn next season. Think of the long evenings next winter.

If you want early tomatoes next season, plant seeds in nice soil in a box and keep it in a warm place in the house, so as to have early plants.

Some one says you can't keep a good man down, school or no school. But, for all that, we want the school to help him up.

Some one truly says, good books and papers and flowers are just as necessary as good food and clothes.

The farmer's wife must almost live in the kitchen. Does she have all possible conveniences there, and is everything arranged attractively?

The farm home ought to be of more importance than the houses and arrangements for the stock. Look about, upstairs, downstairs, and around the house, and see if they indicate that you think so.

When you have a chance to do an enemy a favor do it. You need not take the trouble to talk about it afterwards, just leave it with the enemy.

A person need not be stingy to not be a spendthrift. A good heart and a right judgment easily decides which is which.

Money spent for a good book, magazine or paper is well invested. The trouble is, we can't talk with those who think otherwise, for they don't read.

Don't think it is a small business to talk it over with the women folks. The smartest men sometimes do a great deal better afterwards.

We don't live in this world but once, and when our time is out it don't seem like we have been here very long. Let's do our best while we're here.—Selected.

Dairy cattle in the field on the Kuhn Project in December, 1911

A great dairy center on the "Kuhn California Project"

Where every condition makes for the greatest yield of butter fat at the lowest cost.

LAND VALUES LOW
Terms of Payment EASY
MARKETS GOOD

A great dairy movement has been started on the Kuhn Project in Glenn and Colusa Counties, California. Dairymen from all over the United States are interesting themselves in these lands where alfalfa produces from 7 to 10 tons per acre, where Butter Fat demands 30 cents and over per pound every month in the year. Climate the best. In fact every crop grown in California makes its maximum returns on these lands. Oranges, Walnuts, Almonds, Peaches, Prunes, Grapes, etc.

A SMALL FIRST PAYMENT DOWN and No Payments for 3 Years if you move on to the land and develop your holdings

Cadets of Equity

The Department Dedicated to Our Boys and Girls

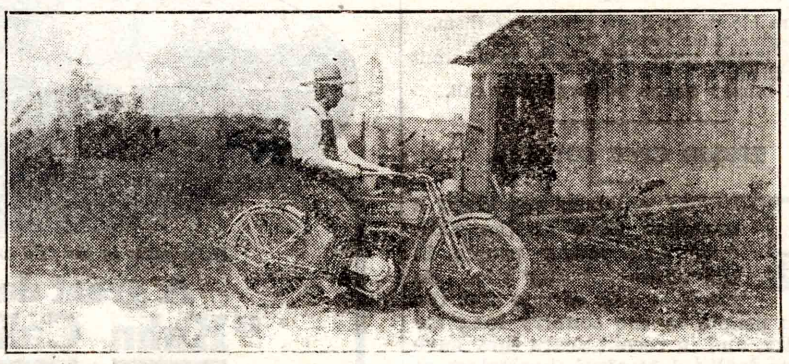
This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

WE do regret to not print letters. For a long time, in preparing them for the press, we have practiced shortening them so that we can make room for a greater number. For this issue we have decided to shorten them still more, printing only the most striking points. Of course, we cut out some good points, but we rather like it so far:

DEAR CADETS: I am not a farmer myself, but I live on a farm and work in the First National Bank of Munay, am 18, and will answer all letters or cards from the Cadet girls and boys.—Albert Amodt, Munay, Utah.

DEAR CADETS: I live on a farm among the Adirondack mountains in the northern part of New York. Our crops are corn, oats, potatoes and hops. I expect to study telegraphy this summer. In winter we have skating and coasting, and in summer we have mountain climbing expeditions and picnics. I am 17, and would like to exchange letters or cards with the Cadet boys and girls near my age.—Lilah Livernois, Owl's Head, N. Y.

DEAR CADETS: I have always lived on a farm, and I love to work out of doors in the garden and taking care of my flowers. I also like housework. I would like birthday cards June 25, when I will 19.—Myrtle Hill, Coldwater, Ohio.



A MOTORCYCLE PAYS IN MANY WAYS ON THE FARM.

DEAR CADETS: I live on a farm of 300 acres, am 16, and will be glad to answer all cards or letters from the Cadets.—Agnes Scharff, DeWitt, Iowa.

DEAR CADETS: I am 18, and live on a farm of 160 acres. We are very busy at present (March 12), making maple syrup. I will answer all letters or cards I receive from the Cadets.—Reed Roy Miller, Galion, Ohio.

DEAR CADETS: I am 16 years of age, and live on a farm of 160 acres in the western part of Oregon. We have a local union in this district. I would like to hear from all the Cadet girls and boys.—Daniel J. Jones, North Plains, Ore.

DEAR CADETS: I am not a farmer, but I go visiting in the country every summer, and know how to do farm work quite well. I will be 17 June 7. Would like to hear from some of the Cadets.—Ethel Parfrey, Richland Center, Wis.

DEAR CADETS: I live on a farm of 800 acres. I have a lot of pretty box flowers. I like ferns and begonias the best for box flowers, and roses for yard flowers. Would like to exchange cards with the Cadets in the different states, views preferred.—Lizzie Folsom, Hahira, Ga.

DEAR CADETS: I live in a nice home on a farm of 240 acres. My cutest pets are a little brother and sister that are twins, and just big enough to be playful, and good or bad as the notion strikes them. We have 80 nice hens, mostly Hangshans. We have two big orchards on the place, and lots of walnut trees. I am only 13 years old, but I would like to exchange cards or letters with the Cadets.—Ada Kenedy, Dahlgren, Ill.

DEAR CADETS: I was 20 years old last Christmas, and I always lived on the farm till the last two years. But I got tired of city life, and am now at home to stay on the farm awhile. I have followed the instructions of UP-TO-DATE FARMING, and have tomato plants 4 inches high. My sister and I have an Old Trusty incubator, and we have it "set." So we'll have early tomatoes and early chickens. Cadets, come on and help us eat them. Papa has two farms half a mile apart. He raises a good many cattle, and mama has an American cream separator; she makes and sells 26 pounds of butter a week, except during the winter months, besides an abundance for family use. I will answer all cards or letters I may receive from the Cadet boys and girls near my age.—Enice Jones, Fredonia, Ind.

DEAR CADETS: I have a little farm of 85 acres in Turlock irrigation district, in the heart of the San Joaquin valley. The trees are all blooming, and the birds are making music all the time. I have seen twenty beautiful summers, and expect to see many more. I have been in nearly every state in the union. I expect to visit Rhode Island this summer. I would like to receive cards, letters and photos from everybody, big, little, old or young, and will answer all I receive.—Harold R. Scott, Ceres, Cal.

DEAR CADETS: I am a 16-year-old European girl. My home is in Holland, but I can read and write English. I live on a 90-acre farm, in a brick building, under the same roof with the cattle and horses and chickens. All farmers here live that way. I want to exchange post cards. To the first 50 I will send my picture with my little brother's, in Holland costume. To others I will send nice Holland cards. Send the cards to my uncle in America, John Doornencal, Route 2, Lynden, Wash. He will send them to me, and I will answer in the same way. We milk 20 cows, but the land here is not fertile, and we have to use lots of fertilizer.—Johanna Reenen.

DEAR CADETS: I live on a farm of 300 acres, in the Cumberland mountains, in the southern part of Kentucky, three miles to the nearest village. There are about 50 big oak trees around the lots. I am 16 years old and will answer all who write me.—Sara Treadway, Delvinta, Ky.

DEAR CADETS: I'm from the fruit belt of northern Michigan, but I haven't any Baldwins or Northern Spies in my pockets. Our apples are "down cellar behind the door." Come up and we'll give you some. You boys must eat Ben Davis, the little girls with good teeth can have Russets, the big girls can have any kind they wish, but those that don't have birthdays any more must take Talman Sweets. Will you Cadets please give my sister a post card shower? She has been sick with a tubercular trouble for nearly 9 years. She had typhoid fever when about 16, and has not been well since. She enjoys views. Her address is Clara Guyer, Central Lake, Mich. I am Grace Guyer, Central Lake, Mich.

DEAR CADETS: I live on a farm of 200 acres, and our principal crops are wheat, barley, heat and potatoes. We have 26 head of cattle, and we make butter to supply our customers. I think no farmer should be without this paper. I am 17, and would be glad to exchange photos and cards with all the girls and boys.—August Carl Mantz, Touchet, Wash.

DEAR CADETS: I live on a farm of 240 acres about 2 miles from town. I am 19 years old, and will answer all cards and letters from the Cadet boys and girls.—Minnie Webster, Rocky, Okla.

DEAR CADETS: I have been a reader of UP-TO-DATE FARMING for a long time. I am 22 years old, and have lived on this farm all these years. Our chief crops are wheat, oats and corn. Will gladly answer all letters, cards and photos from the Cadet boys and girls.—Mary Ehrlich, Marion, Kans.

DEAR CADETS: I am 13 years old and live on a farm of 80 acres. Our crops are wheat, oats, barley, and some vegetables. We have taken UP-TO-DATE for some time, and think it the best farm paper we have ever seen. I would like to hear from all the Cadets, and will answer all I receive.—Annie Wiberg, Marysville, Idaho.

DEAR CADETS: I am a Filipino farmer boy of 18 years. I left the first year school of Iloilo in 1910 to practice farming with my father on his 300-acre farm. We plant sugar cane and make raw sugar. I first entered as a foreman. We have 80 farmhands and 3 more foremen. When my father and sisters retired for the city I became manager. Now I am working alone for myself here on the farm. Farm life is very hard when one is alone, especially is accustomed to live with a large family. I would be very glad to exchange cards, letters and photos with the Cadets, both girls and boys.—Teodoro Lopez, Hda. Paniquion, Fabrica, Neg. Oce., Philippine Islands.

APPEAL TO THE CADETS

I write you in behalf of a crippled boy that has been so all his life. He can't walk, but just sits in a rocking chair all day. He needs a rolling chair, but is not able to buy one. I want to refer his case to the Cadets of Equity. He is entirely worthy, and in 10-cent, or even 5-cent contributions, they could thus do him a great favor, and make an unfortunate child a happy boy. His name is George Aldson, and his postoffice is Hall, Louisiana. Lone Star Local Union, F. S. E., vouches for the merits of this case. Write him as above.—J. C. Williams, Organizer, Hall, La.

Cash in Your Spare Time!

If you have *spare time* for sale, *we will buy it!* We pay big money—*good American Dollars*—and back our agents to the limit.

Write at once for the greatest offer ever made by any tailoring concern on earth.

$5 to $10 A DAY EASY

While Doing Other Work

Join the ranks of "Progress" money makers! Many earn $5 to $10 a day in spare time. You can do as well. We show you how. We pay in *cash* money—not in "premiums" and "promises."

Send No Money—Everything is FREE

It costs us thousands of dollars to make our Free Agents' Outfits—the handsomest, most complete and attractive sample outfits ever presented to agents. Send your name and address *at once* for handsome free outfit and full instructions. (19)

PROGRESS TAILORING CO., Dept. 763, CHICAGO

DAISY FLY KILLER placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or 6 sent prepaid for $1.

HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

If We Can't Save YOU MONEY—don't buy, but send for our Free Catalog and see. Apple trees 8c; peach, 3c; cherry, 8c; pear, 15c, and up. All kinds of shade trees, berry plants, roses, privet, etc. An orange or lemon plant that bears free with order.

ERNST NURSERIES, Box 11 Moscow, O.

SHORES-MUELLER CO.

Wanted

Farmer or Farmer's Son

with rig in every County to introduce and sell Family and Veterinary Remedies, Extracts and Spices. Fine pay. One man made $90 one week. We mean business and want a man in your County. Write us.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

"Grow more, more wheat!"
The teacher repeats,
And in the field it's growing.
The price to save
The farmers brave
Gallant deeds must now be doing.

—o—

It requires a truly progressive spirit to break away from old customs. But to adhere to a bad thing, because it is an old custom, is a deplorable weakness.

—o—

Others have shown the necessary progressiveness. Shall it now be said of the farmers of America that they are less progressive than other classes?

—o—

To delegate another person, one man for a whole community or a county, to market a crop is an innovation from the old established method. It is a surrender of individual right, but such surrender increases the man's independence and power to demand what his crops are worth in ratio with the number of people selling the same crop in the association.

—o—

A single farmer is too weak to protect himself in marketing, but there is nothing that can stand against the farmers organized. The thing that the powers of speculative marketing fear is the combined power of honest selling.

—o—

Before you plunge into another season of production to smash all records, as the exclusive-production teachers want you to do, organize your local union. It will be a support to you where you come to sell.

—o—

A certain professor, connected with a certain southern agricultural college that we will not name, wrote the following after studying the F. S. E. plan of organization and the proposition to incorporate the American Farmers Federation:

I am not in favor of federating all farmers' organizations. The farmers in the south are too indifferent and too full of ignorance of the advantages of co-operation. They must be handled in small numbers or bodies till they become more fully educated to the advantages of a large organization.

—o—

Probably the greatest obstacle organizers of the Farmers Society of Equity have to overcome is the demand of the farmer to "Show me." He says: "Give me the benefits and I will become a member." We quote from Organizer C. A. Stauffer, of Zephryhills, Fla., of March 26, as follows on this point:

Regarding members, many people want to be shown in advance. A man came here from Ellesley to ask me for a market for a carload of cabbage. I told him to become a member of our local and I would market his cabbage. But he would not. Another man from Pasadena asked me to market 850 cases of oranges for him. He said if I would get him a good price he would become a member, but he would not pay the membership fee ($2.00) in advance.

—o—

It seems that there are a lot of people on earth yet that have faith that miracles can be performed. They are looking for the supernatural. All seem to agree that farmers must organize and that they must co-operate in marketing to improve their business. But too many of them want the other fellows to pay the small individual expense and share the benefits with them. Mr. Stauffer asked: "What shall we do with such people?"

—o—

Ignore them. Ours is a co-operative movement and the man who will not co-operate with us shall not have our co-operation. Where there is a local union and some individuals hold aloof, they should be held as unfair and a menace to the public good and welfare. There are not enough of this class of people to defeat our movement, nor even to effect the results if those who are amenable to reason and who have the community and larger welfare of agriculture at heart, are enlisted in our cause.

—o—

And the college professor who is opposed to a broadening of the lines of organization and co-operation, from local to county, to district, to national federation, reporting and direction, should be considered in the same class with the individual producer who will not join the local organization.

—o—

It is coming to be generally admitted that while local independent organizations are beneficial, they cannot elinimate competition and prevent the great bane of the old system—glutted markets. Therefore, they cannot be much advantage as educators, unless as to how co-operation should not be done. For a fact there are very few local associations, standing alone and unsupported, that survive beyond the first year or two. But this is the kind of organization the professor recommends for the southern producers: "Till they become more fully educated to the advantages of a large organization."

—o—

Can it be that some college professors are afraid of comprehensive, practical, successful organization and co-operation, which must be on a national scale, as the business of agriculture is national, because of fear that the farmers may have more to say about the conduct of the agricultural colleges? To be plain, there are a good many farmers coming to look on the agricultural colleges as a species of graft that they are obliged to submit to because they are not in a condition to change it.

—o—

When will the southern producer become educated to the advantages of a large organization if he is held in bondage to the old system? Never! But he need not be held in bondage any longer, even though some of his supposed friends think it would be best. There are opportunities for him to be educated along broad lines of organization outside of the colleges and he must depend upon them, and there are examples of federated marketing that will prove strong object-lessons to him and eventually convert him.

—o—

The producer who has a carload of cabbage to sell this year may think it is economy to save a $2.00 membership to the Farmers Society of Equity which would entitle him to the benefits of its national marketing system, but it will by and by dawn on him that the other system has charged him many times this sum. And the same way with the orange grower and the producers of all other crops.

—o—

This is what a Kansas man says about the cost of marketing:

I enclose a photograph of one hundred baskets of lettuce ready for the market. To get this to the consumer sixty-seven of these baskets go to the system to pay the cost of marketing while thirty-three are sold to pay me for three months of labor and investment to produce them. We certainly are in need of a market adviser.—F. L. Parker, Manhattan, Kas.

—o—

Need any stronger evidence be submitted in favor of federating all farmers' organizations which is the way to get concert of action, and which must be had before the guerilla warfare, amongst thousands of local associations for the market, will cease?

—o—

So the appeal is to the individual to join the association; for the local association to see that others are organized and then all federate in a county union, or clearing house, as we have explained in preceding issues, and by and by there will be enough county associations to establish the national clearing house. When this time arrives we guarantee marketing of farm crops will be as systematic, and as definite for distribution and prices as the marketing of any manufactured goods.

—o—

If you are a member of a local union or any local association, insist that your union does the business of selling its members' crops. Also insist that through a committee, or an organizer, the organization in the county be completed so that the marketing be done as a county unit. This is as far as you need to take concern now. We want each reader of this paper, each member of the Society and all the officers of local unions all over the country to set themselves to the task of organizing his county. The county unions multiply benefits over local unions, besides they are just as essential in the completion of the Farmers Society of Equity or the American Farmers Federation marketing system as the local unions are.

—o—

We have tried to show what each individual's and each local union's duty is in this movement. Don't be longer lulled to sleep by the song of "You do the work and let the other fellow do the business." Sixty-seven baskets of produce is too heavy a toll out of one hundred.

—o—

We certainly are in need of a better market system.

—o—

Send the blank below and get our help and co-operation in return for yours.

—o—

A man must be put to work in each agricultural community THIS YEAR.

MISCELLANEOUS

HEAVEN AND HELL—Swedenborg's great work, 406 pages, 15 cents, postpaid. Pastor Landenberger, Windsor Place, St. Louis, Mo.

The Traveler

Under this head appears accounts of what our "Traveler" sees, hears and otherwise discovers. He can not, unfortunately, visit every section and locality, and those whom he can not see he most earnestly desires to hear from occasionally. This applies to every reader of this paper who is interested in the plans of the Farmers Society of Equity. Write to "The Traveler." Write today and address your correspondence to

"THE TRAVELER'S DESK"
CARE THE FARMERS SOCIETY OF EQUITY
INDIANAPOLIS, IND.

IT is hard to pick up a farm paper or a monthly magazine without finding one or more articles on what co-operation can do, and ought to do for farmers. In some instances accounts are given of what has been done in certain localities. There are two remarkable things connected with this. One is, that in any case where anything worth while has been accomplished, or when definite proposals are made to do something, the precepts and practices of the Farmers Society of Equity are followed closely, if not exactly. The other remarkable feature is that with all the writes and publications advocating co-operation, organization and modernized methods of marketing, not one except UP-TO-DATE FARMING and the F. S. E. is *doing the work*. The others moralize, and theorize, but UP-TO-DATE FARMING and the F. S. E. get right into the harness, and *organize*. It is the only institution to put men at work, give them material to work with, show them how the work can be done, instruct the officers and members of the newly organized locals how to make the most profitable use of co-operation. It not only preaches the gospel of Equity, and better business methods, but it is the organic force that is leading the way into action. It is not only the architect devising a better plan for business, but it employs the builders, supplies the material, and makes real progress. Everybody admits there ought to be a new system. Many have an idea of how the new system should be formed and operated, though their ideas are as yet vague and indefinite. But they go no farther. UP-TO-DATE FARMING and the F. S. E. go into a community, show the farmers living there what is to be done, call them together, unite them in a body, and start the machinery. They are doing their best to accomplish the work others say should be done. As a matter of plain truth and justice, UP-TO-DATE FARMING as a paper and the F. S. E. as an organization are the only ones that really deserve the support of the farming class. Others have been invited, coaxed, urged, in fact, to take part in doing the work necessary. They have neglected their duty. But we are glad to see them taking a part in the discussion of these matters. While we wonder at their long-delayed action, we nevertheless welcome it.

Now, brother, I'm going to drive this little sermon home. You can see that this paper and this society are doing their duty. You can see that others have not, and because they have not, your interests suffer. Now, how about yourself? Have you done *your* part, or are you in the same boat with others who have done nothing so far but talk? Can you criticize them with a clear conscience? Your active support is as much desired, and as much needed as the active support of any others. Are you giving it? Are you a member of the Farmers Society of Equity? Are you doing what you can to establish the Society in your community and county? Are you trying to get farmers who are not members, or readers of UP-TO-DATE FARMING to become such? Have you ever distributed any Equity literature, or asked your neighbor to read up on these matters?

Just now, when the tide is setting in toward organization, it is every farmer's duty to bestir himself in favor of our great movement. Now is the time for every man in the Equity army, every reader of UP-TO-DATE FARMING, to get out and do some personal work for the cause. Send for sample copies of UP-TO-DATE to distribute. Let's all take hold and pull.

Yours,
THE TRAVELER.

The Rough-Road Car

By R. E. Olds, Designer

After 26 years of experience, I tell you a car for the average road ought to be built like this.

Overcapacity

The builder must know the needed strength. Then he must add at least 50 per cent, as we do in this Reo the Fifth.

He must know his steel—have it made to his formula. Then analyze it twice to make sure of it.

He can't test gears with a hammer. He must, as we do, use a crushing machine of 50 tons' capacity.

Not Enough

Tires are expensive. But oversize tires are essential to low upkeep. We use 34x4.

Roller bearings cost five times as much as common ball bearings cost. But the right car must have them. In Reo the Fifth we use 15, eleven of which are Timkens.

Drop forgings are costly, but we use 190 to avoid the risk of flaws. We use a $75 magneto, big brakes and springs, a doubly heated carburetor, a centrifugal pump. And not an engine goes out until 48 hours have been spent in five radical tests.

Reo the Fifth, without these extremes, would cost in the building $200 less. But in the next five years repairs and upkeep would cost you several times that much.

I Know

These are things I know. I have learned them from tens of thousands of cars in my 26 years of car building.

These extra precautions cost this concern two million dollars per year. We are not spending that without knowing the need of them.

We save by efficiency—by building all our own parts. We save 20 per cent by building only one model. Then we spend all those savings on hidden parts. To give you a car which, year after year, will serve you as well as when new.

Look below the frills when you buy a car. All modern cars are attractive. Find out what the maker hides.

A one-summer car is built very differently from a car that is built for keeps. If you want an honest car—a car that endures—watch these inner features.

New Control

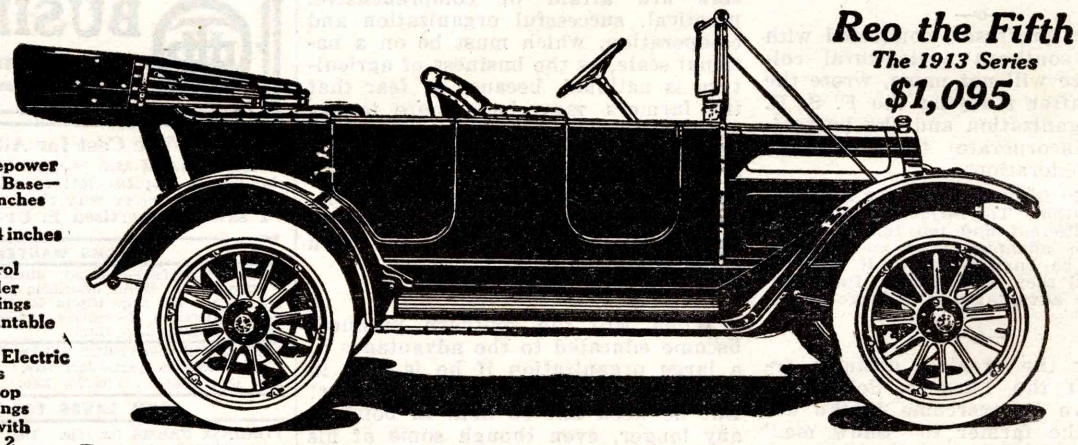
Reo the Fifth has our new control. All the gear shifting is done with one center rod, entirely out of the way. It is done by moving this rod only three inches in each of four directions.

There are no levers to clog the way of the driver. Both brakes are operated by foot pedals. And this car, like all the leading cars, has the left side drive.

A 17-coated body, nickel trimmings, electric lights, genuine leather—all the luxury you want.

Write for our catalog and we will direct you to the nearest Reo showroom. They are everywhere.

R. M. Owen & Co., General Sales Agents for Reo Motor Car Co., Lansing, Mich.
Canadian Factory, St. Catharines, Ont.



Reo the Fifth
The 1913 Series
$1,095

(Gray & Davis Electric Lighting and Starting System at an extra price, if wanted.)

NOTICE TO IDAHO LOCALS

Members of the F. S. E. having fat cattle or hogs to sell are requested to write or call on O. S. Paul, Rexburg, (phone 215), or F. C. Barrett, Rigby, (Rigby Exchange 208-B), for highest prices on carload lots, or less.

—::—

"I have received several letters of late asking me to come tell what we are doing, but am much too busy to give much time to this part of the work. Today I sold 5 cars of sweets, collected $505 for some sold last week, and found in my mail checks amounting to $1,500, and made arrangements to buy all the fertilizer for the county, and many other things also, which will effect a considerable saving. Everything considered, we are getting along as well as could be expected."—C. B. Lozier, County Union Business Agent, Robertsdale, Alabama.

—::—

"Concerning the progress of the cause of Equity in our county, it seems to me to be very gratifying, to say the least. All the trouble we have encountered, is, I presume, the inevitable portion of all new locals, officers and members being new to the work, and have to find their "sea legs" so to speak. Brother Phillips and myself will go to Venango county to effect an organization there for a starter, as D. H. Morrison is arranging for a meeting for us.

"It seems to me there is much to be done in introducing social and educational features to induce good attendance at meetings. A suggestive program for this work in UP-TO-DATE FARMING might be valuable."—R. M. Forringer, New Bethlehem, Pennsylvania.

—::—

"Enclosed find list of four new members to our local, and have several more to report shortly. We intend to use up a goodly amount of your membership cards, so send in a liberal supply. We have a carload of sweet potatoes ready to ship. We are going after business with vim and determination. Courage and power to the brotherhood in Equity."—J. M. Blount, Jr., Secy., Hall, La.

—::—

"We have been very busy with our limited capital. We have shipped in some grass seed to good advantage. We shipped out two cars of hogs, giving our ranchers a raise of 50 cents per cwt. As this is being written we are unloading a car of flour, ground from wheat grown and milled by the farmers of Judith Basin, who are a loyal bunch. We have a car of posts coming and are making up an order for fencing wire. We own our own building, which we now use for headquarters and temporary warehouse. We will later locate on the new railroad that is to be built through our town this summer."—J. W. Randles, Stevensville, Mont.

—::—

We want to buy 1½ tons of alfalfa seed, ½ ton of red clover seed, and some dairy cows, and, of course, want to deal with Equity people, if possible.

At our last regular meeting we passed this resolution:

WHEREAS, the United States Crop Reporter for 1912 based the estimated yield of potatoes on acreage, and

WHEREAS, to our absolute knowledge thousands of acres were not dug, an enormous amount has been frozen and great quantities fed, and

WHEREAS, the Crop Reporter evidently has made no deductions for these losses; therefore be it

RESOLVED, that we use all our efforts, and prevail upon the county, state and national organizations of Equity to call for the actual visible supplies now in hands of growers and to compare the results with government reports.—Burley Local Union No. 6856, W. R. Robinson, Secy., Burley, Idaho.

YOU RUPTURE Sufferers

CAN BE PERMANENTLY CURED

By the "Schuiling Rupture Lock," the wonderful, scientific discovery of the age, its holding power can be regulated by yourself at will. Endorsed by leading physicians as Nature's true method. No leg straps or other annoying features. It's worn with the same comfort as a pair of old suspenders. Nature's healing process never interferred with, etc. **Price within reach of all and it is sent on trial.**

Write our Institute today, for our free booklet, if you want to forever rid yourself of rupture.

Schuiling Rupture Institute
18 West Market St. Indianapolis, Ind.

When sold send $2.00 and we will send you FREE a stem-wind, 5-yr. guaranteed watch, highly engraved, proper size; also signet ring and handsome chain.

PALACE MFG. CO., Dept. 7 CHICAGO

THE FLOOD

THE greatest flood ever known in the history of this section of the country visited Indiana and Ohio the latter part of March. The damage and distress in these two states is beyond computation. The plant of UP-TO-DATE FARMING was not in the flooded district; therefore we had no direct loss from the waters. But there was a heavy indirect loss to us and all other business concerns of the city through the stoppage of transportation, temporarily. Incoming and outgoing mails were stopped for several days, and the receipts and dispatch of freight was delayed much more. In fact, at this writing paper for this publication that was due to arrive two weeks ago has not come in yet. However, before the time this paper reaches its subscribers business in Indianapolis will have resumed its normal condition. As for ourselves, we are ready and anxious to do more business than ever before.

Question Box

This column is for members and subscribers. Use it to ask questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered dependable. If a direct reply is wanted, enclose two stamps.

QUESTION: *Is the Farmers Equity Union, C. O. Drayton, president, Liberal, Kansas, the same as the Farmers Society of Equity, or in any way connected with it? Mr. Drayton, according to an article in Mail and Breeze, is going to establish a line of farmers exchanges from Pratt to Texhoma, in Kansas, on the Rock Island railroad. I enclose the clipping.—C. L. L., Liberal, Kas.*

ANSWER: No. We cannot warn farmers too strongly against this man Drayton. He has been an organization pirate for years. He has operated in several states with impossible schemes, always moving on to new fields when the old fields are exhausted of money to his pockets. His schemes usually call for subscriptions to stock from a couple of dollars to $25 or $100. He is a pious-looking individual, and talks glibly about "Golden Rule" co-operation, and how his brand of organization will oust "Mr. Speculator, Mr. Profit-Taker and Mr. Grafter." But with Drayton's scheme it's a case of "out of the frying pan into the fire." Drayton shifts the headquarters of his equity (?) union about as often as he hangs up his hat in a new community. Therefore, we were not surprised to hear of it being at Liberal, Kas., although we had not heard of him for quite awhile. Interested people can learn more about Drayton by addressing the editor of this paper.

$10,000,000 A Year Wasted On Trusses

Wrong to Buy Anything for Rupture Without Getting Sixty Days' Trial

A conservative estimate shows that nearly ten million dollars a year—in this country alone—is practically wasted on worthless rupture appliances—all because people trust to a mere try-on instead of making a thorough test.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why druggists should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City

Q. *At our meeting of March 15, our local decided to put in a canning factory of about 120 cans an hour. We will get the factory from Thomas M. Brown, Springfield, Mo. (1) Now what should members of the Society pay for their pack, and (2) how much should non-members pay? We propose to charge non-members more. (3) How should the factory be run? C. A. Stauffer, Pres., Zephryhills, Fla.*

A. (1) We believe you can get this information from the manufacturer of the outfit, as he has, no doubt, installed others in Florida. Conditions as to labor are different in Florida from Indiana or other states, and the price must be a local matter. (2) Same as question 1, except we believe you should not pack for non-members, but rather require all to become members. (3) You should incorporate your local union, each member taking an equal amount of stock, when each one will be equally interested in this utility, and all others that may be added in future. You should then pack at actual cost with sufficiently more to make a fund for replacements and improvements. You should not make it a dividend-paying corporation.

Q. *At the last meeting of our county union it was ordered to raise the membership fee to join the F. S. E. in this county to $5.00, but at our last local union meeting it was moved and carried that we continue the $2.00 membership fee until we hear from headquarters. Please advise whether we dare raise the fee.—D. McGuire, Cor. Sec., Hamilton, Mont.*

A. Yes.

Q. *Our section has large quantities of timothy seed to sell. Please inform our brethren.—W. H. Maynard, Lookout, Idaho.*

A. Parties in need please correspond. Idaho timothy seed is desirable because of having been grown on new ground and is freer from weed seeds than that grown on old eastern ground.

Q. *In our last meeting it was decided that if it were all right with headquarters would permit a father to send his son as his proxy, in case of sickness of the member. The question arose then whether the son would be entitled to vote. Please advise.—J. M. Stretcher, Sec., Hillsboro, Ore*

A. The son, not being a full member, would not be entitled to vote.

Phelps Factories Escape

One of the biggest and oldest industries in the state of Ohio, the Ohio Carriage Manufacturing Company, makers of the famous Split Hickory vehicles, escaped all damage from the flood. The general havoc created in some parts of Columbus has rapidly given way to the regular order. The Ohio Carriage factories and others happily located were entirely out of reach and far removed from the troubled side of the city. Their business is progressing without interruption, and the railroads are taking prompt care of all shipments.

GREATEST Cream Separator Offer!

The Wonderful French Machine Sold in America For First Time

The Melotte Cream Separator—Guaranteed for 15 Years

The Genuine French Melotte Sold In America for First Time

This is positively the first bona fide, no-money down offer ever made on any cream separator. No manufacturer of any cream separator ever **dared** to make such a startling offer before. All others who have ever **pretended** to offer you a free trial or to send their separator without any money down have taken care to get **something** out of you first.

But we don't want **anything.** All we ask is your simple request. We send the cream separator direct to your farm absolutely without any money down. We can afford to do this because the Melotte sells itself. It has an absolute self-balancing bowl.

We want you to read every word of this great offer. It is an offer which, we think, proves our **absolute faith** in the great **Melotte Cream Separator.** You are given the opportunity of seeing just how much cream this marvelous separator will extract from your milk before we ask you to send us one cent. Now, read every word of this wonderfully liberal offer.

Sent Without One Penny Down

30-Day Free Trial!

Your simple word that you would like to see this cream separator in your own barn or dairy house brings it to you instantly. We send you the Melotte without a bit of quibbling or hesitancy. We neither ask nor want you to send a penny. We don't want a cent of your money. The separator goes direct to you. You set it up, give it a thorough test with the milk from your own cows. We give you a free trial that **IS** a free trial in every sense of the word. It is a free trial because we don't ask you to pay us any money down—there is no C.O.D.—no lease nor mortgage. You keep your money right in your own pocket. You pay nothing to anybody.

Monthly Payments

These payments are so small that you will hardly notice them. You only pay out of your increased profits. You don't need to be without a cream separator when you can have the separator right in your dairy house while you are paying for it. In reality you do not pay for it at all. It pays for itself.

This is what we want to demonstrate to you. We want to demonstrate and prove beyond all peradventure that the Melotte Cream Separator does pay for itself. Only a few months' use of a Melotte Cream Separator and you will be satisfied that this statement is **absolutely correct.** A few months and the separator has paid for itself. It does not cost you a penny because the increased amount of cream has paid for the machine.

Melotte Runs 54 Years!! At the Melotte works one of the Melotte Separators has been working every day (driven from the shafting) since Nov. 5, 1900, running 10½ hours per day—or 19,687 hours at a cost of only $7.50. Reckoning that a farmer works his separator one hour per day, the 19,687 hours represent (on the farm) a period of 19,687 days, or nearly 54 years. Therefore, the total cost of maintenance for the Melotte Separator for 54 years, inclusive of oil, will be only $7.50. At great trials of separators held at Boulogne, France, Oct. 5 to 9, 1905, under the auspices of the Federated Agricultural Societies of the North, the Melotte easily vanquished all other separators—proving the cleanest skimmer and taking less power—and was **Awarded the Gold Medal.**

World's Grand Prize Winner

Here is a small percentage of First Prizes the wonderful Melotte has won:

1888—Brussels—International Exhibition—Progressive Prize.
1889—Tongres—First Prize.
1890—Brussels—First Prize.
1891—Louvain—Diploma of Honor.
1892—Bouchout-lez-Anvers—First Prize.
1893—Theux—First Prize.
1894—Weert—First Prize. Medal of Highest Merit.
1895—Vienna—First Prize.
1895—Drontheim—Silver Medal. First.
1896—Patay—First Prize. Gold Medal.
1897—Rennes—First Prize.
—Brussels—World's Exhibition. First Prize.
1898—Lyons—First Prize.
—London—First Prize.
1899—Poitiers—First Prize.
1900—Northants—First Prize.
Paris Gold Medal and First Prize.
1901—Vise—Diploma of Honor.
Marchin—First Prize. Gold Medal.
1902—Prague—Diploma of Honor. First Prize.
1903—Reggio - Emilia—Diploma of Honor. First Prize.
—Aussig—Gold Medal. First Prize.
1903—Luxembourg—Gold Medal. First Prize.
—Reims—First Prize.
—London—Gold Medal. First Prize.
1904—Heyst - Op - Den - Berg — First Prize. Gold Medal.

—St. Louis—First Prize.
1905—Bombay—First Prize.
—Durban—First Prize.
—Orleans—First Grand Prize.
1906—Milan—First Grand Prize.
—Tours—First Prize.
1907—Amsterdam—First Prize.
1908—Starodour—Grand Prize.
1909—Saint-Gilles-Termonde—First Prize.
1910—Axel—First Prize.
1911—Sinay—First Prize.
—Brussels—Grand Prize and First Gold Medal.

For full list of prizes which the Melotte has won send the free coupon

Test With Other Machines

Before you decide to buy any Cream Separator arrange to test a **Melotte** along side of the machine you now think is the best separator in America. We want you to do this. Then there can be no doubt in your mind as to whether you are really getting the best machine. This is the only way to buy a cream separator. Then it will not be necessary to take anybody's word. You'll know which machine turns easiest—which machine is the best made. You'll know which skims the closest. You'll know which will make you the most money. Write to us about the **Melotte** and the **Melotte Free Test** today. We are the sole factory representatives in America.

Valuable Book "Profitable Dairying"

Send Today! Get This FREE DAIRY BOOK SENT FREE!

Just ask for this book and it will be sent to you. It is free. Place your name on the coupon, cut it out and mail it at once. Then we will send you our great free book, **"Profitable Dairying,"** telling you everything about cows and dairying, butter and cream—how to feed and care for cattle, how to make them twice as valuable as they are now, how to make more money than ever before out of your cows. This book is written by two of the best known dairy scientists in the country—Prof. G. H. Benkendorf, Wisconsin Dairy School Agricultural College, Madison, Wis. and K. L. Hatch, Winnebago County Agricultural School, Winneconne, Wisconsin.

We will also send you Our FREE Catalog, describing fully the great Melotte self-balancing bowl Cream Separator and telling all about our liberal terms.

Let This Great Suit Offer Save You 1/3

This Sample Book is saving Clothing Dollars for Thousands of Satisfied Customers.

If you have not received your Free Copy of it—send us your name today.

This Big Tailor Book FREE

To get the finest made-to-your-order clothes, the swellest styles, and the most satisfaction—to get fine, perfect-fitting clothes like this with a guarantee of satisfaction so broad, positive and binding that you take no risk whatever—you must have this book. This is the only made-to-order clothing catalog which positively guarantees your satisfaction—it is the only book that shows you, by a short series of pictures, just how a first-class tailor measures—it is the only book that teaches you, in a few minutes, how to measure yourself or anyone as perfectly as any tailor can do it—and this book is issued by the only tailoring house which is big enough and liberal enough to say to you this: "By our simple, quick method it is next to impossible for you to make a mistake—but even if you should make a mistake in measuring—we and not you, stand the loss. We even pay the express charges both ways. No matter where you live you *can* now order your made-to-measure clothing without going any further from home than your nearest mail box. And in a few days your clothes come to you by Prepaid Parcels Post. Even if you live on a Rural Route you can order and have delivered to you complete, the finest made-to-order, Big City Style Clothes—and you don't have to leave your own home to get them." We deliver right to your door.

Low Wholesale Prices to Save You One-Third

We want to have fifty thousand new customers wearing our fine clothes. To help advertise and introduce them, we will let you order at our lowest wholesale prices—prices that save you from one-third to one-half—because they are the same prices the store-keeper must pay. In ordering of us during this great introductory offer, you save the retailer's profit entirely. This offer means, to you, the opportunity of ordering America's finest tailored-to-your-order clothes at an absolute saving of one-third. Instead of paying your store-keeper $15.00 to $40.00 for your made-to-order Suits, you buy them now at $9.95 and if you want the finest grades, we have them at $17.00 to $28.00 instead of $28.00 to $40.00.

Have You a Little Time to be Our Agent at $1.00 an Hour?

There are, within a short distance of your home, hundreds of men who will welcome the chance to order our fine clothes. Many of them are your intimate friends, your neighbors and perhaps even your relatives. You can do them a real service—the friendliest sort of a friendly favor by showing them our Samples and sending their orders to us. You not only supply them with the handsomest, finest and swellest tailored clothing to be had, but you also save big money for them. You can make from $2.00 to $7.00 on every order and do it so easily that you will, at once, realize what a truly great thing the tailoring business is and especially when you have the right house behind you. If you have a little spare time, we will show you how easy it is to make $1.00 an hour any evening or Saturday afternoon.

Would You Accept a Swell Suit Free Just to Advertise?

When sending our catalog and the other great offers, we will also tell you about our great Free Suit Offer—making it possible for you to get all your clothing absolutely Free of any cost whatever. This means exactly what it says—all your own clothes for nothing. Now if you want this fine, big Tailor Book, order blanks, instructions, tapeline and everything all free—just send us your name. But write us at once as this offer is good for a limited time only. Take a postal and your pen and simply say: Send Free Sample Book, Wholesale Price List, Special Suit Offer and the full proof of what your advertisement says. Address:

THE CHICAGO TAILOR'S ASS'N., Dept. 602 Van Buren St., Chicago

UP-TO-DATE FARMING

16th Year, Number 9 — MAY FIRST, 1913 — Indianapolis, Ind.

A Herald of Farm Progress and Prosperity. Published Twice a Month

With the Up-to-Date Farmers

A Department for Live Folks who want the best. Our readers are asked to contribute their thoughts. If you have a helpful idea pass it on. Be neighborly. Contributions always welcome.

S stands for summer and sweat.

A man who gets what he wants usually has to go after it.

The farmer whom summer found with his fences fixed is well fixed for summer.

Hard work is no guarantee of success. Make it "head" work and your chances are better.

It is a mistake to wait until it begins to sprinkle before we begin to lay by for a rainy day.

With budding flowers come budding hopes. Everything is growing now, and expectations thrive.

The dairy cow is running her milk factory full time now, regardless of what Congress may do with the tariff.

Farming to make the dairy pay, and dairying to make the farm pay is a good combination for many farmers.

Put the seed in a good seed bed. Take time to prepare it properly. One acre farmed right is worth two half farmed.

The farmer who waits for the government to give him something will not have anything to put it in when he gets it.

There is too much lost motion on most farms, which is a waste of time and effort. Make every thing you do count in actual results.

Farming is a busy job in the summer time, but the farmer who is too busy to read misses many a good idea right when he could use it.

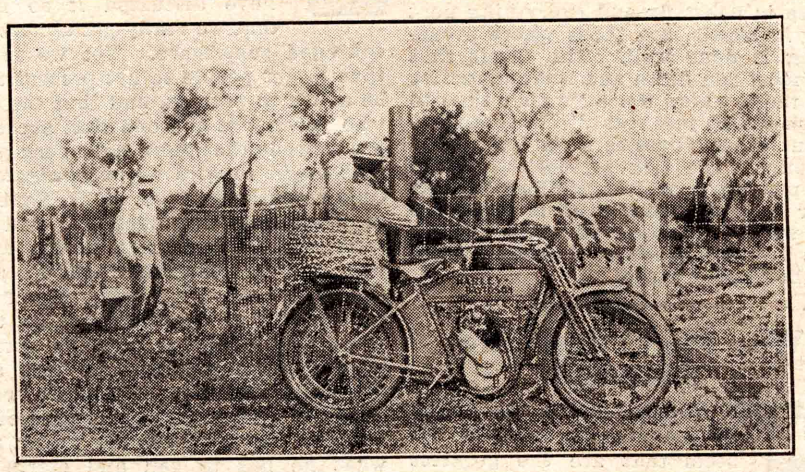
The farmer who succeeds brought his farm tools from under a good shelter, while the farmer who fails found his in a fence corner.

Test your seed corn before you plant it. Test every ear you plant. It isn't too late now to test seed for late planting. You wont know until too late unless you make a test.

Don't neglect growing a few flowers. They pay in pleasure. If necessary, fence in a little flower garden with poultry netting. The women folks will take a world of pleasure in it. It is worth while. Try it.

Growing the crop isn't all of the game. It must be sold. How much will your crop pay you? You don't know, because you don't know the price. When will the farmer learn to work at his marketing problems?

A wheel hoe in the hands of the hired man will do more in the garden in half a day than the farmer's wife can do in a week with a hoe. Besides, when the good woman gathers, washes and cooks these vegetables she has done her fair share.



THE MOTORCYCLE IS A "HANDY-MAN" ON THIS FARM

Think of the work it would save your wife this summer if you had gravel walks around the yards. All the dirt you take into the house on your heels she has to take out in a dust pan. Besides, walks look better, make your farm worth more, and do you credit as a progressive farmer.

And the yearling colt must be out where it can get all sorts of exercise. It should be in a good pasture, and should have company if possible; but the same precautions should be taken as to the fence. There should be no chance for it to get out, or to hurt itself in trying to get out. It will thus learn to stay where it is put, a good quality through life.

Every farmer who knows what it means to make a success of his calling knows that it means three things: A fertile soil, good crops, and good prices. None of these can be neglected and success attained. These three basic features will be treated thoroughly, intelligently, seasonably and practically in this paper. No theory, but practical working plans.

Organization of farmers is now uppermost in the minds of many of the greatest agricultural leaders of our country. What UP-TO-DATE FARMING has been teaching for years is bearing some fruit. But this paper is now, and always will be, we hope, the leader in aiding the farmers to organize successfully and make it profitable.

We know our readers are too busy to read much during the season of field work. Yet, one can't afford to neglect it altogether. A little inspiration all along is a splendid thing. But to meet your needs we have boiled a big paper down to the real essence to give you the kernel of the nut, without the shell. We are giving you the very cream of modern ideas and practices in your work, in short, pithy, paragraphs, and not one thing is going in this paper that you should not know about. Read this issue all through, and see if we are not right.

We plow and plant and prune and hoe, yet harvest pays no debts we owe. Apples are cast in piles to waste, and onions are thrown away in haste, while folks in need don't get a taste. Potatoes lie in pits and rot, what chance for profit have we got? The gross injustice makes me hot, Hark, ye boobs, to UP-TO-DATE. The middleman don't pay the freight. Wake up and act ere it's too late.—Robert Orr, La Grande, Ore.

It is strange that so many farm papers and agricultural publishers, and others posing as leaders in all good works for farmers keep continually telling what great need there is for organization, but never turn a hand to bring into existence a single, solitary co-operative society. And all the while farmers are anxiously asking—what can we do, and how shall we go about it? UP-TO-DATE FARMING, on the other hand is busy organizing the farers, nd hel ping them to win.

The last season has been a disastrous one to many farmers. They have grown crops in great abundance. Nature was apparently kind to them. But when these crops began to hunt a market, they often failed to bring enough to meet expenses. And it has not yet been shown that there was more produced than was needed. It is no wonder that the farmers are waking up to the fact that something is radically wrong with the marketing system.

"We never miss the water 'till the well runs dry." Then we have to dig a new well, and haul water while we dig. That is trouble. We are not going to realize what great value birds are until they are gone, and insects eat our crops before our eyes, and we must poison and spray and fight, which will be more trouble. How much wiser it would be to protect the birds who have been protecting our crops more than we have realized. That would be sagacity and common sense. Read the very interesting article "Insects, Birds and Farming," in this number, and wake up.

The work of organization goes merrily on. Idaho will soon have a state union of the F. S. E. Oregon and Oklahoma have state unions; which state will be next?

How the woman folks hate fly-time! And who can blame them? Do what you can to relieve the summer of these nuisances. Screen the house. Keep the stables clean. Strew lime around the yard. Move the pig pen farther away. Keep the poultry houses clean and whitewashed.

Don't feed hogs either in dust or mud. If fed in the mud much feed will be wasted, and filth will be eaten that will not be good for the hogs; and if fed in the dust, dust will be taken into both stomach and lungs, both of which is harmful, the latter often resulting in a cough that may grow into something serious.

Farm folks, to be good citizens, ought to understand many things about political affairs. Farming depends much on governmental conditions, so farmers should know what to vote for and against. There are some articles on the tariff, "President Wilson on the Cost of Living," etc., in this issue that should be read thoughtfully by every farmer.

If you do not realize what it may mean to you in the future to follow the teachings in the increased production advocates without providing against low prices, read the account of what happened to the Brazilian coffee planters under "How Crops are Handled." Making so-called "progress" by leaps and bounds is fascinating, but "look before you leap."

Life isn't all for work and money-making. What good is life if it is all drudgery? Have a good time as you go along. Go to your local union and shake hands with your neighbors. Take your wife along—she wants to get that dress pattern from Mrs. Brown and give Mrs. Green her recipe for strawberry jam. Go along, now, and let others know you are living. If you haven't a local union, you are missing one of the best things in all your farm life.

With all this talk about farmers being business men, no doubt some farmers are thinking of sending their boys to a business college. That is more likely to make a clerk of an employe of them than business farmers. The agricultural colleges do not teach the business end of farming. But teach the boy first principles in business at home. Teach him energy, ambition and enthusiasm. One good way is to encourage him in doing things for himself. If nothing better comes up, we will make him our subscription agent. He can start a business of his own right at home. It will do him good, and we truly believe the paper will do the neighbors good. Suppose you read our little advertisement on page 13 and think it over.

Up-to-Date Farming

Published the 1st and 15th of Each Month by

The Equity Publishing Co.

at Indianapolis, Indiana

J. A. EVERITT — Editor
JOHN P. STELLE — Associate Editor

SUBSCRIPTION PRICE

One Year, 50 cents; Three Years, $1.00 Trial Subscription, three months, 10 Cents, in clubs of five or more.

Canadian Subscription, double rate.

EXPIRATIONS AND RENEWALS

MAY 13 If this is the latest date in your address as printed on the paper, your subscription expires with this month, May, 1913. We sincerely hope to have your renewal.

In sending in renewals, or new subscriptions, subscribers and subscription agents should always state "new" or "renewal." Old subscribers should always send the address label clipped from the paper with renewal.

In changing your address, always give old as well as new address.

Entered at the Indianapolis, Indiana, Postoffice as second class matter, under the Act of Congress of March, 3, 1879.

EDITORIALS

Why the Change

IT HAS long been our pride that we could truthfully say "there is no other paper like this in the world." Yet we have made a change. We are not, however, going to relinquish our title to the chapionship. No other paper shall surpass us in service to the farmer. None other may excel us in practical work on the farm, in the successful production of crops. None other shall compare with us in teaching how those crops may be profitably marketed. A surplus of money, rather than a surplus of products is what we would rather you should have. No other paper even attempts to expose the erroneous idea of false prophets, who would lead you astray, or dares to tear the disguises from the wolves in sheeps' clothing that prey upon your wealth. Still we are not satisfied. We desire to do more and better work, and in order to make improvements some alterations have been deemed necessary.

Though differently arranged to add some valuable new features, and provide for others to be added later, you will find none of the features you have been accustomed to enjoy left out. Every line is worth your time to read. If you are doubtful, read this special issue straight through as a test. Try it.

Up-to-Date Farming has a great mission. We are deeply in earnest, and your welfare is our success. We are working for you and with you for all the rights, privileges and profits that should be yours. The way to attain them is plain, and their attainment is but a matter of time, which can be hastened only by bringing more farmers into knowledge of what needs be done, and how to do it.

The changes were designed to accomplish these things quickly. Being solely for your pleasure and profit, we hope they meet your approval. If so, we also hope to hear from you with substantial evidence of such approval. If not, we shall appreciate no less your kindly criticism.—The Publishers.

Two hundred thousand is a big audience, isn't it? That is the audience we talk to in every issue of UP-TO-DATE FARMING, and this great number of readers assure us as they never did before of their appreciation of our efforts. We are sure a better day is coming for agriculture. We want to tell these things to everybody, and get them all to help us.

The Farmer that Does Things Well

EVERYBODY is familiar with the saying that what is worth doing at all is worth doing well, and there is no place where the practice of this saying is worth more than on the farm. There are so many different jobs, and frequently so many calling at the same time, and so many that seem like they may be hastened through, that the temptation to slight them is almost irresistible sometimes. The thinking and observant farmer, however, will learn that it is better to let the job go undone entirely than to not do it well.

If the work is breaking a field, do it well; if it is preparing a seed bed, do it well; if it is planting, be sure you are doing it well, and that you have the very best seed obtainable. The future crop and the work to make it depends upon these things.

The best farms in the neighborhood, those in finest fix and everything neat and in repair, are those where everything is done well. The farms that are most run down and least attractive are those where there "wasn't time to finish things just right." In those frequent cases where is a "a lick and a promise," the lick is ineffective and the promise is seldom fulfilled. "Whatever is worth doing at all is worth doing well." We wish we could whisper this to every careless, slipshod farmer in the United States.

Why Insect Pests Are Abundant

FEW farmers realize the extent of the damage done by insects that are the greatest enemy of production, nor understand how to prevent their losses caused by these pests.

Professor Walter Kane, of the New Hampshire College of Agriculture, has written a book to aid farmers to understand the matter, and do effective work in ridding the country of the destructive insects.

Prof. Kane's figures are astounding. He estimates that the boll weevil costs the cotton planters from $15,000,000 to $30,000,000 annually. The chinch bug has destroyed crops valued at $350,000,000 in its sixty years of depredations. The cattle tick eats up $40,000,000 worth of beef, saying nothing of milk and butter losses. Add to these the periodic depredations of grasshoppers, potato bugs, army worms, fruit and vegetable destroyers and we get at least a glimpse of the formidableness of a most destructive foe to humanity, which if left to increase unmolested, will endanger the very source livelihood.

As a whole, insect pests are certainly worse than they were years ago, and the reason is not difficult to find. Small birds have decreased and they are the natural enemies of the insects. Groves and thickets, homes of birds, have been cleared away. Men and boys with guns have killed these little feathered friends of humanity by the score, and called it sport. It may be sport, but it is not wisdom. Even lawmakers who could protect the lives of birds and the future welfare of the husbandman neglect their duty. Consequently, birds decrease and insects increase.

Protect the birds. The sparrow family alone save the farmers nearly $100,000,000 annually. The crop of a single tree swallow was found to contain forty chinch bugs, and ten other species of insects. A bank swallow was found to have caught and swallowed sixty-eight cotton boll weevils in the space of a few minutes. A killdeer's crop contained over three hundred mosquito larvae. Our mutual acquaintance, the yellow hammer, is the most voracious of all insect eaters. The crop of one of these birds was found to contain at one time over five thousand insects. A covey of quail will eradicate more potato bugs, cucumber beetles, and other garden and field insects than all the paris green and arsenate of lead you can work through a pump in a day's time.

Protect the birds, all of them. Bring to bear the power of your combined efforts through organization to secure laws to protect them. Never shoot them, nor allow them to be shot in the neighborhood.

"A stitch in time saves nine."

Farmers and Co-Operation

THE culminating period for farm co-operation is certainly not far away now, but we have discussed it so much that we really get almost discouraged sometimes. Yet we realize that to get people to act precept must be added to precept, and that the man who persists is the one that succeeds. We concede that there have been gains that ought to give us encouragement. Only recently the Hon. A. W. Sanborn, in discussing this question, said the farmer is the only man in the world who can take the other fellow's price and still keep from going into bankruptcy. Other manufacturers set their prices, he declared, but the farmer, who is a manufacturer as well as a producer, and the selling of whose goods is a most important part of his business, simply loads his wagon with what he has to sell and starts out asking how much they will give. Or he may go or send to the city, where he understands there are many buyers, but still he must sell for the price offered him there. Any manufacturer, or merchant even, who would adopt the same selling method, would soon be in the bankruptcy court, says Mr. Sanborn, and that is undoubtedly true. And so the farmer would be but for the constant toil of himself and family, and the self-denying production of his own living.

The farmer, says Mr. Sanborn, can get around this condition by co-operation; and so say we. But the forces which profit by his unorganized condition throw every possible obstacle in the way of such co-operation. They abuse those who would thus work out the farmers' salvation, bemean and belittle every effort made in that direction; and, unfortunately, the average farmer listens more attentively to, and has more confidence in his enemies than he has in his real friends.

This is the most discouraging feature of this proposition. And should the Department of Agriculture undertake to lead in the establishment of a wiser and more equitable system of marketing, the classes who benefit most would by the present system are the ones that will be heard most and that will have most to do in forming the plan and arranging the details. If organized agriculture in a body could take the matter up with the department, the result could easily be very different. But that seems to be the hardest thing to bring about.

Folks are still talking about rural credit. We do not know just what they mean by it, and that is why the people should watch the plans. If it is proposed to give farmers a chance to borrow money as merchants and manufacturers do, well and good; but if it is to result in the issuing of bonds based on real estate, the lands and homes of the people, then away with it.

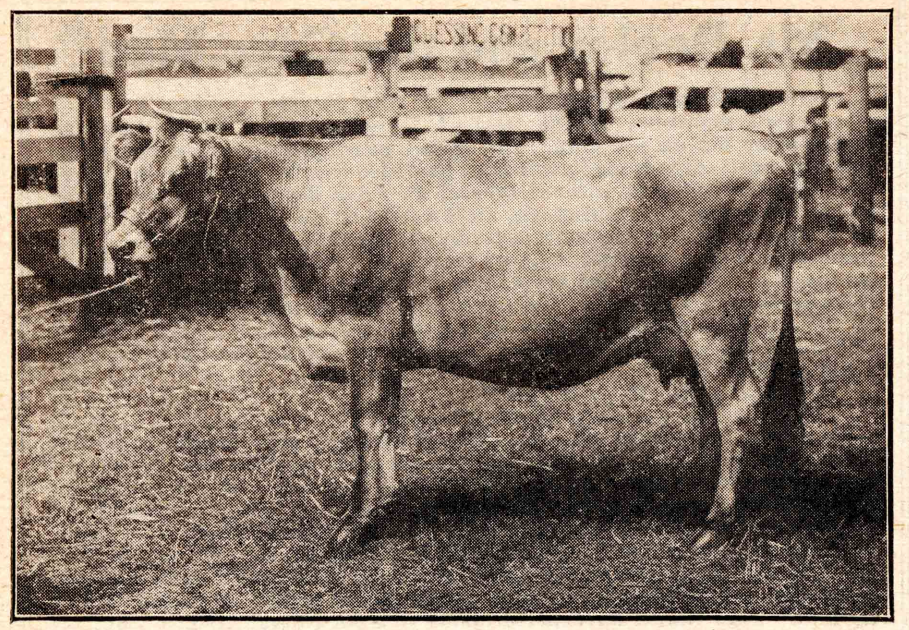
Prize Farming, Marketing, Rural Credits

THE organized farmers of Texas do not approve the so-called prize farming that is now such a rage among those who, though not farmers themselves, would do so much to "help" farming. An executive committee recently in session in Fort Worth, declared that over a quarter of a million dollars had been spent in this prize farming in Texas during the past five years, and the interest taken therein by business men has induced the organization to carefully review the matter from the viewpoint of practical farming. The committee considers it in every instance inadequate and damaging to the farming industry. Its educational value is too limited to be of any practical use, and it turns the mind of the children from practical to fancy farming. Its effect is, say the committee, to give the occupation of farming a childlike appearance, and virtually acknowledges the farmers as delinquent, feeble and incompetent. This does not apply to the exhibition of farm products, even though in competition for prizes, as that is educational in showing and comparing the best, but the offering of large prizes for increased production, even before the planting of the crops, is damaging to agriculture in that it encourages quantity rather than quality. It is prices we want rather than prizes, say the committee. Only one farmer can be benefited by a prize, but half a million may profit by an increase in prices.

Production is not a problem to be submitted to the business interests for solution, affirms the committee. It is caring for the surplus products that more deeply concerns us, and in that the co-operation is asked of strong men with wide experience and a world view of business. The place where business men can render farmers the greatest assistance is in increasing the value of their products while in the hands of the producers through a more intelligent and systematic method of marketing, thus making the business more stable and attractive, and yet, we may say, in no wise increasing the cost of living. In the opinion of the committee, production and marketing of farm products is the largest and most intricate business problem that civilization has ever confronted, and the tendency of friendly agencies to confine their efforts to the production side of the problem, the side which is most easily mastered, and is already overdone, is deplored.

Hence, the committee asks that marketing and rural credits be given attention. They believe there should be better facilities for rural credits, and argue that a bale of cotton should be as good security for a reasonable amount as a government bond. But every proposition for rural credits should be carefully scrutinized. If it involves the lands, the homes of the people in the form of stocks and bonds as security, there is danger in every line, and it should be avoided as would be a proposal to surrender the independence of our people.

Finally, these organized farmers of Texas declare that they want to own and improve their homes; to give their children better educational advantages; to possess the comforts and conveniences of modern life, and make the farm more attractive, the essential of all which is to make the business of farming more remunerative.



The Farmer's Cow

FOR years writers in farm papershave been discussing the kind of cow most profitable to the farmer. Should the farm cow be a specialist in beef, or in butter, or in both, if that is possible?

We have had long experience in all kinds. Years ago, in Nebraska, our farm herd was made up of beef cattle, with one or two "family" cows for milk and butter. It paid, even in those days of "three-cents-on-hoof" (corn was only worth twenty cents in the elevators, and eighteen cents in the crib then.) Later, in eastern Iowa, we built up a herd of general purpose shorthorns, and made money on them also. Corn was worth forty cents, oats, thirty-five cents; mixed hay $6 to $8 a ton. The calves that were vealed brought fair prices. The steers that were fattened also brought good prices. The cow that had about reached the end of her usefulness was sold just before calving to milk dairymen near Elgin, Chicago, and other cities, who sold milk, and would feed heavily and milk the old cow as long as there was any profit in it, then sell what was left of her to the beef packers for canners, to supply the "corned-beef-and-cabbage" consumers. Cows that were not salable to the dairymen were sold direct from the farm as canners. Cows that were young, but not satisfactory at the pail, or butter tub, were fattened and sold for beef.

We had a co-operative creamery in our locality, and it was a most valuable adjunct to farming. Many farmers bought cream separators and sent only cream to the creamery, and saved the cost of hauling the milk to the creamery and back.

The skim milk was utilized in the production of pork and poultry. This system was very profitable and satisfactory in that section.

Another time we were sojourning in the Ozark hills of southern Missouri, where, at that time, dairying as a farm enterprise was impractical. Because of the restricted markets, the rough mountainous character of the country, and the sterility of the soil, few farmers kept more cows than enough for milk and butter for home use. The few exceptions lived near the larger towns, or near a contingent shipping point. There was a little market for beef, which was costly to produce, and no market for veal. Consequently, the butter cow was the favorite, because she was the most profitable.

The farm we are now operating is a Virginia plantation, on the historic James, not far from Richmond. The river bottom lands are very fertile and corn, cow peas and clover, oats and vetches thrive. At first thought it would seem that the Iowa system could be duplicated, but other factors make it inadvisable. Our corn will bring from seventy-five cents to one dollar a bushel in Richmond. Hay is worth $20 to $30 per ton. Small hogs, weighing from 150 to 200 pounds bring very high prices, and crimson clover and cowpeas supplies the bulk of their rations. Good milk cows are in demand. So not beef, but buttermilk stock, and pork are the products most profitable, and this led to the adoption of the Holstein-Friesian, and they are proving eminently satisfactory.

The question of class is one of adaptability to conditions. The choice of breed depends on taste, more than anything else. The character of soil and crops, the market price for hogs, hay, milk, butter and grain must also be considered.

Where feed can be plentifully and cheaply grown, and the market price is not high, and beef as well as butter can be produced to advantage, then the dual-purpose herd is the most desirable. When a farmer keeps just cows enough to supply his home, or some surplus butter to trade for groceries, or sells to the townsmen, the butter breeds are the best payers. Where corn and hay is abundant and cheap, with little market for milk and butter, then the beefy class is "high" class. If quantity of milk and butter is wanted, the Holsteins are par excellence.

But breed is no guarantee of profit. Individuality is what counts. No matter whether a farmer owns four cows, or forty, or more, or less, there are individuals in every breed that keep in debt to their owners. The farmer should keep books on every one of his cows. Over half the cows in this country cost more than they come to. Charge the cow with what she eats at current market prices, then credit her with what she returns, also at current prices. Then strike a balance and see whether or not she pays her board bill.

Farmers with four or more milk cows can often turn loss into profit by a little more business-like management on their own part. It is not always the fault of the cow when her efforts at production are not profitable. The best cow in the country, fed on corn fodder, corn, timothy hay, and other fat-producing foods, without plenty of proteins, such as clover, alfalfa, bran, cottonseed meal, etc., and without succulent matter, like root crops, silage, and beet pulp, can not possibly pay a good profit, especially if her products are not marketed to advantage. The mere matter of a perfectly balanced ration may make a losing game a winning one.

Again, after the cow has gotten all the good out of the food consumed, and turned it over to the farmer, he may fail to get all the profit out of it, because of lack of proper appliances. Cream left in the milk may make little calves and pigs very fat, yet it adds nothing to bone or size. Corn is cheaper than cream for putting on fat when and where it is needed. Old style methods of saving cream are wasteful. Use a good separator of standard make. We have been operating one for several years, and with our other modern appliances, and our excellent markets, and cheap farm-produced protein, it is a poor cow indeed we can not compel to turn us in a profit.

The farmer's cow will be a money-saver and a money-maker as soon as the farmer sets out to make her so, and adapts himself and his herd to his farm and his markets.

Those who find it difficult to determine what is best should get in touch with the dairy department of their experiment station.

We may come again, later, with more details of our various experiences.—Taylor Bros, Virginia.

An Object Lesson in Handling Crops

IF ONE man saw another attempt to cross a deep stream on thin ice, break through and drown, he would be a very foolish man if he blindly attempted to cross the same stream in the same way. This being true, then farmers, not being foolish, should be able to read a valuable lesson in the experience of Brazilian coffee planters.

First, dealers and speculators in coffee organized to control the world's coffee market. Then they urged greater production as the sure way for coffee planters to gain greater profits, even as our agricultural leaders are doing today with crops of grain and cotton. Production was increased and the dealers, using over-production as an excuse, beat the price down to almost nothing, and bought the entire crops at their own figure. Being unorganized, the coffee planters were helpless.

So great a wrong was done the planters, and so heavy were the losses they sustained, that the Brazilian government took up the matter, first trying to curtail production, but with little success, for the present crop is a tremendous one, and is constantly increasing from the coffee trees previously planted.

Notwithstanding this greater production, and the pitifully low prices paid the producers, **the price of coffee per pound to the consumer has been advancing.** This in the face of the fact nearly a million bags of the berry have been stored in the United States, and about three million in Europe. The United States government next took action to break up the monopoly in this country, but still the retail price has not been much affected. Prices to consumers remain practically the same, while the low prices paid producers leaves the industry in a deplorable condition.

When our readers come in touch with persons or publications teaching that increased production alone is the remedy for both poverty on the farm and the high cost of living, let them remember the Brazalian coffee growers, and beware. When the business interests of cities and towns offer glittering inducements for increased production, they are urging farmers out on thin ice, where the coffee industry went through. Even now there are hundreds of thousands of farmers in this country with abundant crops which they are unable to sell profitably.

Organized co-operation of producers and consumers, and a sane, practical, efficient system of squaring the supply with the demand, with distribution and storage under efficient and economical control is the solution to this greatest and most important of all problems of progress and prosperity. It is the only possible remedy.

The task is not an impossible, or even a difficult one. The system and plan has already been evolved to a working basis. Readers of this paper know of the work being done by the Farmers Society of Equity to organize farmers by communities, counties and states, and teach them the precepts and practices of co-operation and controlled marketing. The good work is going forward rapidly.

With the marketing system in the hands of the organized farmers, acting intelligently along sound business lines, with proper storage facilities, and a system for feeding the demand as it arises, by the shortest route, at the least expense, speculation will have no opportunity to rob either producer or consumer, consumption will increase, justifying the increase in production that will inevitably follow profitable prices.

Those who fail to profit by the experience of others are heedless and not wise.

Things Bill Turner Done

By Sam Saxon

Bill Turner was a farmer, an' labored all his life. He didn't have no schoolin', and neither had his wife. But Bill was built for business, an' made the wheels go round, and left a healthy fortune when they put him under ground. He was always taking chances; paid a hundred fer a bull. His neighbors called him crazy; but he left a stable full of cows that broke the record making butter by the ton, and Bill had his picture printed in the Squeedunk Weekly Sun. He had new-fangled notions on makin' farmin' pay. He even bought a fool machine to help him load his hay. The neighbors fairly snorted when they saw the bloomin' thing; said Bill would never make it work. It wasn't worth a ding! Bill didn't say a single word, and didn't care a darn 'bout what they said, for slick as grease, his hay went in the barn an hour before a thunder storm came sailing out that way, and caught his neighbors in a pinch and spoiled their new mown hay. Bill's neighbors put their milk in cans, and set 'em in a tank. Bill skimmed his milk with a machine, and turned it with a crank. Smith chops his firewood with an axe. Bill used some gasoline and sawed a hundred cords a day with another blamed machine. Today Bill's wife rides in a car, and dresses up in silk. Smith's wife rides in a wagon, and keeps on skimming milk.

Current Comments

The Floods

It may be a little late to speak of the great floods that have devastated such a vast area of this country, and brought such a waste of property and so much human suffering. Such floods were never before known in the territory so recently devastated; and that is why we speak of them even now. Public men and lawmakers get beside themselves. A great talk now is to prevent such floods in the future, and it is proposed to spend billions of dollars to make future floods impossible. But when will the future floods come? When did they come in the past? Never; and they may never come again. Ordinary floods should be provided for, and everything done to prevent their ravages that money can do. But to build inordinately in anticipation of such a flood as that of 1913 is foolishness. The main thing is to see that nothing is done to aid possible floods. It was a reservoir that destroyed Johnstown a few years ago, and two reservoirs gave the Ohio floods their principal power. These reservoirs should be made strong enough to defy the most abnormal conditions, and levees should be safe in the highest recurring floods. Beyond that is more than human.

* * *

To Reduce the Cost

President Wilson, speaking of the reduction of the tariff on farm products, says the cost of foodstuff must be reduced. Like almost all the college people, and even the "experts" who are to teach farmers so much about farming, the President may have studied but one side of the question, and believes that to remedy the high cost of living more stuff must be produced, and if our own farmers will not do it the products of other countries must be admitted to supply the deficiency. No account is taken of the fact that much American stuff goes to waste now for lack of a market within reach, and that what is sold brings prices scarcely remunerative. The high prices complained of are not made on the farms and scarcities in trade are not because there is a lack of production. Lower prices to farmers is not the remedy the President seeks, but a more direct and cheaper system of marketing.

* * *

Protect the Birds

A recent act of the national government is designed to prevent the destruction of migratory birds; that is, birds that go to different portions of the country as the seasons change. It now remains for the states to protect such of their birds as do not migrate. Many of the states do this with greater or less efficiency; but the fear of offending bird shooters makes many of these laws ineffective. Without birds farming becomes a doubly doubtful business. Insects destroy crops and birds destroy insects. It is claimed that in Nebraska birds eat 175 carloads of bugs every day, and in Massachusetts they eat 20,000 bushels of bugs a day. We do not know on what these figures are based, but if the birds destroy such numbers of insects in these two states, they evidently destroy like quantities in the other states. Could crops be produced without the destruction of these insects; and if left alone would they not soon make it impossible for people to inhabit the earth? Legislators are small indeed when they pander to the wishes of idle hunters in the matter of killing birds.

Farming and Tariff

Farm products have had less tariff protection than any other produced or manufactured commodities, and yet the measure now before Congress reduces that protection about half. Why, it is difficult to understand, for the tariff on farm products has never been oppressive of any one. American farmers have produced abundant supplies for the American people and much for the people of other countries; and they have never been paid for it more than moderate prices. In fact, the prices at which farmers have had to sell their products have always been below the equitable level of the prices paid for the products of other labor. If those prices are brought to an extreme level after the stuff has gone from the farms the farmers are not to blame for it.

* * *

A Crisis

Everything points to a crisis in agricultural conditions in this country. There is a determination that the cost of living shall be reduced, and those who direct such matters see no fault anywhere except in the farmers, and believe the remedy must be directed entirely at that class. In the hands of these people the farmers individually are as helpless as they are in the hands of the market speculators. Collectively they could defend themselves and compel the application of the remedy to the disease, and not only save themselves from additional wrongs, but remove many of the burdens under which they now struggle. This is an imperative call to organization, confederation, co-operation and unity of action.

* * *

Busy Millions

It requires but little effort of the imagination to see, even from our office in the city, millions of busy farmers all over this great country, working as few other people work. They are preparing the ground and getting their crops in. Many of them are laboring under trying disadvantages and discouragements, and none of them know what their crops will produce nor what prices they will bring. But farmers work by faith and are, therefore, faithful workers. If it were not for the sapsuckers, useless profit takers, they would do well. Help us to get rid of these.

* * *

Helping the Farmer

The farmer is a great fellow to help himself. He is not eternally asking the states, the general government, and the big corporations to "help" him. When things are done for his benefit he is duly grateful, but what he needs most is to be given a chance to help himself—to be allowed to do business like other people do; to cultivate his ground, to produce his stuff, and then sell it as independently as his friend, the manufacturer, sells his products. Give the farmer a chance to do that and he'll take care of himself all right.

* * *

Tariff Tinkerers

Yes, there are tariff tinkerers. When outsiders get in they feel like they must do something to let the world know they are there. But people with good intentions sometimes do things that would better not be done. There is great room for tariff revision; there is no doubt about that; but everybody should be treated fairly therein. Farmers should be protected the same as other people.

Mr. Dooley and the Cave Men

"Good mahrnin', Hinnissy!"

"Good mahrnin', Mister Dooley! I see yez have some jinyouine shtreaks av aig on yer chin. I'm afraid ye're getting aigstravagant in yer ould age. Aigs is aigs nowadays, provided they're not little sassiges."

"Hinnissy, I wint without tobaccy f'r foive days jist to treat mesilf to th' luxury av a jinyouine aig, an' I intind to git all th' injoymint out av it that I can. How do ye suppose th' paypul iv this city would ivir drame that I had et an aig if they didn't have visible ividence av it roight on me chin? Hinnissy, me frind, I'm afraid that ye haven't got any immagynashun. F'r instance, I don't belave that ye ivir shtopped to think av th' paypul that lived all over this coonthry hoondreds av years before Columbus began to run Soonday aigscurshun boats over here from th' coort av Alfonso."

"I nivir have, Mister Dooley."

"Thin ye have nivir paid any attinshun to th' diffycoolties that th' layborers iv th' Shtone Age incountered whiniver they wanted a square male. Nachoorally, whin thim haythin got tired iv livin' off lizzurds an banana peelings, they daysoided to kill a mammoth. That's a kind av anymul that tasted to thim loike quail on toast. Will, sor, they'd all git togither, these cave min that wore long red hair on their laigs instid iv union-made blue overalls, an' they'd dig a big pit an' thin they'd take an' kivver it with shticks an' fishin' poles an' thin they'd droive Mister Mammoth roight into th' barbecue building' an' pound th' dayloight out av him. Thin they'd have porterhouse shteaks enough to last thim all winter, no matter how high th' proice av harrd coal an' ither winter viggytables wint." . .

"That's all viry purty, Mister Dooley, but what has it got to do with th' aig on yer chin?"

"Simply this, Hinnissy. Avin back in thim days they practiced cooperashun. They wurrked togither. If they hadn't wurrked togither, they'd a shtarved alone. Whin th' winter toime wus comin' around they hadn't had th' sinse to git togither an' co-operate. That's th' only thing that saved thim, Hinnissy, an I tell ye roight here that it's th' only thing that's going to save th' Amerryc unpaypul. I'd loike to make it possybul f'r iv'ry man an woman, boy an' gurrl in th' whole land to hear th' cackle av th' Plymouth Rock hin iv'ry mahrnin! Av coorse, by that I don't mane that they're all to live in th' coonthry, but I want to bring th' consumer so near th' projucer that we'll all be happy whin we hear th' roosters crowin'."

The Farmers Living

WE ARE getting a little tired of the ever-lasting howl about the high cost of living. Many who have the most to say about it make it themselves. A spirit of display and extravagance has such complete control of so many people that they seek high prices as a proof of their own greatness and superiority. This is specially notable in Washington. Congressmen who, in their home towns, would growl at a rental of $20 a month, when they get to Washington seek palatial residences at $100 to $150 a month. It is much the same in all the cities. Nothing is worth having unless it costs extravagantly; and persons who really can't afford it seek to imitate the millionaires. This spirit has prompted the dealers to put on extortionate profits and charge unheard of prices. We have not so much sympathy with these conditions as we once had, for even those who actually suffer from the high prices refuse to do what they might in co-operation with the producers to force cheaper handling, more equitable profits and better distribution. They could do that so easily if they would.

But the point we wish to make now is that farmers have no occasion to worry much over this high cost of living business, not that they benefit much by the high prices charged consumers, but because they ought to have most of their living without buying it. But here farmers too often make their greatest blunder. It is not unusual for them, when attractive prices are offered, to sell at harvest time commodities they will have to buy again before the return of the next season. This is sometimes so in the matter of hay and corn, is frequently so in wheat and flour, but it is most common, perhaps, in meat and lard. A calculating writer recites a case. A farmer had a hog in fine condition for slaughtering and converting into pork, lard and bacon, but instead of killing it and putting it up he sold it for $16. The shipper sent it to market and received $20 for it, and there was no great profit to the buyer in that. But the packer worked it up, utilizing every particle of it, even to the hair. The hams, shoulders and sides went back to the country dealer as bacon and cost him $30. It was now retailed to the farmer at prices that made it bring the dealer $40. Had the farmer who sold it bought it all, and he no doubt bought more than that during the season, paid $40 for the $16 he received, besides he slaughtered it himself, he would have had the bones, the feet, the head and the lard. Farmers should put up their own meat; they should save wheat for their bread and feed for their stock, and then they can smile at the high cost of living.

More Acres or Better

A GREAT deal is said now about the increasing demand for land and the exhausted supply. Yes, there are more people every year, but not another foot of land is or will be made. Some heretofore unoccupied land is being reclaimed, but so far as the earth is concerned it is finished.

One thing, however, is open to those who cultivate the soil. They can make the land richer so that fewer acres may suffice. That is the rule in Europe, and we are now looking to Europe for great things. But in America we have been too much inclined to take and not give. In farming as in other things we must learn to "give and take"—to give freely and then we may take abundantly. In many parts of the United States we plow and plant and gather, often the same crops year after year, and then we complain at the seasons because there seems to be less to gather each year. "The seasons are not like they used to be."

Dear reader, it is not the seasons most likely; it is the land. You have taken more than you have given. Those wearied acres have become exhausted, and they must not only have a rest, but they must be fed up. We cannot say just what your land needs, but we know it needs recuperation. If it could be in pasture awhile, with numbers of sleek cattle, horses or mules, or fine sheep upon it, how nobly would it respond to your future culture.

Our Market Review

PRICES of staple crops on April 1, 1913, were 25.9 per cent. lower than on like date in 1912 is the word from the Department of Agriculture under date of April 9. Compared with other years they are 3.7 per cent. lower than in 1911; 18.2 per cent. lower than in 1910, and 13 per cent. lower than in 1909.

The crops aggregate about 12 per cent. greater for 1912 than for 1913, but the price reduction is over 25 per cent. —about one-eighth greater but worth one-fourth less. There is no evidence that the 1912 crops were more than they should have been to supply the demand even with our abominable system of marketing as, practically all of them are going to market even though in some cases they don't bring freight. They find a demand at some price and we will not admit that the consumption is increased because of the cheapness. We are inclined to the belief that unusual plentifulness and low prices make an article less desired than the same article at a fair price.

Only twice since crops have been reported by the government has the April promise for winter wheat been exceeded. The April 1st condition was reported at 91.6 per cent. For 1901 it was 91.7 and in 1903 it was 97.3. But neither of these years produced a bumper crop, the former year it being 522,000,000 bushels and the latter year 670,000,000. The condition of the crop remains good generally.

Reports indicate that a large cotton crop will be planted. Southern vegetable and fruit crops are heavy and in many places but meager returns are being realized by the growers. Florida potatoes so far have netted good profits where intelligently marketed in carlots. Texas onions are being marketed under peculiarly unfavorable conditions, the northern markets being flooded with old onions at give-away prices.

Following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on April 12, 1913, with comparisons, are shown in the following table. (The sign —before figures means decrease, X indicates increase.)

	April 12 1913 Bushels	Change from 2 wks. before Bushels	Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 yrss. before Bushels
WHEAT	59,974,000	—5,218,000	—4,157,000	—8,235,000	X 22,747,000
CORN	19,807,000	—5,245,000	—4,082,000	X 4,978,000	X 1,998,000
OATS	14,585,000	—2,473,000	— 795,000	— 526,000	— 716,000
BARLEY	5,136,000	— 795,000	— 710,000	X 3,166,000	X 3,169,000

Closing Prices of Cash Grain

Cash grain closed in the leading markets on April 21, two weeks before and a year before as follows:

WHEAT, No. 2 RED

	Apr.21	2 Wks before	AYr. before
Chicago	1.05 @1.09½	1.03 @1.06	1.14
St. Louis	1.10 @1.11	1.07	1.18
Kan. Cty	1.00 @1.04	1.01 @1.06	1.11
Cincin.	1.10 @1.12	1.06 @1.11	1.18
N. York	1.14½@1.16	1.11½@1.13	1.21

Minneapolis—Spring wheat, No. 1 hard, 91c; No. 1 northern, 89½@91½c. Two weeks before, 88⅞c and 86⅜@88c, respectively. A year before, $1.13⅝ and $1.13⅛, respectively.

CORN, No. 2 WHITE

Chicago	59½	56 @56½	80½
St. Louis	59½@60½	56	83
Kansas City	58	55	79½
Cincinnati	62 @63	57½@58	81
New York	63¾	59	84

Cotton

New York, April 21, 1913.—Cash cotton closed as follows: Middling upland, 12.15; middling gulf, 12.40c. Two weeks before, 12.50 and 12.85 respectively. A year before, 12. and 12.25c, respectively.

Live Stock

Indianapolis Stock Market, April 21, 1913

CATTLE—Range of day's quotations for steers ..... $6.75@8.75

Range of day's paying prices for steers ..... 7.15@8.00

HOGS—Range of day's quotations ..... 8.25@9.15

Range of day's paying prices 8.00@9.25

The price of cattle is the same as two weeks before. The price of hogs is from unchanged to 35 cents a hundredweight higher.

Chicago Produce Market

April 19, 1913

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets, address the Farmers Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This wk.	Last wk.	Last yr.
Total, 6 days	322	353	326

Per bu. bulk or sacked, Wisconsin Kings, or Burbanks, common, mixed to good sound ..... 34@38c

Rurals, outside fancy, Dusties.... 40@43

Minnesota, round white, bulk or sacked ..... 35@40

NEW POTATOES—There is an easy feeling. Demand is only moderate. Supply is fairly good.

The price of old potatoes is 4c to 5c a bushel lower than two weeks before. The price of Florida new potatoes is $2 a barrel lower than two weeks before.

ADVICE—If any of our readers have old potatoes, contrary to our advice to sell earlier, they should not delay in selling now. Also, advise disposing of new potatoes as soon as they are in prime condition, because the price will probably be lower as the season advances and the supply increases.

SWEET POTATOES—The season is drawing to a close. The demand is very tame. Stock usually is indifferent. The price is very low, running for Illinois yams from $1 to $2 a barrel. For Illinois hampers from 50c to $1.

Old onions are being offered faster than they can be absorbed by the demand. Sacks of 65 to 68 pounds going at 25 to 30c. New onions from Texas are selling at $1.25 per crate for No. 1, as low as 85c a crate for No. 2.

BEANS—Some little improvement in demand reported. Country shippers were said to be holding firmly. Receipts are very moderate. Not much has been doing lately in other kinds. Red Kidneys rule dull; not many on sale, and Brown Swedish remain almost entirely lifeless. Not many on sale here, but supply back in the country is said to be fairly good.

Pea Beans—

Hand-picked, choice ..... $2.20@2.25
Really fine, bright ..... 2.30@....
Prime ..... 2.15@2.20

The price of hand-picked choice pea beans unchanged to 5c a bushel higher than two weeks before. Brown Swedish are 25c a bushel lower. Other kinds are unchanged. We advise selling beans gradually. Beans have been fairly well controlled, as is evidenced by the steadiness of the market for quite a long time.

The price a year before was 40c a bushel higher for pea beans.

HAY—Receipts, 768 tons. Timothy hay in good demand and firm. Offerings light. Prairie hay in light request and supply liberal. Market quiet.

Choice Timothy hay ..... $18.00@19.00
No. 1 Timothy ..... 15.50@17.00
No. 2 Timothy ..... 13.50@15.00
No. 3 Timothy ..... 10.00@12.00

The price of hay is 50c to $1 a ton higher than two weeks before. A year ago the price of choice Timothy hay was $25 to $26.

ADVICE—Sell gradually, but try to sell at the final market, which should mean $2 to $5 a ton more than local dealers pay.

STRAW—Rye straw quotable at $8.50@9.00. Oat straw at $7@7.50. Wheat straw $6.50@7.

Wheat straw is 50c a ton higher than two weeks before. Other kinds unchanged.

Broom corn is unchanged from two weeks before. There is nothing important doing. Supply is ample and demand very tame.

EGGS—A firm feeling exists. Market is in good condition. Receipts are liberal. A great many eggs are going into cold storage. Consumption is large. Preference is given to nearby products. Southern stocks are discriminated against to an extent. They sell from 1 to 1½c lower than western and northern stock.

Miscellaneous lots, cases returned, 16@17c, depending on quality.

The price is ½ to 1c a dozen higher than two weeks before.

APPLES—They are selling fairly well. There is a steady demand for apples of good size, solid and good color. Prices remain low.

The Great Conference

WHAT was called the First National Conference on Marketing and Farm Credits was held at Chicago, April 8 to 10.

The roll call showed 415 delegates present. An analysis of the delegate roll showed the following situation, industries and professions represented:

Agriculture, banks, boards of trade, chambers of commerce, chain stores, consumers' co-operative unions, commission men, doctors, Department of Agriculture (Washington), editors, grocers, grain dealers, insurance, law, legislaturers, manufacturers, merchandising, publishing, railroads, storage and seeds.. Twenty-one of the delegates were listed as farmers.

This analysis of the delegate roll shows that this conference was as little like a real farmers' meeting ought to be as it was possible to have it. The "call" said the conference was to discuss marketing and farm credits and "devise ways and means for better methods of distributing and marketing farm products." A few people were there who came hoping that something definite would be accomplished toward better marketing, but we say plainly that the great majority were there to see that nothing definite was accomplished. Those people realize that the two great classes of our people, producers on the farms and the plain consumers of the products in the towns and cities, are all worked up about the abominable marketing system as it exists and they see that these people are likely to do something by themselves to get relief. If farmers take the business end of agriculture in their own hands it is certain that there will be a genuine revolution and many of the people who have set themselves up between the two great classes will not be needed. And herein is the secret of the sudden great activity of other people for the farmers welfare (?). They are satisfied with conditions as they exist. They are doing well enough, thank you, and they don't want any change. But they see that a change is inevitable. Therefore, they want to direct the movement and decide the new policies and be "in" on the new deal. They don't want farmers to become free and independent business men, as they will be, if they cut loose from all the old influences and reject the proffers of the government and establish their own system of marketing, own it, control it and operate it as this paper has so long shown them how they can do all of these things. We don't like to say these things, but we would not speak our convictions if we said less. For proof:

On Wednesday the committee on organization reported. It recommended making the conference a permanent institution, with officers, for the purpose of discussing annually the same problems—marketing and farm credits. When this report was submitted, the editor of this paper scored the report because of its failure to attempt anything looking to the solution of the problems for which the conference was called. He compared the conference, if it adopted the report, to the fabled mountain that labored mightily and brought forth a mouse. In the line of recommendations he said that he hoped the conference would, at once, organize a National Farmers' Federation that all present farm organizations could work through in the matter of reporting crops and marketing them. This suggestion was received with favor by the real farmers present and called forth much favorable comment. At this point somebody moved that the committees' report be withdrawn and held until the committee on resolutions was also to report. The motion prevailed.

Mr. Everitt was then invited to meet with the committee on organization to explain his plan of federation. This he did on Thursday morning. While making the explanation he was interrupted twice by men who were leaders in calling the conference who came into the committee room and told the committee that it must not make any definite recommendations about organization; that the conference was not called for such a purpose but merely for discussion and a clearing house for different people's ideas. The committee on organization submitted the following as its final report:

1. The next annual National Conference on Marketing and Farm Credits will meet the second Tuesday of April, 1914, at Chicago.
2. All marketing, transportation, and handling agencies; and farm papers, bankers, mercantile, legislatures, governors, agricultural colleges and consumers are entitled to representation.
3. That the proceedings of this conference shall be printed and distributed to educate the people.
4. That a committee be appointed to print and distribute the proceedings.

The report of the committee was adopted.

Following is a summarized report of the committee on resolutions:

1. Favor a government bureau in the Department of Agriculture, to study the problems of distribution of farm crops. That this conference create a committee to work with the Department of Agriculture and be a lobby to work with Congress. Also that similar committees be sent to each of the state's governments and legislatures to ask for the creation of state bureaus for the study of the great cost of living and the low prices the producers get.
2. In favor of co-operation of producers and consumers to reduce the expense of marketing.
3. For the improvement of parcel post.
4. For an international conference on marketing and farm credits at San Francisco, in 1915.
5. We approve of the congressional committee and others to go to Europe to study European methods of marketing and farm credits and will co-operate with them.

The report of the committee was adopted.

The third day was devoted to farm credits. This session proved a haven for all the people who had schemes to improve the security for loans to farmers. The person who sat through the session would be forced to the conclusion that the chief crop farmers raised is mortgages and their chief business is to borrow money. Usually a farmer who is sound financially has no trouble in obtaining reasonable credit or in borrowing needed money at as low a rate of interest as other classes of people in the community. And these people are taken care of now. But there are millions of farmers who would borrow money against the market price of crops; that is they would borrow money to buy a farm, or put lean cattle into feed, or implements to cultivate the crops. The capitalist knows there is no stability to the market prices, therefore, if he takes a gamble on such security he must be paid well for it. A scheme is desired that will embrace all of these and absolutely secure the lender. But what will happen to the mortgagor when prices are low—when the fat cattle do not sell for original cost plus feed and other crops sell for less than cost or when a panic sweeps the country and interest cannot be met? The loan is secured by the land and the mortgage is held by the same people who are now largely in control of deciding the prices that are paid for farm produce. The capital class can't lose but would there not be great danger of the farmers losing their land?

We have said before that no general mortgage scheme should be accepted by the farmers until they are in a condition to sell at right prices. Then many of them who feel the pinch now will not need to borrow and all of them can guage their borrowing on a basis of profitably sold crops and all can have an assurance of stability of prices to meet interest payments. We wonder whether the difficulty experienced by some to place mortgages on the farm are not blessings, while the

UP TO DATE LIVE STOCK AND DAIRYING

Dirt spoils more milk and butter than inexperience.

Nothing can be completed right that isn't begun right. Feed the heifer calf with its mother's milk for fourteen days, three times a day. A calf that will not be worth this care will not be worth raising. You can not have a good cow unless the calf is started right.

Be careful about feeding skim milk to young calves, where separators are used. Give the milk time to cool. Many a fine calf has been lost because this caution has been neglected.

Quality is what counts in butter. Good butter can not be made from bad milk, not in the best dairy in the world.

Alfalfa hay and corn silage is the best known roughage for milk cows. The dairyman who has these can buy his grain and make money.

ter, and three months later gave birth to a pair of twin calves.

This cow is not a mere accident—it didn't just "happen" that she is a wonderful producer. She has a half sister that has established a record of over six gallons of milk daily.

A cow with the handicap of a name too long to print and too hard to say, owned by a stock farmer in New Jersey, smashed a world's record in milk and butter production by producing 40.32 pounds of butter in seven days, 290 pounds in sixty days, and 460.19 pounds in one hundred days, which makes her, for the time being, champion of the world in milk and butter production, the very "Queen of Dairydom."

Such performances are not matters of chance. There never was, and never will be a cow with "scrub" blood in her veins that can ever approach these

MILKING TIME ON FARM OF SUBSCRIBER W. G. MYER, CHARITON, IOWA

Cheap milk is out of the question. Farmers can't produce it. But good, clean, wholesome milk is worth a good price, and every dairyman can produce that kind, if he produces any.

Be careful not to overstock the pasture. Plenty of grass makes plenty of gain.

When a heifer begins the butter making business at two years of age, and turns out two pounds a day for one straight year, it means that great care has been taken in the selection of her parents and grandparents for several generations. How many of our readers are laying the foundation for such wonder-working heifers? Now is the time to begin.

records. Moreover, there are families of pure-breds than can not do it. But these wonder workers came from families of the strains of large producers, the direct result of science and skill in breeding the right qualities.

The average farmer cannot, of course, breed up his herd to such high standards. But, the point is, he can build up the profit-payers, and lay the foundation now for a herd that in a few years time will make him double, triple, possibly ten times the profit he is now making.

Take the best cow you have, reader, and plan to have a herd in a few years, the poorest of which will be better than she is. It can be done.

THE KIND OF CATTLE THAT PAY

ONE cow that makes you a good profit on what she eats is worth more to you than a dozen that just produces enough to pay for her keep.

I would rather have one cow that makes two pounds of butter daily, at a cost of ten cents per pound, than ten cows producing a total of fifteen pounds daily at an average cost of fourteen cents a pound.

A factory owner would not keep a man at $2 whose work was not turning over a good profit to the factory, nor a machine that cost as much to run as the value of its output. The farm is a factory, and the cows are machines.

A young cow by name of Lass of Hood Farm commenced a test under the supervision of the Massachusetts Agricultural College, beginning October 3, 1911, at the age of two years and two months. On October 1, 1912, she had produced 739 pounds of but-

SALVATION OF THE OLD FARM

A WRITER says the dairy cow is the salvation of the worn-out farm. Her presence means greater fertility, larger crops, more prosperity for the farmer, and more comfort for his wife and children.

We agree to all that, but if a small flock of sheep be added, and a good brood sow of some of the best varieties, the salvation will be reached much quicker; and the farmer, though on an old farm, will soon realize that he is on the road to prosperity.

Like Begets Like

"Why am I always the goat?"

"Because you are everlastingly butting in."

PASTURE FOR HOGS

IN a hog feeding contest in Missouri, with corn at 60 cents a bushel, it was determined that an acre of bluegrass pastured 140 days with 14 hogs, was worth $18.80; an acre of clover pastured 90 days with 12 hogs was worth $37.59; an acre of rape, oats and clover, pastured 78 days with 10 hogs, was worth $22.02; an acre of cow peas, pastured 32 days with 12 hogs, was worth $17.75; an acre of corn and cow peas, pastured 52 days with 10 hogs, was worth $35.40.

No Loser

"Why do you call your dog Rockefeller?"

"Because he was never known to lose a scent."

A HOLSTEIN HEIFER

WHILE milch cows command so much higher prices than they used to bring, it is well to know what a good cow ought to be. An Iowa farmer reports a Holstein heifer that brought her first calf when she was one day more than 19 months old. She gave milk for 10 months, and during that time yielded 7,300 pounds of milk. She was then dried up, though it was difficult to stop the flow of milk, but it was thought necessary to do it, for she was soon to be fresh again. She brought another calf a year from the date of her first calf. Therefore, when this heifer was 31 months old, she had brought two calves, and between their birth had given 7,300 pounds of milk.

He Thought He Did

Lawyer—Prisoner, look at these jurors. Do you think you know more than half of them?

Prisoner—Really, Judge, from their looks I believe I know more than all of them.

HOGS AND COAL

DUMB animals have at least one advantage over their human superiors; they know what is good for them, and if they can get it they will take it. Our readers have noticed how eagerly hogs that have not had access to such substances will gather around a pile of coal and eat the small lumps as they would corn. This is not because there is anything in the taste of coal they like or that it has any nutrition in it. It is simply because hogs need it. It is not even digested, but it has a soothing effect on the stomach and elementary canal. It absorbs poisonous gases, makes them harmless and takes them from the animal's system. Besides, nearly all hogs are more or less infested with worms and other internal pests. These crushed particles of coal have a destroying effect upon them, and thus add materially to the health and thriftiness of the hogs. Charcoal is just as good, possibly some better, and it is just as eagerly devoured.

Moral—Keep piles of coal slack or broken coal, or charcoal and ashes where the hogs can get it when they need it.

$65,000,000 would be saved annually by the exclusive use of DE LAVAL CREAM SEPARATORS

It is estimated that a million cow owners in the United States are still skimming their milk by some wasteful "gravity" method.

At an average of four cows to the farm and an av- erage cream loss of $10 per cow per year (it is more often from $15 to $25), all of which could be saved with the use of a De Laval Cream Separator, this alone represents an annual cream loss of $40,000,000.

Then there are, all told, perhaps a half million inferior and old and worn-out machines in use where owners could easily save $5 per cow per year by exchanging their "cream wasting" machines for De Lavals, and figuring on an average of six cows per farm, this represents another loss of $15,000,000 at least.

Then to this tremendous cream waste through the use of inferior separators must be added the excessive cost for repairs on cheap and inferior machines and the cost of replacing machines which should last from ten to twenty years, but which are ready for the scrap heap in two or three years. There must also be taken into consideration the loss in lower prices received for cream and butter due to inferior quality of cream produced by poor separators, all of which must easily equal at least $10,000,000 more.

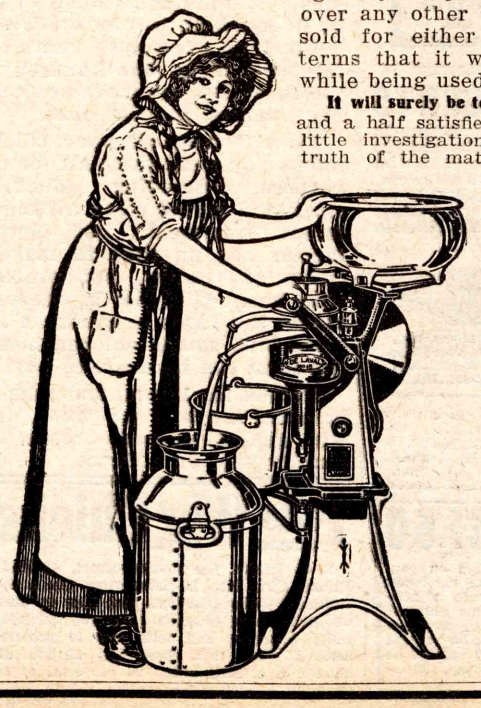
This makes a grand total of $65,000,000 which would be saved to the cow owners in this country by the exclusive use of De Laval Cream Separators.

At first sight these figures may seem startling but any experienced dairyman or creameryman will agree that the cream and other losses without a separator or with an inferior one will average a good deal higher than the above estimates and that these figures are really very conservative.

Any cow owner who is selling cream or making but- ter and who is not using any cream separator or an inferior machine, is really paying for a De Laval in his cream losses and at the same time depriving himself of the benefit of its use.

De Laval Separators are not only superior to all others in skimming efficiency, but are at the same time cheapest in proportion to actual capacity, while they are so much better made that they last from two to ten times longer.

No cow owner can logically make the excuse that he cannot afford to buy a De Laval, because it will save its cost over "gravity" separation in six months and over any other separator in a year and is sold for either cash or on such liberal terms that it will actually pay for itself while being used.



It will surely be to your advantage to join the million and a half satisfied users of De Lavals. A little investigation will prove to you that the truth of the matter is you really cannot afford to sell cream or make butter WITHOUT the use of a De Laval Cream Separator. will be glad to demonstrate this to your own satisfaction or you may write us direct.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

CHICK FEED

Clean all the coops and keep them clean. Filth is the breeding place of insects and disease.

Keep the water vesels covered. Many a young chick met his death trying to swim.

Fresh, cool water is a necessity for all fowls. They drink little at a time, but often.

Don't let the lice and mites get started. White-wash and spray and powder thoroughly and continuously.

Late hatched chicks suffer more from lice, mites and disease than early ones. Warm weather encourages the multiplication of the pests. Extra care, therefore, should be given late hatches.

During the first two weeks a setting hen is on the job, keep her well dusted with insect powder. Make doubly sure of safety.

Have a house or large coop ready for the young pullets when they have outgrown their nursery quarters, and give them plenty of room. Over crowding will stunt them.

The early frys should be pushed to the limit, but don't overdo it, or they will go "off their feed" and will lose as much in a week as they gain in a month. Keep the appetite keen, and they will grow marvelously if the food is right.

Write for poultry and incubator catalogs, and read them. Nearly all contain a fund of useful information. Besides, you probably need some improved poultry appliances.

The first food of a brood of ducklings should be clean water with sand in it, nothing else, for thirty-six hours. Then feed light bread dipped in milk and sprinkled with sand.

Good luck goes a long way in a poultry yard, but it isn't to be depended on. Besides, good management is the best aid to good luck.

In the mornings keep the young turkeys out of the grass and weeds until the dew dries.

Little chicks should be forty-eight hours old before they receive their first meal, which should be hard boiled egg crumbled with oatmeal or dry bread, or both.

Clabber cheese, fed every other day, is a fairly good substitute for green bone in the chicks' bill of fare.

Keep the pullets growing with plenty of wholesome food, so they will be in condition to produce winter eggs—the time everybody wants eggs and few have them. One hundred properly grown pullets are more profitable than five hundred inferior ones.

Do not feed all your chicks alike unless you want them all for the same purpose. Breeding stock, eating stock and laying stock all require different treatment. Of course, the farmer has no time to make a specialty of poultry, but probably the wife has. Give her a chance by dividing the yards or orchards into separate lots, so the chicken business on the farm can be made to pay better.

Pullets for layers, and year-olds for breeders are best for profit, especially with general purpose breeds, the kind usually kept on a farm.

Tells Why Chicks Die

J. C. Reefer, the poultry expert, of 1841 Main St., Kansas City, Mo., is giving away free a valuable book entitled "White Diarrhoea and How to Cure It." This wonderful book contains some new scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98 per cent. of every hatch. Everyone interested in poultry should certainly write Mr. Reefer for one of these valuable FREE books.

SUPPORTING THE HOME

OUR own experience tallies well with that of the writer of the following. In fact, our acquaintance with average farm life enables us to know that the farm family could better give up any other department of farming so far as the family support is concerned than poultry. It only behooves the average farmer to make a little better preparation for the poultry, to give them a little more thought and attention, and get a little better stock:

In my estimation poultry is very fine and a valuable help. It has done much for me. It has helped me support my home in that it has supplied the table with delicious meat and eggs, which are so palatable, and also helping in a great degree to buy the clothes for a family of ten. My biddies also helped to start a Berkshire farm, and there again poultry proved a friend in need. Last year I raised nearly 400 chicks and did not use an incubator. I had the best luck with the chicks, as I usually do, for I seldom lose a chick after it is hatched unless killed by the mother hen. The poultry business is very profitable and a good friend to the farmer and the farmer's wife.

POULTRY IN LARGE FLOCKS OR SMALL

SHALL the poultry be kept in single large flocks, or shall they be separated and kept separate in several smaller flocks with separate houses and separate runs? This question is being considered by poultry people, and it is being given various answers.

There are a few large poultry farms or poultry ranches where thousands of birds are kept. Some of these adopt one of the systems and some the other. Whatever else may be said, it is clear that the fowls should not be crowded, and that they should not be compelled to live in unsanitary conditions. Small flocks are liable to receive better individual treatment than are those kept in large flocks. This is why those who keep small flocks can report better per capital results than those who keep large flocks that are housed together and have the same runs. But when cost and care are taken into account and a dividend struck the apparent advantage in the small flock is liable to disappear. In speaking of large flocks, however, we do not for a moment mean overcrowding. That should never be tolerated under any circumstances.

But on the farms, and there is where the most of the poultry supply comes from, the fowls usually have as broad a run as they choose to take. Under such circumstances large flocks may be given their liberty, and be allowed to go where they please, together or otherwise. We have noticed under circumstances like that they are very liable to divide in different flocks, and run separating during the day, to gather in at feeding time and for the night.

At night is the time when the problem is really up for solution. The poultry must have room at night. If they have not room in the house they will seek it in the nearby trees, or anywhere that affords them a roosting place. Therefore, where large flocks are kept on a farm, several small houses are better than one large one. It is no great task to teach the birds to know their respective homes, so they may be thus comfortable and healthy at night. Then they may well be trusted with a wide range during the day.

Why Incubator Chicks Die

The book entitled "The History of White Diarrhoea, or Why Incubator Chicks Die," will be sent absolutely free by return mail to anyone sending us the names of seven to ten of their friends that use incubators. This book can save you $100 this summer. It describes white diarrhoea or bowel trouble. The cause and tells of a cure. BOOK ABSOLUTELY FREE FOR THE NAMES.

UP-TO-DATE FARMING, Indianapolis.

Though other purses be more fat,
Why should we pine or grieve at that,
Hang sorrow! Care will kill a cat.
And therefore, let's be merry.

SENTIMENT IN VERSE

FEW of us think the world is as good as it ought to be. Some think it is getting better; many think it is getting worse. After all, the world can be no better than the people that live in it. What is each of us doing to make it better; or, to tell it more truly, to make ourselves better? If the world were as good as we are, would the world be better? That is really the problem before each of us, though it is not often so considered. It is impressively told in the following verses:

Were the world as good as you—not an atom better—
Were it just as pure and true,
Just as pure and true as you;
Just as strong in faith and works;
Just as free from crafty quirks;
All extortion, all deceit;
Schemes its neighbors to defeat;
Schemes its neighbors to defraud;
Schemes some culprit to applaud—
Would this world be better?

If this whole world followed you—followed you to the letter—
Would it be a nobler world,
All deceit and falsehood hurled
From it altogether;
Malice, selfishness, and lust
Banished from beneath the crust
Covering human hearts from view—
Tell me if it followed you,
Would the world be better?

Then arises that other familiar saying that, in spite of conditions, life is what we make it. Environment has much to do with our lives, of course, but—

Let's oftener talk of noble deeds,
And rare of the bad ones,
Let's sing about the happy days
And not about our sad ones.
We were not made to fret and sigh,
And when grief sleeps to wake it:
Bright happiness is standing by—
This life is what we make it.

So happiness comes as we qualify ourselves for it. Some who are apparently most favored in this world are most unhappy, because they don't recognize the blessings as they come. The poet again helps us out:

Don't grumble, don't bluster, don't dream and don't shirk;
Don't think of your worries, but think of your work.
The worries will vanish, the work will be done;
No man sees his shadow who faces the sun!

But how can we bring ourselves into such an atmosphere, and make these a part of our own lives. Simply do our best, no matter what is before us.

When a man does his best,
Be his light small or great,
He can leave all the rest
To his God or to fate.

For the comfort that's sure
From a duty well done,
Lets him lie down secure
At the set of the sun.

HOME HELPS

The old saw that tells us to look out for the pennies for the pounds will take care of themselves, is one we should heed.

Five, ten and fifteen cents, with sometimes a quarter, doesn't seem much, and so we buy the new pin or collar, a magazine or some candy too often, and our purses are flat with nothing to show for the money spent. If these expenditures were only occasional, it would not matter so much, but the very smallness of the amount is our undoing.

It is a wise woman who keeps an account, itemizing even the miscellaneous purchases, for she will then see what even small things come to, at the end of the month.

One doesn't care to be penurious or miserly, traits that are decidedly unpleasant, but we must, if we live within our income, use discretion in our buying.

It is the little foxes, the little leaks that we need to watch, for most of us consider well when large amounts are to be spent that we get what we pay for, and need the article.

Housekeepers are beginning to realize that cheating the grocer and the butcher increases the druggists' bills. Many of the illnesses of the body are caused from improper feeding. Much of ill health may be fed out of the system by the use of well selected and prepared food.

When making pastry a few reminders will be helpful. Have every utensil and all the materials cold; cut in the lard with a knife or rub in quickly with the tips of the fingers. When adding the water, have it cold, and add too little rather than too much, for too wet pastry needs more flour and always results in a tough crust. Handle it as little as possible, roll it quickly and lightly and if the proportions are good, a tender, flaky crust will reward your labor. A good hot oven is necessary for pastry.

A teaspoonful of hot honey is a fine cough remedy. Also red pepper tea, which may be mixed with milk instead of water, and does not seem quite so firey.

Charcoal is a splendid odor absorber. Keep in the ice chest, in cupboards where there is any dampness, and renew it occasionally. The old need not be thrown away, for it will start the fire just as well as if it had not been used for a purifier.

Coming to It

"Eggs are getting so costly they will soon want to use them on women's hats."
"That's it eggs-actly."

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

Preserving, a Pleasure —with Parowax

Dip tops of jars and catsup bottles in melted Parowax. Or pour this pure paraffine directly on top of contents of each jelly glass. Result—a perfect, air-tight, mould-proof seal that keeps canned vegetables, catsup, chow-chow, preserves and jellies indefinitely.

No Tins or Tops Needed

It is even simpler than it sounds. It is as cheap as it is easy. No bother with tops that will not fit. Not even paper covers need be used. The direct contact of Parowax with the jelly cannot affect its taste or goodness.
Parowax is tasteless and odorless. It is so thoroughly harmless that it can be chewed like food or gum.

Indispensable in the Laundry

Parowax cleans and whitens clothes in the wash. It imparts a beautiful finish to them in the ironing. And Parowax has a hundred other household uses. No home should be without it.
Your druggist and grocer both keep Parowax. Order it today.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

Seventy-eight letters since last issue! Of course, we can't print near all of them, but we'll shorten them as we did in last issue, and do the best we can.

DEAR CADETS: I am a Tennessee girl 18 years old. My father is a lumberman and is the sheriff of Polk county. I would like to hear from the girls and boys, and will answer all who write.—Ethel Crumley, Benton, Tenn.

DEAR CADETS: UP-TO-DATE has been a visitor at our home for many years, and it is helpful to the entire family. Papa has two large farms, and the French Broad flows through our home farm. I am 18, and have lived on the farm all my life. Farm boys and girls, send me a card or letter; I would be pleased to correspond with you.—Mary Spurgeon, Bybee, Tenn.

DEAR CADETS: I live on a farm of 440 acres. Our state has 78 counties, and I live in Attala county, where we raise corn, cotton, oats, cane and peanuts. All you Cadet boys and girls write to me.—Lillie Burrell, Ethel, Miss.

DEAR CADETS: I am an Arkansas girl, 15 years old, and live on a ranch of 1,000 acres. I want you to write to me, and I will answer all I receive.—Ola Wilerford, Deckerville, Ark.

DEAR CADETS: I am 14 years old May 15, and a great lover of flowers. I love to take bouquets to my teacher. All letters gladly received and answered.—Henrietta Holman, Vaughan, Miss.

DEAR CADETS: I am 21 years old, and live on a farm in North Carolina. We raise corn, wheat and tobacco. I would be glad to receive letters from the Cadet boys and girls. Will answer all I receive. —Charlie Habgood, Oxford, N. C.

DEAR CADETS: I like to read the Cadet letters, and my teacher often speaks of them in school. I would like to exchange cards and letters with all the girls and boys, and I wish some that live in Kentucky would write to me.—Elsie Warren, Orange, Texas.

DEAR CADETS: I live on a 174-acre farm, away up in Maine. I am only 12 years old, but I would like to exchange cards with the boys and girls.—Olive E. Pomeroy, North Bangor, Me.

DEAR CADETS: I am 21 years old, and we raise hay, oats, wheat and potatoes. I would like to hear from all the Cadet girls and boys; will answer all who write.—Raymond Westcott, North Plains, Oregon.

DEAR CADETS: I live in a West Virginia oil field. There are 4 wells on our farm, that yield 250, 500, 480 and 600 barrels, respectively. It is a sight to see the oil flow from the wells. But the gas got so bad we had to move from the farm. Last July 3 men were burnt to death by the gas catching fire. One man was burnt by gas from one of our wells about 150 yards from the house, and a boy and his father only about 50 yards from our door. There are between 400 and 500 wells in two miles of our farm. I wish all the Cadets would write me cards or letters.—Vienna Jarrett, Princeton, W. Va.

DEAR CADETS: I belong to a local union that has 25 members, and more are coming. I think it is just what the farmers need. Would like to hear from all the Cadet girls and boys, and will answer all.—Clarence Rhoades, Paxinos, Pa.

DEAR CADETS: My mother takes UP-TO-DATE, and I am very much interested in its aims. If all farmers would heed the advice it gives, I really believe they would be more prosperous. I am 19 years old, and I would be very much pleased if the Cadets would write to me. I enjoy getting long, lively letters and pretty post cards.—Beula Moore, Sterrett, Ala.

DEAR CADETS: My father owns a farm of 700 acres in southern Nebraska, and feeds many cattle and hogs every year. I have lived on the farm all my life but 3 years, when we lived in town. But in June, 1908, our home was torn away by a tornado, and then we moved back to the farm. I am well satisfied with farm life, and find many things in nature, which, if they were studied more and better understood, would unfold to us many undreamed-of marvels, and bring us useful knowledge few of us possess. I would be pleased to have the Cadet girls and boys send me cards or letters, and I promise to answer all I get.—Jennie L. Bailey, Carleton, Neb.

DEAR CADETS: I am 19 years old and live in southeast Missouri—the "Swamps," as northern people call it. I am working in timber now, but my former life was on a farm, and there is nothing I like better than to sit on a sulky and watch the soil roll from the mould board. Don't be afraid to send me cards or letters; I'll be glad to answer all I receive.—Albert Myers, Wilhelmina, Mo.

DEAR CADETS: I am 19 years old, and I used to be a farm girl, but my father is a merchant now, and I am a postoffice clerk, but I like to read UP-TO-DATE just the same. I will be glad to answer all cards and letters I receive from the Cadet boys and girls.—Carrie I. Taylor, McDermott, O.

DEAR CADETS: I am 17 years old, and live in South Carolina. We think UP-TO-DATE is a noble paper, and we get much valuable information from it. We have a boy corn club in this state, and one of its members, a boy 16 years old, grew 228 bushels of corn on an acre, and won the national prize for the largest yield per acre in the United States. We also have a boys' pig club that is creating much interest. I will be glad to hear from all the Cadet boys and girls, and will answer all the letters and cards I receive from them.—Harvie W. Baker, Travelers Rest, S. C.

DEAR CADETS: People call this neighborhood the "Indian Country," and we often go arrowhead hunting. There are lots of them on our farm. We have found some in the shape of birds, and some tomahawks. About two miles from our home there are more than half a mile of breastworks that were built by the southern soldiers in 1861. I will be 16 May 16, and would like to exchange cards and letters with the Cadets.—Emma W. Schupp, Otterville, Mo.

WRESTLING Learn at Home By Mail

Become an expert. Taught by the **greatest wrestler the world has ever known.** Every man and boy in America should instantly grasp this, the greatest opportunity ever offered to **learn wrestling and physical culture from a world's champion**

Farmer Burns

the greatest **scientific** wrestler of the world, and trainer of the mighty

FRANK GOTCH

The Present World's Champion Wrestler

now for the **first time** offers his wonderful science and secrets of success to the world.

He now offers a **complete course of lessons,** that teach in wonderful simplicity **all** the holds, defenses, and tricks of this manly art.

The lessons teach you how to become a great athlete. How to be strong and healthy. Farmer Burns has taught wrestling and physical culture to more people than any other living man. He has wrestled **over 6000 professional matches** and won all but **seven.** He took **FRANK GOTCH** from behind the plow, on the farm, and made him **the champion of the world.** He can teach you to be a wrestler, or how to develop perfect health and a splendid physical body.

Learn How To Handle Big Men With Ease Mere strength and weight don't count against the "scientific wrestler." It's all in "knowing how." Burns' lessons teach you how to take holds that make your opponent powerless. Nothing equals it for self defense. Every man and boy needs this training.

Send for FREE Book Your name and address is enough. The great book will be sent to you absolutely free and prepaid. Write today as the supply of books is limited.

The Problem of Marketing Crops

By J. A. Everitt

These articles have been prepared to answer ever-occurring questions how a sound and enduring farmers' organization, equipped with a practical marketing system to protect the producers of crops, can be established. And the problems considered in this article are not solely farmers' problems, but problems that concern every individual in the United States. They are nation-wide problems, therefore they must have an interest for all the people. A careful reading of the entire article is urged.

Chapter III

(Continued)

Will Cure High Cost of Living

And not least, the great saving by the new system will make it possible to reduce the cost of the necessaries of life to consumers. We claim that the cure for the high cost of living problem waits for a sane, practical marketing system operated by the farmers themselves.

In some parts of the country, immense quantities of produce spoil because there appears to be no market for it. But this is a mistake. There are always great demands in the cities and elsewhere that go unsupplied, because the present system cannot connect the supply with such demands. **By the new system of marketing, where all of the supply will be represented at the central clearing house, all of the demand can express itself there, which will mean that trainloads of fruits and vegetables that formerly spoiled in the field will go to the markets and realize for the producers profitable prices.**

The main point in all this is to control the supply and to direct the distribution. The first essential is to know where the supply is, and the second is to know where the demand is. These things cannot be known short of organization and the co-operation of the different parts of the organization.

Farmers Must Depend on Themselves

It will not be possible for these things to be accomplished by any other set of people than the farmers, not even by the government, as some have advocated. They must be done by the people engaged in the occupation of farming.

The plan of the Farmers Society of Equity is sound. A careful reading of this article should impress every intelligent person that it is sound, but it has been demonstrated in actual practice that it is sound and practical. The idea of reporting the supply to a central clearing house and compelling the demand to meet it there, underlies, and must underly the solution of those economic problems that relate to profitable agriculture, and the reduction of the high cost of living.

The result that we seek, is to so direct the products of the farms that distribution means distribution and not congestion here, deficiency there and hoarding and monopolization elsewhere.

We submit this plan and declare that it meets every requirement of farmers to get their produce to the markets at the minimum of effort and expense. This is as far as the farmer should be interested. When the farmers do this part, the consumers in the cities will quickly get in a position to receive the stuff and have it delivered to them by the most economical methods.

We owe it to ourselves, we owe it to our children, we owe it to our country, to grasp the opportunity that is now presented, and thus put the business of agriculture upon its feet and save the next generation from the trials and troubles and problems that have so long beset us in this generation. The Farmers Society of Equity presents a substantial framework and superstructure, around which and on which the national organization and federation may be built.

CHAPTER IV

HOW MUCH MUST BE CONTROLLED

Comparatively a Few Counties or Districts Can Make the Prices

WE have referred to the strong position of the farmers, by virtue of having all the necessaries of life once a year, if they were only in an organized condition to control the supply. They can live indefinitely within themselves, but all the other people cannot live a week without them, or what they have. If farmers would stop marketing one week the whole country would be thrown into a panic, to get what they have.

They can be sure they will come and what more will be asked for when certainty prevails than when the demand did not know where all of the supply was and the supply hunted blindly for the demand. The question then naturally arises, how many producers must be organized, and how much produce must be controlled to make the workings of the Farmers Society of Equity and its system definite?

The visible supply of crops is that part that is dumped in excess of what the real demand needs. It accumulates in elevators and warehouses, the property of middlemen, and is the club used by the bulls and bears to pound the prices down on what farmers have left. If there was no such visible supply, or if it belong to the producers, farmers would have no competition in supplying the demand, consequently they would have no competition in making prices.

In other words, if farmers would market just as the demand of consumption needs the stuff there would be no visible supply. Or, if what they market off of the farms faster than the real demand needs it, would be stored as their own property, the visible supply would not be harmful. So we can announce this:

The power that can control the small surplus, that appears as "visible supply" under the old system of marketing, will be the power that can make the price.

Concluded next issue.

The Power of Silent Service

If the crowd on the stock exchange kept quiet and let one man talk, that man could be heard in every corner of the room. But the shouting members produce a composite of sound, so that no one trader is understood except by a small group around a particular trading post.

If everyone were able to shout twice as loud, the result would be only a greater noise, and less intelligible.

For communication to be universal there must be silent transmission. In a noisy stock exchange where the voice, unaided, cannot be understood across the room, there are hundreds of telephones which carry speech half way across the continent.

The telephone converts the spoken words into silent electrical impulses.

In a single Bell telephone cable, a hundred conversations can be carried side by side without interference, and then distributed to as many different cities and towns throughout the land. Each conversation is led through a system of wire pathways to its proper destination, and whispers its message into a waiting ear.

Silent transmission and the interconnecting lines of the Bell System are indispensable for universal telephone service.

Without such service, our cities would be slow of speech and the States would be less closely knit together.

Every Bell Telephone is the Center of the System

LOOK OUT DAUGHTER

For Worms This Month

LOOK OUT DAUGHTER

Right now is the time the stomach and intestinal worms begin to get in their deadly work among your flocks and herds. If neglected they will kill off your little lambs and pigs, keep all your farm animals in poor condition and rob you of your whole season's stock profits. Let me show you how to rid all your stock of these pests. I'll do it and PROVE IT or no pay.

I'll Feed Your Stock 60 Days Before You Pay

(116)

I'll Save Your Lambs

I'll Save Your Pigs

I'll stop your usual summer losses from worms. I'll promptly rid your stock of these blood-sucking, profit-eating, dangerous pests and put your animals in better summer condition than ever before. I'll do it at my risk—not yours. You need not pay me a single cent if I fail. I'll do it with Sal-Vet.

The Great Worm Destroyer — **SAL-VET** — **The Great Live Stock Conditioner**

"Sal-Vet" requires no dosing, no drenching, no handling, no trouble at all. Simply place this wonderful medicated salt where all your stock can run to it freely and THEY WILL DOCTOR THEMSELVES. You will be surprised how they will keep in better condition—thrive better—gain faster—make you more money. I'll prove it right on your own farm at my risk before you pay.

Send No Money—Just the Coupon

Fill out the coupon at right—tell me how many head of stock you have and I'll send you enough "Sal-Vet" to last all your stock 60 days. You simply pay the freight charges when it arrives. If it fails to do what I claim, I'll cancel the charge—you won't owe me a penny. Address

SIDNEY R. FEIL, Pres.
THE S. R. FEIL CO., Mfg. Chem.
Dept. UPF, Cleveland, O.

PROOF

In10 days after I commenced feeding my lambs Sal-Vet, they began to gain flesh and now Oct.3rd they are in perfect health and fat as they can be. I have used tobacco in large quantities and worm powders of three different kinds and they did no good. J. A. ALEXANDER
Maple Hill Stock Farm
New Harmony, Ind.

"Before getting your "Sal-Vet" I had lost thirteen of my best hogs, but since feeding "Sal-Vet" I did not lose a single one, and every animal is in fine condition."
(Signed) GEO. MOREN
R.No.1 Pittsburg, Kansas

PRICES: 40 lbs., $2.25; 100 lbs. $5; 200 lbs. $9; 300 lbs. $13. 500 lbs. $21.12. No orders filled for less than 40 lbs. on this 60 day trial offer. Never sold in bulk; only in Trade-Marked Sal-Vet packages. Shipments for 60 days' trial are based on 1 lb. of Sal-Vet for each sheep or hog, and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular size packages.

SIDNEY R. FEIL, Pres.
THE S. R. FEIL COMPANY
Dept. UPF5 1-13 Cleveland, O.

Ship me enough Sal-Vet to last my stock 60 days. I will pay the freight charges when it arrives, report results in 60 days and will then pay for it if it does what you claim. If it does not, you are to cancel the charge.

J. A. EVERITT, Pres.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

MY FARMER FRIENDS:

Now that the open season for farm work has come again, and you think you are too busy to do anything but plow and plant, let me ask if you have forgotten that the bumper crops of last year sold for less in total than the moderate crops of previous years?

—o—

One of our Michigan organizers writes: "I must wait awhile as farmers are too busy now to say "hello" let alone to attend meetings." This is a mistake. Don't forget that all work and no business system caused fine crops of vegetables and fruits to be fed to hogs last season for lack of a profitable market. Yet, millions of human beings exist without them.

—o—

This is all wrong, particularly since farmers are working less for themselves than for those who do the business of marketing. For each forty-six cents worth of your produce on your farm, they charge fifty-four cents to handle it. In many instances the producer gets nothing at all. A Texas man recently declared that Texas growers of fruit and vegetables received only twelve or thirteen cents of the dollar the consumer paid for the 1912 crops.

—o—

A discerning man once said: "There is this difference between the man who works all the time and the man who works none. The man who does not work gets the profits on the work the other does."

—o—

When farmers take the time necessary to build and operate their own marketing systems, they will find they were better paid for time so spent than for many times that much time spent in the field.

—o—

We have repeatedly shown how farmers can build their own marketing machine and run it, establish their own marketing system and use it with so small an expenditure of time and money it would never be noticed. We intend to keep on showing, teaching and preaching until not a doubting Thomas is left. The very independence of our farmers hangs in the balance.

—o—

It can be done by a very simple, inexpensive plan of organization, and without organization it is and will always be impossible for farmers to secure a fair return for their labor. Therefore, you are asked to consider again the kind of a co-operative machine that will permit you to demand a fair price and obtain it.

—o—

To bring the matter home to you, and make it readily understood, we have prepared a map, elsewhere shown. The small circles represent local unions of the Farmers Society of Equity and the federated associations. The large circles represent the county unions or clearing houses. Indianapolis represents the national clearing house where ultimately all reports of supply will be received and where all demands must go for their supply—the central intelligence for directing the supply to the demand.

—o—

There is not an agricultural community where a local union should not and cannot be at once organized and begin business operations. The great advantage of this plan is that the smallest part of the marketing machine becomes at once profitable, and as other parts are added the profits multiply.

—o—

Let us see what can be done at once, with profit. Take the four counties of Indiana shown on the map—Boone, Clinton, Montgomery and Tippecanoe. Refer to the following table showing the quantities of crops produced in each. Run down the column and try to grasp the magnitude of the business done by these Indiana farmers. They all produce the same crops and all reach the same markets. In the years past, all this immense volume of the finest and most necessary products on earth have been blindly dumped on the local markets by the individual farmers. Local dealers then did the real marketing and pocketed most of the profits.

—o—

Compare the volume of business done by these farmers with the business done by any one business house in the largest town in your section. It is larger by far. Yet the farmers of your county, with a combined business amounting to millions, neglect the business of marketing, when even your groceryman hires one or more clerks to help him sell his goods. Is it not the logical, the sensible thing for farmers to organize and employ a business manager to market their goods for them, in place of selling to a dozen or more local dealers? One capable man, as business manager for the county union, through the assistance of advices from the national union, can market the crops of the county to better advantage than the local dealers can market for themselves, and nearly all the expense of hiring those marketing agents saved.

—o—

This is not theory—but facts that have been demonstrated time and time again.

—o—

This table gives the crops for 1911 taken from the Indiana statistical report:

CROP	Boone County	Clinton County	Mtgmery County	Tppecnoe County
Wheat, bu	194,956	544,220	256,318	429,175
Corn, bu.	2,676,659	3,473,452	3,189 355	3,770,410
Oats, bu.	1,333,286	1,682,952	1,327,755	1,553,244
Potatoes, bu.	6,520	10,836	6,005	20,800
Tomatoes, tons ..	1,995	281	287	281
Hay, timothy, tons	16,000	12,100	13,014	12,500
Hay, clover, tons	8,729	11,808	7,765	4,469
Clover Seed, bu.	5,316	6,376	2,718	2,444
Milk, gallons ...	3,179,450	2,795,453	2,150,510	2,233,735
Butter, pounds ..	810,558	780,850	588,224	381,751
Cattle, sold	7,660	10,944	8,744	6,468
Hogs, sold	62,450	69,518	80,035	34,800
Sheep, sold	13,066	8,641	17,070	5 764
Wool, pounds	83,254	83,420	120,008	27,587
Poultry, sold ...	120,000	120,000	96,300	91,840
Eggs, dozens ...	1,150,270	1,127,685	985,698	733,064

Every business of manufacturing and merchandising located in the county, big or little has its system of distribution or marketing, but here is the greatest business of all, in many counties totally without system or order at its selling end, thousands in each county are selling now, where, through the simple organization we are prepared to establish, one man can do it all and realize an enormous additional amount of money.

—o—

Agriculture must have a business system at its marketing end, or conditions will go from bad to much worse, everything is tending that way. And NOW is the time to establish it. Sin away the days of grace and the time may come when the farmers themselves may not be permitted to have their own business system like all other people have.

Free Pony

Who Wants Me—Quick?

Boys and Girls! Do you want this beautiful Shetland Pony all for your own? Then send me your name and address today—quick. Some one is going to get him—you can have him—*but hurry!*

My Name is "Major"

Well Broken Gentle Kind

42 Inches High

I Am Now 42-in. High and 3 yrs. Old. I am a Pet, Too.

My color is black. I am considered a very handsome pony. I am well trained. You can either ride me or drive me and I am just as kind and gentle as a kitten. I can go almost as fast as a big horse and can haul my carriage with my little owner mile after mile without getting tired or lazy. I do not scare because I know better—have been taught better. I want a kind little boy or girl as my owner. I'll go anywhere to find them. I am just waiting to come to someone. I'll make some boy or girl happy, because that's what I was made for. That's what I was intended for and it's what I like to do. If you want me, and I know you do, just send me your name and address on the coupon below (or a postal) and I'll do my best to come to you in a hurry—I must go somewhere, so be quick. Send your name this very day.

Wagon and Harness, Too, Come With Me

This is one of the most beautiful ponies, that I have ever given to any boy or girl in all my life, and I have given away more than 25 Shetland Ponies. This one, **"Major"** is a beauty. He will make the heart of any boy or girl leap with joy. I wish you could see him. I just hate to let him go, but go he must, free of all cost to some boy or girl friend of mine who is willing to do me a small favor.

I am going to send a beautiful carriage along with him, and harness too, and I expect a saddle also. Might as well. I want to please and that's the way to do it. I want the boy or girl who gets this elegant Shetland Pony and outfit to be just the happiest person in all the world. I want them to remember me as long as they live, and they will, too. I have dozens of little boy and girl friends to whom I have given ponies and presents, all over the United States and I get letters from them every now and then. They send me pictures of the ponies I gave them, and tell me how pleased they are and that I always do as I say—Now my friend, if you want **"Major"**, just send me your name and do it quick. **I have a gift for you.** A postal card or the coupon in the corner, will do. Hurry! I'll send you the present, pony pictures and letters from boys and girls to prove what I say, so hurry!

Uncle Billy, Pony Man, 142 W. Ohio St., Chicago

I Want This Pony

Uncle Billy, 142 W. Ohio St., Chicago, Ill.

I want **"Major"** and I want you to send me the pony pictures, your free gift, and tell me how to get this pony. Below is my full name and address. Send quick.

Map showing system of connecting local shipping points with Central Clearing houses.

Unite, or Forever be Workers Only

MR. FARMER:

Or any other person who wants agriculture equipped with a scientific marketing system that will protect the producer as well as the consumer, how would you like to organize a county like above and be paid well for doing it, and possibly be selected the BUSINESS AGENT. As this system is bound to prevail some of the present handlers of farm produce might make themselves solid with the farmers by organizing them and then give them the advantage of their experience as local or county business agent.

Send the coupon.

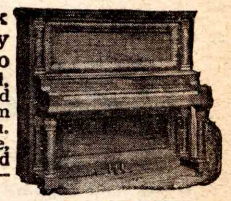
EVANS PIANO **Artist Model Direct to You at Wholesale**



Yes, at the rock bottom price; any Artist Model piano you select on approval, prepaid and at the bed rock price direct from our factory to you. Not a cent in advance, not a cent C. O. D. and no freight charges—all prepaid.

30 Days' Free Trial

Think of it. Absolutely free. Not a cent to pay. All freight charges prepaid and absolutely free trial for four weeks in your home. If you don't want it simply return it at our expense. You take no risk. If you decide to keep this superb Artist Model Piano you can have it at the inside confidential wholesale price and make settlement on the easiest monthly payments.

Limited Offer To advertise and quickly introduce this superb instrument, we will sell the first in your locality at the confidential wholesale price. This offer applies only on the first sale. Write today and save $100 to $200 on the purchase of a piano. Also learn all about our 2-year course in music free. A postal will do.

F. O. EVANS PIANO CO.
Room 445 Fine Arts Bldg., Chicago, Ill.

Ky. Blue GRASS. Genuine and pure. The last you bought you probably paid about $3 a bushel for it. We will supply you at $1.65 a bushel. Send orders to O. K. SEED STORE, Indianapolis, Ind.

The order of marketing farm crops must be reversed, and by the system we teach it can be reversed and the demand will have to go where the supply is represented and express itself there. Then the supply will be sent direct from the nearest place of production to fill it.

—o—

Farmers will be in a peculiarly strong position to do this because the demand cannot be independent. As soon as the unorganized and uncontrolled supply becomes organized and controlled and represented at a known place, the demand will at once go there or people must starve and go unclothed. There is very much more in this that we will not explain here, but will send clear details to all interested people.

—o—

Who ever is weary of the old way and wants a new way that will relieve the individual of all the annoyance and disappointments and time of marketing independently, and give him more time for producing, if he wants to devote it that way should send the "Organization Coupon" on this page at once.

—o—

Whoever is a member or officer of a local association now and wants to join in this national movement for unity of marketing, without in the least destroying any of the prized features of his local association should send the "Federation Coupon" at once.

—o—

We need no more conferences. We need action. This is a call to act. Why delay? We have much to gain and nothing to lose by acting now. Much will be lost and nothing gained by delay. Everything is in readiness, waiting upon you. Send in the coupon today.

A Subscription Representative Wanted in Your Locality

Every neighborhood affords a fertile field for securing subscriptions to Up-to-Date Farming. We want a representative in every locality and also traveling agents. Experience is not necessary, we will furnish full instructions and help you to make money securing subscribers for us.

Canvassers now selling in Rural districts will find it easy and very profitable to solicit subscriptions for Up-to-Date Farming, in connection with their other work.

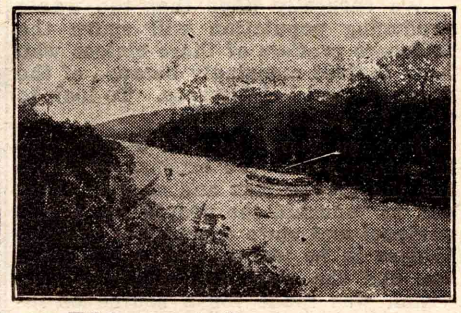
Experienced subscription agents should write for our proposition. This paper does more for farmers than any other and is the easiest to secure subscriptions for.

If you want to make more money write today.

Agents' Department
UP-TO-DATE FARMING, Indianapolis, Ind.

The Panama Canal on Postcards

Never before has a more interesting or instructive set of Postcards been offered than these magnificent views of the "Great Ditch." Each is from an actual photograph, and all are in beautiful colors.



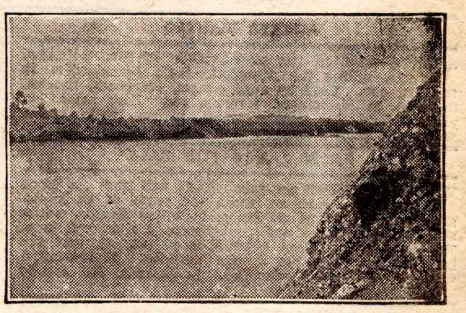


Photo by Underwood & Underwood

THE first vessel will probably pass through the Panama Canal the latter part of this year. Just imagine that you are upon the deck of this thousand-foot vessel on the Pacific Ocean, off the coast of Central America. You are just entering the Bay of Panama. There is the City of Panama on the right, the American port of La Boca straight in front of you, and the entrance to the Panama Canal, the greatest engineering feat of the world, at your left. After making a short stop here, allowing you to see some of this old city of Panama, your vessel enters the Canal channel, passes Balboa with its great machine-shops, and sails 8 1-2 miles in a channel 500 feet wide and 45 feet deep to Miraflores. Here you enter a flight of two locks and are raised 54 2-3 feet. Sailing 1 1-2 miles through a small lake, you come to Pedro Miguel, enter another lock and are raised 30 1-3 feet. You are now in the section of the Canal which shows the most gigantic task accomplished by the engineers, the famous Culebra cut. Passing through this 9-mile cut in a channel 300 feet wide and 45 feet deep, cut straight through the hills, you come to Gatun Lake and can sail at full speed for 24 miles in a channel from 500 to 1,000 feet wide and from 45 to 85 feet deep. Note the section-tower or lighthouse on the left, and a little farther on the great Gatun Dam and Spillway. Now you are at Gatun, are entering a flight of three locks, and are being lowered 85 feet to the level of the Atlantic Ocean. Only seven miles ahead is the blue Atlantic with the cities of Colon and Cristobal where you will make a short stop. It has taken you but twelve hours to pass from the Pacific to the Atlantic through this "great ditch" where formerly it took days. All has been very wonderful and every minute most interesting.

Fifty-two Beautiful Four-Colored, Glazed-Finish Postcards

Our great set of Panama Canal Postcard will show you, in natural colors, all the above, and more. They will not show you the whole of the finished Canal, which will look a good deal like a river. No! Much more interesting, we will show you the Canal in course of construction which will become historically valuable and most interesting to everyone after the locks and cuts are filled with water. We show you by naturally colored pictures, concise descriptions, and concrete facts all the many features of the wonderful Panama Canal as it is today. In addition to pictures of locks, dams, cuts, lighthouses, etc. we show you the sections of the completed Canal, the Steam-Shovels, Dredges, Excavators and other great machines actually at work in the Canal; views of the natives, their homes and manner of living. In fact, we show you 52 of the most interesting views of the Panama Canal that it is possible to secure. This set is published especially for us, and these views are the result of examining and comparing many hundreds of photographs.

The opening of the Panama Canal, suggested by Balboa 400 years ago, is an important event in the history of the whole world. It is a monument to American engineering skill and industry. Each of us should have patriotic pride in the successful conclusion of this herculean task. The set of views we offer you is the most complete ever offered in this form. We guarantee each and every view to be a true reproduction of an original photograph taken on the canal.

Our Great Set of Panama Canal Views and The American Woman

Our set contains fifty-two new, large, clear, and full-sized views printed as nearly as possible in the exact colors of the scenes represented, on fifty-two heavy glazed postcards, no two alike. The view takes up the whole of one side. On the other is a description of the scene and Canal statistics with space for a message and address if you wish to use the cards in writing your friends. There is one threefold panoramic view-card and two maps in our set. Every home, every school-teacher, every child should own a set of our Panama Canal postcards. Our liberal offer places it within the reach of all.

THE AMERICAN WOMAN This favorite story- and household-paper has pleased and delighted its thousands of subscribers ever since the first issue, 14 years ago. It gives women more true enjoyment and real help in their daily work than any other paper published. The stories are the very best that we can buy. Each year we run many interesting and thrilling serials by some of the most popular writers. There are hundreds of short stories of life, love, and adventure, all told in a delightful, pleasing manner. A glance at the various **departments** will show their value. On the **Special Fancy-work Pages** will be found articles of wearing apparel for women, girls, and children; articles of ornamental and household necessity. Each month we devote one whole page to the latest New York and Paris fashions, and supply any pattern for only ten cents.

SPECIAL OFFER Send us **25 cents** (coin or 1c stamps) and we will send you The American Woman for six months and will also mail you free and postpaid 26 Panama Canal Postcards, just one-half of our great set as described above.

FREE SAMPLES We will send you a specimen copy of The American Woman, our large premium-list, and **6 Panama Canal Postcards free** if you will send us 4 one-cent stamps to pay postage and mailing and promise to show your cards to two of your friends.

Address The American Woman, Dept. U, Augusta, Maine

(*Newspaper Clipping*)

VISIT PANAMA CANAL

NEW YORK, March 11.—Tourists continue to flock to Panama to see the big ditch the United States government is digging there. The Victoria Luise, a German cruising steamer, sailed today for Colon with all her cabins filled. Among the passengers were John D.

Ruptured People—Get This On 60 Days Trial

You know you can't possibly tell anything about a truss or anything else for rupture merely by trying it on, for a truss or so-called "appliance" may seem all right at first and afterwards prove utterly worthless. But here is something you can try sixty days—just as a test—without having to risk a single cent.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City

Free Monthly Fashion Guide We are unable to print all the fashion illustrations each issue that we would like to publish. However, with each pattern order mailed we will include free an advance Monthly Fashion Guide. Monthly Guide alone, without pattern, for 2c for mailing. All patterns are very latest and only 10c each, postpaid.

The Great Conference

(Continued from Page 5)

uncertainty of prices continue and whether easy money and mortgages, under the present system of marketing would not prove a curse?

And so another great conference has come and gone and not a single practical thing was done to rescue farmers and consumers from the wretched marketing system that robs at both ends. We believe we state the truth when we say that there was no intention to help the farmers through this conference, but it was called to pave the way for permanently keeping the business of marketing crops and loaning money in the hands of the same people who are doing these things now. We know that what we say is not the popular thing and no other paper will say it. But we say it because we want the farmers to know the truth so they can forearm themselves if they will.

We are going to make this prediction; Unless farmers will take this whole matter on themselves and organize themselves within themselves, adopt a business system of their own, keep control of it and operate it themselves and independent of anything or anybody else, they will be given a system by other people controlled by other people and operated by them and for them (the other people's) and for their own chief interest.

The conditions regarding marketing crops are now exactly the same as they were previous to the passage of the industrial alcohol law which riveted the control of light, fuel and power alcohol to the oil monopoly; and previous to the passage of the postal savings banks law which made the new banks merely feeders for the national banks and brings to them deposits at a lower rate of interest than could be gotten without them; and previous to the passage of the parcels post law, which is designed to help the merchants and middlemen, but is unavailable to the farmer, although it was supposed the farmer would be the chief beneficiary. We mean that the masses then demanded those things, and when the demands could no longer be ignored, the classes framed the laws in their own interests and had them passed.

We warn farmers now. You have often trusted your supposed friends only to find them false in performance. People up toward the top are now convinced that there will be changes in marketing. They know if the farmers are left to themselves that many of them will be left out in the new deal. The graft they now enjoy is too sweet to them and they don't want to relinquish it. So it is the same old game. Sand is being thrown in the farmers' eyes through great conferences while the schemers are perfecting their plans for a marketing system that will protect them and perpetuate them in doing farmer's business. It is the hope of these people, not farmers, to have their plans endorsed by Congress and, if precedents prevail, they will succeed. After they succeed, if they do succeed, the difficulties in the way of the farmers establishing a system of their own will be increased. There are difficulties to overcome now that were not present a few years ago, but we are hopeful that the real farmers will meet them and overcome them.

We earnestly hope that the whole producing population will spurn the insincere proffers of those classes who have thrived amazingly because of the farmers' past helplessness. To look to them for relief is unwise.

Perhaps it will be well to ask, who is going to pay the expense of printing the proceedings and sending them out to "educate the people" or of the national and state committees and the lobbies to be maintained in Washington and the state capitals? No provision was made for a source of income from the farmers and there is no fund now. The delegates to the conference were asked to contribute fifty to seventy-five cents each for a copy of the proceedings. Unless the farmers are called upon to pay the expenses of the committees and lobbies, some other people must pay them and if they do what motive would they have in doing it.

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 8c a Word Each Insertion

Each initial and number counts as a word. No display, except the first few words will be set in capital letters without extra charge. To bring sellers and buyers together there is no surer way than through this BUSINESS EXCHANGE. When writing please say: "I saw it advertised in UP-TO-DATE FARMING.

Rightly Named

"How do you like my execution on the piano?"

"If that is what you call it it is well named, for you certainly do kill time."

Not Shocked

Dab—When you proposed to her did she say, "Oh, this is so sudden!"

Grab—No. She said, "All right, John; but you have kept me in suspense a long time."

Wants First Place

"Blevins is certainly the most envious man I ever saw."

"Yes, when they go to the table he gets mad at the baby because it has the high chair."

The Lawyer and the Preacher

They were walking down the street together in a very icy time, when the lawyer slipped and fell. "It is proved again," laughed the preacher; "the wicked stand in slippery places." "Yes, I see they do," grunted the lawyer, "but I can't."

A Pessimist

"Emma, I understand there is a little sister at your house. Does she cry much?"

"Cry! I suppose she does. She don't see anything good in anything."

MOTORCYCLING TO SCHOOL

A motorcycle as a pleasure vehicle has been exploited until nearly everyone who reads is familiar with this means of recreation. Also as a commercial convenience the motorcycle has reaped a share of praise.

However, Lynn V. Allenbrand, of Valparaiso, Ind., uses his motorcycle to carry him back and forth to high school, ten and one-half miles.

He explains that his machine is invaluable for short trips to and from town, also enabling him to continue his education beyond the rural graded school which he could not do without leaving home and boarding in the city were he to return to the old methods of travel.

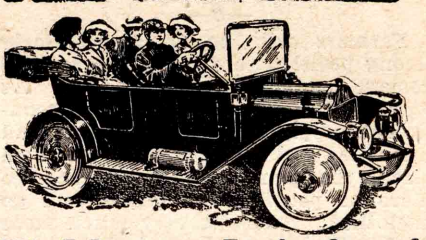
Prize Winners

Many very interesting letters have been received from motorcycle owners, in response to our prize offer of $5, $3 and $2, for the first, second and third best, respectively.

The first prize is awarded to Lynn V. Allenbrand, Valparaiso, Ind. The second to John Seilhamer, Newall, Iowa, Blooming third to Erwin E. Thompson, Blooming Prairie, Minn.

Good live agents are finding the Warner E-Z Vacuum Cleaner a ready seller and big money maker. Write for their liberal terms and opportunity. Warner Vacuum Cleaner Co., Dept. L., Muncie, Ind.

$900 Auto Free!!



This 5-Passenger Touring Car and 5 OTHER GRAND PRIZES

Given Away in Our Great SUBSCRIPTION CONTEST

This great Prize Contest starts immediately and will close July 4th, 1913. Our object in conducting this contest is to secure more subscriptions for our big home, story, fancy work and general family magazine, "*The Household*".

It is easy work for any one anywhere to get subscriptions to "*The Household*" and in this contest it will be *especially* easy because we furnish you a stock of very beautiful *free premiums* to distribute among your subscribers.

For a one-year subscription at 25 cents you get *25 points* to your credit in the contest—a three-year subscription at 50 cents gives you *75 points*, and a six-year subscription at $1 gives you *150 points*.

The six contestants having to their credit the greatest number of points at the close of the contest on *July 4, 1913*, will be awarded the *Six Grand Prizes* as follows: First, a $900 "Krit" 5-passenger Touring Car; Second, a $550 Genuine Mahogany Player-Piano; Third, $100 in Gold; Fourth, a $50 Gold Watch; Fifth, a $40 New Model Bicycle; Sixth, a $30 Talking Machine Outfit.

Any man, woman, boy or girl may secure subscriptions in this contest anywhere in the United States, except in cities of more than 100,000 population.

1000 FREE POINTS and Big Cash Commission for All Who Enter Now

To all who mail *at once* the Entry Coupon printed below we will give *1,000 points free*, thus giving you a fine start in the contest.

Furthermore *we will pay you a cash commission of 40% on every subscription you secure*—in other words, you keep 10c out of each 25c, 20c out of each 50c and 40c out of each $1 you collect for subscriptions as *your pay* in *addition* to the chance you have of winning the Auto or one of the other Grand Prizes. You should be able to earn *$2 to $5 a day* on this liberal commission offer.

Send your name and address on the Entry Coupon *at once* for the 1,000 free points, sample copies of *Household Magazine*, pictures and description of the Six Grand Prizes, subscription blanks, full instructions how to work, etc. Make *your* start for the *big prize* today! Address

LET US PAY YOU A REGULAR WEEKLY SALARY

Our Offer: To Double the Sales of Our Swellest Made-to-Measure Suits and Pants, We Now Offer Every Man Who Answers, a Big Guaranteed Weekly Salary — in Addition to Cash Commissions. We Furnish Our Men Swell Suits and Raincoats as Samples FREE to Start With.

This is a brand new offer—different from any you ever saw before—and what's best of all, ***we mean business*** and hope ***you*** do. So first, understand clearly, this offer is genuine. We want a man in every town to whom we can pay a big, fat guaranteed weekly salary. And this offer is not for any chosen few ***—but for everybody.*** When we say everybody, we mean everybody—we mean you. With us you need no experience—no capital—no reference—no "pull" or influential friends. We take you without question and assume all the chances. You don't even have to leave your easy chair (or go to any bother or trouble) to get a regular salary job with us. That's how easy it is. ***Read on and be convinced.***

We Are the Only House Big Enough to Pay Regular Weekly Salaries

We "started something" when we put out an announcement offering real salaries to tailoring agents. This you understand, is ***in addition*** to the big cash commissions you make on every sale. It means ***double*** pay, It was the first offer of a regular weekly salary ever made in this business. People thought we were crazy. But we had seen so many men easily make $35 to $65 a week on just commissions, that we figured—if it is easy to make ***that much on commissions,*** think how much more the average man can make with a steady, regular, weekly salary behind him. ***The success of our salary plan was established over night—it was instantaneous.*** So, if you ever see any of the old style tailoring agents ads again offering commissions alone—just remember what a small chance you have with them when they say, "The greatest money-making chance," etc. It ***is*** a chance that ***you*** take. ***But on our salary offer we take the chance.*** See the difference? ***We*** are the ***only*** house that pays you big commissions ***and a Regular Salary.*** And, bear in mind; we don't just pay salaries while business is good. Your pay check comes in regularly during dull times as well (we guarantee this.)

Money Talks—Are You Listening? $5 to $10 a Day Is Easy

It's a cinch to sell our swell tailor-mades and make $5 to $10 a day in just commissions (in addition to your weekly salary). Knickerbocker garments are the ***final word in styles and values.*** We guarantee you and your customers absolute satisfaction—or no pay—and ***prepay all express.*** And remember, we give you a great Sample Suit and Raincoat FREE—just to show the ***"class"*** that goes into every Knickerbocker garment—to help you get started. In short, we do anything that any other tailoring house offers you—only we do it on a bigger, broader more generous scale; and then ***give you a salary besides.*** Knickerbocker suits and pants cost less—and when sold, you know in advance your customers are going to be ***more*** satisfied than if they paid ***twice as much elsewhere.*** Our styles and quality are the guide that ***leads***—and our wonderfully low prices are the goal that all have tried to reach, but failed.

GET YOUR FREE SUIT AND RAINCOAT AT ONCE

Also Our Big SALARIED AGENTS' OUTFIT

Here's a real "outfit"! We mean your ***own*** clothes free and our imposing Knickerbocker style book—the possession of which literally guarantees that you have the trade of your whole town bottled—sealed and labeled "mine." It's the greatest tailoring book ***ever***—the crowning achievement of the biggest, most liberal, most reliable of all cash tailoring houses. There isn't a suit order in your town that this great book won't land for you. And we send everything FREE at once—*prepaid.* The Sample Suit and Raincoat we send will be the swellest, niftiest and classiest garments you ever laid your eyes on—made up in ***any style*** you desire of ***any material*** you select.

Fill Out This Coupon—Get on Our Pay Roll NOW!

Don't answer any other ad if you are convinced that you want ***this salaried job.*** But if you are ***still*** in doubt answer some of the other ads when you answer this. Then see what ***we give you*** and see what they ***don't*** give you. This just goes to show the difference in ***our*** spirit and others. They beseech you to answer their ads only. That shows who's afraid to come out into the open and measure up with our great new salary offer and big outfit. Now come on you doubters—you fellows who want to be shown. We have got "the goods" and are eager to convince you. So don't wait—just fill out, clip and mail the coupon—or a postal will do. Take our word for it, there is no better offer—this is your only chance to get a regular salary. We will give you the biggest surprise of your life. Remember, we put you on our regular weekly pay roll as soon as we hear from you. But time is precious. Shoot back the coupon—at once—NOW!

KNICKERBOCKER TAILORING CO., Dept 415 Chicago, Ill.

SALARY COUPON

Knickerbocker Tailoring Co.,
Dept. 415 Chicago

GENTLEMEN:—Without cost or obligation to me—put my name on your ***regular weekly pay roll*** and send me at once your wonderful new 1913 Fashion Book, and complete outfit as offered in your special announcement.

UP-TO-DATE FARMING

16th Year, Number 10 | MAY FIFTEENTH, 1913 | Indianapolis, Ind.

A Herald of Farm Progress and Prosperity. Published Twice a Month

With the Up-to-Date Farmers

A Department for Live Folks who want the best. Our readers are asked to contribute their thoughts. If you have a helpful idea pass it on. Be neighborly. Contributions always welcome.

Go on with your work and be strong,
Halting not in your ways,
Balking the end half won
For an instant dole of praise,
Stand to your work and be wise,
Certain of sword and pen,
You are neither children nor gods,
But men in a world of men.
—Rudyard Kipling.

A community organization is an incubator for ideas.

It is not a bad idea to let some of the fields go to grass now and then.

The man who drinks to drown his sorrow only makes his head swim.

Speaking of golden eagles, the early crop is the one that catches the bird.
—T. C. G.

The man who works to beat the devil isn't snooping around to beat some one else.

Luck is all right, but hunting four-leaf clovers will not take the place of hoeing corn.

The farmer gets the credit for a good crop. The weather takes the blame for the poor one.

It is a common form of bad luck to have the house or barn burn the day after the insurance ran out.

The working woman in the city wants an eight-hour law. The farmer's wife works under the late hour law.

Sam Saxon says the road to success is worn so smooth and slippery a man can't go up it in a hurry without danger of slipping down.

Now that you have decided to get a subscription to UP-TO-DATE FARMING from that neighbor of yours, get it before you forget it.

Plain living and high thinking will make any class of people great, prosperous and contented, says a philosopher. Well, we farmers get the plain living, all right, all right.

The man who puts all his energy and time on a single crop, and it fails to return a profit, has a hard time of it. The farmer, as well as the farmer's wife, should not put all the eggs in one basket.

The person on the farm who envies their city cousins their privilege of seeing "fine art" in the great art galleries do not realize that a neat little farm home, with its trees, yards and flowers is more beautiful, more pleasing to the eye, more restful and gratifying to the senses than all the famous paintings or statuary ever shown in any art gallery. And besides, the farm folks own their beautiful scenes, and no admission price is charged.

The Nation and the Farm Home

By THEODORE ROOSEVELT

NO NATION has ever achieved permanent greatness unless this greatness was based on the well-being of the men who till the soil. We Americans are making great progress in the development of our agricultural resources. Yet the social and economic institutions in the open country are not keeping pace with the development of the nation as a whole. I doubt if any nation can compare with our own in amount of attention given by federal and state governments to agriculture; but practically the whole of this effort has hitherto been directed toward increasing the production of crops, concentrated exclusively on better farming. In the beginning this was unquestionably the right thing to do. The farmer must first of all grow good crops; but when this has been secured, the effort for better farming should cease to stand alone. It should be accompanied by effort for better business and better living on the farm. It is as important that the farmer should get the largest possible return in money from the crops he grows as that he should get the largest possible returns in crops from the land he farms. Large crops are not the whole of country life. The great rural interests are human interests and good crops are of little value to the farmer unless they open the door to better living on the farm. This problem of country life is in its truest sense a national problem. The farm grows the raw material for the food and clothing of all its citizens, directly supports almost half of them, and nearly half of our citizens are born and brought up on farms. Whatever is necessary to brighten home life in the country, whether by co-operation between farmers for buying, selling or borrowing, or by promoting social advantages, should be done promptly and thoroughly. There is no more important person, measured by influence on the nation, than the farmer's wife, no more important home than the farmer's home, and it is of national importance that we do the best we can for both.

We ultimately hope to double the average yield per acre of wheat and corn, but it is of more importance to double the desirability of the life on the farm.

If Maxim would only invent a silencer to put on the muzzle of a scandal monger.

Anybody can make fairly good plans but it takes grit and gumption to carry them out successfully.

Just making a living isn't successful farming. We need to save a little each year as we go along to take care of our old age.

Putting your best foot forward, then following it right up with the second best is what is called getting there with both feet.

"The devil," remarked our minister in his sermon last Sunday, "works twenty-four hours a day." Well, he never was a lazy devil, anyhow, and moreover, it's a pleasure to work when one has good success.

Shorty's Shortcuts

(By Shorty Himself.)

NUMBER 1.

My neighbors, including my friends and foes, for I have some of both, call me "Shorty" for short, and for other various reasons, though I have a real name of my own, and a clear title to it.

One reason I am called "Shorty" is because I am four feet, eight inches tall in my socks and underwear. Skinny Jones was the one who first gave me the name, long before I got my growth, and I've been living up to it ever since. It hasn't been hard to do, either, for there has been no high living in it.

Another reason they call me by a short name is that, because of my short stature, I was always inventing short cuts to do things other boys could do without the aid of invention. What Dame Nature did for them I found I had to do for myself, and I've never felt just right toward the old dame on that account. I suppose I should not complain, for in making my head bring me what my hands and my heels couldn't reach I've done pretty well, considering, and while not trying to boast (as I do that without trying) I've won a great many rewards my friends of "long standing" have failed to obtain. I've made head work do what hard work couldn't do. Consequently, I have devised many ways of saving time, and steps, and money. While I have just as much time as Skinny Jones, who joins farms with me on the North, I have to be more saving of it than he does, for it takes more of it to take me a mile than it does him. I save steps for the same reason—I have to use more of them. As for money, I don't scheme much to save money, as I've found that when I've saved time, and saved steps, I've also saved money.

One day my wife said to me—Oh, yes, I'm married, just like real folks are,—my wife said, "Shorty, why don't you write out a description of all these

WE wish to reach as quickly as possible the largest possible number of people that will be benefitted by our teachings. In this our friends can help us. We cannot meet and grasp the hand of those whom we would so gladly reach with these facts, conditions and remedies, but our thousands of outside friends can do that for us. Will they? If each one who appreciates what we have taught, and believes what we believe, would induce one more neighbor to read UP-TO-DATE FARMING what an impetus that would give to the work that is being done!

Farmers and Money Matters

I.

THE total amount of money, including gold and silver coin and bullion, and all paper money, in the United States amounts to $3,644,000,000. The total amount of business done in the United States in one year, whereby money changes hands, or ownership, amounts to $422,000,000,000. The total money, therefore, is but little more than eight-tenths of one per cent. of the business done. In other words each dollar is turned over more than 100 times to take care of our annual business, provided all the money that exists is in active circulation.

II.

It is a fact, though, as every one knows, that not near all the actual money is in actual circulation. An enormous amount of business is done on credit, and the credit furnishers, and speculators in credit have the real money—the coin and the paper, and business is done with notes and checks and other commercial paper, such as certificates of stocks, bonds, etc. The reason for this is found in the fact that by thus hoarding the coin of the realm, a greater demand is created for credit, which is then sold at a price profitable to the holders of the coin. It is therefore quite safe to say that practically all of the business of the country is done on credit, and business must pay the credit furnishers a profit in the shape of interest, not on the cash, for that is not used, but on the credits which are used. The real money lies in banks and depositories, in the charge of, and under the control of the credit speculators. The dangerous condition this system creates is that the credit furnishers control business to an unsafe degree.

III.

Another feature of our financial system is that money deposited in country banks, is by those banks redeposited in city banks. The local banks retain only sufficient to meet their probable calls from day to day. Occasionally city banks in which these local banks deposit fail to respond to demands upon them and the local banks are ruined, and the depositors lose their money, which is absolutely insecure.

IV.

It may be true that a knowledge of the facts may tend to destroy confidence and result in financial disturbance. But it is better that all should know the situation. Besides, these conditions will never be made better until the people know them. No effort was ever made to put out the fire of a burning house until the house was known to be on fire.

V.

Strange as it may seem, in this credit furnishing business farmers are woefully discriminated against by the laws of the United States. Persons purchasing United States bonds in a required amount, and depositing them with the treasurer, are authorized to organize a national bank, and may issue their notes, or mere "promises to pay," to the full amount of the bonds deposited, and these notes are permitted to circulate as money. They may be loaned to business people, manufacturers, or those of other industrial enterprises on various security, but the law giving them the privilege of issuing their notes as money forbids their making loans on farms or real estate security. Why this discrimination against the farmer it is difficult to understand, for there could be no better or safer security than real estate—the farms and homes of the rural masses, the most essential part of our citizens.

The new administration proposes to take up financial reform, and there is certainly much room for reformation.

The buying of a single piece of $25 machinery may aid you $100 worth in the production of your crop.

If They Only Would Unite

FARMERS have not an equal business chance with the rest of the world. Petted and cajoled by politicians, their importance is conceded by many sincere professionals, and some of the greatest business concerns of the world have expressed a willingness to aid them with their millions in return for millions of increased business for themselves; but in every day business, farming is discriminated against, unaccountably discriminated against in the financial laws of the nation; and in the most important part of their business, the selling of their products, the entire business world is arrayed against them. Their crops are watched from the time of planting to the time of harvesting, and reports are constantly made. These reports, false as often as they are true, practically determine the price. When the farmers have the stuff and are ready to sell, these reports, though they may be from official sources, almost always indicate an abundance that depresses prices, ...after the farmers have sold and the surplus is in the hands of those who bought to sell again, the reports indicate a scarcity that justifies an advance in price.

And that is not all. The entire buying world is engaged in a constant and untiring effort to induce an increased production. The reason given to their own class is that thereby will the necessaries of life come cheaper. To the farmers they argue that the greater the production the more farmers will have to sell, and the greater will be their income.

Farmers are helpless in the entanglements of such a system, as helpless as the fly in the web of a spider. But they need not be. Others unite in their business affairs and act in concert so as to accomplish combined purposes. Farmers organize in groups here and there, and those groups are each other's rivals and competitors. Farm production of almost all crops is nation wide, and to meet the conditions that so operate against the farmers' success and profits requires a movement that is nation wide. Separate and ineffective organizations must federate so as to make a national movement that will reach every crop and every producing district with a marketing system that will take the stuff to those who need it at prices even lower than they now pay, and yet pay producers better than they are now paid. Thus only can the producers of every crop be brought within the pale of just and equitable protection. In this there is certainly a heavy responsibility of the leaders of the separate farm organizations. If they only would unite what a wonderful work could be done.

Spring fever gives a lot of folks a reasonable excuse for not feeling like work.

A great deal is said about "the average farmer," and city people who talk most about him know him least. The "rural uplift" city people organize commissions to help him to live like they do. The fact is, the average farmer is the greatest half of the twelve million of our best citizens who cultivate the soil. He raises good crops, harvests them properly, and has them ready to feed a hungry world. He supports the rural schools and country churches, and his children fill the higher institutions of learning. He is a reading man, a more or less progressive thinker, and is often called from his fields to fill important official station. Upon the average farmer rests a heavy burden of taxation, and upon him depends many of our most cherished institutions. Let him no longer be spoken of as an unimportant, uninformed, non-reading "Hayseed."

In these busy days noon and night find the farmer tired. Reading is restful, especially the short, pointed pieces like those found in UP-TO-DATE FARMING, that is controlled by no selfish interest and that plainly tells truths about business affairs that no paper ever told before. Read while you are resting. You will be all the better prepared for work, and you will realize that, after all, there is something to work for.

As was truly said recently by an earnest thinker, the persistent teaching of UP-TO-DATE FARMING has brought about a revolution in thought and action as to marketing farm products that must inevitably lead to more successful business methods from the farms outward.

Current Comment

That Lever Bill may be intended merely to pry loose a little more tax money. Watch it.

The farmer has less to fear from the high cost of supplies than from the high cost of wages and taxes. Both keep going up. We believe the wage-earner usually earns his pay, but does the government give value received for the taxes it collects?

It is one thing to preach economy and another thing to practice it. Congress spends millions in just holding an extra session, exclusive of appropriations. We have an idea that Congressional costs could be cut copiously, and still give the people the same results.

The state of Kansas, expecting a crop of 120,000,000 bushels of wheat, has set the state employment burea at work to import the 40,000 harvest hands deemed necessary to handle this immense crop, which, based on Secretary Coburn's estimates. The Kansas crop in 1912 amounted to 89,000,000 bushels.

President Wilson declares that the farmer has not fared as well as he might, or should, at the hands of the National government. Whether the fault lies in Congress, or in the Department of Agriculture, or both, the president did not say. We think possible a share of the blame rests on the farmers themselves. They could have whatever they need if they would ask for it in unison.

The old farm life is not a path of roses, exactly, but it is in many respects a better life than the concrete walks of the city. Country life means hard work and possibly hard times now and then. City life means harder work to keep alive and respectable. We hope our folks will take warning from the reports of the vice crusaders who have found the most distressing and abhorrent conditions surrounding the average working girl in the city. Be not in haste to leave the country home.

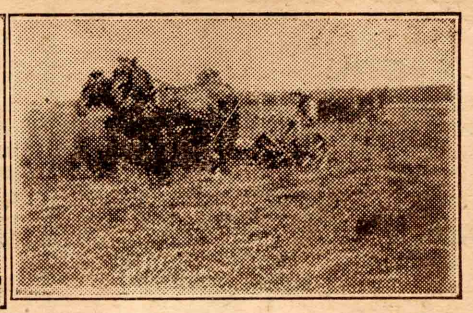
The tariff question, still engaging the attention of Congress, at best is a complicated question, and our hope is that it may be determined on a basis fair to all. We regard the measure a decidedly radical one. The farmers' interests, as usual, seem to be the ones most ignored, the leaders contending that agriculture never has been benefited by tariff duties on farm products. But those leaders never were farmers.

California does not wish the Japanese to acquire ownership of land in that state, and proposes to prohibit such ownership. Japan protests to the national government that the proposed laws violate treaty agreements between the United States and Japan. Thence came complications. A State has a right to control its own internal affairs, and the national government may not dictate. So important were these complications that Secretary of State Bryan went to California to talk over the situation with the State authorities.

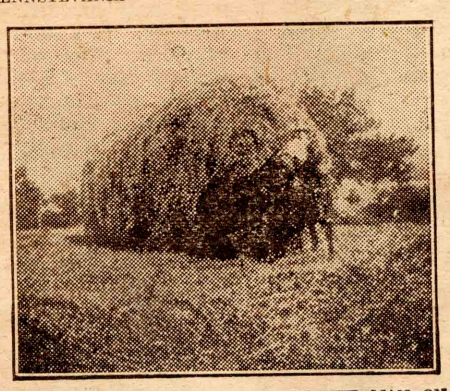
It seems to be a fixed fact that in the national Department of Agriculture there is to be a Division of Marketing. Secretary Houston has designated Prof. T. N. Carver, Harvard University, to be at the head of the Bureau, which will not begin operations until next winter. College men will have a chance in this administration to show how much of the practical there is in their scientific theories. If the farmers themselves were sufficiently organized to act together there could be no question as to the good results and success of the movement.

Making Hay While the Sun Shines

A HAY-MAKING SCENE ON FARM OF A SUBSCRIBER IN PENNSYLVANIA



MOWING ON FARM OF W. A. CHAMBERLAIN, A PENNSYLVANIA SUBSCRIBER



"HOW WOULD YOU LIKE TO BE THE MAN ON TOP OF THIS LOAD OF HAY?"

The Farm Value of Hay.

Hay is a product of universal growth. Wherever agriculture is an industry the hay crop is a factor. In some sections where natural grasses are not fit for hay, and other grasses and hay crops are not commonly grown, on account of peculiar conditions of soil and climate, hay is not a large factor in farming. But nevertheless, all farmers are haymakers to a greater or less degree. There are some states which rank high as hay producers, and some that must import annually hundreds of thousands of tons. There are farmers whose hay fields are a source of considerable cash income, and there are farmers who buy hay every year to feed their stock.

If the money value of any other farm crops be greater than that of the hay crop, this in no way detracts from the importance of hay on the farm. It is a necessity. With proper management, good hay crops can be grown where any farm crops will grow. The farm that does not have its hay fields, luxuriant with nutritious feed, is not returning its owner all it should. The owner, likewise, is not returning to the farm all he should. An abundance of hay, fed to stock, the manure carefully saved and returned to the soil, is probably the best system that has ever been or ever will be devised for the maintenance and increase of soil fertility.

* * *

The Importance of Being Ready

Now that the haying season is rapidly approaching, the farm owner should see that everything is in readiness to properly save the crop. Haying machinery should be thoroughly overhauled and put in condition. The mower, the tedder, the rake, the loader, and carriers, ropes, pulleys, forks, etc., should all be provided ahead of time. Go over all parts of each implement, making repairs where necessary, tightening, oiling, and putting everything in readiness. Haying is strenuous work, and haying time is valuable time. The loss of a few hours even may occasion the loss of dollars that might have been saved by preparedness. I have seen a large load of fine hay standing at the end of a hay barn in a soaking rain, because the hay carrier track had given away just before the sudden shower came up, and the track could have been, and should have been made perfectly secure before the haying season arrived. I have seen tons of excellent hay, cured ready for the mow, left lying in the field in the rain because the old hay rake that was being made to "do another year" gave away suddenly in the great haste of the farmer to crowd it to its capacity before the storm came up. I have seen a field of excellent clover stand a few days too long, losing in digestibility and feeding value every hour, because the farmer had to send to a distant city for repairs because he had not purchased a standard mower, and repairs could not be obtained from a local dealer.

* * *

The Value of Improved Machinery.

Remember, a dollar saved is a dollar earned. The hay crop is now about ready for you. Be ready for it. And you can not be ready unless you have the necessary machinery in suitable shape. A good mower is the first essential. If the mower has parts that are badly worn, replace them now. Have an extra sickle on hand with plenty of extra sections. If your crop is a heavy one, you should have a tedder. This valuable tool is seen too infrequently on our farms. The more rapidly your hay cures, with as little exposure to sun, the better feed it makes. Getting the cured hay into the barn quickly is one of the secrets of success in hay-time. It keeps better, it is eaten with more relish, it digests better, it goes farther, and, placed on the market, brings more money.

* * *

When Time is Money

Haying comes at a time when work in the cultivated crops is most pressing and important. The earth-mulch is to be kept by continued and frequent stirring of the soil to conserve the moisture. Hay time is therefore most valuable time. The more time you save the more money you save during these busy days. The hay loader is one of the greatest time-savers in the hayfield. Like the tedder, and the side delivery rake, there are too few of them. Modern methods do not incline to the old-fashioned practice of leaving the cut hay on the ground, taking its time to cure, trusting to Providence and good luck to be saved before being injured by sun-scald or rain. Then the hay press is now an absolute necessity for the thrifty farmer. It saves space on stored hay, and baled hay is by far the most profitable for market.

* * *

Be on the Winning Side

The up-to-date farmer takes few chances, and his losses are few. He is abreast of the times, and makes every crop he grows pay, unless the speculators beat him out at the marketing end. Even then he outclasses his less progressive neighbor, because his crops are superior in quality, and cost less in production.

We hope every one of our folks will take this advice right to heart, and determine now to get all the good possible out of the coming hay crop. Provide yourselves with all the necessary tools. Begin at the right time, and then push the work right through, without halt or hindrance. It will add many dollars to the ultimate value of the hay crop.

The farmer who is a "live wire" often gives his neighbors a shock.

Pitchfork Platitudes

Rain and sun are good grass growers.

The weather has a lot of influence with the hay crop.

What excellent yields of hay some fields would bring if the weeds would only turn to grass.

Lemonade is a mighty fine thing to cleanse and cool the blood. Keep this in mind as haying time comes around.

Ground oats, green clover hay, and sweet skim-milk make a good ration for the lambs after they are three weeks old.

Don't lose a half a day in a critical time on account of a broken fork. Keep one or two extra ones on hand, also an extra handle.

Sam Saxon says that the farmer who has his barns filled with choice hay doesn't have to make two blades of grass grow where but one grew before.

When a man comes in from the field, hot, tired and thirsty, there is nothing so refreshing as a deep draught of cool, clear water right out of the northwest corner of the well.

It takes some extra time to have a good crop of green clover, or rye-oats-and-vetch to cut and feed to the milk cows, but that kind of time is money to the man who is short of pasture.

Don't feed swale hay. It isn't fit for feed. It is good for packing around crockery, iron castings and such things, but isn't fit to pack a horse's stomach with. Drain that swale, and let some good and valuable grass grow thereon.

Arrange to begin haying in good season. Now is the time to make your work adjust itself properly to the haying season. Look ahead and be ready. Grass and clovers deteriorate in hay value rapidly after they reach the stage of full bloom.

There should by all means be a hay press in every community where hay is grown for market. Where farms are small, the owners should purchase one in partnership. It lessens the expense of handling and marketing, and enhances the value of the crop. The hay press soon pays for itself.

Alfalfa that is too thin on the ground will become weedy, and grow coarse and woody in fibre. After the first cutting, if the crop is too thin, put on a little more seed, and disc it in with a spading harrow. This applies to old fields, well established by one or two years growth. Alfalfa spreads considerable the second year.

If you haven't help enough on the farm to handle the hay as quickly as it should be handled, better arrange for extra labor now. Help isn't as plentiful as it was a few years ago, and a wise man takes thought of the morrow, regardless of what the Bible says. The Savior wasn't talking to mowers of hay, but to fishers of men.

The wise farmer takes extra care of his horses when he puts them in the heavy work of early spring. He feeds and waters carefully and judiciously, and his teams do their work well. How many apply the same common sense care to themselves when haying time comes? That is usually the first severe work of summer. Take care of yourselves, friends. Eat judicious, rest sufficiently, drink moderately, and often, and haying will not be so hard.

Sam Saxon says that some folks make hay while the sun shines and then leave it out until it rains.

Show Us Please

I.

We have sometimes been taken to task for insisting that the farmers' losses through deplorable marketing conditions could be largely if not entirely eliminated by a national (meaning country-wide) marketing organization. Some papers, without even an examination of the plan we have been advocating, have said the plan was wholly visionary and impractical. Visionary it may be, but many things visionary are practical. Wireless telegraphy, flying machines, and many other ideas, as far back as the days of Columbus have been called visionary, and time and test have proven them both practical and beneficial.

II.

We admit that a better marketing system is visionary—that is, something that exists only in the minds of those who realize its need. We can easily see in the future a better marketing system established, and operated to the greater welfare of mankind. But we have yet to be shown wherein, or how, or why our plan is either impossible or impractical. Merely the sayso of even intelligent men does not make it so. We must demand reasonable proof. If the Farmers Society of Equity, in its earnest endeavor is based on an impossible or impractical idea, and it can be reasonably proven, UP-TO-DATE FARMING will be the first to expose its fallacies. But we are tired of hearing other publications loud in their denunciation of the principles we advocate, but absolutely silent in anything but denunciation.

III.

We are weary of being eternally criticised for trying to remedy an evil, by those who accept that evil as a matter-of-course, not to be criticised or remedied, and we call upon such self-appointed critics to discuss the evil with us, determine its cause, and find and apply a practical remedy.

(Continued on Page 18)

Two Paths to Travel

By Sam Saxon.

Jones sent his son to college to soak up scientific knowledge on how to make the old farm pay a thousand plunks a year. Brown gave his boy a rake and hoe and told him that he'd better go and renovate the cornfield so each stalk would bear an ear. Now when these rural neighbors had ceased their earthly labors to rest in peace and silence until resurrection morn, Young Jones was making money on buttermilk and honey, while Brown was facing failure though he kept on hoeing corn. Jones weeded out his 'taters with two-row cultivators. Brown used a double-shovel hitched behind an aged mule. Jones read the daily papers while Brown was cutting capers in the barnyard with old Brindle and a one-leg milking stool. Jones raised a few commotions with his farmers' college notions, but he also raised the mortgage growing crops of corn and hay. Though Brown worked to beat the devil he would tell you on the level, that no college-cultured dude could farm and ever make it pay. In these days of competition, farmers must have some ambition, and keep pace with modern methods, mowing grass or shearing sheep. And the man who's up and going, learning all the things worth knowing will be growing into money while his neighbors are asleep.

Pastoral Paragraphs

I jes don' know ef de cohn'll grow,
But I plants hit jes' de same;
I jes' don' know ef de wind'll blow,
But I watch an' pray an, reap an' sow,
An' de sun he rise, an' de ribber flow
An' de good Lawd know my name.

...s' can't tell ef de cottn'll sell,
...ut I toils on jes' de same;
... birds dey build when de spring sap swell,
... dey know enough fer a rainy spell,
... dat's lots more dan dey gwine ter tell—
...n' de good Lawd know my name.

...ilding up the soil is one way to ... up your bank account.

...e man who gets a bunch of garden seeds from the government at ... begins to wonder if they will ...w.

A poor fence is a good invitation for ...e stock to get on the other side. If ...u don't want them there, fix the ...ence.

Many a man fails to forge ahead because he has the looking backward habit. Face forward. Your fortune ...s in the future.

Many peoples' troubles come from ...oo much open mouth. They are either taking in too much food and drink, or letting out too many words.

The average farmer is reasonably sure of three square meals a day, even if he doesn't have a lot of excitement. That is hardly true of the average city worker.

More corn may grow in a crooked ...ow than in a straight one, but you can't get so many crooked rows in a field. Besides, why make the horses dizzy?

Sam Saxon says that once the farmer's son went to college to study the roots of Greek and Latin verbs. Now he goes to college to study the roots of Indian corn and Egyptian cotton.

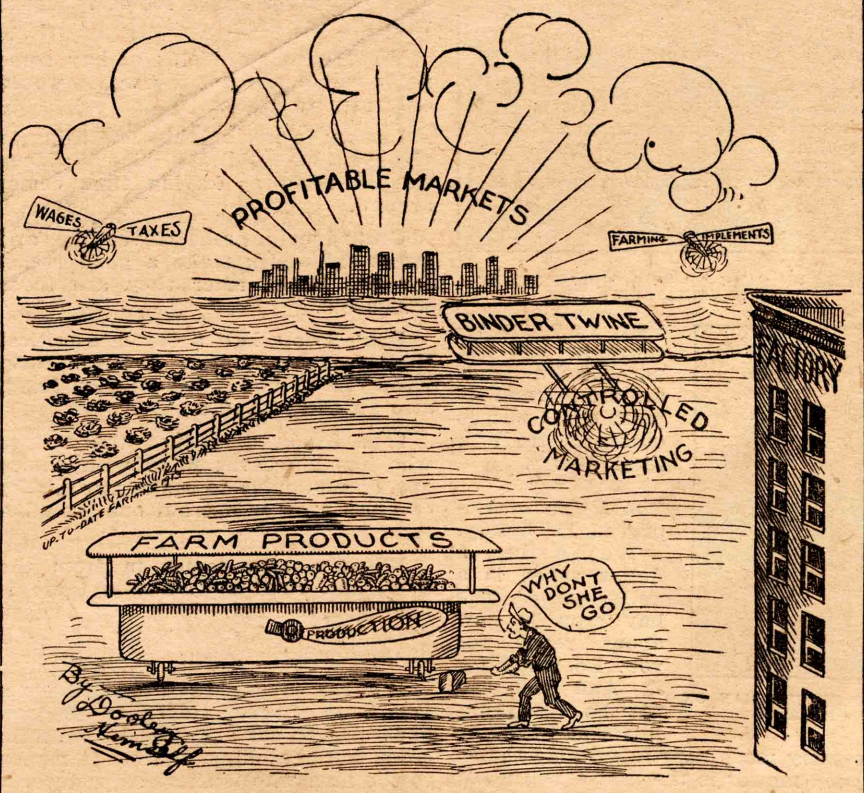
Ground lacking in vegetable matter forms a hard crust quickly after a rain. This makes cultivation a harder and more laborious task. Putting vegetable matter in the soil not only increases yields but lessens labor.

A few years ago the pessimists asserted that when automobiles became plentiful, the horse would have to go. We are seldom out of sight or hearing of the motor car these days, but we haven't noticed any useless horses browsing by the roadsides, and the horse market is still strong.

One good feature about the farm demonstration work in inducing farmers to try for big yields per acre is found in the fact that the methods advocated compel the cultivation of less acres. The farmer who takes the time to do the work necessary to raise 100 bushels or more to the acre cannot possibly cover the ground that the farmer covers who is content with 40 bushels per acre. Facts have proven that large total yields are not as profitable as smaller yields; and, under the present method of marketing, there is danger to profits in prolific productions.

The beef growers are worried about the tariff on meats; the sheep men are exercised over the wool tariff; the wheat farmers are disturbed over the proposed bill to change the tariff on wheat and flour. The cotton planters, the tobacco growers, the sugar beet farmers, are all pecking at Congress with their little hammers, each class for itself. How much more practical and effective it would be if all should combine, and as one body, demand equal rights, justice and protection for all. The force of a thousand hand hammers is not equal to that of a single pile driver.

Mr. Dooley Turns Artistic



"Hinnissy," remarked Dooley, as he entered Hogan's Saloon with a large cardboard under his arm, "Me payshients has bin entoirely eggshausted by the dumbness of the loikes of yez. Oi've shpoke to ye in fayables, and parables and eppygrams which Oi've had to eggshplane wid maps and dhiagrams befure ye cood undershtand a p'int which wud shtick out loike the nose on yer face, which is so plain an prominent it's painful, so it is,"

"Yez hov somethin' on yer moind, Mister Dooley, "replied Hennessy. "But phwat have ye under your arrm. Is it a parable or an eppygram?"

"'Tis nayther, Hinnissy. It is a wurrk of art, it is. Pr'aps it will make an imprission where wurrds hav bin useless. The fahrmer, now, is a man av brains, but as a rule he niver uses but half av thim at a time. He sees the wurrld av business go soarin to success, but he niver has thought how he might fly wid the rist av thim. Oi've dhrawn this picthure to show him the way. Ye see, Hinnissy, the mannyfacthurers have outgrown their schwaddlin clothes, whativer thot may be, and they've built up business maysheens to sell their goods at prices jist high enough so the fahrmers kin raych thim wid a 6-months note wid a ten per cint intrus extinsion onto the ind av it. The ingine which runs their marketing maysheens is called "Controlled Marketing," which means, Hinnissy, that they won't sell till they git a price that pays thim a profit. Prices on fahrmin implimints is so hoigh it makes the fahrmers dizzy to avin luk at thim. Binder twoine is goin' up. Wages an taxes air goin hoigher all the toime. But the proice av fahrmer's projooce is trailing in the dhirt he tuk thim frum."

"What's the raysin of it all, Mister Dooley?" asked Hinnissy, studdying the picture with great care.

"Holy Patrick! Hinnissy, cahn't avin an artist larn ye nothin? The fahrmer overloads his ship wid too much av his projooce all at once. His ingine, havin but one propiller, which is production, cahn't take the load to a profitable market, so it shtays on the fahrm till a speculathor cums along and takes it away wid him at his own proice. What the fahrmer nades iz a new propiller, same as thim other lads have and whin he gets it he can wear dimons in the bosom of his caliker shirt, an ate beefshtake wid the rist of thim. Whin the fahrmers git togither they kin do these things, but jist as long as they go ivery mon fer himself and th' divil take the hindmost, the divil will git thim all, fer they'll all come out behind.

"Begorra, Oi b'lave ye're roight," said Hennessy, thoughtfully.

It is easy to cut a lot of hay down, but not so easy to get it up. Don't let the mower get too far ahead of the wagon.

An Alabama paper congratulates the South in having a Mississippi farmer who produced 7,875 bushels of corn on 70 acres, an average of 112½ bushels per acre, and goes on to say that "Ten years ago the man who raised twenty-five or thirty bushels of corn to the acre was regarded as qualified to serve his State as Commissioner of Agriculture. Now only the tail-enders raise that little." This would indeed be a matter of great satisfaction if only it were not true that 900 out of every thousand of our farmers are "tail-enders." Farmers, in fact, have the tail-hold on agriculture.

Cow peas in the corn is a popular policy in southern climes where the growing season is long. And it is popular because it is profitable.

We should be more careful to know just what we are doing on our farms. It is a mistake to think that the balance at the end of the year is all we are interested in. The balance may be so low as to be surprising, yet we do not understand how we happened to do so poorly. For instance, our expectations may have been set for a 60-bu-per-acre corn crop, and when we get it in the crib, it falls short about 20 bushels per acre, in spite of a fair season, good soil and careful cultivation. How much, then, did we lose by not having a perfect stand, and how much from barren stalks and "nubbins?"

Some Succeed and Others Fail

Farmers sometimes wonder how it is possible for some men to win such great measures of success. The accomplishments of those who have succeeded to an unusual degree look to be almost supernatural feats, requiring a genius not given to ordinary mortal. But it isn't so. Those who succeed beyond the ordinary merely take extraordinary pains to succeed, that's all.

For instance, the average farmer probably does not take extraordinary pains to keep his farm machinery in good condition, while the unusually successful farmer overlooks nothing. The average farmer is a bit careless. The successful man takes infinite care of his tools. The average farmer has never even tried to determine how much he loses by lack of care and attention to his machinery. The successful man made it a study, and found it paid big dividends to keep everything in perfect condition and in readiness.

No business man on earth, and no successful farmer could succeed with successful farmer could succeed above the average with the methods employed by the average farmer.

The average farmer can succeed when he adopts the methods of the business man and farmer.

By success we mean paying good wages for all time employed; paying interest on the value of land, improvements and equipment; putting aside about ten per cent. of value of buildings and equipment for depreciation, to replace them when gone; putting by a sinking fund sufficient to make necessary additional improvements in buildings and equipment, and then, after all that has been accomplished, paying yourself from five to ten per cent dividends on the capital stock—i. e., the value of your land, stock, and equipment.

Are you doing that? If not, you are not a business success. Take your pencil and by a little exercise in mathematics you can quickly determine your right to the title of a successful farmer. If you are not one, determine at once to become one from this time forward.

Alfalfa—The Wonder Worker

Splendid legume that clover is, alfalfa is taking its place in the very heart of the clover country. There is seldom anything so good there can be nothing better.

The farmer who "tries out" alfalfa on a piece of ground he thinks ought to be good for alfalfa because it is good for nothing else has no right to expect success. The best acre on the farm is none too good for alfalfa. No matter if it will bring you 100 bushels of corn, or 40 bushels of wheat; it will bring you more profit in alfalfa.

The first of June is the acceptable time to start alfalfa. Deep plowing in early spring, with occasional harrowing to kill the weed seeds and keep the seed bed fine is one of the best insurances of success. Thirty pounds of seed to the acre was once considered none too much, but many or our most successful growers drill in but 10 pounds to the acre. It depends on the quality of the seed, the condition of the seed bed, and the method of seeding. Broadcasting the seed on a poorly prepared bed will require 30 pounds. Drilling the seed on a well-prepared bed will find 10 pounds sufficient. Follow seeding with a heavy roller, and this with a light smoothing harrow.

Alfalfa, being nearly as nutritious as wheat bran, cuts down the cost of grain feed. Work horses are kept in excellent condition on alfalfa hay and a small supplement of oats

Our Market Review

WEATHER generally has been favorable for farmers. Winter wheat is reported in excellent condition from all sections. Needed rains have fallen, and the crop is thriving. The outlook in Kansas is for a crop 25 per cent. larger than the yield of 1912. Seeding of spring wheat has been finished under favorable conditions, and it is reported in commercial circles that the small grain acreage is larger than last year. Latest estimates from the sections of the middle west that suffered from the floods of March say the loss to wheat will not surpass seven per cent. Preparation for corn planting is progressing under very satisfactory conditions.

Smaller shipments of wheat from Argentina, coupled with a strong foreign demand gave strength to the wheat market, which was counteracted by the excellent crop prospects in the United States. Corn and oats showed strength on good cash demand, coupled with great decrease in visible supply.

During the week ending April 26, there was a decrease of 16,000,000 bushels in the visible supply of wheat, much of it due to the fact that large quantities of the grain was enroute on lake steamers, which supply will appear again in later reports.

Reports from Canada give evidence that the acreage in spring wheat for 1913 will not exceed the acreage of 1912, though both Alberta and Saskatchewan report slight increases. Eastern Canadian provinces report winter grain in excellent condition.

Kansas reports that farmers still hold 7,600,000 bushels of the state's 1912 wheat crop; elevators, 1,600,000 bushels; mills and mill elevators, 3,900,000 bushels; total, 13,100,000 bushels.

The visible supply of all grain has been materially reduced. Excellent crop conditions have effectually prevented any material advance in price, however, as wheat has fallen off from one to four cents in various markets. Corn lost about one cent, compared with prices two weeks ago, and is thirty cents below prices of last year. Oats remain practically the same as two weeks before, and are twenty cents under last year's prices.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on May 3, two weeks before and a year before as follows:

WHEAT, No. 2 RED

	May 3		2 Wks before		AYr. before
Chicago	1.02	@1.04½	1.05	@1.09	1.18
St. Louis	1.07	@1.10½	1.10	@1.11	1.24
Kan. Ct.	.87	@ .89½	1.00	@1.04	1.17
Cincin.	1.09	@1.12	1.10	@1.12	1.23

Minneapolis—Spring wheat, No. 1, hard, 91c; No. 1 northern, 89¾@90½c. Two weeks before, 89½@91½; a year before, $1.18.

CORN, No. 2, WHITE

Chicago	58	@58½	59½	80@81½

OATS, No. 2 WHITE

Chicago	36¾	36½@37½	57¾	
St. L.	35¼	36½@37½	57¾	
K. City	35¾@36	37 @37½	57	
Cincin.	35 @35½	37 @37½	58½	

Cotton

New Orleans, May 3.—Secretary Hester's statement of the world's visible supply of cotton shows the total visible is 4,617,802, against 4,800,008 last week, 4,928,997 last year and 3,521,724 year before last. Of this the total American cotton is 3,164,802 against 3,302,008 last week and 3,733,997 last year.

The market closed steady at a net decline of 3 to 6 points. Estimated receipts at all the ports today, 9,000 bales, against 7,969 bales last week, and 8,734 bales last year. For the week, 80,000 bales, against 81,746 bales last week and 62,226 bales last year. Today's receipts at Galveston, 3,166 bales, against 2,752 bales last year; at New Orleans, 2,325 bales, against 1,331 bales last year, and at Houston, 1,560 bales, against 1,490 bales last year. Spot closed quiet; middling uplands, 11.85c; middling gulf, 12.10c. Sales, none.

Live Stock

Chicago, May 3.—Hogs—Receipts, 9,000, steady, bulk of sales, $8.40@8.55; light, $8.35@8.60; mixed, $8.20@8.60; heavy, $7.95@8.50; rough, $7,95@8.15; pigs, $6.60@8.60. Cattle—Receipts, 100, steady; beeves, $7.20@8.90; Texas steers, $6.70@7.75; stockers and feeders, $6.00@8.10; cows and heifers, $3.90@8.15; calves, $6.50@9.50. Sheep—Receipts, 1,000, steady; native, $6.00@7.15; yearlings, $6.50@8.00; lambs, $6.60@8.75.

During the first four months of the year the Chicago Union Stock Yards received 85,739 cars of live stock, compared with 92,873 cars in 1912, 89,299 cars in 1911, 75,602 cars in 1910.

INDIANAPOLIS STOCK MARKET
May 3, 1913

CATTLE—Range of day's quotations for steers ..... $7.00@8.65
HOGS—Range of day's quotations ..... 7.25@8.65
Bulk of sales ..... 8.50@8.60

Prices on cattle practically the same as two weeks before. Hogs are down 50c per cwt.

Chicago Produce Market
May 3, 1913

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets, address the Farmers Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

Total receipts, 6 days, this week, 248; last week, 322; last year, 269.

The market maintained its firm tone, although no material changes were noted in prices. Most of the stock was of good quality. Receipts were moderate, and the week's total is much below that of the previous week and also smaller than a year ago.

Sales reported were: Minnesota whites, in bulk—1 car at 41c. Wisconsin round whites, in bulk—2 cars at 43c, 2 cars at 44c; Rurals—2 cars at 45c, 1 car fancy Dusties at 47c; mixed, round and long—1 car at 45c.

Per bu., bulk or sacked Wisconsin, Kings or Burbanks, common mixed, to good sound 37@43c
Rurals, outside fancy ..... 44@47c
Minnesota, round white, bulk or sacked ..... 37@45c
Seed Potatoes in 2½-bu. sacks,
Early Ohios ..... 35@40c
Rose ..... 38@42c
Triumphs ..... 40@44c

NEW POTATOES—Were quiet. Bermuda reds have been cleaned up and no more are expected. Florida reds are fair sale and firm. White stock is quiet. There is some inquiry for the best, but No. 2 stock is slow sale.

Alabama crop is expected to be about ready to move.

Per barrel, Florida, white, No. 1 $4.75@5.00
Hampers, Florida ..... 1.25@1.75

SWEET POTATOES—Very few really nice on the market. These are steady and have some sale. General run of stock ordinary to poor and dull and weak. Very poor stock without a market. No market for seed stock.

Hampers, Illinois, general run of so called good $1.00
Poor ..... .50
Alabama, choice $1.15

BEANS—The market has ruled steady lately. No change has come over the market for a week at least. There has been reported a fair and steady demand for Pea Beans of No. 1 quality and color. Stained at the same time have been rather slow. A good many of these available, but there is not much really nice stock offered. Business quiet and slow in all other lines, and, in fact, some were only about nominal. Quotable:

Pea Beans—
Hand-picked, choice ..... $2.20@2.25
Really fine, bright ..... 2.30@....
Prime ..... 2.15@2.20
Stock faulty ..... 1.25@1.90

Mediums nominally about same as Pea Beans.

HAY—Chicago, May 7.—Firm. Receipts, 545 tons; shipments, 36 tons.

Choice timothy ..... $16.00@17.00
No. 1 timothy ..... 14.00@15.00
No. 2 timothy ..... 12.00@13.50
No. 3 timothy and clover mixed ..... 7.00@11.00
Rye straw ..... 8.00@ 9.00
Oat straw ..... 6.50@ 7.50
Wheat straw ..... 5.50@ 6.50

Hay has fallen $2 per ton in the last two weeks. Straw remains about the same. Choice timothy brought $29.00 a year ago; oat straw, $9.50@10.00.

EGGS—The receipts at Chicago(not including through shipments) for the days mentioned were as follows. This week, 180,558; last week, 203,108; last year, 213,567.

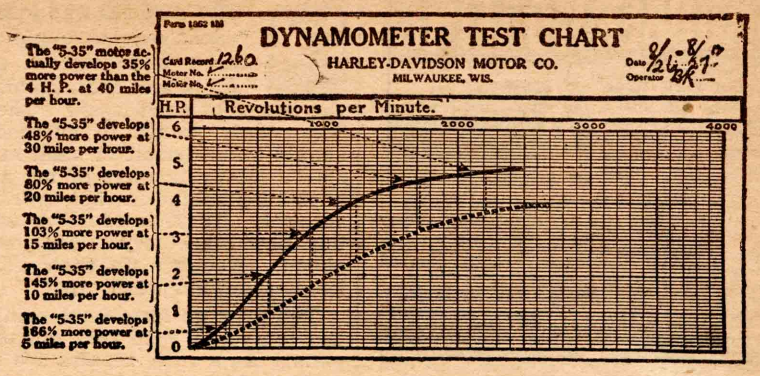
Receipts, April 1, 1913, to May 3, 1913, 827,511 cases. April 1, 1912, to May 4, 1912, 825,799 cases.

Trade is good and market in good condition for all good stock. Fine eggs are wanted for local use, also to fill outside orders and are alsc taken for rehandling purposes to place in storage.

The ordinary stock is dull, with considerable of this poorer quality on sale. The receipts are heavy but a considerable part comprise storage packed which are going into storage direct and not placed on sale.

Buyers are discriminating against Southern eggs. Tennessee, Kentucky and Oklahoma eggs are not as desirable as the western and northern stock and do not sell within 1c to 1½c of what the more desirable lots sell at.

Ordinary Firsts quotable at 16@17c.
Dirties—In good supply. Quotably 15c.



An Actual Reproduction of Dynamometer Test Chart

The Most Powerful Single Cylinder Motorcycle Made and Why

It has been conclusively proven time and time again that the Harley-Davidson "5-35" is the most powerful single cylinder motorcycle made. The most accurate means of testing the power of a gasoline engine is by dynamometer. Above is reproduced an actual dynamometer test chart showing power produced by the "5-35" (black line) and that produced by our former popular 4 H. P. model (dotted line), which was acknowledged to be the most powerful single in the world.

Note the tremendous increase in power developed by the new "5-35". Note that it develops 166% more power at five miles an hour, 145% more power at ten miles an hour and 35% more power at forty miles an hour. Do you know that this means that hills that would stall the ordinary single cylinder motorcycle, the "5-35" will take with ease. The Harley-Davidson "5-35" will "pick-up" to forty miles an hour in 190 feet from a standing start. No other single can do this. Its wonderful power development has made the

HARLEY-DAVIDSON "5-35"

the most popular single cylinder motorcycle made and the consequent demand has been so strong that we must and will actually build more single cylinder machines than any other factory in order to supply the demand.

In the hands of the rider the "5-35" is living up to its factory record. At the Springfield, Ohio, Hill Climb, held October 10th, 1912, Harley-Davidsons won every event. The "5-35" did even more—it not only won in its class but made faster time than any twin cylinder of other make by an average of eight seconds, a performance never duplicated by any other make in any contest whatsoever.

In the San Francisco Reliability Run the Harley-Davidson "5-35" was placed in the same class and time schedule as the twins, the Officials thereby openly acknowledging that the "5-35" was superior to all other singles.

In the Utica, New York Endurance Run October 20th, the "5-35" won a perfect score and was the only single cylinder to climb Tulley Hill. The "5-35" went up easily while a number of twins of other makes barely crawled over the top. In the Lynn, Massachusetts twenty-four hour endurance contest the "5-35" was the sensation of the run. It won a perfect score and climbed the famous Jacob's Ladder. In fact, it was right up with the twins all the time.

In the more recent Savannah 300 mile endurance contest, April 26 and 27, the Harley-Davidson single cylinder "5-35" was the only single to win a perfect score. This contest was so severe that twins entered failed to score perfect, but after the run the officials, after a careful technical inspection, failed to find even a loose screw or nut on the winning Harley-Davidson and pronounced it absolutely perfect mechanically.

These are but a few of the many records which have proven the "5-35" to be the greatest single cylinder motorcycle made.

The Harley-Davidson holds the world's record for economy and is the only motorcycle that has ever been awarded a diamond medal and a 1000 plus 5 score for its super-excellent performance in an endurance contest before the National Federation of American Motorcyclists.

Four thousand of these "silent gray fellows" are today employed by the United States Government in eight different departments. They have been adopted because they have proven their excellence over all competitive makes.

Our nearest dealer will demonstrate to you the many qualities of the new "5-35" including the Ful-Floteing Seat and the Free Wheel Control, two features which make the Harley-Davidson the most comfortable motorcycle made. Call on our dealer or write for illustrated catalog.

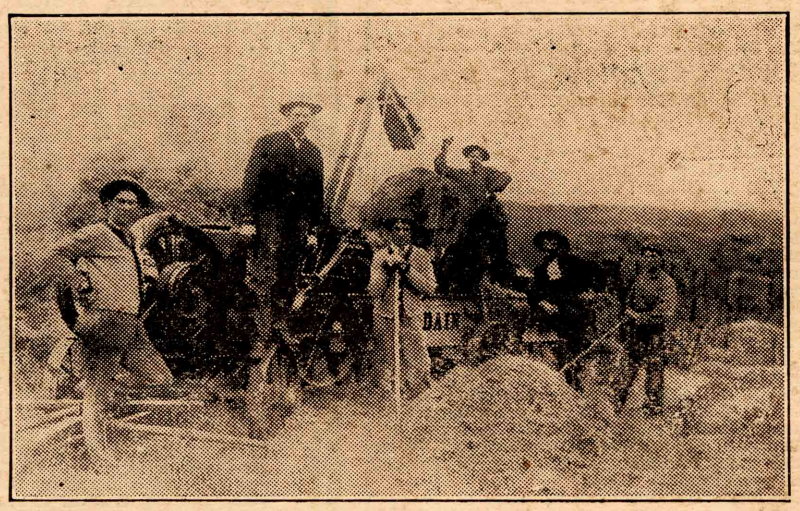
CARE OF FARM MACHINERY

FEW farmers who lose heavily each year through carelessness and neglect of their tools and implements realize the extent of such losses. The farmer who really wants to succeed better should take himself in hand in this respect. Many farmers of my acquaintance keep behind in their work on this account. They are forever saving to buy new machinery. They never get ahead. Keeping up their equipment keeps them financially tied.

The average farm implement should last ten years, with very few minor repairs. As a rule, repairs are made at a time when valuable time is lost. The time is at hand when the most expensive machinery on the farm will come into use. It should be put in order. In fact, it ought to be in order. The mower, the rake, the hay loader, the binder, all should have been put away after use last season, and put away properly. Whether or not that was done, they must now be put in good condition, ready for business, and adjusted and repaired so there will be no hitch in the work when once begun. Don't assume that everything is all right—make sure that it is.



BALING TIMOTHY HAY ON FARM OF OUR UP-TO-DATE SUBSCRIBER, E. R. ROEBUCK, MELROSE, IOWA

Go over every piece, and give it a rigid inspection. The successful farmer has realized the necessity for doing this. That is why he is successful. The unsuccessful farmer has not taken pains to know the value of the method, and does not appreciate the need. Therefore, he neglects it, and has a hard time making his income equal his outgo. He lays his misfortune to bad luck—when neglect of proper attention to little things is the real cause.

Any farmer, of ordinary intelligence, willing to work, can adopt successful business methods that will save him much time and money each year. He only needs to determine to look after the little things. In the matter of farm machinery, let him take a little note book, and write as a heading "Losses Through Neglect." Then, whenever he loses time, or must pay out money for repairs, or new machinery that might have been unnecessary had proper attention been paid to the cause of the loss or expenditure set down the amount so lost. This note book will in a short time prove an eye-opener. It will make its owner realize the value of taking care of things. This is merely a methodical, business-like way of getting right at the heart of things, and will demonstrate conclusively that business methods can be made to pay.

Take care of the farm tools. See that they are properly housed. When paint wears off, put more on. Keep the bolts tight. Axle grease is cheaper than iron and steel, and it prevents rust. A shelter to keep tools dry and out of the sun can be constructed at small cost, so keep the wood work dry. Before putting a piece of machinery in the field, put it in order.

SHORTY'S SHORTCUTS

(Continued from Page 1)

little short cuts, and send it to Up-to-Date Farming. It may help other farm folks to get ahead faster."

My wife feels sorry for folks that can't get ahead faster. That's what we get for being short. She is short, too. Just four feet five in her boudoir, (by the mark on the door.) We are pretty well matched all the way around. We both weigh 180 pounds, each, not together. We never weighed together. We couldn't both stand on the same scales at the same time. Being short and well rounded (Skinny calls it "fat") we waddle if we walk fast, so we move along slow and majestically. On Sundays, when we go out to walk over the farm we start early in the morning and take our lunch. We can't make the round trip by dinner time. Like our motor car, we are built more for comfort, than for speed, and make haste slowly. All this explains why my wife feels sorry for folks that do not get ahead fast. So she wanted me to write a book. Now, I can't do that, I haven't time, but I think possibly it would help some folks to learn by reading what I had to learn by experience, so with the editors kind permission, I will send in a few labor-saving, time-saving, and money saving short cuts from time to time as I find time. I am no finished writer, and I'll have to tell my stories in the common language used on the farm. All my neighbors understand it better than they do the experiment station language, anyhow.

I will begin next month. I've used all the space I dare ask for this time, just getting acquainted. You will need to know something about us and our neighbors to get the full force and effect of the ideas we have worked out, and how it all came about. And as we had lots of fun working them out, I hope the good editor will not object to my mixing some of the fun along with the facts. (Nary an objection, Shorty. Go to it.—Ed.) I sometimes think we need fun as much as we need religion, and being by nature inclined to adipose and humor, we like it better, to be right honest about it.

(Signed) SHORTY.

P. S. My wife thinks I should tell you that "adipose and humor means "fat and jolly." I know what it means all right, but I didn't want to be so brutally frank about it.—S.

Answered.

An officer of the Indian office at Washington tells of the patronizing airs frequently assumed by visitors to the government schools for the Redskins.

On one occasion a pompous little man was being shown through one institution when he came upon an Indian lad of 17 years. The worker was engaged in a bit of carpentry, which the visitor observed in silence for some minutes. Then, with the utmost gravity, he asked the boy:

"Are you civilized?"

The youthful Redskin lifted his eyes from his work, calmly surveyed his questioner, and then replied:

"No; are you?"

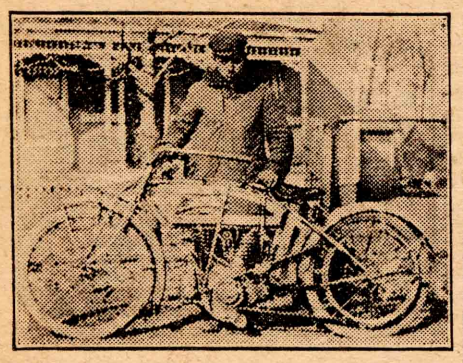
A MOTORCYCLE BEATS A HORSE

A Farmer and His Hired Man Both Win

A horse, not a money-maker, is replaced by a machine that is a time-saver, and the feed can be fed to a cow that produces an income.

The hired help problem is a real problem to most farmers. Getting good wages is every hired man's desire. Nearly all farmers keep a horse for the hired man, and in these days feed costs money. Consequently wages are kept down on the hired man with a horse. And when the hired man isn't working his horse will not stop eating, and that eats holes in his wages. Many hired men are buying motorcycles. They go farther and faster on less expense, and it is far more fun. Their owners get more wages, for a motorcycle is a handy thing to have on the farm. Every farm really ought to have one. The hired



man with a motor stands a better chance of a good job than the one with a horse. It saves time, and enables its owner to do more work. One hired man and his employer who have given this a test are in favor of the motorcycle. Read the letter from the hired man below:

UP-TO-DATE FARMING.

Dear Sir: I am a hired man on a farm, and if I did not have a motorcycle it would be necessary for me to own a horse and buggy, which would be more expensive to both my employer and to me. Also, I can get more wages without a horse, as the men who hire farm help do not have to furnish gasoline for a motor bike, but must supply feed for a horse; therefore they are willing to pay more wages in lieu of feed.

It is certainly great sport to ride the iron steed.

I find that it costs me approximately one-third of a cent a mile to operate my motorcycle, with gasoline at 20 cents a gallon, lubricating oil at 75 cents, and minor repairs.

My machine has been in use about six months, and I am sending you a photograph. I am 18 years old.—John Scilhamer, Newhall, Iowa.

The best tonic for a run-down farm is liberal doses of essence of energy.

Referring to an article printed elsewhere on the disastrous tumble in beef prices about May first, we wish to say that we agree with the Chicago Drovers Journal that the prospects of free trade in meats could not possibly have caused the decline if the producers had not become stampeded and began unloading heavily. Why act panic-stricken and suffer such needless losses? The packers save a few cool millions at the feeders expense, that's all. When, oh, when will the farmers wake up, and get into position to take care of themselves?

We all have about the same weather in the same neighborhoods, yet one will make good crops and save them, while the next neighbor lays his failure on the weather.

Drawing the Line.

"And before we were married you said you would be willing to die for me."

"I know it."

"And yet you refuse to beat the rugs."

"Sure. Dying's my limit."

A CHANCE FOR THE CHILDREN

Many more field peas would be grown if it were not for the high cost of the seed. No crop is so doubtful in the production of seed as the field pea. There may be a heavy growth of vine and not many pods, and there may be an abundant growth of pods on a comparatively meager growth of vine. One can scarcely tell how the crop will turn out.

There are machines for threshing and cleaning the peas, but none are yet in use which do not break, cut and injure much of the seed, besides the tearing up of the vines and the pulverizing and waste of the leaves, materially reducing the value of the forage as feed. These facts greatly diminish the saving of seed. Farmers hesitate to have their peas threshed.

A neighborhood in Kentucky, and possibly the same thing has been done elsewhere, the saving of pea seed is made a money making opportunity for the children. The peas ripen at a time when the country schools are seldom in session, and when there is nothing much on the farm for the young folks to do. Hence as soon as the peas begin to ripen the children begin to pick the pods. These pods are hulled by hand, and the peas are easily cleaned. The work may be kept up until frost, and it is surprising how many peas may thus be gathered; and such peas are worth much more for seed than are the machine-threshed seed, and buyers are generally willing to pay more for them.

This is an opportunity for the children that may well be considered. The pods may be picked on pleasant days, or during the pleasant parts of the days, and they may be shelled in the house, and during rainy days, or while the dew is on in the morning, or the whole family may assist in the evenings. Every bushel thus cleaned is worth $2 or more, besides the pleasure children generally have in making something of their own.

Some enterprising farmers have already hitched a paying business to the parcels post.

Open to Cinviction.

Mrs. Hayson—"Now, David, ye know I like ter see ye go ter the dairymen's convention; but, while ye're in the city, I want ye to promise ter keep good hours, not ter drink a drop, go to church, an' "—

Mr. Hayson (interruptingly)—"Now, look a-here, Mary! If I can't go to a convention uninstructed, why, by ginger! I'll stay ter hum."

No-Rim-Cut Tires 10% Oversize

How Do We Afford Them

You ask, perhaps, how tires like these can be sold at Goodyear prices.

The utmost in tires—the final result of 14 years of betterments.

Tires that can't rim-cut—tires 10 per cent oversize.

One process alone costs us a million dollars yearly more than processes generally used.

How are such tires—tires that give such mileage—sold as low as Goodyears? Let us tell you.

Our Cost

We are the world's largest tire builders. We build almost as many tires as any other two plants combined.

Our factories are new. Our equipment is modern. We have invented a wealth of labor-saving machinery. We employ efficiency experts.

Our capital cost is exceedingly low, due to small capitalization.

Grade for grade, our cost of making must be far below the rest.

Our Profit

Then our profit is kept at the minimum. To assure you of this, every year we advertise our profits. In times past this profit has averaged around 8½ per cent, out of which must come the interest on millions of capital invested. This year, with our reduced prices, we do not expect to exceed that

Those are the reasons why tires like these can be sold at the Goodyear prices.

Lower Prices

Of course tires can be made to cost less. Tires can be sold at half our prices, yet pay a larger profit.

But tire cost means the cost per mile. Goodyears cost far less per mile than any other tire that's built.

The Evidence

This is shown by the fact that Goodyears far outsell the rest, after 2,000,000 have been used.

Our sales last year were larger than the previous 12 years put together.

That's the result of testing these tires on hundreds of thousands of cars. Men have proved enormous savings.

The No-Rim-Cut feature ends rim-cutting completely. The 10 per cent oversize, with the average car, adds 25 per cent. to the tire mileage.

You will see these savings clearly when you test these tires.

The Biggest Thing in the Clock Business

Big Ben is the biggest thing today in the alarm clock business.

He is only two years and a half old, but he's already getting more work from the States than any clock alive.

In two years and a half time, 18,000 jewelers—70% of the total number of United States watchmakers — have already adopted him. Two million and a half families leave it to him to call them up in the morning. Two million and a half families use him all day long to tell the right time by.

He is really two good clocks in one—a crackerjack of a timekeeper and a crackerjack of an alarm.

Big Ben stands seven inches tall. He is triple nickel-plated and wears an inner vest of steel that insures him for life. His big, bold figures and hands are easy to read in the dim morning light. His large, comfortable keys almost wind themselves. He rings *five minutes steadily or ten intermittently*. If he is oiled every other year, there is no telling how long he will last.

He's sold by 18,000 watchmakers. His price is $2.50 anywhere in the States, $3.00 anywhere in Canada. If you can't find him at your jeweler's, a money order mailed to *Westclox, La Salle, Illinois*, will send him anywhere you say, express charges prepaid.

BIG BEN

Run On Coal Oil

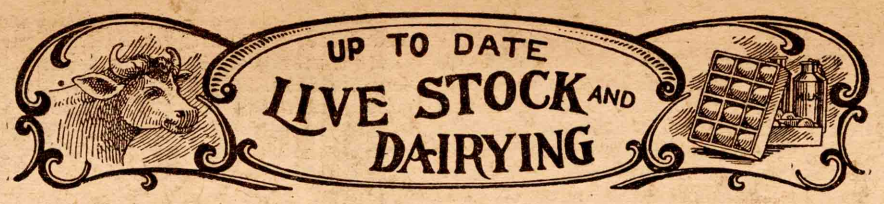
CHANDLEE & CHANDLEE, Patent Att'ys
Established 16 Years
1088 F. Street, Washington, D. C.



Taking notice of the standards of each modern known concern,
We're reminded of the passing of the good old-fashioned churn;
For by virtue of invention of a buttermilk machine
One can turn a tub of water into toothsome butterine.

The wildest colts often make the best horses if properly broken and trained.

You must help the hog lift by giving him good care and feed, if he is to be a mortgage lifter.

Young pigs will begin eating solid food very early in life if given a chance. It is good policy to give them a chance.

Sam Saxon says that the corporation lawyer doesn't ever think about going back to the farm—he's "watering stock" in the city.

I have found corn-and-cob meal an excellent food for dairy cows and "baby beef." I have been feeding it for over a year, with clover hay, and my cows almost double their milk production.—F. J. G.

Cow Tester H. D. Wetherell, Somerset county, Mo., reporting sixteen herds of ninety-five milking cows in all, finds the average feed cost for one pound of butter fat 22 cents. Highest cost was 39 cents in one herd and the lowest 11.7 cents in another herd.

A lady in Huron county, Ohio, owns three cows. Before she owned a hand cream separator she had trouble in getting all the cream from the milk, as everyone has in like circumstances, especially in the summer. After using the hand separator one year the same three cows made $72 more than the year before.

Better cows mean fewer of them to supply the demand for beef, milk and butter. For thirty years the proportion of dairy cows to the population has remained about the same. During the last decade, however, there has been a decrease. Not so many are needed, for the average dairy cow of today is a far better animal than her great grand-mother. The number of dairy cattle has increased 19 per cent., but population has increased 22 per cent.

A Holstein cow has recently completed an official record of 43.34 pounds of butter in seven days and 170 pounds in thirty days. Some day these records are going to get so high that the public will say as Artemas Ward did, "This is 2 mutch," and refuse to credit them. There must be a limit somewhere to the capacity of the cow, but the friends of this breed do not think it has been reached yet and are now cheerfully discussing the possibility of fifty pounds a week.

Beef cattle has decreased in number greatly during the last ten years. The total value, however, has increased. The lesser quantity is worth more money than the larger quantity, proving again that with our present system of marketing more in numbers does not mean more in money. Yet it has not been shown that less pounds of beef are produced now. Possibly the 36,000,000 head of beef cattle now in the country weigh more in total pounds than the total weight of the 44,000,000 head in the country in 1903, ten years ago.

Both of 'Em

"A wife is a gift from heaven."
"Why do you say that?"
"Because we get from them the bright sunshine and life-giving showers."
"And don't the storms come from the same source?"

Packers Advise Consumer and Producer.

One of the large packing companies, with its main offices in Chicago, has issued a pamphlet to farmers and consumers. It advises the latter to eat more lamb and mutton and urges the farmer to stop the slaughter of calves and raise more cattle. This corporation declares steadily advancing prices for beef are certain unless these things are done. The pamphlet says that the increase in population in the United States in the last 10 years has been approximately 16,500,000 while the decrease in the number of cattle in the country in the same time has been nearly 7,500,000. There was a decrease in 1912 of 560,265 cattle marketed as compared with 1911. This represented a decrease of 18 pounds per head in the cattle marketed and a total decrease in pounds of 704,498,355. The pamphlet says the United States is the greatest veal consuming country in the world, the number of calves slaughtered in the last 10 years having increased 100 per cent. It believes the only way to meet and prevent prices of beef soaring still higher is to stop this slaughter of calves by Nation-wide laws similar to those now in force in South America.

The pamphlet contains some figure showing the packer's profit on beef. For instance, it declares that after buying, dressing, refrigerating, shippingg and selling a 10-pound roast of beef, the packing company realizes from all these operations two cents, or one-fifth of a cent per pound. The purchasing power of a dollar for beef and for mutton in Chicago is given as follows by the pamphlet: Beef ribs, 5½ pounds; mutton loin, 15 pounds; beef, round, 8½ pounds; mutton hind quarters, 14 pounds; beef chuck, 10 pounds; mutton forequarters, 20 pounds. These are Chicago figures, and presumably wholesale at that. A considerable reduction, two-thirds or more, in the number of pounds is noticeable by the time the consumer in the East gets either the beef or the mutton from his retail butcher in exchange for his dollar.

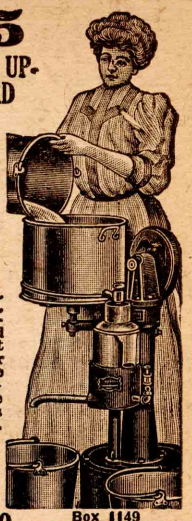
PASTURE FOR THE PIGS

IT is a pity there are not more and better fences on every farm. If the hogs and pigs could be turned into the wheat and oats and other grain stubble, much feed would be saved that otherwise goes to waste, and these stubbles would constitute a pasture for these animals of greater value than almost anything else could be. So, also, of the cornfields after the corn has been gathered. A lack of fencing precludes the use of these pastures, but a little figuring would should that very soon the values saved and gained would exceed the cost of the fencing.

GIVE THE COLTS LIBERTY

OF all young animals the colt, perhaps, needs the most outdoor exercise. It is necessary to its proper and natural development. It is a great mistake even while the mare is at work in the fields and the colt is unweaned, to keep it in a close stall. But to let it run, even in a lot, no risk must be taken as to gates or fences. These must be absolutely safe, high and tight. There must be no weak or low places in the fence, and no holes that the colt can get its head through. If of wire it should be high woven wire, well stretched and every post strong and solid.

15.95 AND UPWARD AMERICAN SEPARATOR



THIS OFFER IS NO CATCH. It is a solid proposition to send, on trial, fully guaranteed, a new, well made, easy running separator for $15.95. Skims hot or cold milk; making heavy or light cream. Save money daily with this awl by repairing shoes, harness, belts, rugs, gloves, grain bags, etc. Everything enclosed. Full size 6½ in. long. Makes lock stitch. Use any thread. Full instructions included.

OUR OFFER—Awl given with a two years' subscription for 75c. Satisfaction guaranteed or money refunded.

UP-TO-DATE FARMING, Indianapolis.

The Problem of Marketing Crops

By J. A. Everitt

CHAPTER V

To Control Wheat

The visible supply of wheat in the United States on October 26, 1912, was 45,482,000 bushels. There are about 2,500,000 farms producing wheat. If each of these would have marketed 18 bushels less than was marketed there would have been no visible supply; or if 500,000 farms would each have marketed 91 bushels less than they did market there would have been no visible supply; or if five of the heaviest producing states would control 9,000,000 bushels each that was marketed, there would have been no visible supply. And without a visible supply all the demand would have been compelled to look to the growers for supplies, which would have given them their opportunity to get their price. The ability to make the price 20 cents a bushel higher than the old system made it on the 1912 crop of wheat would mean $144,000,000 additional profit.

To Control Corn

The visible supply of corn on the same date was only 3,921,000 bushels. This is a negligible quantity. Now if the corn growers will feed the demand when the new crop comes on, just as it needs it; or if they will store for their own account what they cannot hold, the declining prices could be stopped at once and sent back to where they ought to be and kept there. December corn was quoted at 47 cents at that time, with the tendency downward. If corn growers were organized in the F. S. E. and had set a price of 65 cents at Chicago, that would be the price. It would mean $570,420,000 more for the crop.

And this can be gained to the corn growers if they will get into this organization quickly and feed the demand only as it calls for corn and store the surplus for their own account and get money advances on it as the speculators do.

To Control Perishable Crops

And the same illustration might be made for all other grain, cotton, hay and similar non-perishable crops. For perishable crops the problem is just as simple. If there is a real surplus it will be left at home—each producer holding his share—and all that goes to market will sell at profitable prices. Everything is provided for in the business plan or marketing system that is communicated to all local unions of the Farmers Society of Equity and federated associations.

Two States Can Control Corn and Hogs

Illinois and Iowa raised more than one-fourth of the corn. These states alone, if organized in the Farmers Society of Equity, could make the price on all corn and hogs.

Two States Can Control Wheat

Kansas and Minnesota usually raise almost one-fourth of all the wheat. These two states can organize to market by the Equity System and make the price on all the wheat.

Two States Can Control Oats, Corn and Hogs

Illinois and Iowa produce more than one-fourth of the oats. These states, alone, can organize and make and maintain the price on all the oats raised in the country, as well as the prices on corn and hogs.

One State Can Control Barley

Minnesota raises one-fourth of all the barley of the country. She can control the barley situation and decide the price for all the crop.

Five States Can Control Potatoes

Maine, New York, Michigan, Wisconsin and Minnesota produce two-fifths of all the potatoes, or about three-fourths of the supply for fall, winter and spring. These states can positively control potatoes and decide the prices from October to the end of the season if organized and marketing by the Equity System.

A Few Counties and Districts Can Control All Crops

We find that 260 counties produce 60 per cent of the wheat, 67 counties produces 40 per cent of the potatoes, and 216 counties produce two-thirds of the cotton. We could thus find the heavy producing counties or districts for all the crops. Such sections organized, which would be only a small part of the country, would bring all the crops under control and prices of the farmers' own making could be secured.

Organized Farmers Invincible

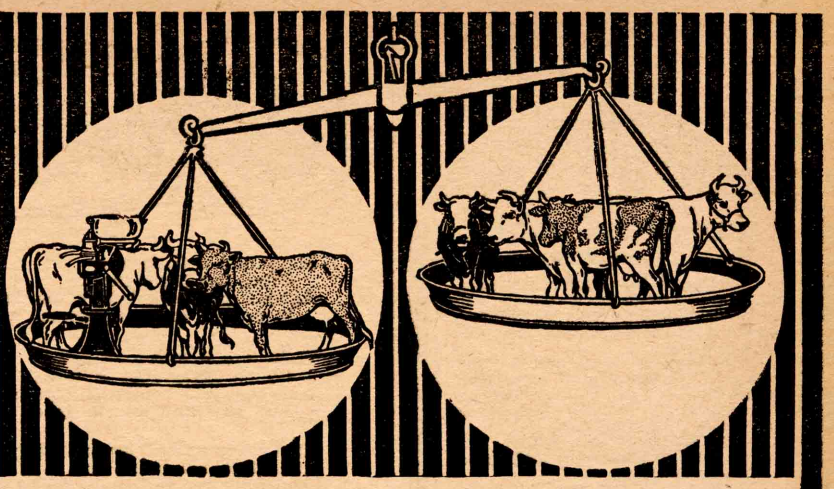
A couple million growers of potatoes marketing independently, or even marketing through a thousand or more local associations but competing with each other; or the same condition in any other crop, cannot prevent glutted markets or have much influence on the prices received. Such prices under such conditions will continue to be made "on the market" instead of on the farms, or by the farmers' representatives, as will be the case in the new order of things. The best that independent local organizations can do is to save some of the middlemen's tolls. But a couple of million farmers in the Farmers Society of Equity organization will be invincible in price-making. The individual farmer as a unit in an army of a million, each one competing for the markets, is totally without power. Numbers without unison in action, is of no avail. But if this individual farmer is one of a million organized and co-operating farmers, all directed to the accomplishment of a common object, he is as strong as the combined power of the million.

The fact that farmers have the indispensable things of life is what makes their marketing problems so easy.

Every day we hear farmers say: "Something must be done to improve our marketing system." What should be done, or what can be done better than to extend the Farmers Society of Equity? It has the only practical plan to build a marketing system for agriculture more perfect and more reliable in results, as far as profitable prices and economy of operation is concerned, than is used by the best regulated business in the country. Search the country over and you will not find anything else that will bring the relief we seek.

Organization Against Organization

So, brother farmers, don't be afraid to organize. The balance of the world is organized against us, to the extent that almost every article we buy from a horseshoe nail to a threshing machine is laid down to us at prices made by the producers, and profits, and transportation charges, and oftentime several brokerage or commission charges added thereon. The only reason that we have permitted this thing to continue these many years was because no real solution of the trouble was ever offered before. It is not because farmers will not organize, because they have been the greatest organizers on earth. They were the first and original organizers and have organized to the extent of millions. But they never organized for the right objects, nor did they have a plan on which could be built a sound and enduring organization. But it is different now. Organized on the Farmers Society of Equity plan we have a profit-making business organization immediately—as soon as the local union is organized. Use it for selling and buying, and the financial benefits will be so great that nothing can induce the members to depart from it. And then will grow the county organization with multiplied benefits and many of these will make the national organization, when, ere long, the Equity System of Marketing will be established for all the farmers, for all the crops, for the entire country.



Three cows and a

DE LAVAL CREAM SEPARATOR

will make more money than four cows with gravity setting

Thousands upon thousands of cow owners have already proved this statement; any experienced dairyman will verify it for you.

With such a big saving it is hard to understand why any cow owner should try to get along without a De Laval Cream Separator.

If you are selling cream or making butter, and have no separator, or else an inferior machine, we know if we could put a De Laval on your place we would be doing you a personal favor.

If you haven't a separator don't make the mistake of starting with a "cheap" or inferior machine. When you do buy a separator—as sooner or later you surely will—be sure to get the best—the De Laval.

Remember, you can't make money by trying to save money in the purchase price of a cream separator. A De Laval costs only a little more than the cheapest and will save you twice as much and last five to ten times as long as other separators.

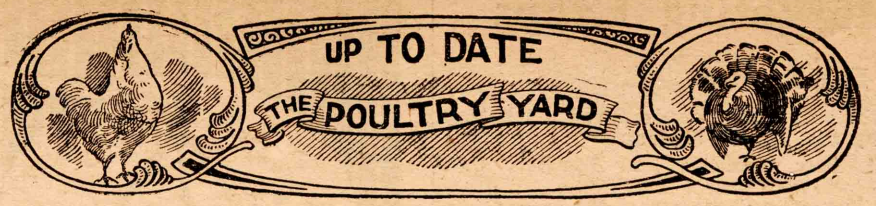
The Wilber H. Murray Mfg. Co. 939 5th Ave. Cincinnati, O.



Mary had a little hen
Upon her little farm,
Against the wolf before the door,
It proved to be a charm.

Each day it laid a little egg,
Which Mary sold in town,
And thus she bought her groceries,
And now and then a gown.

The years passed by and Mary paid
The little mortgage due,
And sent her girl to boarding school,
Her boy to college, too.

She has a nest-egg in the bank,
And even keeps a cook,
And everything about her has
A thrifty, well-kept look.

Says she, to those who daily fail
With needle, brush, and pen;
"If you would do as well as I,
Just keep a little hen."

Daisy Field

Grit, charcoal and granulated bone should always be mixed with the young chicks' feed.

Ducks kept entirely on land, must have deep drinking vessels, so they can get their heads under water.

It is best to salt the morning mash, but not more than one ounce for one hundred head of stock should be used.

Sam Saxon says that when a man gets the chicken fever only an incubator thermometer will take his temperature.

The busy hen is the productive one; hence she should be so fed as to induce the greatest activity, if in confinement.

Ducks are practically immune from cholera, roup and gapes. Their favorite diseases are spinal meningitis and paralysis.

If fowls are to do their best they positively must have clean, cool drinking water. Keep it in clean fountains in the shade.

Give the chicks as much range as possible, even if you have to limit that of the old fowls. Exercise is a means of development.

It it were not for lice, poultry raising would be an easy matter. At the same time it is not difficult to rid the henhouse of this pest.

For the first two weeks give young chicks all they will eat. Afterward, require them to clean up what you give them before nightfall.

The proportion of down-feathers on the legs of Asiatic chicks when hatched, indicates the amount of feathers they will have when matured.

When the fowl acts dumpish, has a poor appetite, and seems generally out of sorts, it is best to pen it alone for a few days and give a good physic.

The poultry business has been spoken of as a get-rich-quick scheme but the people who have succeeded can testify that this has not always been the truth.

During the hot summer months keep corn out of the bill of fare. A little in the chick-feed will do no harm, but wheat and hulled oats is better.

If a woman can hate anything she hates a chicken-eating hog. The chickens don't know the difference between that kind and the other, so keep them apart, and keep peace in the family.

Don't forget there is nothing better for your fowls in winter than nice, bright dried clover leaves. Now is the time to gather it, tie it in bunches, and hang it up in the granary, or barn, machine shop or woodshed, to cure. It will be time well spent.

SAVE YOUR WINTER EGGS NOW.

Eggs at present prices on the farm are cheap food. Next winter, when eggs are scarce and high, why not have plenty of cheap eggs for home use?

The poultry department of the New York state college of agriculture at Cornell university gives the following directions for preserving eggs in waterglass.

The commercial water-glass solution may be obtained from any drug store at a cost of about 20 cents a quart. Mix 1½ quarts of this solution with eighteen quarts of pure water. Water which has been boiled is preferable. Stir these until they are thoroughly mixed. Two eight-gallon jars are sufficient for thirty dozen eggs, using the amount of solution as prescribed above. After the water-glass is thoroughly mixed divide it into the vessels to be used. Be sure that the vessels are absolutely clean. Place the eggs in the water-glass, see that the top eggs are covered by at least two inches of the liquid, and cover the jars to prevent evaporation. Place them in a cool place where they will be undisturbed during the year.

Preserve only absolutely fresh eggs. Stale eggs will not keep in any preservative. Have your preservative ready to put the fresh eggs into as you get them. If you are in doubt as to their freshness, candle them, or see if they sink when placed in a dish of water. If any egg sinks it is reasonably fresh. Do not preserve dirty eggs nor eggs which have been washed.

Water-glass eggs are practically as good as fresh eggs for most cooking purposes. If it is desired to boil them, prick a small hole through the large end of the shell before placing them in the water. The pores of the shell have been sealed with the water-glass solution, and without this pin hole the expanding air within the shell would burst it.

LIME AND POULTRY

THERE can be no success with poultry unless the fowls are healthy, and the main assurance of health in the fowls is healthy surroundings and conditions. In the first place, the house, the roosting and nesting place, and particularly the setting place, must be kept clean and free from the elements of disease. Many people now have separate places in which to make the nests for the setting hens and move them from the laying nests to the setting nests before putting under them the eggs for hatching. This is a good plan and it is not difficult when worked out with reasonable skill and judgment. In moving a hen it is necessary to confine her at her new nest for a short time, a day or two perhaps, but if she is broody she will soon accept her new nest, and the eggs may safely be given her. Be sure that setting nests are new and clean. The material used in making them should never have been used in a nest before; then a little lime sifted in the material makes it a nest safe from all the poultry pests. The laying nests, too, should be kept fresh and clean, and a little lime occasionally sifted in them is an important precautionary measure.

Each time the house is cleaned it should have a good treatment of lime; sprinkled over the floor until it shows distinctly, and dashed or sifted into all the wall and corner crevices and on the roosts. This is scarcely equal

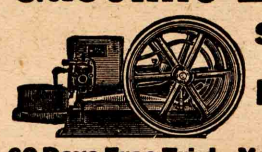
Gasoline Engines



Sold Direct to You at FACTORY PRICES

60 Days Free Trial—You Run No Risk

The Witte is conceded the best engine in America. Made by E. H. Witte, master builder for 25 years. Ask any Witte user. Any size from 1½ to 40 horse-power all tested to ten per cent overload. 61 special advantages.

And You Now Pay Only FACTORY PRICE

We cut out all dealers—their profits go to you. You also get the full benefit of our low factory cost. We have no power expense at our plant, as we own our gas well; testing, heating, lighting fuel, all free. Take a 60 day trial. Five year guarantee. Write for book, "How to Judge a Gasoline Engine," and complete catalog. Our wholesale factory prices will interest you mightily. Write NOW, telling us size engine you need.

WITTE IRON WORKS CO.
1971 Oakland Ave. Kansas City, Mo.

The WITTE Cuts Gasoline Bills in Half

to whitewashing, but it is the work of only a few minutes, and it is a great help.

The young chicks raised on the farm are expected to have much the same runs year after year. These runs are liable to become germ and disease infested, and then there is complaint of "bad luck with the young chicks." Gapes appears among them and many die without apparent cause. Early every spring such runs should be treated with a liberal dressing of lime. Let it be sown broadcast, or otherwise evenly spread all over the ground until its whiteness can be easily seen. Lime is not costly, and when it is air-slaked it does not take much to accomplish this purpose. It is a practical guarantee against many of the young chick troubles.

FREAKS IN FEATHERS.

Twin chickens were hatched from one egg on a Lebanon, Pa., poultry farm. The birds are now grown and are laying eggs every day. They are fully developed and are as plump as any chickens hatched from a single egg. They are named "Jack" and "Jill," and know their names, responding when called. They are a cross between Light Brahma and Wyandotte.

John D. Gile, Barrows, Minn., describes an egg laid by one of his hens. The egg is of an unusual shape, looking a great deal like two eggs fastened together at the ends, and on one end are the figures "3" and "6."

Robert Connall, New Bridge, Ore., writes: "A hen of a small bunch of Black Minorcas, owned by Mrs. A. C. Ewing of New Bridge, laid an egg measuring 8¾ inches by 6⅞ inches."

George E. Merrill of East Rodman, N. Y., seems to be the possessor of the hen that laid the golden egg. Merrill reports one of the largest egggs seen this spring and the story of the egg seems more wonderful from the fact that it was laid by a White Leghorn. The egg measures 8¾ inches by 6¼ inches.

Harry Sawyers, of Youngstown, Pa., has a freak chicken. The chicken, which was hatched a few days ago, possesses four fully developed legs. It is lively, runs about on its four legs, and gives promise of being as lusty as any other chick from the hatch.

W. F. Clark, Newark, N. J., writes that one of his hens has laid a strange soft shell egg. The egg is in two parts, the while in one and the yolk in another part, and both parts are connected by a sort of a tube.

Building up the farm flock is not a difficult matter. Start right. Sell all but about twenty of your best two-year-old hens, and put the money into one good male from a reliable breeder whose flock has been bred for utility. Then you have your foundation, and a good one. Care, common sense and intelligence will do the rest.

We raise feed for the cow, the horse, the sheep and the pig, and the chicken eats with all of them.

Not So Very Fresh.

A Harvard professor, noted for his severe way of examining students, tackled a raw-looking freshman: "I understand you attend the class for mathematics?" "Yes," "How many sides has a circle?" "Two," said the student. "Indeed! What are they?" "An inside and outside!" was the prompt reply. "And you attend the moral philosophy class also?" "Yes." "Well, no doubt you heard lectures on various subjects. Did you ever hear one on cause and effect?" "Yes." "Does an effect ever go before a cause?" "Yes." "Give an instance." "A barrow wheeled by a man!" The doctor hastily sat down and put no more qquestions.

In No Danger

"James got dizzy when he went into the water."

"Then he was safe, wasnt he?"

"How's that?"

"When a fellow is dizzy don't his head swim?"

MOTORCYCLING ON THE FARM

Recently while stopping in a small town my attention was attracted by a young farmer riding up to the post-office on a machine and dismounting.

Being lonesome and a stranger there, I started a conversation about motorcycling, and here is what he said:

My motorcycle is the best investment I ever made. It is certainly a source of economy, saving me much time and money, and as a pleasure vehicle is hard to excel.

The most notable comparison I can make is in the trips to town and back. By the old traveling methods it required one and one-half hours, while now I can skim over the same distance in fifteen minutes—some improvement, don't you think.

The motorcycle is not compelled to stick to the road, but can "hum" down the lane or bridle path, where other vehicles could not follow.

It is always ready and never tired. On Sundays when the hard-working horses are resting, I put on my extra seat and my wife and I go out fora spin. She enjoys motorcycling equally as well as I do, and is delighted with our machine.

In an economical sense it cannot be beaten. It costs me less than one-fifth of a cent per mile for gasoline, and, including other expenses, such as lubricating oil, grease, etc., it costs about a cent a mile, while running, and costs nothing while standing still—a great advantage over a horse.

I have had my machine about two years, and regret I did not buy one before that time. Just as soon as this one is worn out another will take its place, and so continue as long as I live.

Surely this young man is making hay while the sun shines by taking advantage of the short cuts.

There seems to be no doubt but what the "soul of steel" is a great factor in farm life today.

A Common Gift

"Did the deacon give you anything for the church benefit?"

"Yes, he gave me his opinion of it."

Scent For Cent.

A grouchy butcher, who had watched the price of porterhouse steak climb the ladder of fame, was deep in the throes of an unusually bad grouch when a would-be customer, eight years old, approached him and handed him a penny.

"Please, mister, I want a cent's worth of sausage."

Turning on the youngster with a growl, he let forth this burst of good salesmanship:

"Go smell o' the hook!"

Simple.

Two citizens were discussing who should be head of the house, the man or the woman.

"I am the head of my establishment," said John. "I am the breadwinner, why shouldn't I be?"

"Well," replied the other, "before my wife and I were married, we made an agreement that I should make the rulings in all major things, my wife in all the minor."

"How has it worked?"

"So far no major matters have come up."

A Real 1913 Car

By R. E. Olds, Designer

Here are some things which you should look for in a 1913 car. A car without them lacks things you should have.

New Features

The leading cars of this year have the left-side drive. They have electric dash lights—set-in lights—not the old projecting lamps.

They have oversize tires. Skimpy tires, which double one's tire bills, are quite out-of-date.

All cars, in such things, follow the leaders. So don't get features which the best makers have abandoned.

New Ideals

Then men today are buying cars for keeps. So the best makers now are building cars which will run for years like new. And cars which cut down upkeep.

Reo the Fifth, my latest car, shows what such cars require.

It is built of steel made to formula, and analyzed twice. The gears are tested in a 50-ton crushing machine. The springs are tested for 100,000 vibrations.

Every driving part, as a margin of safety, is given 50 per cent overcapacity.

We use 15 roller bearings, though they cost five times as much as common ball bearings. We use 190 drop forgings to avoid the risk of flaws

We use a $75 magneto, a doubly-heated carburetor, a smokeless oiling system.

We build slowly and carefully—grind parts over and over—watch them through endless inspection.

Each engine is given five long tests, lasting 48 hours altogether.

We could save in our building about $200 by using less care and less costly parts. But it would cost you in upkeep, in years to come, several times $200.

So we give you the best we know. Then we save you about 20 per cent on our cost by confining our output to this single model.

Thus we give you a car, built as we describe, at this matchless Reo price.

Rod Control

Reo the Fifth has our new control. All the gear shifting is done with one center rod, entirely out of the way. It is done by moving this rod only three inches in each of four directions.

There are no levers to clog the way of the driver. Both brakes are operated by foot pedals. So the driver enters from either side.

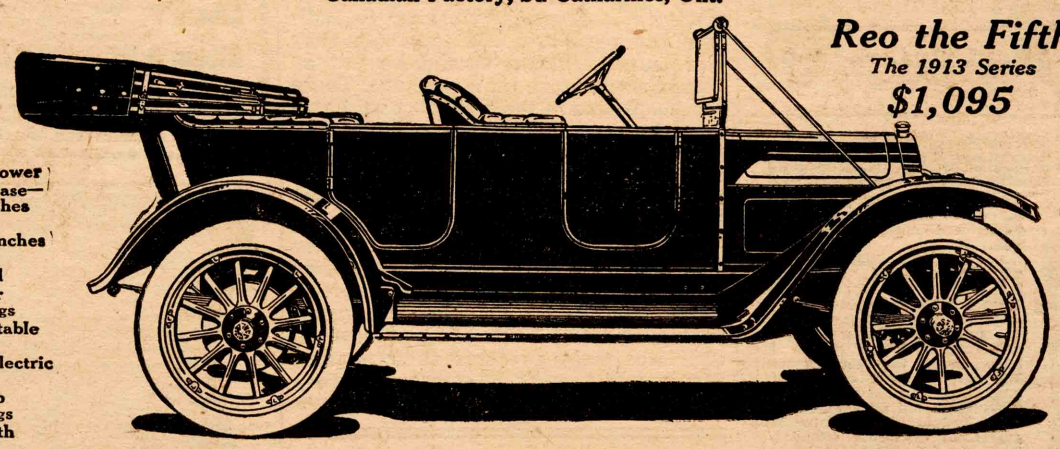
You will want this feature in your car when you see how much it means.

After 26 years spent in car building, Reo the Fifth marks the best I know. If you want the best, please see it.

Write for our catalog and we will direct you to the nearest Reo showroom. They are everywhere.

R. M. Owen & Co., General Sales Agents for Reo Motor Car Co., Lansing, Mich.

Canadian Factory, St. Catharines, Ont.



Reo the Fifth

The 1913 Series

$1,095

30-35 Horsepower
Wheel Base—112 inches

HOME HELPS

To remove iron-rust stains from white goods, boil the goods in water in which several teaspoonfuls of cream of tartar have been dissolved.

If a cake is inclined to stick to the pan when taken out of the oven, wrap a wet cloth around the sides and bottom of the pan for a few minutes. The cake may then be readily removed.

Faded cotton goods may be made perfectly white by boiling the goods in cream of tartar water. A faded calico dress may thus be made a perfectly white dress.

It is better to sprinkle clothes for ironing with warm water than with cold, and a clean whisk broom is a good thing to do the sprinkling with.

House plants in a flower pot should always be watered from beneath by setting the pot in a shallow vessel containing water, such as a saucer or the small earthen pan that usually accompanies them. The water is then drawn up to the roots of the plant through the hole in the bottom of the pot, and there is no crusting of the ground on top. It is well, though, to sprinkle the plants occasionally as a shower of rain would do.

It may be an advantage sometimes to know the following weights and measures: A peck of apples weighs 12½ pounds; a peck of clean carrots, turnips or parsnips weighs 13¾ pounds; a peck of onions weighs 14½ pounds; a peck of potatoes or beets weighs 15 pounds; a quart of string beans weighs ¾ of a pound; a quart of dried apples weighs ¾ of a pound; a quart of dried peas weighs 1 7-8 pounds. A bushel weighs four times as much as a peck and thirty-two times as much as a quart.

Trim the dead branches out of the rose bushes. Every sprig in the bunch will then have leaves and flowers.

The home grape vines should be pruned very closely, but it should have been done earlier in the season. There is no better place for the wood ashes than about the roots of the grape vines.

SOME BORROWED HOME THOUGHTS

EVERY girl expects some time to have a home of her own. What will she have to take to that home? She has many an hour that she could devote to something useful. Why not employ that time in something that may go into the future home? For instance, embroidery or crochet work, handkerchiefs, scarfs, napkins, towels, pillow cases, or even sheets, all with more or less special working to indicate the period of life in which they were made. Dates should be put on things much more than they are. There are keepsakes in the writer's own home that the date on them would add immensely to their value. A small trunk, or even a neat box, to keep these things in would be one of the most valued possessions.

Mothers who read often find articles they prize, or that they believe their children would be interested in—instructive articles, interesting stories, poetry, unusual items of news, recipes, etc. Not many preserve their papers; they would become bunglesome if they did, and the prized articles would seldom be found and read. A scrap book is the thing. Clip them out and put them in that. Or even a large envelope to put them in, the envelope to be kept in a bureau drawer or other safe place. Write the year of the clipping on them. In after years "Mothers' Scraps" will be highly prized.

Even the country home must not be shut up so that the air will become bad in any part of it. The sleeping rooms particularly must be looked after. The inmates must not breathe bad air. The living rooms are opened so frequently that there is not much danger concerning them, but the bed rooms should be specially aired every day. And the closets, too, must be kept free from filth or foulness or moldy garments. Looking after these things in the home is the easiest way to prevent doctors' bills.

Bathing facilities are specially deficient in farm homes. A lady overcame this deficiency in a measure by spreading an oil cloth on the ground in a secluded place, after providing herself with a suitable screen. She then brought a bucket of cold water, stood on the cloth, drew the screen around her, poured the water first over one shoulder and then over the other, rubbing herself down as she did so. Of course, a permanent enclosure could easily be provided, with a floor that would allow the water to run freely through it.

Did you ever make what is called bran bread? Try it. Take two cups of bran, two cups of whate flour, one teaspoon of soda, and one teaspoon of salt. Mix the dry ingredients well; then add two tablespoons of molasses or honey and two cups of sweet milk; work up and bake an hour or until done in a moderate oven. Sour milk may be used if preferred. Another recipe is as follows: Two cups wheat bran, one and a half cups sweet milk, one cup wheat flour, one-half cup molasses, one-third cup raisins, one teaspoonful soda and the same of salt. Bake an hour in a slow oven. Be sure the bran is fresh and clean. This is said to be good for constipation or stomach trouble.

A lady keeps her stoves and range all the time like they were new. She keeps a clean cloth to dust the range with the same as she does any other furniture, but she doesn't use it for anything else. She dusts the stoves every morning and rubes the nickel hard to get all the ggrease and dirt off. When it needs it she washes the stove all over with a rag and clean soapsuds, and then dries good with another rag. She prefers to do this while the stove is a little warm. Once or twice a year she gives the lower part of the stove a coat of fresh lard and coal oil, after which she rubs the stove with a woolen rag, which makes it as bright as new. She washes the top of the range every morning with clean soap suds, using plenty of soap.

In cooking dried fruits of any kind try to restore the fruit to its natural condition. After being sure that all defective pieces have been taken out, plunge the fruit into a large pan of cold water and quickly wash it most thoroughly. Do not allow it to remain long in the water, but transfer it quickly to a seive or collander and allow it to drain a short time; then rinse it through a second water as speedily as possible.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

Up-to-Date Farming, Indianapolis.

THE JOY LIGHT OF HOME

"HOME, sweet home." But what makes it so? If earth has a happy place that place ought to be home, and those who are brought up in happy homes are very likely to have happy homes when they make homes of their own. We cannot refrain from copying this paragraph, the origin of which we do not know:

Of all places on earth, home is the most delicate and sensitive. If we would have a true home, we must guard well our thoughts and actions. A single bitter word may disquiet the home for a whole day; but, like unexpected flowers which spring up along our path full of freshness, fragrance and beauty, so do kind words and gentle acts and sweet disposition make glad the home where peace and blessing dwell. No matter how humble the abode, if it be thus garnished with grace and sweetened by kindness and smiles, the heart will turn lovingly toward it from the tumults of the world; and home, "Be it ever so humble," will be the dearest spot under the sun.

Don't sneer at the man who dares try new ways of doing things. All progress came through the efforts of just that class.

CHILDREN ON THEIR OWN JUDGMENT

PARENTS, both in the house and out of doors, sometimes make the mistake of always leading the children in their duties rather than merely directing them. Children always led by their mother in the housework, or by their father in the fields and among the stock do not acquire the self-confidence so necessary to success in life. They may feel that they know how to do things, and they nearly always have a longing to be allowed to go ahead; but if they have always been taught to look to the parent for every detail, they lose in resourcefulness, and learn to look, even in after life, for some one else to lead.

Nothing strengthens a child more than to feel that it is under personal responsibility, and the sooner it is made to feel thus the better it will be for the child even in the future years. We do not argue that the child should too early be thrown upon its own resources. The parent should always be ready to point out the way and assist out of difficulties, but it should be made to feel that its own judgment in handling jobs is a factor in the work.

This is not only a matter for the good of the child in its bringing up, but it is an actual necessity in emergencies. Fathers and mothers are often called away from their families by death. Girls or boys may be left to do the work and manage affairs that the deceased parent had been depended upon to do. Happy now if those children had been taught to depend upon themselves; had been so directed as to cultivate their judgment, increase their resourcefulness, and be the better qualified to go ahead on their own responsibility.

There is even more in this than is here outlined. The father cannot always lead in the work, and the boy that is accustomed to being led in everything, when the time comes that he is thrown upon his own resources, finds himself blocked at every turn. He may be willing to do, but the directing mind as to how and when is no longer with him, and the work brings mental burdens, at least that he is not accustomed to, and discouragement follows. The farm work becomes distasteful, and he begins to seek some other mode of living. And it is much the same with the girls in the house.

Encourage the children to lead out in the work that devolves upon them. They will make mistakes in judgment and methods; will not always do the job just as father or mother would have done it, but they will acquire self-reliance, and become accustomed to lead, and that is worth far more than doing every job just as older or wiser ones might have done it.

Tonsorial Art.

Barber: "Poor Jim has been sent to a lunatic asylum."

Victim (in chair): "Who's Jim?"

"Jim is my twin brother, sir. Jim has long been broodin' over the hard times, an' I suppose he finally got crazy."

"Is that so?"

"Yes, he and me has worked side by side for years, and we were so alike we couldn't tell each other apart. We both brooded a great deal, too. No money in this business now."

"What's the reason?"

"Price too low. Unless a customer takes a shampoo, it doesn't pay to shave or haircut. Poor Jim, I caught him trying to cut a customer's throat because he refused a shampoo, so I had to have the poor fellow locked up. Makes me sad. Sometimes I feel sorry I didn't let him slash all he wanted to. It might have saved his reason. Shampoo, sir?"

"Yes, yes, certainly!"

A Cart Load of Fun

This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in **"A Cart Load of Fun"** are the following: "A Man With a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded Not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jones' Baby," "Breaking up a Cat Concert," and 148 others. **"A Cart Load of Fun"** is a book of sixty-four large double column pages, neatly bound in attractive colored paper covers. Price 10 cents each, 3 for 25c; postpaid.

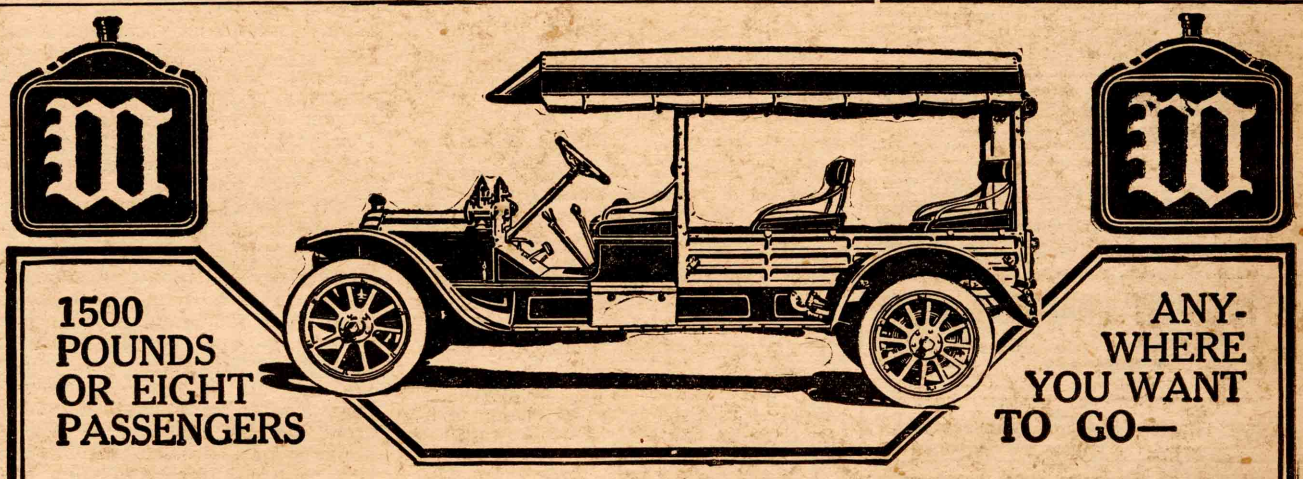
DALE WATCH CO., Dept. 53 CHICAGO



The White Combination Car

This Car Will Give You More Practical Use, More Comfort, More Pleasure, Last Longer and Cost Less to Run, Than Any Car Built

A Roomy Carriage and Large Motor Wagon in One

There is no car built that so perfectly meets your every requirement. It carries eight people easily and conveniently, with plenty of room besides for lunch baskets or hand baggage. Its seats, (which are deep and comfortable) can be easily removed by one person in a couple of minutes, and the wagonbox body utilized for baggage, merchandise, or anything that the ordinary road or spring wagon would be used for, up to a load of 1500 pounds.

Its Riding Comfort and Ease of Operation

Its excellent springs, light weight (considering its capacity) and its perfectly balanced body, make this car unsurpassed for comfortable riding qualities, and as easy to steer as a light roadster.

Enough Speed and Power to Meet Every Condition

There are very few, even of the fastest touring cars, that can pass the White Combination Car on the road. And even when loaded to full capacity this White will climb hills at a steady road pace, that the ordinary car will have difficulty in climbing at all.

The Reliable, Economical White Engine

If you have driven a White, then only can you understand, how simple, quiet, powerful and economical is the White engine. It was the first, and is still, the only practical long stroke, cast-in-one-piece engine in this country. Its fuel consumption is so low under all conditions, that regardless of price, it is the most economical engine made, and its performances in daily service in thousands of White cars is worth investigating, in fact, the rise in the price of gasoline is not felt by White owners. Its compact simplicity with no parts exposed to dirt or injury, removes all of the chief sources of care and trouble, and necessitates little or no attention being given to it.

Body Upholstery and All Fixtures Beautifully Finished

The finish, material and workmanship on this car, is in every detail true to the White standard,—the highest. The spring seats are roomy and comfortable, and are upholstered with the best leather, while the body finish is done with that attention to detail that has made the White cars famous for their excellence.

The Material and Workmanship of the Highest Grade

The chassis, including engine, transmission, axles, gears, bearings and wheels, is constructed with the same care and excellent material that has characterized White products for over fifty years—and has made White automobiles of every design second to none in the world.

Consider What This Car Means To You

Stop and think to what practical and pleasurable uses this car can be put, both in hauling and touring. You will find that it will more than take the place of a touring car, a spring wagon, a service wagon and two teams of horses combined. Just write us today or use the coupon below, and we will send you complete details of the White Combination Car.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

Our UP-TO-DATE YOUNG PEOPLE are progressive. There is no doubt about that. Give them an opportunity for higher attainment and for acquiring knowledge of other portions of the world, and they eagerly avail themselves of that opportunity. There can be no greater proof than the Cadet writers afford. We have had more letters than ever since our last paper was printed, and as an evidence of the interest the writers take in each other we give the following:

DEAR CADETS: We think this a fine paper, one that no farmer should be without. Kentucky is a pretty place. We live on a farm of 183 acres, and our chief crops are corn, tobacco and cane. I would like to exchange letter with all the Cadet boys and girls.—Hattie Turner, Wallingford, Ky.

DEAR CADETS: Our farm consists of 360 acres, and our crops are corn, wheat, oats and clover. We live 13 miles from the railroad station. Would like to hear from all the Cadet boys and girls, and will answer all mail I receive.—Frank Henry, Shirley, Mo.

DEAR CADETS: I live on a farm of 153 acres, where we raise cotton, corn, wheat, oats, and nearly all kinds of fruit and garden truck. Papa has built us a new home, and mamma, sister and I have had a time resetting our rose bushes and fixing our yards. I think every farmer should take UP-TO-DATE. It is so much help to them if they will read it. Would be glad to hear from some of the Cadet boys and girls. My age is 20.—Nettie Smith, Pendergrass, Ga.

DEAR CADETS: I am a 15-year-old boy from the fruit belt of California, and the orchards are a beautiful flower garden now (March 15). I live on a stock farm of 347 acres. We have had a great many horses and cattle and some sheep. I would like to exchange letters and postals with the Cadet boys and girls; will answer all I receive.—Willie H. James, Cordelia, Cal.

DEAR CADETS: I am 16 years old, and am fond of flowers; the red rose is my favorite. We always have a nice garden, in which we raise all kinds of vegetables. We raise corn, oats, wheat, rye and potatoes in the fields. I think it is so nice to receive letters from the boys and girls. I wish some of them would write me a nice letter; I will sure answer if they do.—Junito Shafer, LaGrange, Ind.

DEAR CADETS: We live on a small truck farm, where we raise strawberries, raspberries and vegetables, but I don't help so much on the farm now, as I have become a carpenter. I am working for the Hershey Chocolate company, on a large cholocate factory. But about a month ago I got a bad fall; fell 36 feet from a roof. I will be 20 May 9, and am looking for birthday cards. Would like to hear from all the Cadets, and will answer all cards I receive.—Samuel S. Basehore, Derry Church, Pa.

DEAR CADETS: Vacation will soon be here, and then for roaming in the woods, gathering flowers, fishing and other sports. But I would rather take a book and find a beautiful shady, grassy place and read. I have read about two dozen books since Christmas. I am 15 years old, and would be pleased to hear from all the Cadets. Card views are preferred, and I will answer all.—Olga Graferberg, West Union, Iowa.

DEAR CADETS: I am a farmer boy, 17 years old, but I don't like farming much. I have taken a course in taxidermy, and think it a very fine job. I have mounted a number of birds and animals. I would like to hear from the Cadet boys and girls, and will try to answer all I receive.—Mat Brackelsberg, Madelia, Minn.

DEAR CADETS: I have been a reader of UP-TO-DATE FARMING for nearly 4 years, and think it a fine paper. Our principal crops are wheat, oats, barley, corn, potatoes, and timothy and clover hay. I would be glad to exchange cards, letters or photos with any of the Cadet boys or girls near my age, especially from the western states, as I intend to take a trip out west in the near future to see the country, and thus might get personally acquainted. I will be 19 April 26.—Ewald Worchel, Neilsville, Wis.

DEAR CADETS: I am 15 years old and live with my parents on a farm of 160 acres. We have been taking UP-TO-DATE for some time, and like it fine. I shall send you a new subscriber soon. I would be glad to hear from some of the Cadet boys and girls, and will certainly answer all letters and cards I receive. I would also like to exchange photos with them.—Esther Jenkins, Nethers, Va.

DEAR CADETS: We think UP-TO-DATE is the best farm paper printed. I have gotten several subscribers, and I want to get more. I am proud of the beautiful premiums I received. I am nearly 16, and I like housework all right, but I like outdoor work every bit as well. I am not afraid of work, either. I would like to hear from the boys and girls in all parts of the United States.—Lizzie Royalty, Tatham Springs, Ky.

DEAR CADETS: I live in Readville, a suburb of Boston, Mass. I have recently been visiting my parents in New Hampshire. My father takes UP-TO-DATE, and my sister and I enjoyed reading the Cadet letters. We sent cards to a few and received answers from most of them. I have two cameras, and take a lot of pictures. Will be glad to have view cards of any kind from Cadets or readers, and will certainly answer every one. Will also exchange camera pictures on cards. I am 24 years old.—Mrs. Bernice French, Lakeside Ave., Readville, Mass.

DEAR CADETS: I am 19 years old, and live on a farm of 320 acres. It is fine to live in the country. My father takes UP-TO-DATE FARMING, and I enjoy reading the letters from the boys and girls. I would be glad to receive letters or cards from them, and will answer all I receive.—Mattabelle Glenn, Prospect, Va.

DEAR CADETS: Here comes another girl from the good old state of Maine. I am a farmer's daughter, 13 years old, and think there is nothing like farm life. I live about 3 miles from the railroad. I would like to get cards and letters from the Cadet boys and girls, and will answer all I receive.—Cynthia A. Hurd, Harmony, Me.

DEAR CADETS: I am a Pennsylvania girl, 17 years old. I get UP-TO-DATE, and am very much interested in the Cadet letters. We live on a little farm, and raise potatoes, corn, oats and wheat. I like to work in the fields. I want to be a friend of the Cadets, and would like to write to them, as I am fond of writing. Will answer all cards and letters I receive. —Elizabeth Dickman, Mammoth, Pa.

MR. EVERITT: You certainly did a good thing in giving a page to the young folks. My stepfather has taken the paper for some time, and he really appreciates everything printed in it. I asked him if I should become a Cadet, and he said I might, but when I wrote the letter I little dreamed what it would mean to me. I shall never regret becoming a Cadet of Equity, for, judging by the letters and cards I have received, it has put me in communication with good young people all over this country. I have heard from 22 states, as follows: Ohio, Nebraska, Michigan, Indiana, Illinois, Missouri, North and South Dakota, Colorado, Oklahoma, Georgia, New York, Virginia, Iowa, Wisconsin, New Mexico, Connecticut, Minnesota, Kansas, Pennsylvania and North Carolina. I have answered all, but of course I cannot keep up correspondence with so many,

(Continued on Page 15)

The Farm Boy In Business For Himself

Every farm boy wants money of his own, that he earns himself. The farmer and his wife should encourage their sons in this in every way possible. Up-to-Date Farming will help.

The publishers of this paper want an agent in every locality to secure subscriptions and renewals to Up-to-Date Farming. This is the one paper that should be read by every farmer, no matter where he lives or what he raises on his farm. A bright boy can easily sell subscriptions to nearly every farmer within five miles of his home, and secure renewals when the time is out.

Boys, or men, for that matter, who are looking for a comparatively easy way to earn some ready money should write us at once, for an outfit and full instructions.

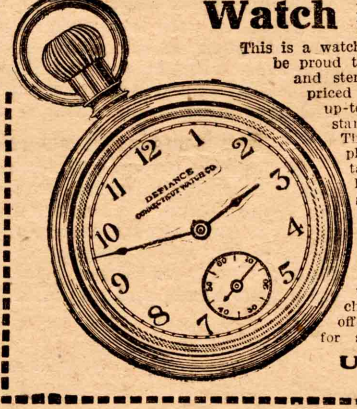
R. E. CHALMERS & CO., 538 So. Dearborn St., CHICAGO.

SPECIAL Gold Plate Finish Watch



for man or boy this is a dandy. When people ask you for the time, pull this gold-finish watch out of your pocket and it will look like a $25.00 watch.

This is a watch of real quality that you will be proud to wear. It is full stem wind and stem set, just like every high-priced watch, and it is thoroughly up-to-date in every way. It is the standard size for men and boys. The case is a handsome gold-plated finish, an excellent imitation of real gold, and will last for years. This watch is guaranteed and fully warranted for accuracy.

A Defiance watch as above, given to anyone sending us 4 subscriptions to Up-to-Date Farming at 50 cents ($2.00 total). We pay delivery charges. This is a special offer and only a few subscribers for such a fine premium value.

Up-to-Date Farming
Indianapolis, Ind.

Gold Finish Ladies Watch

It is small—just the proper size for ladies and girls. It is neat in appearance and an accurate timekeeper. Case is gold-plate finish and very handsome. It is fully guaranteed and will last for years. A fine present.

Special Offer: Given for 5 subscriptions at 50c ($2.50 total). Sent postpaid.

FREE TELESCOPE 3½ FEET LONG

If you will accept this powerful telescope and show it to your friends; if you want to examine fences, count stock, see houses, friends and objects miles away just like they were close—write today. Enjoy it day and night. Needed on every farm. Telescopes this size have sold for $5 to $8. It is brass bound; protected with brass caps on ends. 5 sections; opens out over 3½ feet long; closed, 12 inches long. Entertain your friends with the "Wonder."

Up-to-Date Farming helps farmers to market crops, is published twice a month. Departments for all the family. 24 numbers a year.

Free Offer Send $1.00 for a 2-years subscription (or 2 one year subscriptions) and we will send a "Wonder" telescope free. Send 10c extra for ordinary delivery, or 20c for insured delivery and we guarantee safe arrival.

5 to 10-mile Sight Range

It is far beyond expectations. If I couldn't get another I wouldn't take $5 for it.—O. F. Folk, Elk Lick, Pa.

Worth $10.00 to me. I can see cattle at 15 miles and a nickel at 60 yards—Tervis S. Sepeda, Morgan Hill, Calif.

It's a dandy; all you claim and then some. I trained it on the Buttes 28 miles away, they looked like 2 or 3 miles instead. I can count stock in farmer's yard 4 miles away—Chas. A. Story, Ft. Robinson, Neb.

Every boy and man on farm needs one—Chester Housen, Minden, Ga.

Our farm is on a hill and we can see 10 miles away. Count windows in houses which cannot be seen with the eye.—Henry Conner, Manor, Tex.

Can see children playing at school six miles away.—P. H. Herrington, McDade, Tex.

Can see court-house clock 2 miles away and tell exact minute.—Jennie Beers, Columbus, Ind.

Best investment for the money I ever made.—Mathias Brown, Batavia, Ill.

Give Express and Post-office If not a great bargain and you are not well pleased, money will be refunded.

Cadets of Equity

though I have selected quite a number with whom I expect to correspond regularly.—Margaret TaKala, 4988 Water Works St., Calumet, Mich.

DEAR CADETS: I am a farmer girl 15 years of age, and live on a farm of 160 acres. My father takes UP-TO-DATE, and likes it very much. He says he will never be without it. I read it myself and like it fine. I would like to exchange letters or postals with the Cadets.—Bessie West, Mayfield, Ky.

DEAR CADETS: I am a Southern Illinois country boy, 15 years old, and I think UP-TO-DATE is the finest paper I ever read, and the Cadet page is the best of all. Would like to exchange letters with all the Cadets, and will answer all I receive. Would like for some of them to send me their photos, and I will send them mine if they want me to.—Burris York, McLeansboro, Ill.

DEAR CADETS: I am 18 years of age, a farmer's daughter, and welcome the visits of UP-TO-DATE with delight. I am going to try to be a teacher, but I am not yet enrolled in the list of active teachers. I would be pleased to hear from any and all of the Cadets, and will answer all letters received.—Bessie Smith, Hillman, Mich.

DEAR CADETS: I am 13 years of age, and would like to join you. I have read UP-TO-DATE for two years, and think it the best of all farm papers. I want all of you girls and boys to write to me, and I will answer all.—Samuel Turner, Springerton, Ill.

DEAR CADETS: I am a Christian man of 21 years. I take UP-TO-DATE FARMING. I live in the city where it is printed, and think it the finest paper farmers can get, because it tells them how to be more successful in their work. I would like to receive letters, cards and photos from Cadets all over the Union. Will answer all.——Harold Cordell, 621 Colorado Ave., Indianapolis, Ind.

DEAR CADETS: I am a farmer's daughter, though I spend much of my time in the city with my sister. We live about 3 miles from Oscaloosa, the county seat of Mahaska county. I am a twin, and will be 19 years old May 13. Would appreciate a post card shower very much. We are constant readers of UP-TO-DATE FARMING, and surely make use of the valuable information it gives to all farmers. Will be glad to exchange cards, letters and photos with all the Cadets, and will promise to answer all I receive.—Ethyle Hale, Beacon, Iowa.

DEAR CADETS: I am a farmer boy 16 years old and live on a farm of 139 acres in Nevada county, Ark. I am the youngest of a family of 13; 3 sisters and 5 brothers are married. My father has been dead 12 years, and a brother has been dead 13 years. Our crops are corn, cotton, hay, peanuts, potatoes and sugar cane. I would be glad to hear from the Cadet boys and girls, and will answer all cards I receive.—Lester White, Cale, Ark.

DEAR CADETS: I am going to ask if you know the whereabouts of my only brother, Garl H. Martin, light blue eyes, light hair and fair complexion, dimples in both cheeks, nearly 6 feet in height, and weight 135 or 140. He left home last fall, and the last we heard of him he was in Breckinridge, Minn.—S. E. Wilson, Mt. Etna, Ind.

DEAR CADETS: I live in Central Oklahoma on a farm, and I like to plow. Some people when they get cross, "raise sand," but we don't have to do that here, the wind does it for us. I am 15 years of age, 5 feet 4 inches tall, have red hair, freckled face, blubber lips, and am goggle eyed, knock-kneed and pigeon toed, but otherwise am considered handsome. I am of the opinion that the 640 acre farm in southwest Oklahoma that produced that 140-pound pumpkin in 18 seasons has natural gas on it. Will exchange photos and answer all letters and cards.——Elver E. Delap, Yale, Okla.

DEAR CADETS: We have been taking UP-TO-DATE for several years, and think there is nothing like it. I live on a farm of 237 acres, owned by my father. We have 6 horses, and cattle and hogs, and lots of chickens. The country is thickly settled, and we have some big old times. I would like to exchange letters with you all, and will give you the best answers I can.—William Hass, Newton, N. C.

DEAR CADETS: I was 20 years old in January, and have a horse and buggy of my own. We had but one snow last winter, and that fell on Thanksgiving day. We plant corn the first of April, and cotton later. I hope the Cadet boys and girls will write to me, and I will answer all.—John Hass, Newton, N. C.

DEAR CADETS: I am 18 years old, and live right here in the good old Hoosier State, on a farm of 200 acres, where we raise wheat, corn and hay. Would like to exchange letters and cards with all the girls and boys.—Jos. N. Thompson, Owensville, Ind.

DEAR CADETS: I am 19, and was born and still live in South Dakota. My father owns 320 acres of land, but I am working on a farm 2 miles from home. I would like to hear from the Cadet boys and girls, and will answer all letters and cards.—Edward Lemke, Yale, S. D.

Should Be More Careful

"Jennie is very careless with her temper."
"How do you mean?"
"She loses it so much."

Just Cutting Up.

An old farmer was noted for boasting about the products of his farm. So one day a neighbor, thinking to take a rise out of him, sent his man to ask if he could have the loan of his cross-cut saw to cut a turnip up, so as to get it in the cart.

He was not quite sure, however, that he had the best of it when he received the following reply:

"You should have had the saw with pleasure, but I have just got it fast in a potato."

Up-to-Date Readers!

Do You Believe

?

1st., that Up-to-Date Farming is doing a work for your benefit?

2nd, that farmers have been victimized by the nefarious system of marketing that has hitherto existed?

3d, that if farmers knew how, they would establish a new system of marketing that would yield them better prices for their produce?

If you believe these things, don't you also believe you should help us bring all farmers into a knowledge of what can be done, and is being done by thousands of our subscribers who have organized themselves in local unions and are working with us and their fellow-farmers to rid the country of the evils of its present marketing system?

YOU CAN DO IT by showing your neighbor a copy of this paper, and getting him to subscribe. Tell him what you like about the paper, and what you learn from it. Tell him of the work it is doing to get more money for the farmers from what they have to sell. Ask him to take and read the paper for just one year.

WILL YOU DO IT?

We have 200,000 subscribers now. If you will do this one thing we ask of you, we will have 400,000 readers next month. Do you realize what this means to you? It means that 400,000 farmers will take a part in demanding a square deal in the markets of the world. It means 400,000 farmers fully alive to the need of a better system of marketing. It will mean 400,000 farmers acting in unison to keep speculation and mis-marketing from robbing them of hard earned profits.

Now, neighbor, if you are at all interested in our efforts, won't you put forth a little effort yourself? Send us a subscriber. Send a dozen, if you can —the more the sooner we will win your battle for you. But send one anyhow. There is not one of you but who can do this little task easily. If you are interested in your own future welfare you will do it. We must go right after these reforms if we want them quickly, and we surely do.

Show This Copy to Your Neighbor.

Ask him to give you 50 cents for one year, write his name and address on the blanks below, and send it to us. Before the year is out both you and your neighbor will be glad you did it.

And do it NOW.

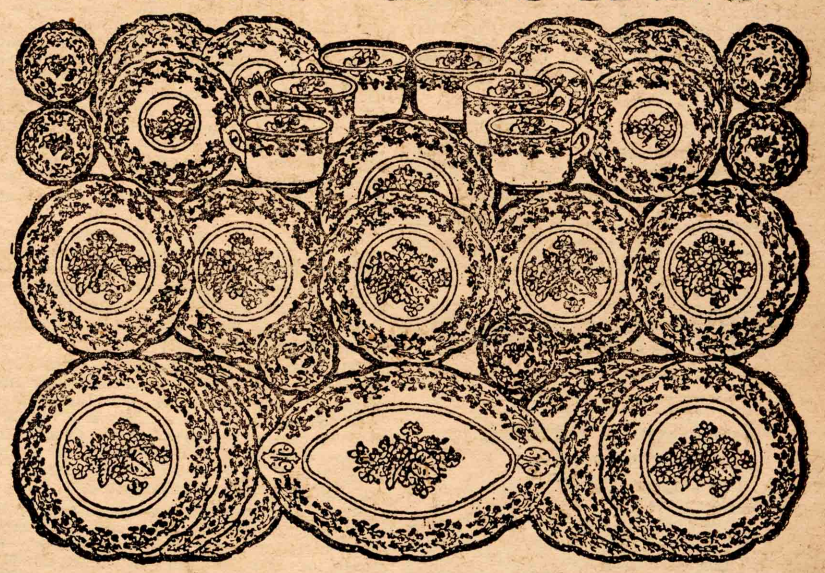
FREE DISHES



WE GIVE THIS BEAUTIFUL 33-PIECE DINNER SET FREE

WE HAVE SELECTED the prettiest set of dishes we could find to give to our friends. The above pictures does not show all the dishes, but gives a faint idea of the beautiful Rose design and the size of each piece. As soon as you send in the coupon below we will mail you a large picture of the entire set with each piece in all the pretty colors of red, white, green and gold, showing just exactly how the set will look when you take it out of the box in your own home. In the center of each plate or dish there is a beautiful cluster of bright roses, surrounded by green foliage, all in perfectly natural colors. Around the edge of each piece there is a very heavy and artistic design in gold. The combination of gold, green, white and red, makes the most popular design yet produced in tableware. The ware itself is pure white and dainty enough to delight the most fastidious housekeeper. When you get these dishes on your table you will have something to be proud of indeed. And we don't want you to pay us a cent of your money for them. What we ask you to do is so easy you will never miss the spare time it will take, and the pleasure of these beautiful dishes give will be with you for years. Don't let this opportunity escape. It is positively the most liberal dish offer you ever did or ever will see.

41 OTHER ARTICLES FREE FOR PROMPTNESS

Getting the Good of it

What the Organized Farmers Can Do When They Try

THE Equity folks in Bingham County, Ore., having a county union and a dozen or more local unions are making hay while the sun shines. They have organized for business and they rightfully consider the social and intellectual uplift of their members a part of their business. They rightfully believe that farmers should understand the business end of their industry.

To get results along these lines a county convention was held on March 10th, in the rooms of the Commercial Club, in Blackfoot. The following program was rendered, which tells a story of alert wakefulness and business methods that cannot help but be of great value to the county.

Program

10:00 A. M.—Temporary Organization.

Subjects for Discussion

"Potato Warehouses and Cellars: How we can develop same to our advantage as a County Unit," Lewis Robbins, President, Moreland Local.

"Fruit and how we, as a County Unit, can handle same," Henry Dann, President, Blackfoot Local.

"Grain Warehouse and Elevators: How the County Unit can build and operate same," O. E. Scott, Secretary-Manager, Shelley Local.

"Dairying: How we can develop same as a County Unit," Joseph Merrill.

"Poultry and how same can be handled as a County Unit," General Discussion.

"Farm Machinery and Implements: How can the County Unit buy and distribute same," Joseph H. Merrill, Vice-President, Blackfoot Local.

"Coal and Sacks: The purchase and distribution of same by County Unit," P. E. Van Orden, President, Thomas Local.

"The Efficiency of the County Unit," P. W. Powers, Secretary, Blackfoot Local.

Success in Selling

MR. J. A. EVERITT, President.
Farmers Society of Equity
Indianapolis, Ind.

Dear Sir: I want you to know something of our success here under the Equity System of marketing, as great credit is due you since it was your brains that conceived the system and helped us to apply it.

Let me say that we organized local unions of the Farmers Society of Equity at Summerdale, Robertsdale, Seminole, Foley, Elberta, Loxley and Dyas, in this county, and then organized our county union at Robertsdale. These towns comprise all the railroad towns in the county except two. After we organized our county union, or clearing house the growers quit selling and referred all inquiries to the manager of the county union who sells for the whole county.

Since we began doing business through the county clearing house, which was just before the beginning of 1913, we have been able to establish most valuable business relations with many of the best houses in the country in the leading markets. Also we have found that buyers prefer our system to dealing with the individual producers or with numerous local organizations. Our plan of concentrating the supply appeals to the large buyer because he is able to get as much as he wants without the trouble and expense of skirmishing around and dickering. Also we are able to put up a uniform grade which is appreciated by the best buyers. We grade and pack everything on the loading platforms, so we can guarantee every package. This season's experience has impressed us with the importance of pack. Buyers are always apprehensive of the quality of the goods and fearful that they might get something that would not sell on their markets. We have always been able to please the buyers. We have adopted as our trademark "The F. S. E. Brand," and this is stamped on each package.

Our principal crop so far has been sweet potatoes. The marketing problem for them was a particularly hard one as the crop was large in 1912 and prices low. In fact, there was scarcely any demand any time, because unorganized growers and competing associations that did not have the facilities and organization we have threw their potatoes on the markets almost regardless of price, and on consignment. Notwithstanding this we have never failed to get better prices than those outside of our society by from five to fifteen cents a bushel. We have loaded sweet potatoes day after day along side of growers and associations outside of our society and always at higher prices. We have always led and at no time do I remember that our sales were as low as others on the same day. We know of cases where other organizations lost the contents of an entire car, but we have not had any such experience. With our combination of several producing communities under one selling head, we are in a position to extend our operations over a wider territory for markets, besides it makes a much more desirable proposition for the buyer. This is evidenced by several cases where buyers came to our county and paid us more for our pack of sweet potatoes than others offered theirs for. Many of the best handlers desire to buy our produce and some have sent their representatives hundreds of miles to see us with the idea of handling our products.

Our next big crop will be cucumbers. We have made all arrangements and satisfactory arrangements for selling on track here and the money paid over when the cucumbers are loaded.

At no time have we lost a customer because of unsatisfactory stuff.

We have no capital stock. The expenses of the county and local unions are met by a small commission on the business done. The presidents of the different locals constitute our executive board. Our manager is not elected, but hired, and as a further evidence of satisfactory business the present manager was reappointed.

Every day we are more and more pleased with the Equity System and convinced of its efficiency and the soundness of the plans of the Farmers Society of Equity. This system saves the grower work and worry and gets better results.

We are now Equity people from start to finish.

Yours truly
C. D. LOZIER.

County Business Agent for Farmers Society of Equity, Robertsdale, Ala.
Apr. 24, 1913.

Benefits in Buying

(Reprint from Shelley (Idaho) Pioneer, April 25, 1913.)

O. E. Scott was in Preston, Franklin county, last Saturday, where he assisted A. Y. Satterfield in perfecting the county organization of Farmers Society of Equity, with thirteen locals. The farmers of North Cache valley are very ambitious, and are getting together along the lines of co-operation.

Mr. Satterfield has been very successful in perfecting the county organization, as he organized five locals last week in Franklin county, and received a letter from the National President, advising him that he had made the best record of any organizer in the field.

Arrangements are now in progress to organize the state and buy all implements, binding twine, sacks, etc., as well as sell all products through the state organization.

Headquarters of the state will very likely be located at Pocatello, it being the most available from the standpoint of location both in shipping and easy to reach from all points.

Our local here now has over one hundred members, and more farmers coming in each week. The F. S. E. will build a mill and elevator at Inkom. Other locals are arranging for spud cellars and warehouses.

In an interview Tuesday morning, Mr. Scott said: "The Shelley local is ordering a car of woven wire fence today direct from factory to farmers at wholesale prices."

The farmers are alive, and local members are getting 20 per cent reduction on farm implements in Bannock and Franklin counties, from the regular dealers, which shows that Equity pays. It's here to stay.

Mr. Scott is secretary of the Shelley local society, and as always, is looking out for the farmers' interests. His wide experience in buying and marketing farm produce and implements has won approval by the farmers who are acquainted with him, and he is popular among the great majority. His square deal methods are well known, and when a man of his caliber puts his shoulder to the wheel in the interest of better marketing conditions and co-operation, there is something doing. We predict that the local in this district will be the livest in the state, and that Mr. Scott will probably have the big hand in the future success of the organization in this state.

Department of F. S. E.

Practical Organization and Co-operation

This Department, conducted by Mr. J. A. Everitt, President of the Farmers Society of Equity, is devoted to the practical work of organization and successful co-operation through the Farmers Society of Equity. Discussion on all matters pertaining thereto is cordially invited. Address all communications to J. A. Everitt, Indianapolis, Ind.

THE FARMERS SOCIETY OF EQUITY.

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No capital stock. Membership fee, $2.00; Dues, $1.50 annually. Organizes communities into local organizations. County, State and National unions in active operation. Representatives in all principal markets. Co-operative buying and selling directed by the National Union.

NATIONAL UNION OFFICERS.

Pres., J. A. Everitt, Indianapolis; V.-Pres., W. H. Mitchell, Hutchinson, Kas.; Treas., National City Bank, Indianapolis; Sec., M. K. Sleight, Indianapolis; National Organizer, H. F. Cutting, Portland, Ore., or Indianapolis. Directors, Robert Stevenson, Lebanon, Ind.; Jacob Bretz, Bretzville, Ind.; S. W. Morris, Rochester, Minn.; Fred N. Parkinson, Rexburg, Idaho; W. S. Shure, Summerdale, Ala.; J. A. Harmon, Shawnee, Okla.; C. Hayes Taylor, Indianapolis, Ind.

Write Plainly

OCCASIONALLY we request our correspondents to write so there need be no danger of mistakes in entering subscriptions and memberships. Keeping this matter before the people helps, but we never hope to educate all the people to observe due care in this respect. It is a very important matter, and we dare say the failure to write names and addresses distinctly increases our office work 10 to 20 per cent. As an example: We have a copy of a report of a local union of 27 names before us now in which 9 names were incorrectly or indistinctly written (33 1-3 per cent). In the case of local union reports we always submit a copy of our records for correction, which gives the opportunity to correct, but it is impractical to do this for subscribers. This example will give an idea of the chances for complaints. We again appeal to all our correspondents to write so plainly that every letter in a name and address is readable.

Our local is doing fine. The people here are getting their eyes open. It won't be long until we shall make another Equity jump in Louisiana. God speed the day when farmers will quit trusting entirely in production and look more to the price. I would be glad if every farmer in the United States would read UP-TO-DATE FARMING and follow its teaching of profitable prices for farmers and controlling the supply until the demand seeks it. That ought to be written in every schoolbook in the United States.—J. C. Williams, Hall, La.

I enclose a list of names of the tried and true variety. The F. S. E. is a grand thing, if only farmers would open their eyes and get busy. They have been doped so long they are in a stupor; but, like the old cow, once they get a taste of the good things in the co-operative pasture, you can't keep them out, even if they are yoked up to a robber system. UP-TO-DATE is the best farm paper published. I do enjoy the way it skins the grafters, the agricultural colleges thrown in. Farmers are held up and robbed all along the line from the trust to the scavenger. It is time their eyes were open to the good mission of UP-TO-DATE FARMING.—T. J. Reed, Blair, Okla.

J. A. EVERITT, Pres.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

Thirty-six states and four Canadian provinces are represented on the commission that sailed for Europe on April 26 to study the methods of marketing and the rural credit systems abroad.

—o—

The committee consists of 115 persons. The tour will cover 90 days. The countries to be visited are England, Ireland, France, Germany, Belgium, Holland, and Austria. It is an ambitious program and, without doubt, 115 men can gather many ideas on farming, marketing and credits in three months of STRENUOUS WORK as it is reported is ahead of the commission.

—o—

So we may expect a great volume of expert advice to be turned loose on the farmers who stayed at home and are doing the work while their representatives are studying conditions abroad. Farmers never lacked for advice before and just what they will do with what is going to come to them soon we will not predict. But it is always in order to speculate a little on the possible outcome.

—o—

One of the chief objects of the commission is to study rural co-operation in marketing so that the European methods may be applied in this country. But have the members of the committee, or congress and the legislatures and institutions that selected the members of the committee, considered the crops that are produced in the respective countries and whether it is remotely possible to get any valuable data from those countries?

—o—

We have asked before: "Why go to Europe to study methods of farming and marketing when European farmers come to this country to farm to make a living?

—o—

We raise cotton and it presents one of our great marketing problems. The countries to be visited do not raise cotton so can the southern farmers hope for a solution of their great problem through the committee?

—o—

Our country raises the bulk of the corn of the world and corn growers have their marketing problem to solve. But the countries to be visited raise very little corn and positively nothing can be learned by the committee to help our corn growers solve their problems because the crop is inconsiderable there.

—o—

Some of the countries to be visited raise wheat, as we do, but they raise only for domestic use and usually import a lot more, while we raise enough for home consumption and export

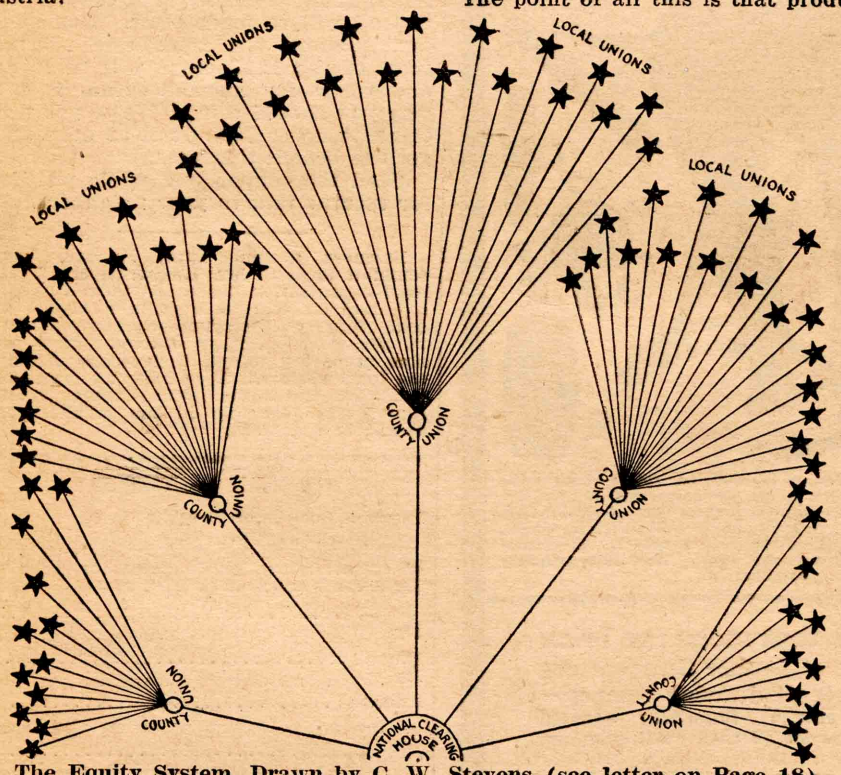
great quantities, so the conditions are so different with wheat that, even if the French or German farmers have solved the marketing problem for wheat, the solution could not fit our case, unless we would get on the same basis—an importing instead of an exporting nation.

—o—

And what is true of wheat is likewise true of live stock and oats and apples. So we have one important crop left——potatoes. Germany is the greatest producer of potatoes in the world, per acre and total production. She solved the potato market problem by starting starch factories, evaporators and feeding them to stock. Only 30 per cent. of Germany's potato crop is consumed by her people direct It appeals to us as being very clear that we must make arrangements to preserve or feed any surplus of potatoes at the place of production, instead of throwing them on glutted markets. The commission will hardly make any other recommendation.

—o—

But there are the fruit and vegetable crops that present serious marketing problems in this country. If the European producers have solved such problems, and if their solution will fit our case, and if the commission brings it back and gives it to us then the commission will have performed a grand work. But the fact is that European growers have not solved the marketing problems for perishable products. On April 24th, two days before the commission sailed the following dispatch came from Vienna, Austria:



The Equity System, Drawn by C. W. Stevens (see letter on Page 18).

Viennese housewives are in a plight similar to that of their sisters in Chicago regarding the high prices of vegetables and garden produce, despite the abundant supplies on hand. Recently the wholesale markets of Vienna were glutted with cauliflower from Italy. Huge quantities rotted and had to be thrown away, but the housewives continued to pay extortionate prices, as they were ignorant of the true condition of the market. The result is the renewal of the public agitation against the constantly increasing cost of living, especially as regards food.

The municipal authorities are planning the erection of a great market hall on the banks of the Danube, where garden products can be sold direct by the growers to dealers, who will retail the stuff at fixed prices to the consumer. It is hoped in this way to avoid the great expense of the commission agent and other middlemen and to provide the public with cheaper and fresher vegetables than is possible under present conditions. At the same time it is proposed to abandon the use of all measures and sell vegetables exclusively by weight.

With such conditions existing in a country that the commission visits can it find a ready-to-wear plan to bring home with it?

If the commission would go to Russia it would find conditions more like they are in America. That is, Russia produces many crops that we do AND FOR EXPORT as we do. But the commission will not go there and it is just as well, for Russia has the same marketing problems as we have only in aggravated form.

The point of all this is that producers in this country, and we care not what crops they produce to sell will merely lose time waiting for the report of the commission. This scheme of the European committee was conceived by the Southern Commercial Congress. It was then endorsed by the federal congress and others who added their delegates to the Southern committee. It is evident to any people who know more than geese that the proposition to send a committee to Europe to study marketing conditions to fit them to marketing the South's leading crop is a farce on its face. We will say of it as we said in our preceding issue about the great Chicago conference, **IT IS IS A SCHEME TO THROW SAND IN THE FARMERS EYES AND BLIND HIM WHILE THE PEOPLE WHO HAVE BEEN IN CHARGE OF HIS MARKETING FIX UP A PLAN TO SUIT THEMSELVES, WHICH PLAN WILL STILL KEEP THEM IN CONTROL.**

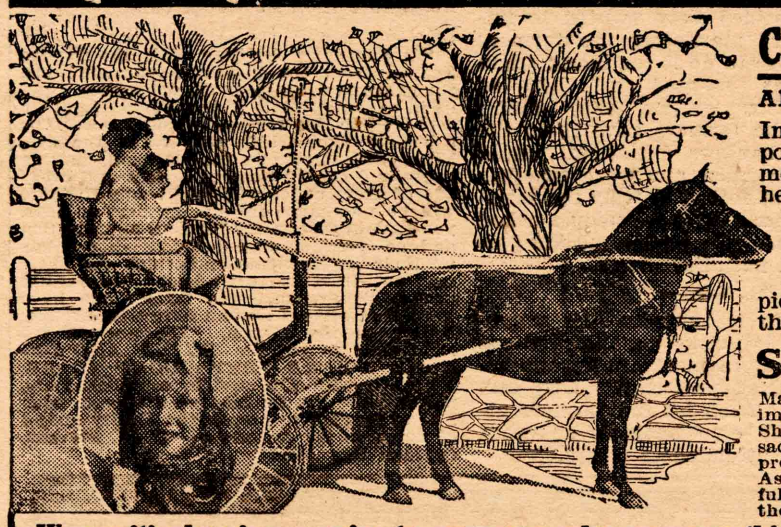
FREE Shetland Ponies



Carriage, Harness, Saddle & Bridle

AND HUNDREDS OF OTHER FREE GIFTS

In the picture here you see Emma Williams and her pony. I gave her the entire outfit. She was the most delighted person in the world. In the picture here are seven hidden faces. Can YOU find them? I will give a beautiful Shetland pony, carriage and harness free to the one person who has the greatest number of votes to his credit at the end of this contest. For each face you can find in this picture I will give you 1000 votes as a starter. Now this is YOUR chance.

SEND NO MONEY— Just Your Name and Address

Mark the location of the faces with an X plainly, and we will immediately enter you as a contestant for this magnificent Shetland pony outfit, which includes pony, carriage, harness, saddle and bridle; all sent direct to your home, all charges prepaid. A more beautiful pony you never saw than this one. As soon as we hear from you we will send you his picture, also full particulars telling how you can easily secure him—besides the pony we have hundreds of other presents we give away.

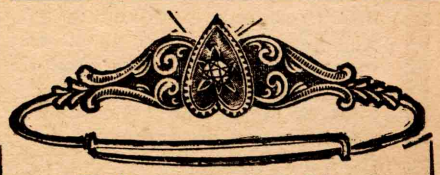
We positively give a prize to everyone who answers this advertisement! So be sure and send your name in today with the hidden faces all plainly marked and get the free pony votes. It is the easiest thing you ever saw. I have given away over thirty Shetland ponies to boys and girls all over the United States, besides thousands upon thousands of other beautiful presents. Be sure to write today.

Address, MATT. YOUNG, Pony Man, 546 La Salle Avenue, CHICAGO, ILL.

100 LETTER HEADS ENVELOPES $1.50

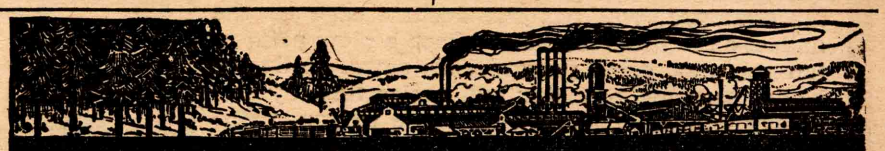
Be a business farmer—write your letters on your own private letterheads and use your own envelopes; printed stationery gives your correspondence a business-like appearance. For a limited time only we make this special introductory offer of 100 envelopes and 100 letterheads, with your name, address and business or the name of your farm neatly printed on them, all for $1.50, postpaid. Write today. Satisfaction guaranteed or money refunded.
WEST SIDE PRESS, 227 W. Wash. St., Indianapolis

WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING



This Bracelet 25c

To introduce our line we will send this fine bracelet postpaid for 25 cents. Fits any size wrist. Made in handsome gold finish. Handsome heart shape, set with stone. Not more than two to any one person. This bracelet is all the rage—to be in style you should have one. Send 25 cents; stamps or coin.
S. E. FERRY, Indianapolis, Ind.



From forest and mills direct to you

Stop paying five profits on lumber and millwork. We'll sell you direct at *one* profit. We get our *raw* materials at *cost of production.* We own huge timber tracts—billions of feet of standing fir, spruce, cedar, hemlock and Western soft pine—some of the finest timber in the celebrated Puget Sound district. We do our own cutting, logging, hauling. Our six great mills produce daily, twenty to thirty carloads of highest quality lumber, sash, doors, shingles and general millwork. It's easy to see why we can undersell everyone else. We'll sell you at prices lower than your dealer can *buy* for. Just note prices at the left.

No one else can equal these direct-to-you prices

Save 40% to 60% on lumber and millwork

Immediate Shipments—Quick Delivery

We carry immense stocks. We'll ship your orders within twenty-four to forty hours. Seven great railways radiate from Seattle. Our shipments reach all points west of the Mississippi River within two weeks. The carlot rates from Seattle to you bring our delivered prices below all competition.

Better Materials Guaranteed The Puget Sound region is noted for big timber—produces quality lumber, famous for strength and durability. Free from large knots and sap. Reaches you straight—not warped—and uniform in thickness and width. Railroad companies use fir for car sills, car siding. Has proved the best for changes from climate to climate, and for severe wear and tear. Grade for grade, our material is better quality than carried by local lumbermen. No warped, culled or dirty stock shipped on our orders. Money promptly refunded unless satisfied.

Get Our Prices Today Quit paying 40% to 60% *too much* for lumber of inferior quality. Get our direct-to-you figures. Send us your carpenter's material list. We ship everything for building complete—lumber, sash, doors, shingles, millwork, hardware and paint. **Mail the Coupon today for catalog and price list.**

A PERSONAL MESSAGE
(Continued from Page 17)

MARKETING MUST BE IMPROVED. But who should improve it but the farmers themselves? Why all this concern by other people? When manufacturers decided they wanted to improve their marketing the farmers didn't propose to do it for them; when the railroads merged and adopted modern business system they didn't wait until the farmers gave them the cue; when bankers decided it would be wise to organize and work together they were not forced to it by the farmers. Also none of these people asked the government for advice and the government did not offer advice.

—o—

Is farming a business like manufacturing? Is marketing the products of the farm like marketing manufactured or mined products? Why certainly it is. Then let the farmers attend to their own business as other people have attended to theirs.

Read the letter below and study the illustration from a man who knew of the Equity plan of organization, federation and marketing only a short time. But he improved his time. He studied the plan and talked it over with his neighbors then he wrote this:

"In becoming familiar with the Equity System from the literature you sent me, the enclosed drawing is the conception I get of it. (See Fig. A.) I would like to put up a chart like this for public addresses. It is a simple plan which will reach the eye. With efficient men in the National clearing house and county clearing houses and every one of them under sufficient bonds so there will be no chance for the farmers to fear, you have a system for farmers organization and co-operation and business that meets all their requirements and which the Sherman anti-trust law can't bust. The farmer needs this system. The farmer can have it. I find several around here who already believe in the system. You are on the right road to put the *SUPPLY AND DEMAND WHERE THEY OUGHT TO BE.* I believe with this system established the people could live for half what it costs now. I shall be glad to preach the Equity gospel of union to the farmers.——C. W. Stevens, Ogeman Co., Mich."

This man who has read this paper and other literature he sent for says: **YOU HAVE A SYSTEM FOR FARMERS' ORGANIZATION, CO-OPERATION AND BUSINESS THAT MEETS ALL THEIR REQUIREMENTS.** Then why wait? Why search the world over for what is right at home and already partly established? Why delay three months for a committee's report, which is hunting for duck eggs where there are no ducks, and then find that, if it reports on crops and conditions in the European countries as it finds them that they do not fit our case. They cannot meet the needs of this country. Mr. Stearns says the **EQUITY SYSTEM IS SUFFICIENT** and he says "the farmer needs this system" and "the farmer can have it."

—o—

Of course he can have it, without delay. It is free and it can be put in operation at less expense to each farmer than he pays for the cheapest machine on the farm. And he can keep it running smoothly year after year at less cost than the oil that he buys to lubricate his farm machines.

—o—

You who understand the machine begin at once to build it in your community, then in your county. Look at Mr. Stearns' sketch. It is easily understood. Show it to your neighbors, they will be interested at once and soon, as Mr. Stearns said, was the case in his community, several will believe in the system. Send the coupon for full instructions for organizing **NOW.**

—o—

If you don't understand the machine let us know when you send the coupon and all will be made clear. Don't delay. Before the committee returns most of the 1913 crops will be made and ready for market. This is the way you should think: We've got this thing to do so let's do it at once and get the benefit this year.

Send the coupon and while waiting for returns talk to your neighbors.

Farmers around Tyro, Kansas, have found it pays to buy co-operatively. Their local organization has saved them 70 cents a barrel on cement, 5 cents a bushel on coal, 20 per cent. on lumber and from 18 to 28 per cent. on other articles. They are now preparing to sell their crops through the local society. They have 26 members. G. R. Wheeler is the business manager, and says every township in the middle west should be organized.

Sharpen tools FREE on artificial diamond wheels

Do not toil away with the old grindstone. Dimo-Grit, the artificial diamond sharpening wheels with which Luther Farm Tool Grinders are equipped, will put the keenest edge on the dullest ax in three minutes—shape a plow point in ten minutes, grind your sickles, saws, cultivator blades amazingly quicker and easier than by any other method. To prove its value to you, without putting you under any obligations, sending any money or making any promises, I will let you use the Luther Farm Tool Grinder on your farm for a full month's free trial. Try it on your dull tools and rusty blades as much as you like, then return it at my expense if not wanted. C. J. LUTHER, Pres.

14 Tools In One 1—Medium Dimo-Grit-wheel. 2—Coarse Dimo-Grit wheel. 3—Universal tool rest 4—Chisel and plane bit guide. 5—Dimo-Grit razor hone. 6—Dimo-Grit scythe stone. 7—Dimo-Grit saw gummer. 8—Felt polishing wheel. 9—Fine Dimo-Grit wheel. 10—Cloth buffing wheel. 11—Dimo-Grit oil stone. 12—Dimo-Grit pocket hone. 13—Sickle grinding attachment. 14—Disk grinding attachment.

DIMO-GRIT—"the wheel for steel"

Luther Dimo-Grit Sharpening Wheels are made of artificial diamond crystals—made of the same elements as real diamonds fused in the intense heat of wonderful electrical furnaces that melts fire brick like butter, and turns iron into vapor like steam. The Dimo-Grit wheels of Luther Grinders cut hardest steel as emery cuts soft copper. No water needed. No danger of drawing temper—twenty-five times faster cutting than grindstones, ten times more efficient than emery. Especially adapted for steel, leaving the smoothest, keenest edge. Dimo-Grit is what the big factories use for all their steel grinding.

LUTHER FARM TOOL GRINDERS

Luther Farm Tool Grinders equipped with the fast cutting Dimo-Grit wheels turning 2500 revolutions per minute, make the toughest job of grinding amazingly easy—so easy that you will never again work with half-dull tools. Your saw will just seem to melt through the wood—your plow points slide easily through the soil and your sickles cut close and easy. Everything you do is done at a big saving of your own strength and that of your horses, and at a big saving of time and money. You have used the grindstone and know it is too slow, and you know that emery wheels destroy the temper of steel tools. Let us send you a Luther Dimo-Grit Grinder, the only perfect sharpening device known.

WRITE FOR OUR BIG FREE BOOK

Write to-day for big 40-page free book telling the fascinating story of artificial diamond abrasives. It also illustrates Luther Tool Grinders and explains the correct way to sharpen tools. From this book you can select the outfit you like best, should you decide to take advantage of our 30 days free trial offer. No money needed. Write now.

Luther Grinder Mfg. Co. 100 Stroh Bldg. **Milwaukee**

All Metal Shaft Drive

The Luther Farm Tool Grinder, with its fast cutting Dimo-Grit wheels, foot and engine power, is built completely of steel and iron. Nothing to wear out. Has enclosed shaft drive like an automobile, dust-proof bearings. No chains to stretch and break. Runs as easy as sewing machine. Easy motion of pedals gives Dimo-Grit wheels 2500 revolutions per minute. Patented tool rests give proper bevel to tools, making it easy for anyone to grind twist drills, saws, discs, sickles, ensilage knives, cultivator blades, etc.

A Work-shop in Itself

Seventeen extra attachments transform this grinder into jig and circle saws, forge, lathe, drill, milk tester, etc. These low cost attachments equip you to do all your own general repair work, saving repair bills, saving the time going to town, etc. To get machines to do what these attachments will do would cost big money, but this way you can equip a workshop for wonderfully little money.

Show Us, Please

(Continued from Page 3)

IV.

We have little hope that this challenge will be accepted, because we have doubts that these critical publications really desire to eliminate what must be eliminated before the marketing evils can be corrected. Neither are they willing to establish what must be established before a better system of marketing can be instituted. This leaves the burden resting on the shoulders of UP-TO-DATE FARMING, a burden cheerfully assumed.

V.

We have time and time again given proof of the need for a better system of marketing, and shown how it can be established and operated. It it simply a matter of co-operatively controlled marketing. We never tire of giving examples, and we never lack for material, for every week brings evidence from the market centers. We could occupy all our space with them, if necessary. Here is a case in point, that will demonstrate the need for some system to marketing, and the practicability of our plans.

VI.

April 28, the Chicago market reports were headed by a scare-line, stating that

THE COUNTRY WRECKS STEER PRICES BY EXCESSIVE SUPPLY.

and then goes on to say:

Has the country gone mad? Thirty thousand steers arrived today to add to a lot of stale steers, when in face of the half-demoralized conditions of last week less than half that many should have been here. More decline, in big chunks was the logical result. Danger signals were flying over the trade last week, and the country was warned to stay away.

VII.

The whole trouble came about through the blind, indiscriminate marketing by the producers. Half, or all this double supply could have been withheld a day, or a week, if necessary.

The producers, not knowing or understanding conditions, and having no means to influence or control them, threw profits to the winds, and pocketed their losses. Though the report says "the country was warned to stay away" it was not heard by those who were shipping.

VIII.

To remedy and control such conditions there must be national organization of producers, so there may be national co-operation. With local unions at every shipping point, and experienced men in every market, the information of how much to market, where to market and when to market can be sent to ALL, not a scattering few, and such unfortunate conditions, with attending enormous losses, can be practically prevented. They are wholly unnecessary. But we reiterate and maintain that by no other means under heaven but a national organization of farmers, of themselves and by themselves, will ever turn the trick. We assert positively this is true, and it is up to the skeptics to prove it false or untenable.

"The farmer is more interested, just at present," says President Waters, of the Kansas State Agricultural College, "in the details of marketing what he produces than in producing more. It is costing too much to get the farm produce to the consumer." True: therefore, let us get busy, organize, and make a change.

Organized farmers around Marshville, N. C., buy fertilizer at $17 per ton that the farmer who buys in the usual way on "crop time" pays $25. Still some claim it doesn't pay to organize.

A county union in Alabama and a local union in Idaho report in this issue how they made local organization through the Equity System pay. If it will pay these localities it will pay all the localities between.

This paper is the only one published that organizes farmers into local associations, shows them how to make a success of it, and helps do the actual work.

The editor of the Co-operative Manager and Farmer, has this to say:

"General co-operation by farmers in live stock raising and a close association with the big markets will insure live stock being handled at more profit for the farmer. There is a great waste in marketing live stock. If farmers themselves, through their own co-operative shipping associations, market their own live stock they can easily save this waste. They can save shrinkage by shipping to the nearest market prices equal; ship in bunched lots with neighbors; make the money for themselves that the dealer makes from their stock."

With farmers organizing and employing experts to seek the best markets for their associations, the unorganized farmers had best think about their chances outside of organization.

End The Misery Of Wearing Worthless Trusses

Hoow 60 Days Trial Is The Only Safe Way to Buy Anything For Rupture.

Here is something absolutely GUARANTEED to keep rupture from coming out—something that does away with the misery-causing leg-strap and body springs.

Away Wit Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 8c a Word Each Insertion

Each initial and number counts as a word. No display, except the first few words will be set in capital letters without extra charge. To bring sellers and buyers together there is no surer way than through this BUSINESS EXCHANGE. When writing please say: "I saw it advertised in UP-TO-DATE FARMING.

AGENTS WANTED

AGENTS—$173 IN TWO WEEKS, made by Mr. Williams, Illinois, selling the Automatic Jack, combination 12 tools in one. Used by auto owners, teamsters, liveries, factories, mills, miners, farmers, etc. Easy sales, big profit. Exclusive county rights if you write QUICK. Free Pony

Who Wants Me—Quick?

Boys and Girls! Do you want this beautiful Shetland Pony all for your own? Then send me your name and address today—quick. Some one is going to get him—you can have him—*but hurry!*

My Name is "Major"

Well Broken Gentle Kind

42 Inches High

I Am Now 42-in. High and 3 yrs. Old. I am a Pet, Too.

My color is black. I am considered a very handsome pony. I am well trained. You can either ride me or drive me and I am just as kind and gentle as a kitten. I can go almost as fast as a big horse and can haul my carriage with my little owner mile after mile without getting tired or lazy. I do not scare because I know better—have been taught better. I want a kind little boy or girl as my owner. I'll go anywhere to find them. I am just waiting to come to someone. I'll make some boy or girl happy, because that's what I was made for. That's what I was intended for and it's what I like to do. If you want me, and I know you do, just send me your name and address on the coupon below (or a postal,) and I'll do my best to come to you in a hurry—I must go somewhere, so be quick. Send your name this very day.

Wagon and Harness, Too, Come With Me

This is one of the most beautiful ponies, that I have ever given to any boy or girl in all my life, and I have given away more than 25 Shetland Ponies. This one, **"Major"** is a beauty. He will make the heart of any boy or girl leap with joy. I wish you could see him. I just hate to let him go, but go he must, free of all cost to some boy or girl friend of mine who is willing to do me a small favor.

I am going to send a beautiful carriage along with him, and harness too, and I expect a saddle also. Might as well. I want to please and that's the way to do it. I want the boy or girl who gets this elegant Shetland Pony and outfit to be just the happiest person in all the world. I want them to remember me as long as they live, and they will, too. I have dozens of little boy and girl friends to whom I have given ponies and presents, all over the United States and I get letters from them every now and then. They send me pictures of the ponies I gave them, and tell me how pleased they are and that I always do as I say—Now my friend, if you want **"Major"**, just send me your name and do it quick. **I have a gift for you.** A postal card or the coupon in the corner, will do. Hurry! I'll send you the present, pony pictures and letters from boys and girls to prove what I say, so hurry!

Uncle Billy, Pony Man, 142 W. Ohio St., Chicago

I Want This Pony

Uncle Billy, 142 W. Ohio St., Chicago, Ill.

I want **"Major"** and I want you to send me the pony pictures, your free gift, and tell me how to get this pony. Below is my full name and address. Send quick.

Get Your Cream Separator NOW

Most Women Prefer the New Butterfly

Only $2 DOWN

One Year To Pay

Here is the opportunity you have been waiting for—a chance to get one of these big-capacity, light-running, easy-cleaning, close-skimming New Butterfly Cream Separators without taking the money out of your pocket.

By paying only $2 down, you can get the biggest machine we make, use it 30 days free, then if you decide to keep it pay us the rest of our low factory-to-farm price (only $24 and up) in small, easy installments. You can make these payments monthly out of the extra cream profits which the machine will save for you. You buy direct from the manufacturer and save half. You try the machine 30 days on your own farm before you decide to keep it. You get a signed lifetime guarantee. You have the benefit of this great labor-saving machine while it is earning its own cost and more. You don't risk a single penny. We pay the freight both ways if the separator fails to please you. Get your separator NOW at factory prices and on terms so easy you won't feel the cost at all.

New Butterfly Cream Separators

will make you $10 to $15 a year more profit from every cow you own. They are handsome, high-grade, durable machines. The most modern and convenient separator you can buy. No other separator costs more to make, has so many patented improvements or gives you as much value for your money. We will prove this on your own farm, or no sale. Thousands are in daily use all over the United States. Read the letter at right.

Davenport, Iowa.

Dear Sirs: I like the separator; I think it is a daisy. It certainly is everything you claim it to be. I would not exchange it for any other separator, regardless of make or price. The——, which I am shipping you today, took all the strength a man had to run, but my little 8-year-old boy can run this one easily. It skims perfectly clean, and is so easy to wash.

EDWARD SCHMIDT.

No. 5½
One-Piece Aluminum Skimming Device
Frictionless Pivot Ball-Bearings; Open, Easily-Cleaned Milk and Cream Spouts; Self-Draining Bowl and Tank.

30 Days' Free Trial

Lifetime Guarantee

Fill out the coupon below—mail it to us right away for free catalog folder. Get our big special offer on the five sizes of machines we make, so you can pick out the one that exactly suits your requirements. We will ship it to you on our easy payment terms of only $2 down and let you try it 30 days on your own farm. When the 30 days are up, **if for any reason** you are not pleased—if you don't prefer the New Butterfly to any other separator you ever saw or used—just return the machine to us. We will pay the freight both ways and refund your first payment. You won't be out a single penny.

TEAR ALONG DOTTED LINE

Every New Butterfly Separator is guaranteed against defects in material and workmanship, regardless of how many years you have used it. No other separator manufacturer will give you this signed lifetime guarantee.

Direct from Factory

Only $24 and Up

—according to size. We make two styles and five sizes of the New Butterfly Separator. Our Free Catalog Folder describes all of them. Every machine we build is beautifully finished throughout and guaranteed a lifetime. Note these special features: No disks to wash and rust out. The New Butterfly Skimming Device is complete in one piece—made of aluminum—the "everlasting," easy-cleaning metal. Shelby Seamless Steel Bowl—phosphor bronze bearings, vertical shafts, adjustable cream platter, ratchet crank, self-draining bowl, low-down self-draining milk supply tank, closed bottom, open milk and cream spouts, oil-bathed ball-bearings, and many other exclusive features.

Mail This Coupon Today

Albaugh-Dover Co., 2298 *Marshall Blvd., Chicago, Ill.*

Gentlemen: Please send me at once your big colored Catalog Folder, with full description, illustrations, factory prices and self-earning, easy-payment terms on the New Butterfly Cream Separator. I keep.....cows.

Name.....

UP-TO-DATE FARMING

16th Year, Number 11 JUNE FIRST, 1913 Indianapolis, Ind.

A Herald of Farm Progress and Prosperity. Published Twice a Month

With the Up-to-Date Farmers

A Department for Live Folks who want the best. Our readers are asked to contribute their thoughts. If you have a helpful idea pass it on. Be neighborly. Contributions always welcome.

A wise old owl sat in an oak;
The more he saw the less he spoke
The less he spoke the more he heard
Why can't we all be like that bird?

The farm well tilled means the purse well filled.

When borrowing becomes a habit it is a chronic disease.

The best lessons a man can learn are from his own mistakes.

The rule of gold is usually an exception to the Golden Rule.

Some folks make fools of themselves; some are born that way.

Success is one part talent, two parts opportunity, and the rest, perserverance.

The man who loses his temper always finds it before he needs to lose it again.

Sam Saxon says that those who succeed according to rule are usually the exceptions to it.

A good maxim is—When you can't do what you want to do, try to want to do what you can do.

The more good we find in other people the more they will find in us, and there's some good in everybody.

Some folks plant crocuses in the yard for a bit of spring brightness and beauty. Some just let the dandelions grow.

"Doing well enough" isn't what wins those little extra luxuries and enjoyments. It is the horse that is a neck ahead that brings home the bets.

Our national constitution guarantees us all the right to "life, liberty, and the pursuit of happiness." But about all that some of us get is the pursuit.

Poke all the fun you like at book farming, but you will find that nine out of every ten successful farmers are doing just what the book farmers say is good.

The man who, unashamed of anything he has done, can look himself and his neighbors straight in the eye is happier and better off than the man with a million who cannot.

It is worth a lot to a man to know he's done his best, and played the game of life on the square. No matter how poor he is, he can still be happy, something impossible to the shirker or the crook.

A Fatal Delusion

SEE PAGES 13 AND 14.

Now that the city schools have begun farming the vacant lots with school children, the city man can go "back to the farm easily," and about as much as he cares to.

The union labor of Kansas City has organized a Co-operative Trading Association, and recently opened three retail stores. The association bought a carload of Texas onions at three cents a pound in ten-pound sacks. A "producer to consumer" enterprise that should succeed.

On May 17 four hundred farmers' institutes out in Kansas each held a co-operative meeting. These meetings are designed and called by the state agricultural college, and the subjects discussed were: Co-operation in community breeding of stock; in production of pure-bred seed; in the construction of silos; in buying machinery; in owning machinery; in buying fuel and feed; in marketing eggs; in picking and marketing fruit; in marketing grain; in marketing potatoes; in marketing cream.

Jones is a good farmer, who had the same kind of soil, in the same neighborhood with Smith, and Green, and Brown. Jones made more money, and worked less hard. One day he found the other three together and told them just how he surpassed them. They listened, and then tried out the plans. During the years gone by, Jones had learned much from farm papers, and did many things advised in books and bulletins. Smith and Green and Brown laughed at "book farming." And even today they laugh at it, even while doing it, for what Jones told them was "book farming." Jones laughs (to himself) at them.

Shorty's Shortcuts

(By Shorty Himself.)

NUMBER II

Some women can drive a team of horses hitched to a wagon through a gateway and some can only try. My wife can try. She usually gets the horses through all right. They will go through, anyhow. But as my wife thinks lines are to pull, she pulls on them. Consequently the wagon doesn't get through as well as it might. One of the posts usually gets right in front of one of the rear wheels. I've had my wife get our old team and wagon so mixed up with two gateposts in three seconds that it took us all ten minutes to straighten things out.

A number of years ago one of our neighbors purchased one of those "Manlove" farm gates that open when you drive over a trip-lever as you approach, and then closes after you have passed through, provided you drive over another trip-lever. Provided again the machinery is in working order. Well, it was a good gate, and it is a good gate yet. It works, and is never out of order. The only thing necessary is to hit the lever with the wheel. But right here a funny thing happens: While my wife can hit both of the gate posts, she can't hit either one of those levers, and I'm not saying anything against the levers, either. But that is really not a part of this story, and my wife says it has no business in it, so I will leave it out, of course. The idea is that now, instead of getting out, opening the gate, getting back in the wagon, driving through, getting out, shutting the gate, getting back in and driving off—I drive right through and on. Of course, with the old style gate, I could have asked my wife to get out and open it, and let me drive through, but that is all I could have done—asked her—for finally I would have to get out and open the gate myself. It is not easy work for people who are five

An Indiana Farm Conference

A GREAT gathering of Indiana business interests, including bankers, brokers, grain exchanges, farm implement dealers, agricultural college experts, business men, and incidentally a farmer or two from various counties will be in conference in Indianapolis, June 3 and 4, about the time this paper is being read by our subscribers. One of the chief objects is to thoroughly investigate the problems of agriculture and country life, and arrange, under the new vocational law, for teaching agriculture in the public schools, the installation of a county demonstration agent in each county, and to do other things for the benefit of agriculture, which, if truly beneficial will be of great benefit to all business and the country-at-large, as well as farming.

Conferences are often of value, as they tend to produce new habits of thinking and action, greatly needed. While the farmer has always been able to produce sufficient bread and meat and fiber to feed and clothe the world, few of them do their work economically. The average cost of production is needlessly greater than it should be. Better farming methods are much to be desired, and any movement in behalf of better farming is a worthy one. Yet, it has its dangers. If better farming means greater production, and greater production means lower prices, wherein is the farmer benefited? If he decreases the cost by means which brings about a decrease in the selling price, will he not lose his gain and more? Is the real test of successful farming the number of bushels of wheat an acre will produce, or the number of dollars profit an acre will return? And, if an average yield of twenty bushels per acre will sell at eighty cents a bushel, who can guarantee that an average yield of thirty bushels would also sell at eighty cents a bushel?

We suggest that these conferences look ahead as to price, as well as to production. We respectfully submit that if the prices are encouraging to production, the farmer and Mother Nature will be able to produce all the world wants. The business world has no need to exercise itself over the farmer's end of agriculture. No one has yet gone hungry or naked on his account. But there is need for the business world to look after its own part of the work—the distribution. Give the farmer a fair price, and production will care for itself. Let the business world help determine how prices may be maintained at a profitable point. Let them cut out some of the excessive costs of distribution. That is in their line, and is for them to undertake, as they are mainly responsible for the system as it exists. Before they go before the farmers, urging that they produce greater yields, let them first be able to assure the farmers that those bumper crops will return a profitable price. Good crops are desirable, but good prices are absolutely necessary to the welfare of agriculture.

A good farmer is one able to make a comfortable living from the soil, rears his family well, is of service to the community in which he lives, and leaves his farm more productive than he found it.—L. H. Bailey.

All Farm Papers Are Doing It

BROTHER FARMER, we want to enjoy the privilege right this minute of saying, "I told you so." For ten years we have been telling everybody, and farmers particularly, that the marketing system was not what is should be, and that it could be remedied only by the co-operative efforts of farmers themselves. We endeavored years ago to obtain the co-operation of agricultural colleges, farm papers, and business men in an effort to correct the marketing evils by assisting the farmer to organize so it might be accomplished. Our statements were doubted by some, laughed at by others, and bitterly assailed by a few.

For the past few weeks we have been gleefully gloating over our exchanges. Very few farm papers now reach us without strong articles on the necessity of better marketing methods. State agricultural colleges have given out strong statements to the same effect. Certain business interests are now asking how they can help the farmers to organize. The United States Department of Agriculture has provided for a toy they call the "Bureau of Marketing." And nearly all of these are the very things we taught ten years ago and have been consistently teaching since. Farm papers who laughed at or denounced our articles then are printing identically the same arguments today. They have seen a "great light," evidently. We have no cause to doubt their sincerity, and we welcome them to the work.

We cannot refrain from saying, however, that while these good institutions have at last heard "the voice of the prophet," they have not evidently heard the words distinctly, and the words are these:

THE FIRST THING AND THE ONLY THING TO DO IS TO ORGANIZE THE FARMERS IN A NAIONAL MOVEMENT SO THEY MAY HAVE AND CONTROL A NATIONAL MARKETING SYSTEM, BASED UPON SOUND AND ECONOMIC BUSINESS PRINCIPLES.

It can be done, and must be done before tangible results can be obtained, and until the others see the full light, we shall continue to alone build up the organization along the lines we have advocated for years, and along the lines the others will also be advocating in due time.

The spray pump and the powder dust machine should now be brought into play on all potato, tomato and truck farms. Spray and powder for bugs and blight. Write advertisers for catalogues and you will also receive a fund of valuable information on the subject of insects, diseases, and their prevention. Prevention is cheaper and far more efficient than remedial measures after trouble has begun.

What Sanitation Means in Money

WE FARMERS are prone to look on sanitation as something connected with a hospital, including sterilized apparatus, and scrupulous cleanliness to the degree of nonsense. We smile to ourselves at the idea of a sanitary farm. Can a farm of the earth, earthy, in short, just "dirt" be sanitary? It surely can, and there is nothing foolish in the idea whatever.

First, keep down the weeds. These are the most unsanitary things on the farm. They not only rob the soil of its fertility, but they inoculate it with poisons that hinder the growth of valuable vegetation. Moreover, they harbor and furnish breeding places for insects that make us trouble. Keep the fields, the fence rows, the lawn and barnyards free from weeds.

Keep the barnyards clean, and prevent disease to the farm animals. This applies also to the chicken yards and the hog pens. Flies are the carriers of disease among both animals and people. Do all you can to eradicate them. Don't think you can do nothing, for you can do much. Keep the stables clean, the manure piled up in the manure shed, which you can have screened. Spray the manure with sulphate of iron, and sift kainit over each addition to the pile. This not only prevents flies from breeding, but saves the nitrates, the most valuable part of the manure, much of which escapes in the air if not prevented.

Use lime freely around the house, chicken and barnyards. Keep a barrel of air-slacked lime in a dry place for this purpose. Do these things and you will accomplish wonders in the way of sanitation.

Sanitation is not alone a matter of cleanliness, but of money as well. The farmer who keeps out the weeds, eradicates the flies, kills lurking cholera and other disease germs, and saves the nitrates in the farm manure, will have better health, better "luck," better crops, more efficient and profitable stock, and his bank account will be far more satisfactory.

Tightening the purse-strings to keep in the pennies sometimes shuts out dollars.

Advertising Apples

IN ORDER to increase the sale and consumption of apples, growers, shippers and dealers have devised a co-operative advertising campaign called the "stamp plan." To properly market the coming crop of apples, with profit to the producer, consumption must be increased. To increase consumption the price to consumers must be decreased, and the apple-eating habit formed in millions of homes. Large sales at small profits is better business than small sales at larger profits. The campaign to make apples more profitable all around hinges on the amount the public will consume, and this in turn hinges on the price the public is required to pay for the fruit, and to a degree, their knowledge of its value as a staple article of diet. It seems to be a matter of education as well as business. The people are to be informed on what apples are really worth and what they should pay. This education is to be partly accomplished through advertising, and the campaign is a means of raising funds to defray the expenses of the advertising campaign. Stamps to be affixed to all packages of apples, barrels, boxes, crates, etc., will be sold. On boxes a one-cent stamp will be affixed, while barrels will take a two-cent stamp. Growers and shippers are to be asked to purchase and affix the stamps. The stamp issue will be under the control of a duly authorized advertising committee, who will employ the funds thus produced in the advertising campaign to convince consumers they should eat more apples, to convince retailers they should sell at moderate prices, and to bring to the producer the extra profits such a procedure is expected to make possible.

All of this is good as far as it goes. It is for the producers, however, to organize their own selling system and first insure themselves a fair profit from the apples they send to market. The "stamp plan," by increasing markets, can be made a valuable aid to the producers, who should give it support.

"Figgers"

STATISTICS, they say, are dry and uninteresting. Yet, farm papers and farm colleges have been feeding the farmers on figures to show them the great opportunities they neglect by failing to do better farming. Recently Professor Stone, of Indiana, president of the State Agricultural College, in an address delivered in Indianapolis, declared that if the Indiana farmers possessed and would act upon the knowledge on corn production the college could supply, the corn crops of Indiana could be increased ten fold. Possibly this is true; but, if Indiana farmers raised ten times as much as they now raise, **how much would that corn be worth a bushel?** What is always the effect when a great surplus is produced?

Regulates the Commission Man

THE New York state legislature has passed a law regulating the commission business. It requires the commission men doing business in that state to take out a license, and the state commissioner of agriculture is empowered to revoke the licenses of those who do not do a square business, and to refuse licenses to any whose integrity is in question; it compels the commission man to give a $3,000 fidelity bond, any part of which can be collected by the farmer for any loss he may sustain at the hands of a dishonest dealer. Now, this law would be of great service if farmers were only organized to provide easy means to take advantage of its provisions.

A Real Problem to Face

AGAIN we assert that the unorganized farmers of this country had best look forward to future markets. There is now underway a tremendous sentiment in favor of a change in marketing methods and when the change comes about the unorganized farmer will be absolutely at the mercy of the "powers that be," and the organized farmers will be chief amongst those powers. There has been need for farmers' organizations in the past; there is greater need for them now, but these needs are as nothing compared to the needs in the near future.

If Farmers Kept Books

ONE of the first principles of success is to know what one is doing. Business without bookkeeping could not exist, therefore, bookkeeping must be valuable to business—any business. Farming is a business.

Farmers would make more money if they kept book accounts. Not many farmers believe this, or they would be keeping books. Those who do, however, know it is true. Those who do not, knowing nothing about the value of it, have no right to an opinion.

The Middleman

JUST now the middleman is the "goat." Farmers, consumers, editors, and a goodly number of the business classes lay charges of a serious nature at his door. He is blamed for both the low prices of products on the farm, and the high cost of those same products in the corner grocery.

A "middleman" of some sort is a necessity. Business cannot exist without him, honest, dishonest, good or bad, we must have him. All time and talk employed to eradicate the middleman is wasted. We can't do it, and maintain civilization. The average farmer cannot dispose of his crop direct to the consumer. The idea is not only impractical, it is impossible. An agency between producer and consumer is an absolute necessity, and that agency is a "middleman."

The present method of operation can be vastly improved, however. But let us state right here, and most emphatically, that improvement cannot come without co-operation, and co-operation without organization is impossible. Organization is and must be the first step. Congress may pass laws, and make appropriations; the Department of Agriculture may establish marketing bureaus and make investigations; educators may orate, and editors may erupt, and conferences may convene, but no change in affairs can be made until the farmers are shown what to do and how to do it, and then they can not do what will be required of them except through organization.

Once this is done, then efficient action may be taken toward eliminating the unnecessary and unreliable features of the middleman system.

One of the first steps to be taken is ousting the dishonest middleman. The records and reputation of all marketing agencies must be made known. Shippers must know whom to trust, and whom to distrust. Refuse business to the unreliable middleman and his elimination is accomplished. In this work there must be co-operation of honest farmers, honest middlemen, and possibly the government. This also is impossible without organization. If others think differently, let them come forward with a remedy that can be successfully applied without it. No theory, gentlemen, but a practical plan that will stand the "acid test" of business success and efficiency.

Still another, and very necessary step is the proper distribution. Under the present system the middlemen are powerless to prevent glutted markets. With the right kind of an organization, the co-operative action of shippers and dealers could successfully handle this problem. Without organization, nothing can be done.

There has been, and is too great a tendency to generalize and theorize. What is needed is a thorough, conscientious investigation of practical plans to remedy an evil everyone knows to exist. UP-TO-DATE FARMING has taught for years that only by organization can anything be accomplished. So firm is our belief in this conclusion that we have done our utmost to help farmers organize on a practical plan. Much has been accomplished and we will continue our efforts along this line until the organization is completed. We have not been content to teach the necessity and value of organization theoretically alone, but practically as well. We have been instrumental in organizing thousands of local unions. We shall continue to do so.

The outlook is most encouraging. Agitation of these vital problems is stirring the minds of the more thoughtful people everywhere who will quickly see the futility of long continued discussions that end where they begin. Willing and capable hands will deal with the actual as well as theoretical problems, and the national system of co-operation and controlled marketing will be quickly perfected, and the problem of the middleman solved to the extent that the millions now lost, wasted, and filched from the producing and consuming classes will be saved to them. But we reiterate that, no matter what the new system may be, nor how operated, it cannot become effective except through the medium of organized agriculture, with organized communities as its foundation.

Human Rights in West Virginia

FOR months the coal fields of West Virginia have been in the throes of a terrible struggle between the mine owners and the miners. It is the old contest between capital and labor. The miners want more of the wealth created by their dangerous and difficult labor. The mine owners refused their requests, and a strike was called. Then a bitter struggle began, and conditions went from bad to worse until the governor of the state declared martial law, and sent the soldiers into the mining districts to quell what had come to be an insurrection. Soon after the miners complained that the state troops were but carrying out the commands of the mine owners, and that their treatment of the miners was most unjust and brutal; that without just cause the miners were herded in "bull pens," refused a hearing in a court of justice, and otherwise outraged. So serious were these complaints, and so critical did the situation become that Senator John W. Kern, of Indiana, introduced a resolution in the United States Senate that the body should make a thorough investigation of the situation. Immediately a storm of protest arose from both the civil authorities of West Virginia and the mine owners. The miners, on the other hand, hailed the news with joy.

From an impartial standpoint it would seem that if the mine owners and the state officials had been doing only that which was right and proper, and all in their power to treat the miners fairly, and honorably, they would have nothing to fear from a Senate investigation, and would have welcomed it. Their opposition clearly indicates a condition they feel will not bear the light. Nothing could have been stronger proof that investigation is necessary. It certainly looks as though the mine owners own not only the mines and the miners, but the state government as well. The investigation has been ordered and it is to be hoped that swift justice will be meted to both mine owners and miners.

A Motorcycle to the Rescue

The old saying that "necessity is the mother of invention" is again demonstrated with a new twist.

Recently the small gasoline engine owned by Thurman Golding, of Greentower, Ind., was disabled, seriously inconveniencing him and delaying the work on his farm.

Ingenious Mr. Golding was not to be stopped in his work by this indisposition of his gasoline engine, at least not while his motorcycle was on the place.

He blocked up the rear wheel of his flyer, slipped a belt around it and soon had the water tank filled and the other farm machinery running.

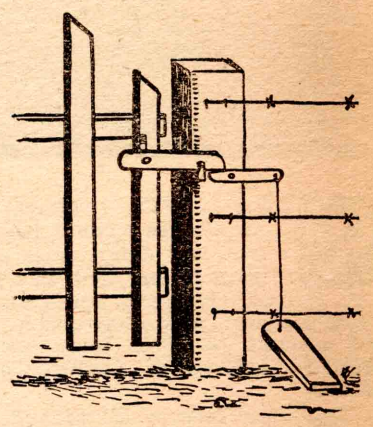
In the motorcycle the farmer has not only a rapid means of transportation, but a steady, reliable, portable engine, that's always ready to do its duty, and it only remains for such men as Mr. Golding to discover new and different uses for these sturdy time-savers.

Shorty's Shortcuts

(Continued from Page 1)

feet high and four feet in circumference to climb in and out of a wagon. So, after Neighbor Wallace bought his mechanical gate, I soon had one or two myself.

This gate gave me another idea, and I made a little mechanical opener of my own for the back yard gate, between the kitchen and the well and garden. When carrying two buckets of water, or a basket of tomatoes, or any burden that called for both hands, I needed something to open the garden gate for me, so I set to work and made it, with a hammer, brace and bit, saw, pocket-knife, a piece of wire, and a few pieces of wood. Here it is:



These gate improvements have saved me a great amount of time and energy and are a source of much satisfaction. Of course, I couldn't show all the features of the garden gate, and make the opening contrivance clear, as I am better at making hay than making pictures. I will say, however, the gate shuts itself, and stays shut until some one opens it. It is also a better looking gate than its picture, which my wife says is a caricature, and Webster (Noah, not Daniel) says a caricature is a picture of an article where the beauties are hidden and the blemishes are exaggerated, yet still leaves some resemblance to the article.

Yours as ever,

SHORTY.

Mr. Dooley and the Japs

"Good mahrnin,' Hinnissy."

"Good mahrnin,' Mister Dooley. How is yer ham an' aigs this mahrnin'?

"Nothin' to cackle about, Hinnissy. Ye see, I've bin gettin' so mootch iv th' Jappynese quistion into me systim that I fale loike a sicriterry iv shtate goin' wist on a furlough an' a free railroad pass. If me ould frind, Billy Bryan, can't put a twist in th' tail iv th' Callyfornya wildcat an' nozzle him, I'd loike to know who can."

"Phwat's th' troobel all about, Mister Dooley?"

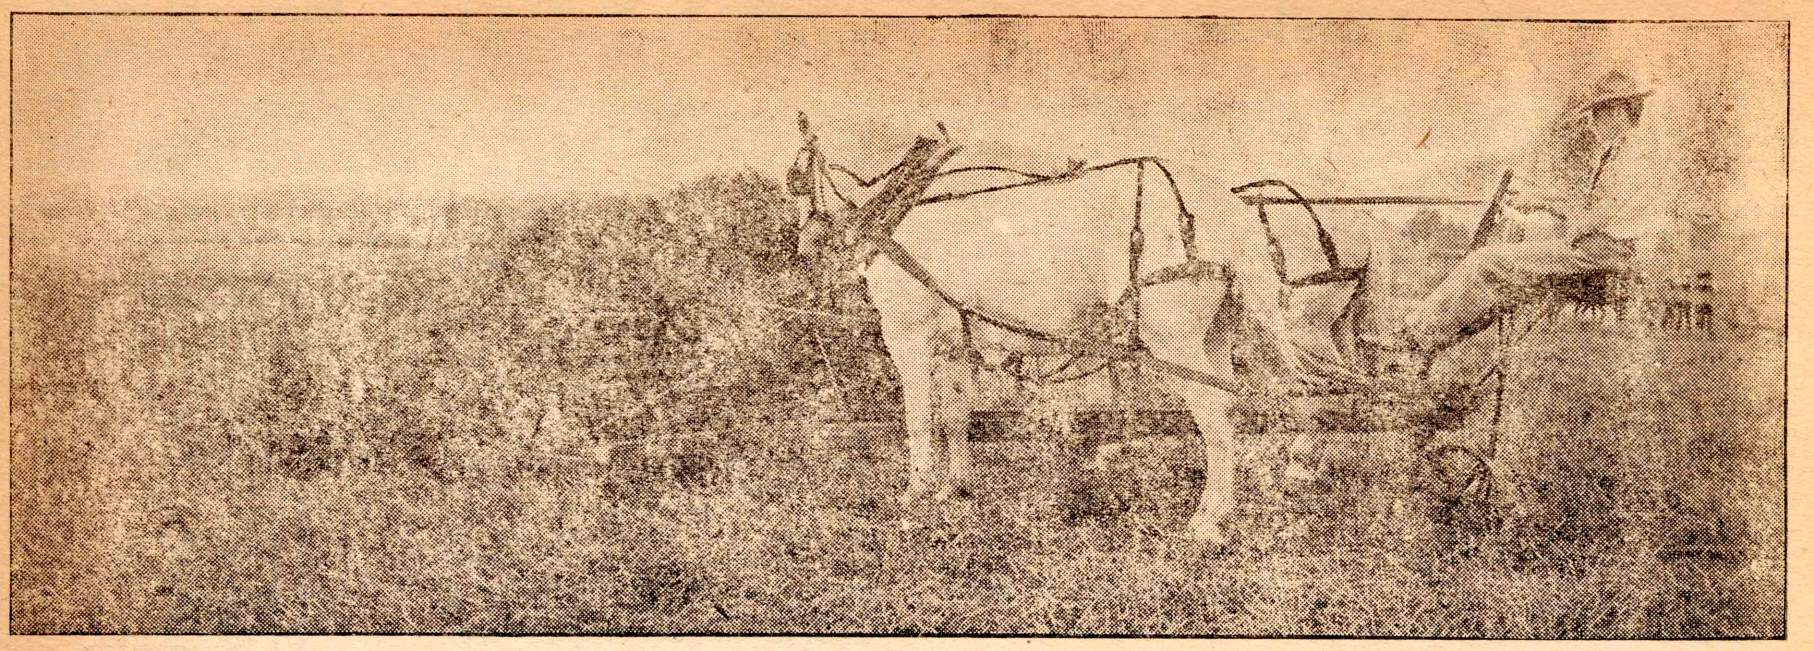
"Will, ye see, Hinnissy, thim Japs have bin flockin' in through th' Golden Gate. Th' paypul iv Callyfornya wants to put a padlock on th' gate an' throw th' kay into th' Paycific, but thim Japs sez they'll crawl betwane thim bars avin if they tear their shmokin' jackits. It's a bad mess, Hinnissy, but I belave afther all it shows that th' Callyfornyans are beginnin' to wake up a little. Ye see, they've got some iv th' foinest land out there in th' whole wurrld, includin' avin th' North Pole. It's a great place f'r raisin' ostrich fithers an' ahranges an' figs an' prunes an' other boardin' house lookshuries. Now thim Japs have bin comin' in there an' gobblin' up th' land er squattin' down on it an' ye couldn't pry thim loose with a crowbar. That's why th' Callyfornyans are all gettin' togither an' telling' thim Japs, 'Ye'll have to vacant these primmyses insoide iv thirty days or we'll give ye sixty in th' workhouse on nothin' but porterhouse steak. Ye're not sittyzuns an' we don't want ye hangin' 'round, so whin yer lease iggspires, ye naden't try to poomp new loife into it. It's movin' day iv'ry day in Callyfornya an' it's yer move."

"It's a boornin' shame."

"No, it's not, Hinnessy. It's wan iv th' bist things that could happin to this coonthry iv ours, avin if ye won't agree with me on this point. Ye see, it's nicissary f'r thim haythin to come in here an' show us that there's money in th' soil but we must go about it roight to git it. Thim Callyfornyans, instid iv fightin' wan anither are now united aginst thim Japs. In ither words, they're co-operatin.' They're pullin' togither, Hinnissy. They've found that they can't do mootch unliss they manage things roight. Amerrycun fahrmers all over th' land are jist wakin' up to th' fact that they've got to pull togither to make a success iv their wurrk an' to get th' rale fruits iv their toil. They've got to know th' markits an' sind their produce where it's naded. Thin they'll begin to make th' progriss that they're intitled to. It's th' only way, I till ye, Hinnissy, an' ye kin put that in yer poipe an' shmoke it."

Why Brooms Should be Cheap

A FARMER can, as an individual, learn the business of successful production, but he cannot, as an individual, or even in small associations follow the necessary business practises of successful marketing. He may learn the principles, it is true, but not the practise. In 1911 high prices were paid for broom corn brush, so high that in 1912 the broom corn districts were covered with broom corn fields, and prices went to near nothing. The great crop of 1912 sold for a great deal less than the smaller crop of 1911, less than the cost of production. If each broom corn farmer had harvested only half his crop, selecting the best brush and let the balance rot on the ground the farm and the farmer would have been vastly better off. The half would have brought him far more cash than the whole crop harvested, and the other half would have made humus which is worth something. Now, the broom manufacturers have brush enough to be able to beat down the price of the 1913 crop. After a few years of low prices, few farmers will produce heavily, a shortage will occur, and prices go high for a short time, and then the same foolish tragedy will be enacted all over again. What is the use of teaching the broom corn farmers how to grow more broom corn under such conditions? Why not teach them how to market, so they can hold their surplus, and not dump it on the market? Selling it doesn't get rid of it, but only puts it where it can do the broom corn farmers great injury.



Iowa's Alfalfa Story

OPPORTUNITY, training, and nature has made a feeder of beef and dairy cattle of the Iowa farmer, but with it, he is likewise a horse-raiser, a pork-producer, and a hay-maker. For all around farming, Iowa has the greatest amount of facilities of all states.

The Iowa farmer, all around agriculturist as he is, has found in alfalfa the greatest all around crop he can have growing on his farm, and he has also found that he can grow it in abundance. He wanted something to keep up the fertility of his soil, to make good horseflesh, beef, pork, milk and butter. Formerly he used a combination of corn, oats and clover, but he is coming to see that alfalfa does the work of all these and does it better, quicker, and cheaper. The Iowa farmer who has alfalfa puts hogs on the market for twenty-five to fifty per cent. less than he could without it. A farmer in the vicinity of Minden sowed fifteen acres in 1911, after harvesting his oat crop. He disced and harrowed the field, and August 20 broadcasted twenty pounds of seed to the acre. In the summer of 1912 he pastured thirty sows and 184 pigs from early spring until late fall, giving them a light ration of grain. He also cut six loads of excellent hay. On February 15, 1913, he sold his hogs and the average weight was 338 pounds. Another farmer in the same neighborhood pastured nine sows and forty shoats the entire season on three acres of alfalfa and cut four tons of hay besides. And not only is alfalfa a pasturage of great value for hogs, but they eat the cured hay with a relish. Eight pounds of hay fed with each bushel of corn increased the amount of grain one-half, and as to quality, alfalfa fed pigs top the market, and are unusually healthful and thrifty. An alfalfa-fed sow will have stronger, better pigs than those without this ideal food.

Mr. C. M. Lau, of Davenport, is very successful with alfalfa. He uses lime and "nitragin" to inoculate the soil when preparing for alfalfa, and by experiment has found such treatment of value. He does not top-dress with barnyard manure, as such practice introduces weeds, blue grass, clover, timothy and other things that occupy the land to the detriment of alfalfa, eventually killing it out. He advocates the use of basic slag, chicken guano, steamed bone and potash. He wintered forty head of cattle on alfalfa hay from four acres and six acres of silage corn. His alfalfa was exhausted and then he fed timothy instead, and his milk cows immediately dropped off many pounds of butter-fat per week.

Leonard Everett is one of the largest growers of alfalfa in the state. He has three hundred acres of it on his numerous farms near Council Bluffs. He turned one hundred head of cattle on one forty-acre field, after the first cutting was made and declares that alfalfa will keep three times as much stock as other pastures, and in seasons of drouth, when the ordinary pastures are dry and bare, the alfalfa fields are green and growing.

E. H. Geiss, of Neola, has what is believed to be the largest alfalfa field in the state, having forty acres. Last winter he fed sixty pure-bred Hereford cows, 130 head of heifers, eighty stock steers, and eighty-five head of pure-bred Berkshire hogs on the hay from twenty acres of alfalfa.

As to hay, H. C. Brandes, of Avoca, harvested as many tons of alfalfa from eleven acres as he did timothy from forty acres. And one ton of alfalfa is easily worth two of timothy for feeding value, if either are fed exclusively.

This very brief outline of the story of what alfalfa is doing for Iowa farmers is worthy of careful consideration by every farmer, not only in Iowa, but everywhere. Alfalfa can be made to adapt itself over a wider range than timothy and clover. It grows from Puget Sound to Mexico, and from Canada to the gulf. The experiment stations of every state are developing alfalfa specialists to aid the farmers of their state to grow this wonder-worker.

Every farmer who can should have alfalfa, whether two acres or twenty, or ten times twenty. If you do not know whether or not alfalfa can be made to succeed on your farm, find out. A good way will be to take up the matter in your local union meetings, if you are progressive enough to have a local union. (If not, get one, for a man so unprogressive as to live in a community and not promote a local organization is hardly progressive enough to make a success of alfalfa.) Get the entire neighborhood interested in the matter, and send to the agricultural college for an expert to come, visit your neighborhood, and give you full instructions by means of a lecture.

In the main, whether or not you will have alfalfa, and realize the profits it is capable of giving you, depends mostly on yourself. If you are one who firmly determines to do a thing, and then goes about doing it with energy, enterprise and intelligence, your farm will probably have a good alfalfa field in a comparatively short time. Half-hearted, slip-shod methods, based on guess-work and hope will not succeed with alfalfa, or anything else. Thoroughness and Persistence are the steeds to hitch to the chariot of success.

The future is pregnant with great possibilities, but the present must be properly employed if we are to realize them.

The Farmer and Science

AGRICULTURE is a science, and the better a scientist a farmer is, the better farming he can do. Science is knowledge of why and how. Anything that isn't true isn't scientific. There is as much science in farming, or more, than there is in medicine or manufacturing. In fact, farming combines about all there is in science. If the soil is sick, so the farmer can not produce good crops thereon, he has to doctor it up before he can manufacture the crop. It would be as safe and as sensible to expect a physician ignorant of the science of life and medicine to cure a disease as to expect a farmer ignorant of the science of soil and crops to make a poor farm over into a rich one, and make money by doing so.

One of the chief functions of our agricultural colleges is to teach the science of agriculture. The experiment stations are for determining the facts. Every farmer learns much from his own experience, and some from the experience of his neighbors. But he has neither the time nor means to learn many things that would be of great value to him. It was not farmers, but scientists that found the way to prevent potato scab, destroy the San Jose scale, produced the cow that makes four pounds of butter daily, and changed the razor-back hog into the Poland China, and the Berkshire. It was not farmers, but scientists who discovered that alfalfa could be grown in nearly all parts of the country. The farmers of this country owe a great debt to scientific investigations. The agricultural college and the experiment station is doing a great work. Thousands of farmers owe their success to the assistance received from them.

For a Good Reason.

The curate of a large and fashionable church was endeavoring to teach the significance of white to a Sunday school class.

"Why," said he, "does a bride invariably desire to be clothed in white at her marriage?" As no one answered, he explained. "White," said he, "stands for joy, and the wedding day is the most joyous occasion of a woman's life."

A small boy queried:

"Why do the men all wear black?"

Where Duty Ends

Customer (sarcastically)—"I've managed to cut this steak, but I'm bothered if I can chew it."

Waiter—"Yes, sir. We guarantee our knives, but our responsibility does not extend to our customer's teeth."

Two Miles Too Far

A German farmer was in search of a horse. "I've got just the horse for you," said the liveryman. "He's five years old, sound as a dollar and goes 10 miles without stopping."

The German threw up his hands . "Not for me," he said; "not for me. I live eight miles from town, and mit dot horse I haf to valk back two miles."—National Monthly.

Our Market Review

Semi-Monthly Review of Crops, Market and Trade

THERE are crop damages and rumors of crop damages; and crop improvements and rumors of crop improvements in the land today. And there are raids by the bears and counter raids by the bulls; and slashing of prices and boosting of prices. Millions of bushels of grain are sold and bought every day that the seed may have just been put in the ground, or of wheat that the head has not pushed out of boot yet. In all this wild scramble and gamble where millions are made and some millions lost, the farmer goes patiently plodding on, co-operating with nature to produce what they can without knowing what it will bring. The uncertainty of the weather, which is the greatest factor in crop production, we will always have with us, but there is no good reason why the crop should not be accurately measured when it is produced and the unconsumed supply known, when desired, all through the year. Such knowledge could be used to make and maintain a fair, equitable price to the end that speculation in the necessities of life would be impossible. Take potatoes for instance. The 1912 crop was a very large one. Whether the government estimate was approximately correct we do not know. But we do know that there were heavy losses by rot in some sections. The amount of this loss was not known, but, having only the

"YOU BETTER GET YOUR WHEAT IN AS QUICK AS YOU CAN BEFORE THE PRICE GOES LOWER." QUESTION: BUT WHY DOES THE DEALER WANT IT IF HE REALLY THINKS THE PRICE WILL GO LOWER?

enormous yield in view and the fear of a surplus at the end of the season caused prices to be maintained low all through the season until about May 15. At that time a shortage developed and the price went up by leaps and bounds. Without exact knowledge of the amount of potatoes in the hands of farmers yet, which can not be had short of a comprehensive organization for reporting, no reliable prediction can be made whether the high prices will be maintained. But this is the point we want to emphasze: If the present high price is because of a real shortage in the supply now, then it follows that the large crop did not include a surplus. But this was not known until the last month in the marketing season and probably ninety per cent. of the crop sold below the price it should have brought, and the equitable price based on supply and demand. So it is accurate knowledge of supply that we need when a crop is produced and all the time through the marketing season. The 1912 crop was estimated at 420,000,000 bushels. It looks now as though all of the crop could have been sold at at least fifteen cents a bushel higher or about $60,000,000 more if exact knowledge would always have been at hand. And the same conditions often obtain in other crops.

Is it worth while to organize?

Winter wheat crop prospects continue very bright. Spring wheat conditions are reported as excellent, although the seeding was delayed some by wet weather. Oats acreage is a little short, but corn acreage more than compensates and will probably show the largest of record. The cotton acreage has been increased over last year and the condition of the plant is generally satisfactory. Cattle and hogs suffered a temporary slump in prices, but much of the loss has been regained. Vegetable crops and prospects are very satisfactory. Fruit prospects, taken as a whole, promise even a larger yield than last season's bumper crop.

The visible supplies of grain have decreased, and, except for wheat, are small for the season of the year, all cash grains and hay are sharply higher than two weeks before.

The following tables tell the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on May 17, 1913, with comparisons, are shown in the following table: (The sign — before figures means decrease, X indicates increase.)

	May 17 1913 Bushels	Change from 2 wks. before Bushels	Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
WHEAT	46,278,000		—5,407,000	X 8,355,000	X 16,216,000
CORN	6,131,000		—1,982,000	—4,957,000	— 2,984,000
OATS	9,790,000		—2,451,000	— 444,000	— 3,185,000
BARLEY	3,534,000		— 366,000	X 2,453,000	X 2,106,000

The visible supply of wheat in Canada on the same date was 27,897,000 bushels. This is 2,819,000 bushels less than a year before. The visible supply of oats was 10,966,000 bushels on the same date, which is 2,159,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on May 23, two weeks before and a year before as follows:

WHEAT, No. 2 RED

	May 23	2 Wks before	AYr. before
Chi.	1.07 @1.08½	1.02 @1.04½	1.14
St. L.	1.02 @1.05	1.07 @1.10½	1.18
K. C.	.94 @ .97	.87 @ .89½	1.16
Cinci.	1.05 @1.08	1.09 @1.12	1.20
N. Y.			1.23½

Minneapolis—Spring wheat, No. 1 hard, 92⅛c; No. 1 northern, 90⅛@92⅞c. At Chicago—92½@94½c and 91@93c, respectively. Two weeks before, Minneapolis, 91c, and 89¾@90½c, respectively. A year before, $1.16⅝ and $1.15⅞@1.16⅛ respectively.

CORN, No. 2 WHITE

Chi.	.62 @62½	58	@58½	81½	@82½

FUTURE GRAIN PRICES

Chicago grain futures closed on May 23, 1913, and two weeks before, as follows:

WHEAT—May, 91c; July, 90c; September, 89¼c; December, 91¼c.

CORN—May, 58c; July, 57⅜c; September, 58¼c; December, 56⅛c.

OATS—May, 41¼c; July, 38⅞c; September, 37¾c; December, 38½c.

COTTON

New York, May 23.—Cash cotton closed, middling upland, 12.10c; middling gulf, 12.35c. The price is 25c a cwt. higher than two weeks before. A year before the price was 11.60 and 11.85 cents respectively.

LIVE STOCK

Indianapolis, May 23, 1913.

CATTLE—Range of day's paying prices for steers	$7.00@8.40
Range of day's quotations for steers	7.60@8.15
Good to choice steers, 1,300 lbs. and up	8.15@8.65
Good to medium steers, 900 lbs. to 1,200 lbs.	7.25@7.85
HOGS—Range of day's paying prices	7.50@8.55
Range of day's quotations	7.50@8.65
Best heavies, 210 lbs. and up	8.50@8.65
Common to choice lights, 130 to 180 lbs.	8.50@8.60

Chicago Produce Market

May 23, 1913

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets address the Farmers Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	100	105	79
Tuesday	43	67	47
Wednesday	41	30	44
Thursday	33	36	41
Friday	46	46	38
Saturday	58	34	27
Total, 6 days	321	318	276

A damper was put on "bullish" enthusiasm today. Buyers were determined to hold back until Monday, and receivers who insisted on making sales had to accept 8c to 10c lower prices. Holders who asked steady figures could not dispose of any goods, and business was restricted to very small volume, as there were sellers not ready to accept reductions after the success of the last few days. The trade is waiting for Monday. If receipts then are small, buyers will be at a disadvantage and prices will go higher. Scarcely 10 cars of Potatoes changed hands today, although receipts were largest since Monday.

Sales reported were: Wisconsins in bulk —1 car dark at 65c, 2 cars good at 70c, 1 car at 72c. Minnesota, sacked—1 car at 65c.

Per bu., bulk or sacked, Wisconsin, Kings or Burbanks, common, mixed, to good sound	60@65c
Rurals, outside fancy	67@73c
Minnesota, round white, bulk or sacked	60@67c

NEW POTATOES—Are easy. Enough have been coming in lately to give the market a good supply. They have not been cleaning up. Receivers say the Louisiana stock runs uneven and not so desirable as some of the others. Prices have weakened some all around.

Per barrel, Florida, white, No. 1	$5.00@....
No. 2	2.00@3.50
Red	4.75@5.00
Alabama, red	4.73@5.00
Hampers, Louisiana, red	1.00@1.25
White	1.00@....
Florida, red, No. 1	1.25@1.50
No. 2	1.75@....

The price of old potatoes is 23c a bushel higher than two weeks before. A year before the prices ranged from 90 cents to $1.10.

The market has been excited. A great dearth of supply has been felt in the markets. It may be attributed to an exhaustion of supply or to the fact that farmers are busy and have not been hauling potatoes. The price will probably not be maintained as high as at present, as the bins will not be scraped clean and sent to market which may make very low prices. But it is impossible to forecast the future and this emphasizes the need of a comprehensive organization of farmers so the supply can be known at anytime—such an organization as we are building as rapidly as the farmers will move.

The price of new potatoes is about the same as two weeks before.

STRAW—Rye straw quotable at $9@9.50. Oat straw at $7@7.50. Wheat straw, $6.50@7.

HAY—Receipts, 350 tons. Inquiry good and supply light. Prices firm.

Choice timothy hay	$18.00@18.50
No. 1 timothy	15.50@16.50
No. 2 timothy	13.00@14.00

The price of timothy hay is $1 to $2 a ton higher than two weeks before. The price of choice timothy a year before was $26.50 to $27.

BROOM CORN—Market quiet. No change quoted.

Per ton. Illinois Corn	$100.00@120.00
Oklahoma	50.00@ 80.00

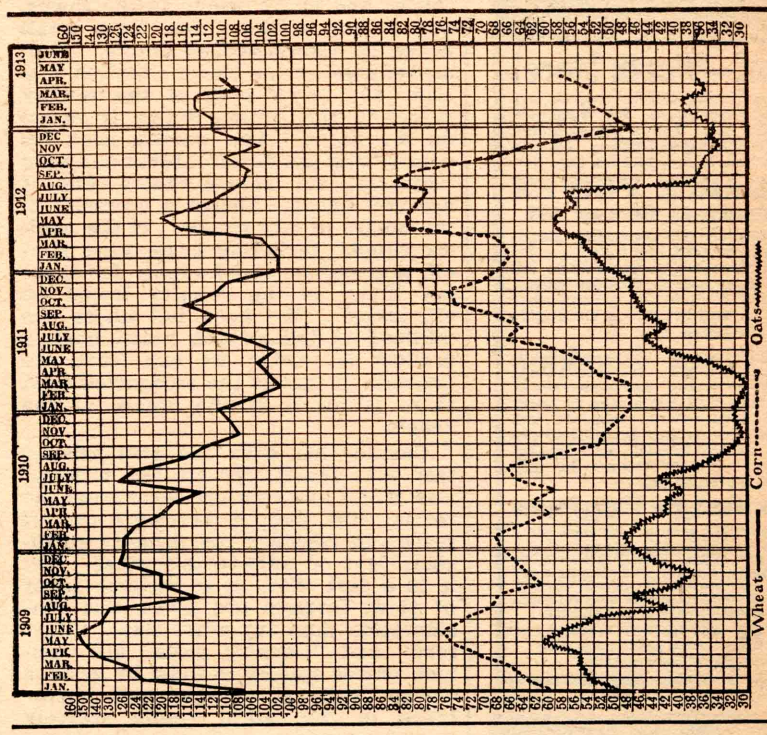
BEANS—Outside of what there is doing in pea beans there is little trade. All other lines are in but very limited request. Pea beans that are choice, bright, are fair sale and firm, but there are imperfect goods which sell slowly. Prices have been subject to but little change for some time. Stocks in the hands of dealers seem to be ample for current needs. No consignment offerings are noticed. Quotable as follows:

Pea Beans—	
Hand-picked, choice	$2.30@2.35
Really fine, bright	2.40@....
Prime	2.20@2.25
Stock faulty	1.25@1.00
Mediums nominally about same as pea beans.	
Red Kidneys, choice	$2.10@2.20

The price of pea beans is 10c a bushel higher than two weeks before. A year ago the price of hand-picked choice was $2.85 @2.90.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week Cases	Last week Cases	Last year Cases
Monday	21,341	31,277	20,581
Tuesday	27,477	27,331	29,291
Wedn'sday	25,086	23,635	19,047
Thursday	16,052	19,925	20.407
Friday	18,021	20,668	18,543
Saturday	21,307	25,633	19,606
Total	129,284	148,469	127,475



This chart shows the highest monthly cash prices for the three leading grains at Chicago, for a period 1909 to March, 1913, inclusive. The figures on right are prices in cents. The highest prices were as follows: Wheat, $1. Corn, 59½c. Oats, 38c. The lowest prices were: Wheat, 1.02. Corn, 56c. Oats, 35½c.

Receipts April 1, 1913, to May 24, 1913, 1,282,463 cases.
Receipts April 1, 1912, to May 25, 1912, 1,275,740 cases.
Receipts April 1, 1911, to May 27, 1911, 1,095,995 cases.
Receipts April 1, 1910, to May 28, 1910, 1,307,482 cases.

The market is quotably steady and no special change in prices.

Buyers are discriminating against Southern eggs. Tennessee, Kentucky and Oklahoma eggs are not as desirable as the western and northern stock.

Miscellaneous lots, cases returned, 16@18c, depending an quality.

Ordinary Firsts quotable at 16¾@17¾.

Firsts quotably 18¼@18¾c—top price, it must be understood, means new cases and Northern stock.

Checks—In good supply and meeting with a good demand. Quotably 14½ @ 15c.

Dirties—In good supply and in good demand. Quotably 15½@16c.

Storage packed eggs. "Firsts," were quotable at 18¾@19¼c.

The price is fractionally higher than two weeks before.

APPLES—It has got so that, owing to the lateness of the season, sales are only in a small way. The demand is only in that way. Some of the retailers are about through handling apples. The supply is small, and all good stock which remains is firmly held.

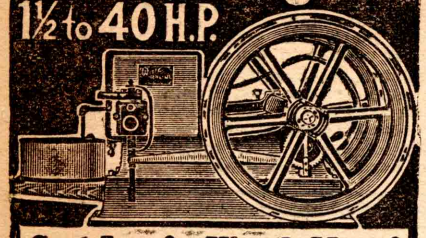
Campaign in North Dakota

Organizer R. A. Southworth, who was so successful in organization in Idaho up to the point when that state organized its State Union, which assumes charge of organizing work, has gone to North Dakota. At present he is working in Ward county. His instructions are to appoint county and local organizers, as rapidly as possible and assist them in all parts of the state. His permanent address, while in North Dakota, or until further notice, will be Devils Lake.

The North Dakota farmers are in great need of a sound marketing organization. They have been annually robbed of tens of millions of dollars in marketing their crops. Take the 1912 spring wheat crop as an example. North Dakota raised 143,820,000 bushels (government report). Spring wheat is worth as much for grinding as winter wheat is and, when no unusual condition exists usually sells a little higher. But there was an unusual condition following the 1912 crop—it was an extremely large one, lacking only three and one-half million bushels of being twice as large as the crop of 1911 and more than three times as large as the crop of 1910. The buyers knew that the farmers had no organization; they knew that they could not work in concert in marketing and they knew they would throw the crop on the market at almost any price. Therefore, they put the price down just as low as the growers would take and still not dry up the fount of supply. The price paid for spring wheat since the 1912 crop began to go on the market was 15 to 20 cents below the price of winter wheat in the Chicago market. Notwithstanding that spring wheat is worth as much or more for flour the growers in North Dakota were thus robbed of at least $21,573,000 just because they permitted the organized buyers to name the price and the middlemen put this difference in their own pockets. A like illustration can be applied to the other spring wheat states.

The farmers of North Dakota now have the opportunity to change this and in the future dictate the price. Correspond with Mr. Southworth.

WITTE Engines
1½ to 40 H.P.



Cost Less!—Worth More!

Here's my new offer, **direct** from my factory to power users everywhere. **No dealer's profits.** Think of it! The **highest** standard engines for the **lowest** prices. Nobody else has these two things to offer together.

DEPENDABLE POWER
From Gasoline, Gas or Oil

WITTE engines have set the quality standard for 26 years. Better today than ever. 1½ to 40 H. P. stationary and portable sizes. All have detachable cylinders, vertical valves, four ring pistons, electric ignition and other exclusive merits, without which no engine can now be high-grade.

Start Without Cranking

The **WITTE** had that advantage 20 years ago. You don't even have to press a button. Don't be satisfied with any out-of-date engine. Don't risk any untried, new fangled devices with high-falutin' names. Be safe and sure. Let me show you

How To Judge Engines

My new book shows the secrets. All made plain as A. B. C. It gives my 5-year guarantee and 60-day free trial plan. Tells you how to be safe in your engine selection, even if you don't pick a WITTE. It took me 26 years to write it, but you can get it quick—just send me your name—no money—and it will come by return mail.

ED. H. WITTE, WITTE IRON WORKS CO. 1075 OAKLAND AVE., KANSAS CITY, MISSOURI.

BLIZZARD Ensilage Cutter

Big capacity with small power. Cuts any silage, dry or green. Self feed. Almost runs itself. Elevates any height. Simplest, safest. The original. Write for **Free Books,** "Why Silage Pays," "What Users Say," and Catalog.

The Joseph Dick Mfg. Co.
1470 Tuscarawas, CANTON, O.

Running Water
in House and Barn at even temperature Winter or Summer at Small Cost.
Send Postal for New Water Supply Plan. It will bring you 100 pictures of it in actual use. Do it Now.
Aermotor Co., 1144 S. Campbell Av., Chicago

FARMERS AND THOSE WHO ARE NOT

WE doubt if the great part of the world's population that are not farmers realize what farming is to them. Take a single item—Poultry. There are poultry farms or ranches, a few of them, where poultry is the main, sometimes the only product, and where fowls are kept and raised by thousands; and many people in the towns, and a few in the cities, keep small flocks in circumscribed limits. But, as declared by the North Carolina Station, the great bulk of the poultry raised in the United States is raised on the farms. The world's need for poultry and the demand for it has been increasing for several years, and it has now become almost a necessity in the homes of city people. If the poultry supply, including eggs, were shut off, a prominent food supply for those not living in the country would be eliminated. We need not quote the millions of dollars each year's poultry product is worth; we can leave the estimate of that to the recognized need there is for it in the homes of the people.

Couple this with the still greater fact that practically all the necessaries of life and comfort come from the farms, and then it is easily out of reason to consider the farmers an insignificant or unimportant class. Yet it is a fact that, in a business point of view, farmers are given less consideration than any other class. "Hayseed" and "Country Jake" are common names applied to them by persons whose depth of thought and importance in the world would scarcely measure up with the insects the farmers trample upon.

But we must admit that the average farmer is extra conservative. He sees his farm and the crops that grow thereon, but he too seldom takes note of the progress that is being made all around him. He is too nearly content with the things that used to be, and that is how senseless dudes have learned there is a "Country Jake." But this is not for always. The sunshine of advancement is bringing to life thoughts that trend upward, and people that now could scarcely live without the chickens and eggs from the farm will soon learn that real business has been added to the products of the soil.

Parcel Post Improvement

Congressman Lewis, of Maryland, father of the Parcel Post law, has recommended changes to permit of increasing the weight to one hundred pounds, reducing the rate, and making the service of greater value to farmers in marketing produce. The postmaster-general has power to make these changes without congressional action.

A Direct Marketing Experiment

To demonstrate the possibility of economy in distributing farm products the Texas Onion Growers Association is shipping two hundred car loads of Bermuda onions to Chicago to be sold at three cents a pound in ten-pound cartons. Hampers containing a choice assortment of vegetables are to be retailed at $1.20.

Safeguarding the Shipper

The Interstate Commerce Commission has ordered railroads in Minnesota and Wisconsin to provide sufficient number of heated cars for potato shipments next winter. Growers and shippers lost heavily through inadequate facilities during the cold weather of last winter.

Is He Worth It

In one county of Missouri a farm expert is employed at an annual salary of $3,000. He has a contract for another year at this amount. If he could terminate the contract today, a neighboring county would employ him at a salary of $6,000.

THE SILO'S ADVANTAGES

SILOS and silage are great topics for discussion nowadays.

A good silo can be made a profitable investment on every farm where livestock is a part of the farm business. It supplies a cheap food, and permits other more valuable crops to go to market.

Any farmer who has a summer silo has a good pasturage, and one acre of ensilage will keep more cows through the summer than three acres of pasture.

On farms where hay and stalks are going to waste, in other words where the fullest live-stock carrying capacity of the land has not already been reached, the silo is not a necessity and may not add materially to the profits obtained.

Silage that is rich in corn is a more valuable feed than that which is deficient. And corn in the silo is even more valuable for feeding than corn in the crib.

Sorghum makes good silage, but corn makes the best. Where corn yields less than sorghum, or kaffir corn, it is advisable to use these in preference, for what is lost in quality is more than made up in quantity.

Cane silage is more fattening than corn silage. Use the latter for milk and butter, and the former for beef.

Even such a blessing and a necessity as fire is dangerous and destructive unless properly controlled. A silo is valuable to the farmer who will properly fill it, and properly feed its contents to the right sort of stock. It is intelligence and judgment—the "know how" that makes scientific farming profitable. Those who are unwilling to learn the how and why of better farming are probably right when they say it doesn't pay them. Make-shift methods are best for make-shift people. The cow that will hustle for herself is the right kind of a cow for the man who will not hustle for her.

A silo would be of little use to the man who would fill it in any kind of way, and feed it to any kind of animals after any sort of fashion. The silo isn't a success in the hands of any kind of a farmer. But any farmer who is willing to learn, and will do his best can make the silo pay.

The farmer who makes stock raising a part of his farming makes more money from the increased fertility of his soil, than from the profits on the sale of the stock. A silo is one of the best known means of conserving soil fertility.

At present prices for labor, feed stuff, and beef cattle, silage will put $5 worth of weight on a steer at a cost of $3.50, in thirty days. Remember, you get paid for your time at current wages, paid for your feed at market prices, and paid a profit of $1.50 extra, besides the manure saved.

Great is silage!

When cultivating the corn the last time over, count the misisng hills and stalks in ten rows, then compute the number missing in the field. When you harvest the corn next fall, count the barren stalks and the nubbins on ten rows and compute how much you lost because each stalk did not have a good ear thereon. Add this loss to the loss by an imperfect stand. You will thus be made to realize what you lose by not being sure that your seed is of the best, the seed bed properly prepared, the planting done at the right depth, and the ground harrowed so the young sprouts can come through readily.

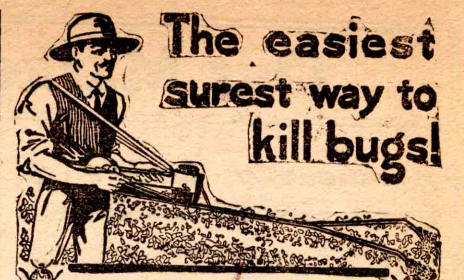
It Leaked Out

"My first husband and I kept our marriage a secret for a whole year."

"It was hard to do, wasn't it?"

"No, and we could have kept it secret much longer, but there happened to be a meddlesome newspaper man in the lawyer's office where I went to apply for a divorce."

The easiest surest way to kill bugs!



No one will ever use a liquid sprayer who has once used the

CHAMPION INSECTICIDE DUSTER

The Champion works faster—dusts two rows at once—as fast as a man walks. Weighs only six pounds. Simple to operate, any farm hand, even a boy can use it. It gives better results, at less expense—in time and material used—than any other machine. **No water to carry.** Least danger because the poison is kept at a safe distance. Price $8.00. If your local dealer can't supply you, we will ship direct on receipt of price. Guaranteed satisfactory.

On large acreage, use the Beetle Duster. Dusts four rows as fast as a horse walks.

Save 40% to 60% on a Clear Fir Silo

Buy direct from us a Seattle Silo of famous Puget Sound fir—made of timber cut from our forests, worked in one of our six great mills. Sold to you at one profit above manufacturing cost.

Seattle Silos

are made of the finest fir in the land. Many trees grow 200 to 250 feet tall. For our silo staves we use only the choicest. Close and straight grain. Free from sap and knots. Wonderfully durable. Seattle Silos have ***patented swinging doors***—quick detachable; no lifting; easily swing in or out; new iron crossbar or hoop connection; door bars form ladder from which hoops are easily tightened.

Write today for folder. On a single silo we can probably arrange to give you practically carload shipment price. To one farmer in each township we have a very special offer. Write today.

SAVE 40% to 60% on Lumber and Millwork

You pay five middlemen's profits on lumber you buy of your local dealer. We sell you at *one* profit above *producing* cost. Give you choice timber as grows only in the Puget Sound region—give you the benefit of our wonderfully low cost of production. Our six great mills turn out twenty to thirty carloads of materials each day. All orders shipped within 24 to 48 hours. Reach our customers within average of two weeks. *Satisfaction guaranteed or money refunded.* Send for price list and catalog. Send bill of materials, if possible, for estimate.

HEWITT-LEA-FUNCK CO.
Third Floor, Crary Bldg., SEATTLE, WASH.

THE HORSE AND THE TRACTOR

THE horse will always be the chief dependence for power on the average American farm, even as man will always be the chief dependence of the factory. Machines can do the work of many men, it is true, but machines cannot do work without men. Machines will do a great part of farming, but farming without horses for any purpose is well night inconceivable. There will always be a place for the horse on the farm, but there is also a place for the machinery that will take the place of many horses. The horse costs as much when idle as when working. The tractor is only an expense while it is earning. The tractor will work longer hours, and work as well in hot as in cool weather. A shed will shelter a twelve-horse-power tractor. It takes a large barn, with stalls, and hay mows and grain bins to shelter twelve horses. A part of the season a large amount of horse-power is needed, and the rest of the time there is a surplus of power that cuts down the profits. Farmers need horses, but they also need the power machine that will when called upon, do the work of many horses at less cost. There are thousands of farms where half the horses could be sold, the money invested in a good tractor, and the costs of production would be vastly decreased.

FEEDING THE PIG FOR PROFIT IN PORK

THE cost of producing a pound of pork varies with the value of the rations fed to produce it. The value of the rations depend partly on the cost to produce them, and partly on the prices to be obtained for them in the market. Cheap pork means pork produced on rations easily produced and of low market value.

Pork can be produced cheaply on corn and clover in some sections. In other sections, where corn and clover are more expensive to grow, and more valuable in the market, the cost of a pound of pork will be increased on those crops. The farmers of the various sections of country have different problems in pig feeding. The Alabama farmer, who reads an account of an Iowa farmer who made easy money on corn and clover, doesn't conclude that corn and clover are the crops for him to produce cheap pork. The Iowa farmer can produce corn at thirty cents a bushel and green clover at $20 an acre. The Alabama farmer would find his expense in producing the same crops more expensive, as a rule. In Iowa, pork can be produced at five cents a pound on the farm, with a fair profit to the farmer. In Alabama (or other southern states) it could hardly be done.

To put "flesh" on pigs, and make them fat, therefore, requires plenty of food with protein and fat, enough ash to supply a large and strong frame on which to build the flesh and fat, and then plenty of water, both to drink and combined with food, as in green clover, sweet potatoes, sugar beets, rape, alfalfa, and other succulent feeds.

As a rule, our most successful hog raisers have found the largest profits are obtained by putting the animals on the market at the youngest possible age to meet market requirements in point of weight. Some markets demand light hogs of from 125 to 160 pounds. Others want heavy hogs, weighing from 200 to 250 pounds. The farmer should learn his market, and make his plans accordingly. Every pound put on a pig weighing 160 pounds, intended for the light-hog market is not put on at a profit. It costs more to put a pound on a 160-pound porker than it does on a 125-pounder. That is why the profits are better when the hogs are sold as soon as they reach the acceptable size.

INDIANA STATE TWINE

Save Money on Twine

Buy your twine direct from the manufacturer. Save all dealers' and jobbers' and agents' profits. Get the best guaranteed binder twine:—the only twine with the guarantee of a state back of it. LIVE STOCK AND DAIRY

The best will bring the biggest price
In many cases brings it twice
As much as will the common grade,
And so it is with all things made.
Then do the very best you can,
Ne'er mind about the other man;
And if your products do excel,
'Twill be because you did it well.
—Albert E. Vassar.

Some farmers keep cows. Others make their cows keep them.

Take care of the mother, and the young colt will take care of itself.

Thirty-five per cent. of all butter made is made out on the farm, by the farmers' wives.

A cow should yield over 150 pounds of butter annually to pay for her keep on the farm.

A pig in the milk-trough, or milk in a pig-trough, its all the same, and the profits are big.

Mason county, Ky., boasts of having over two hundred silos. The silage is fed principally to beef cattle.

Sam Saxon says the true test of a gentleman farmer is—can he teach a calf to drink without cussing?

Many a New Yorker uses milk for his breakfast that was produced on a farm five hundred miles away the day before.

The Illinois experiment station fed corn silage and alfalfa hay to dairy cows that averaged 8,500 pounds of milk per year.

On the average farm it takes the proceeds of 130 pounds of butter to pay for the hay and grain a cow eats during a year.

The butter-fat, skim-milk, and calf produced by a good cow should make the farmer $100 clear profit, after paying for her feed and care.

Sam Saxon says that two animals should always have rings in their noses, aye, three. The civilized hog, the uncivilized savage, and the bull.

"Keep the lambs on the jump," says an exchange. Make them healthy and happy with good food and good quarters and they will "keep on the jump" all right.

A bullet that doesn't start straight to the mark never reaches it. There is everything in a good start. Remember this when you start off the little calves, lambs, pigs and colts.

One woman with a seven-eighths Guernsey cow, made in one year 408 pounds of butter, which she sold for $180, and had all the milk, cream and butter her family could use besides. Good cow, that.

The dairy cattle of New York state have decreased twenty thousand in number in the last ten years, yet the milk, butter and cheese production has increased. They're keeping better cows now.

Those of you who have hand cream separators should always skim the milk immediately after milking, while still warm. Those who have no separator should lose little time in getting one. Lose time—lose money.

The good cow is a friend to humanity, the "mother" of the small family, the mainstay of the widow, the lifegiver to babies and children, the salvation of a million farms, and the most valuable beast God ever made aside from the human being.—W. G.

Some farmers would be more prosperous if they took as good care of their calves as of their families. On the other hand, some farmers would have happier homes if they took as good care of their families as of their calves.

Would you be making good money on every milk cow in your barn, if you were getting twenty-five cents a pound for butter-fat, or five cents a quart for milk? These are good prices, certainly. Yet we venture to say there are plenty of cows on the average dairy farms that could not pay their board at those figures.

While it is quite true that heavy milk producers consume more feed than light milkers, the former produces more milk per dollar's worth of feed than the latter. A scrub cow giving a gallon at a milking consumes as much feed, however, as a good cow that gives five gallons a day. Weed out the poor producers.

The cheap foods (carbohydrates such as fodder, corn silage, pasture grasses, corn, etc.) produce butter fat, says a Jersey dairy man. while high-priced foods (proteins such as bran, cottonseed meal, etc.) produce skim milk. That is a good reason why you should have plenty of each. You can't get butter fat without having skim milk left.

No matter what method of separating cream from milk is used, some butterfat is left in the milk. But the machine separator gets it all but three pounds per year per cow, while the old fashioned methods leave fifteen pounds per cow per year. The loss on five cows per year is seventy-five pounds of butter, worth $25. Too much to lose when a $50 machine will save it, and will last for years.

Profanity Justified

Lady—Why, you naughty boy. I never heard such language since the day I was born.

Small Boy—Yes, mum; I s'pose dere wuz a good deal of cussin' de day you wuz born.

Peace and Good-Will

A Southern Missouri man was being tried on a charge of assault. The state brought into court as the weapons used a rail, an ax, a pair of tongs, a saw and a rifle. The defendant's counsel exhibited as the other man's weapons a scythe blade, a pitchfork, a pistol and a hoe.

The jury's verdict is said to have been: "Resolved, that we, the jury, would have given one dollar each to have seen the fight."—Exchange.

A Superfluity.

Little George was six years old at New Year's, and the family was much interested in having him start to school in February; but he insisted that he was not going.

One day his grandmother said to him, "Georgia, you are going to school with sister this winter, aren't you?"

"No, Grandma, I'm not going to school at all. I can't read, nor I can't write, nor I can't sing, and I'd like to know what good I'd be at school."

A Mail-Made Mechanic

A New York lawyer hired a colored chauffeur some time ago. The darky, who had newly arrived from Virginia, could run a car; but, as developed subsequently, he had studied the mechanism of automobiles through the medium of a course of correspondence lessons by mail.

The discovery came about in the second week of his employment in the new job. The car stalled on a lonely Long Island road, fifteen miles from almost anywhere. The chauffeur climbed out of his seat and got down under the car. He spent some minutes there and then emerged.

"Dey's three different things de matter wif dis car," he announced; "an' I don't know whut nary one of 'em is!"

SEE AND TRY A DE LAVAL CREAM SEPARATOR

Be Your Own Judge

We cannot believe that there is a sensible man living who would purchase any other than a DE LAVAL Cream Separator for his own use if he would but SEE and TRY an improved DE LAVAL machine before buying.

It is a fact that 99 per cent. of all separator buyers who do SEE and TRY a DE LAVAL machine before buying purchase the DE LAVAL and will have no other separator. The 1 per cent. who do not buy the DE LAVAL are those who allow themselves to be influenced by something other than real genuine separator merit.

Every responsible person who wishes it may have the Free Trial of a DE LAVAL machine at his own home without advance payment or any obligation whatsoever. Simply ask the DE LAVAL agent in your nearest town or write direct to the nearest DE LAVAL office.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

THE DE LAVAL SEPARATOR CO.
NEW YORK CHICAGO SAN FRANCISCO SEATTLE

FREE TELESCOPE 3½ FEET LONG

If you will accept this powerful telescope and show it to your friends; if you want to examine fences, count stock, see houses, friends and objects miles away just like they were close—write today. Enjoy it day and night. Needed on every farm. Telescopes this size have sold for $5 to $8. It is brass bound; protected with brass caps on ends. 5 sections; opens out over 3½ feet long; closed, 12 inches long. Entertain your friends with the "Wonder."

5 to 10-mile Sight Range

It is far beyond expectations. If I couldn't get another I wouldn't take $5 for it.—O. F. Folk, Elk Lick, Pa.

Worth $10.00 to me. I can see cattle at 15 miles and a nickel at 60 yards—Tervis S. Sepeda, Morgan Hill, Calf.

It's a dandy; all you claim and then some. I trained it on the Buttes 28 miles away, they looked like 2 or 3 miles instead. I can count stock in farmer's yard 4 miles away—Chas. A. Story, Ft. Robinson, Neb.

Every boy and man on farm needs one—Chester Housen, Minden, Ga.

Our farm is on a hill and we can see 10 miles away. Count windows in houses which cannot be seen with the eye.—Henry Conner, Manor, Tex.

Can see children playing at school six miles away.—P. H. Herrington, McDade, Tex.

Can see court-house clock 2 miles away and tell exact minute.—Jennie Beers, Columbus, Ind.

Best investment for the money I ever made.—Mathie Brown, Batavia, Ill.

Indianapolis, Ind.

POULTRY NOTES

The hen came striding down the street
To scratch the rose bed with both feet,
Oh, what would we poor mortals do
Had she four feet instead of two?

Keep the nests clean.

Quality and uniformity counts in the egg market.

The infertile egg is the quality egg for market.

Whole corn is an excellent food for setting hens.

Sour milk is a splendid food for chicks—tonic and nourishing.

Have enough nests. One nest for every four hens is about right.

The hen's greatest profit producing period is during her first and second years.

There is very little danger of overfeeding young stock, if feed on right materials.

Uniform products command highest prices. Pure-bred fowls produce uniform products.

Given the same care and feed, pure-bred fowls will always make more profit than mongrels.

Excelsior is excellent for nest bottoms. It should be renewed often, and the old should be burned.

The loss to the farmers from bad methods of handling and marketing eggs amounts to $45,000,000 annually.

Plenty of exercise is what increases the egg yield, provided the fowls get plenty of egg-forming food while getting the exercise.

Keep using lime and whitewash freely. Mix kerosene or crude oil with the whitewash, mix it thin and apply wit'ı a spray pump.

White diarrhea usually sets in within forty-eight hours after the chick is hatched, though it may develop up until the chick is four days old. Feed sour milk to check and prevent an epidemic of it.

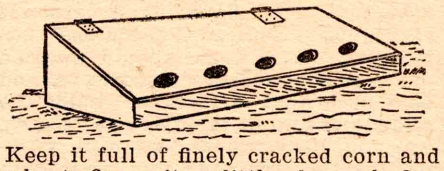
The farmer who keeps sufficient number of fowls to send a case or more of fresh eggs to market each week can make poultry pay handsomely if he sends only good eggs, under his own trademark.

The Buttercups, a Mediterranean variety of egg-producing poultry, are rapidly winning great favor in this country. Though the fowls came from the Island of Cicily, just off the coast of Italy, they have an American name.

One reason why the Barred Plymouth Rock is so popular with our readers is because this variety was one of the first general purpose fowls to win great popularity. Our mothers and grandmothers raised them. We know they are good. Another reason is, a better fowl for farmers does not exist. Others are as good, however.

SELF-FEEDER FOR SMALL CHICKS

SMALL chicks will not eat more than they want, and they should have all they want whenever they want it. The busy farmer's wife does not always know just when a little chick is hungry, and hasn't the time to run around to see every hour or so. Above is a model of a chick feeder that has been used with the utmost success and satisfaction. It is fifteen inches long, five inches wide, three inches high in the back, and one and one-half inches high in front. The top is a thin board, and the holes are bored with a one and one-fourth inch auger. This lid is fastened at the top with small hinges.



Keep it full of finely cracked corn and wheat, fine grit, a little charcoal. One of these self-feeders placed near a dozen coops will care for as many broods of little chicks. It must be placed where larger fowls can not have access to it, but then the little chicks should be kept in a lot where other fowls are not permitted. A chick-tight poultry yard is a necessity on every farm if chickens are to be kept at greatest profit.

STRANGE WAY TO PRESERVE EGGS

A MODE of preserving eggs has been practiced in Bavaria recently which is said to be satisfactory. The eggs are placed in water of a temperature of about 95 degrees for a quarter of an hour. Then they are put on a net, held for five seconds in boiling water, and then, as quickly as possible, removed into cold water. The eggs, still wet, are laid on a clean cloth and allowed to dry by exposure to the air. They must not be dried off with a cloth or towel. When they are dry they are packed in a box with bran and ground peat. The box is stored in a cool place, out of reach of frost. Eggs thus preserved in June were found to be perfectly fresh next March.

Positively No.

A little girl was told if she didn't behave she would be shut up in the chicken-coop. To which she gave the following ultimatum: "You can shut me up in the chicken-coop if you want to, but I ain't going to lay any eggs."—Judge.

Strictly Confidential.

Clara: "Rose told me that you told her that secret I told you not to tell her."

Belle: "She's a mean thing; I told her not to tell you."

Clara: "Well, I told her I wouldn't tell you she told me, so don't tell her I did."

Guaranteed Rupture Holder On 60 Days Trial

Won't Cost You a Cent if the Two Months' Test Doesn't Prove All Our Claims.

You can make a thorough 60-day test of this guaranteed rupture holder without having to risk a single cent. We'll make one especially for your case and let you see for yourself how it takes all the misery out of being ruptured.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of **good** enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City

I'll Stop Your Worm Losses

President S. R. FEIL Reg. Pharmacist and Chemist

(79)

READ THIS LETTER

"Ship us at once another 300-lb. barrel of Sal-Vet. We find it an invaluable asset to successful sheep farming. Every sheep on our place is in excellent, thrifty condition."—Geo. McKerrow & Sons, Pewaukee, Wis.

I'll Feed Your Stock 60 Days Before You Pay

I want the privilege of sending you a 60-day supply of SAL-VET, the great worm destroyer and conditioner, at my risk and without asking you a single penny in advance.

If your stock (especially sheep and hogs) cough, look gaunt and thin, have dull eyes, laggard steps and drooping ears—look out for worms. They are stealing your stock profits and keeping your animals from thriving and putting on money-making flesh. Some may even die. I'll stop these losses, or no pay.

SAL-VET

I never ask any man to pay me a penny for Sal-Vet until he has convinced himself that it has rid his stock of worms—stopped his losses and increased his profits. Read this liberal offer, already accepted by hundreds of thousands of farmers:

PRICES
40 lbs. $2.25, 100 lbs. $5, 200 lbs. $9, 300 lbs. $13.00, 500 lbs. $21.12. No shipment made of less than 40 lbs. on 60 day offer. Never sold in bulk; only in Trade-Marked Sal-Vet packages.

Send No Money—Just the Coupon

Just fill out the coupon, tell me how many head of stock you have; mail it to me today. I'll send you enough Sal-Vet to last all your stock 60 days. You simply pay the freight charges when it arrives; when the 60 days are up report results. If Sal-Vet does not do all I claim, I'll cancel the charge; you won't owe me a penny. Send no money, just the coupon. Address

S. R. Feil, Pres. THE S. R. FEIL CO., Dept UPF Cleveland, Ohio

60-day trial shipments are based on 1 lb. of "Sal-Vet" for each hog or sheep, and 4 lbs. for each horse or head of cattle, as nearly as we can come without breaking regular packages.

I will pay the freight and you may pay for it if it does not cancel the charge.

SIDNEY R. FEIL, Pres., THE S. R. FEIL CO., Cleveland, Ohio
Ship me enough SAL-VET to last my stock 60 days. I will pay the freight and report results in 60 days and will then pay for it if it does what you claim. If it does not you are to cancel the charge.

Dressmaking Lessons Free

Complete Illustrated Course of Lessons Given to Women Readers at This Parer For a Short Time Only

We have just published in one large volume one of the most valuable and most comprehensive courses of instruction in home dressmaking ever written. This course of lessons covers practically every phase of the subject of dressmaking. It tells you how to make most every garment from the simplest house apron to the most elaborate evening gown.

This valuable book, "Every Woman Her Own Dressmaker," will be found of great assistance to beginners as well as experienced dressmakers. You can turn to this book and find a satisfactory answer to practically every dressmaking question which might come up. It illustrates and fully describes 200 very latest styles for ladies and children. It gives valuable instructions on fitting and finishing—instruction needed by every woman. Here are some of the interesting subjects taught in these lessons:

How to Sponge and Shrink Wool Goods.

How to Shrink Wash Materials.

How to Make a Tailored Coat at Home.

How to Make a Plain Shirtwaist by the Newest and Easiest Method.

How to Make a Boned Lining.

How to Make Stylish Suits, Skirts, Waists, Dresses and Dressing Sacques.

How to Make Wrappers, Kimonos and Underclothes.

How to Make Children's Coats and School Clothes.

How to make Baby Clothes, Long and Short.

We are giving these valuable dressmaking books away absolutely free just to introduce our popular publication. Send us your name and address at once, together with 4 cents in stamps to cover mailing expense, and secure one of these valuable books before the offer is withdrawn. Address ARTHUR CAPPER COMPANY, Dept. DM-42, Topeka, Kan.

Work in Woman's World

There's a dark little flat in a poor little street
Where never a sunbeam falls,
And never the patter of children's feet
Is heard in the dingy halls.
And never a fairy has entered there
And never a playful gnome.
The rooms are cold and the walls are bare,
And silence broods in the dampened air,
But somebody calls it Home.

WHAT WIVES CAN DO

IT IS a mistake to look upon the farm as a mere machine to make money. It is a home, a shelter, a place where we should be happiest and most content. The house and grounds should be a source of pride and satisfaction. The home should sweeten our joys and soften our sorrows, and be a place that attracts and holds the companionship of families and friends. Are you, dear woman and man, striving together for your own, your children's and your community's sakes, to make your home a real home, a harbor of peace, of plenty, and of life's richest blessings, or are you only using it as a mere convenience in your efforts to make money?

Much of the burden of the home rests upon the woman, and she can do much to make homelife what it should be, or she may neglect these opportunities and suffer in consequence.

A contributor to a well-known weekly publication brought out the possibilities of the woman's influence in this respect so forcibly that we give a selection from her story that carries with it a moral lesson of great value. Here it is:

Recently the wife of a prosperous farmer died. The doctors could find no reason whatever for her death. One old physician who had known her longest gave as his opinion, "She just did not want to live." When the neighbors gathered to make ready for the funeral they understood why she did not want to live. The big house was so bare and barnlike. From cellar to garret there was not a comfort or convenience in it. Even the cookstove had lost some of its legs and bricks supplied their places. Her husband had big barns full of the latest machinery and the choicest stock. He had plenty of hired help. He knew what he wanted and always got it. Don't blame him too much The dead wife's timidity was the real root of it alll At the very start of her married life she could have prevented such a situation If the needs of the home had been presented persistently and consistently they would have been heeded

Now here the story of another kind of wife It was in haying time and of course all the men were rushed Several times she called their attention to the fact there was no stovewood cut and that she had scraped up all the chips and bark to be found. At noon they laughed when they saw one end of a long fence rail burning in the cookstove and the other resting in a chair in the middle of the kitchen. They hurried back to the field after dinner without cutting any wood. At night they came in for supper. They found the brave woman calmly sewing; there was no fire and no supper. The tired, hungry men did not forget their lesson.

HELPS FOR THE HOUSEWIFE

If a package or envelope is sealed with white of egg instead of gum it cannot be steamed open.

When making mustard add a tiny drop of salad oil to it while it is being mixed. It will greatly improve the flavor.

A cup of moderately strong tea, in which two or three slices of lemon have been infused, will frequently cure a nervous headache.

Fingers stained with fresh fruit, walnuts, etc., should be dipped in strong tea, rubbed with a nail brush, and then washed in warm water.

Never have a metal spoon in a saucepan if you wish the contents to boil quickly, for the spoon is the means of carrying off a great deal of heat.

When making a ground-rice pudding a great improvement to it is to add two teaspoonsful of cornflour to the mixture. This makes it very creamy, and adds greatly to the flavor.

Always add a small piece of butter to milk puddings when cooking them, as this not only improves the taste, but prevents the pudding from boiling over.

"Children Teething"

MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

Should too much salt have been added to the soup, slice a raw potato and place it to boil in the soup for a few minutes. It will absorbe a great deal of the salt.

We like to can a nice supply of garden beets when young and tender. We boil them in salted water until soft, peel and slice into cans, turn boiling vinegar over them and seal. We add sugar to some, making a sweet pickle.—Mrs. . C. L.

Try to keep a pair of scissors in the kitchen, and cut salad vegetables with these. A pair of scissors does good work among the lettuce leaves.

As everything points to a big supply of fruits, try to get ready for the work so there will be no unnecessary delay. Among other things, send to Department of Agriculture, Washington, D. C., for Farmers' Bulletin No. 359.

Patterns of Fashion

6124, FOUR-GORED SKIRT.—The closing is made at the left side of the front and the empire or regulation waistline used. Dart or gathers can be made at the side. Linen or serge material should be used. Sizes 22 to 30 inches waist measure. Medium size requires 4½ yards of 36-inch material.

6115.—This pretty frock has two full length tucks at each side beginning at the shoulders. The closing is in the center of the front and the sleeve is set in without any fullness at the shoulder, and may be full length if preferred. Gingham, pongee or cashmere can be used to make this dress with the sash of ribbon or satin. Sizes 2, 4, and 6 years. Medium size requires 1⅞ yards of 36-inch material, ½ yard of 36-inch satin for the belt.

6123—This shirtwaist has a tuck at each shoulder in front, but the back is plain. The neck may have a high or low finish and the sleeve may be long or short. This style is appropriate for challis, silk, madras or linen. Sizes 34 to 42 inches bust measure. Medium size requires 2½ yards of 36-inch material, ¾ yards of 27-inch material for the collar and cuffs.

Price of each of above patterns, 10 cents.

Up-to-Date Farming, Indianapolis

STEP- AND TIME-SAVERS

THIS is to be a story of hammer and nails. Nothing to buy, nothing to make, nothing to do but—

Drive the nail aright, boys
Hit it on the head.
Strike with all your might, boys
While the iron is red.

—or, in other words, the moment you finish reading this get son, brother or husband to get a hammer and some nails, and put them where you want them. Or, do it yourself.

This is to be a scheme to save both steps and disorder.

First, near the water bench, or the sink, or wherever the business of washing face and hands is done, put up nails for the wash basin, the dipper, the soap box, a mirror, a fingernail brush, tooth brushes and one or two for extras.

Second, back of the stove, and along either side, put two rows, one about fifteen inches above the other, for pans, skillets, and cooking utensils, that are often used. Have them handy no matter how it looks, this is not a campaign to make an art exhibit of of the kitchen, but to save mother's tired feet.

On the back door and behind it put two rows of nails for coats, caps, hats, jackets, and other wearing apparel of the men folks. If little ones make the home lively, put up a row low for their use, and teach them to use them. How many, many times a day does mother pick up things that ought never to be thrown down. Nails will help.

Use the walls, as well as the shelves in the pantry by putting in nails and hanging up the utensils that will "hang." It saves space, it saves time, and it saves utensils.

Have a nail for the broom. Bore a hole through the handle. Brooms that hang on the wall never have the brush twisted and bent out of shape. A good straight brush makes sweeping easier, and lasts longer. The straw that is bent soon breaks.

After all this is done, go out in the woodshed, and drive in the rest of the nails. Hang up the baskets, the rubber boots, rubber coats, ropes, pails, and all the other articles that soon "go to the dogs" because they are left laying around.

Nails are cheap, and everyone has a hammer. Use them both. It will pay.

WHY THEY MARRIED

POSTCARDS having been sent out to married men with the inquiry, "Why did you marry?" a large number of responses came to hand, from the following is a selection:

"That's what I have been trying for eleven years to find out."

"Married to get square with her mother, but never have."

"Because Sarah told me that five other men had proposed to her."

"The father thought eight years' courtin' was almost long enough."

"I was tired of buying presents and going to theaters and concerts, and wanted a rest. Have saved money."

"Please don't stir me up."

"Because I thought she was one among a thousand; now I sometimes thing she is a thousand among one."

"Because I did not have the experience I have now."

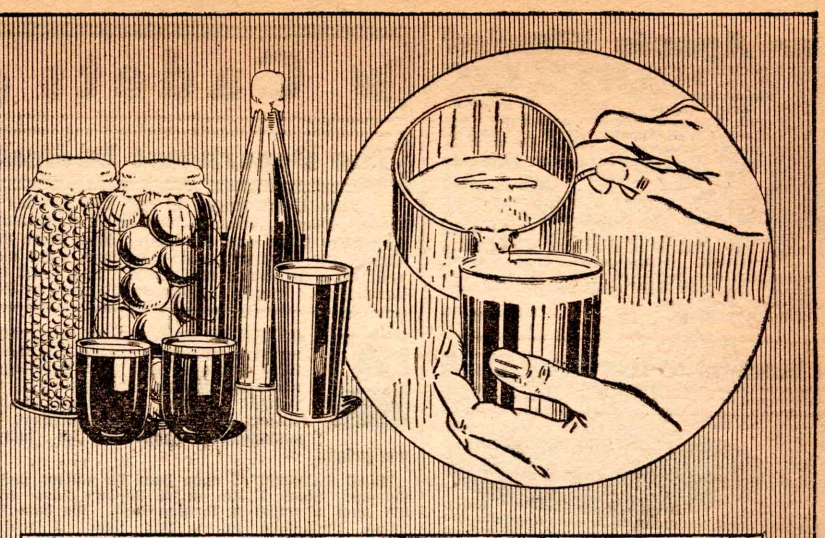
"That's the same question that my friends ask me."

"Because I had more money than I knew what to do with. Now I have more to do than I have money with."

"I wanted a companion of the opposite sex. P. S.—She is still opposite."

"Because it is just my luck."

"I yearned for company. We now have it all the time."



Thus Sealed, They Cannot Spoil

Seal Jellies, Preserves, Vegetables and Catsup With ***Parowax*** and they will keep indefinitely, and retain their natural flavor.

Sealing with Parowax is much simpler and easier, too. No struggling with tops. No fuss, no bother. Not even paper covers need be used.

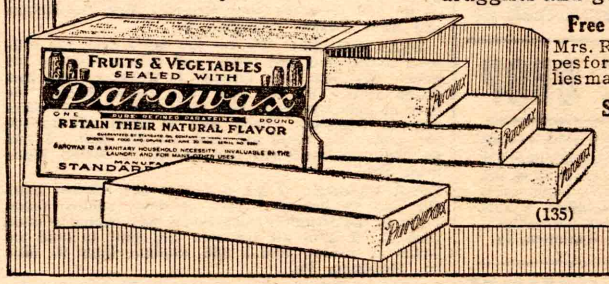
Pour this pure, refined paraffine directly on the cooled contents of each jelly glass.

Dip tops of jars and bottles in melted Parowax. No mould or fermentation can result.

Parowax

is indispensable in the laundry—both for washing and starching as well as ironing.

Costs but a trifle. Sold by all druggists and grocers.



Free Book of Recipes
Mrs. Rorer's prize recipes for preserves and jellies mailed upon request.

6 Knives 6 Forks
IN A HANDSOME BOX WITHOUT COST

The illustration gives you an idea of how handsome this set is. We have given away hundreds of them and they always give satisfaction. No, they are not silver, if they were the set would cost from $12 to $20. But you will get good service from these knives and forks and our offer is a bargain.

OUR OFFER—Send us $1.25 for 2 years' subscription to Up-to-Date Farming and we will send the Knife and Fork Set to you fully prepaid. This is a bargain.

Up-to-Date Farming, Indianapolis.

A Cart Load of Fun

This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in **"A Cart Load of Fun"** are the following: "A Man With a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded Not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jones' Baby," "Breaking up a Cat Concert," and 148 others. **"A Cart Load of Fun"** is a book of sixty-four large double column pages, neatly bound in attractive colored paper covers. Price 10 cents each, 3 for 25c; postpaid.

For 10 Cts

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

AS SUMMER approaches our young writers multiply as do the beautiful flowers, and that intelligent activity makes us know that the future holds in store better things for this great country. We necessarily shorten the letters we print:

DEAR CADETS: I come from the eastern part of Colorado, where I live on a 640-acre farm, about 260 acres of which is farming land. We have been taking Up-to-Date for a long time. I was 19 the 8th of March, and have lived on a farm all my life. I would be glad for the Cadets to write me, and I will answer all.—Otis Cauble, Holyoke, Colo.

DEAR CADETS: The principal crops in Virginia are corn, wheat, oats, and all kinds of garden vegetables. I am 18 years old, and like to ride horseback. I am fond of all out door sports. I hope to hear from the Cadet boys and girls.—Amanda D. Pierson, Clinchport, Va.

DEAR CADETS: I am a rancher here in Colorado, and enjoy it very much. The ranch and country near it is entirely surrounded by mountains. Several prominent mountains are in plain view from the ranch—Pilot Knob, Elk mountain, Sand mountain, Morgan mountain, Wolf mountain, Ethel's Peak, and Storm mountain. Would like to hear from the writers.—R. A. Phillips, Deep Creek, Colo.

DEAR CADETS: I live on an eighty-acre farm in the Buckeye state. I have been reading the Cadet page for a long time, and would like to exchange cards or letters with the Cadets. I would like a post card shower for May 23, for myself and sister, as we both have the same birthday, May 23.—Martha and Anna Wrasse, Arlington, O.

DEAR CADETS: We are two miles from the railroad station and post office, and have a farm of 100 acres. We have been farming in Texas for the past fifteen years. We call our home Sunset Farm. We have no cold winters in this part of Texas. We plant corn in February. Land sells at from $20 to $50 per acre. We would sell ours for $28 cash. I will be twenty-six years old July 23.—A. L. Hafer, Westfield, Tex.

DEAR CADETS: I am a farmer girl, sixteen years old, and we live on a farm of three hundred acres. I am in the Hyndman high school and expect to complete it. I want all the boys and girls to send me letters or photos, and I will answer.—Mary C. Miller, Hyndman, Pa.

DEAR CADETS: The winters in Phoenix are delightful. We do not have snow here. I hardly know what snow is. We think it is terrible if a day passes without sunshine. It is rather warm in summer, but stock does not suffer. I have never heard of a person dying from heat, though the thermometer sometimes reaches 117 degrees in the shade. We have an excellent high school in Pheonix. It consists of four large buildings and a one-story building. The equipment is excellent and up-to-date. The buildings are the Science Hall, Auditorium, Domestic Science and Arts Building, and Commercial Hall. The smaller building is devoted to manual training. There are over five hundred students this year.

We had an unusually cold spell during the first days of January so there were no lovely fragrant orange blossoms, and there will be no oranges here this year; and California suffered a greater loss than Arizona. The ostrich farms are excellent here. The greatest farm in the United States is west of Phoenix. The ostriches and their eggs and little ones are interesting objects. The Grand Canyon of Arizona is one of the world's greatest wonders. I admit we have rattlesnakes, scorpions, centipedes, gila monsters and tarantulas, but they do not worry us. The scorpion is the only one that is really a bother; its bite is painful for a little while, but it is really harmless. I live in an adobe or mud house. Don't take it for a dugout. The adobe is moulded into large bricks like the cement, and the house is constructed in the same way. It is plastered on both sides so that the adobe does not show. It is very cool in the summer. I live on a twenty-acre farm a quarter of a mile out of the city limits, and a mile and a quarter from the center of the town. I am nineteen years old, and expect to go to college next year and take domestic science. I enjoy the Cadet letters very much. I have cards from almost all of the states, and from Australia and Africa. I hope to get one from our little European friend in Holland.—Rena C. LaTourette, Route 1, Phoenix, Arizona.

DEAR CADETS: I am a country boy of nineteen, and live on a farm about a mile from a small railroad town. My brother and I have run the farm for about five years, and have been taking Up-to-Date Farming about a year. I will answer all cards and letters I receive.—Eugene F. Stirnaman, Fort Gage, Ill.

DEAR CADETS: I am a girl of fifteen years, and would like to exchange postals with the boys and girls of the Up-to-Date Family. I work outside in summer and go to school in winter. I am going to have a garden of my own this summer. Where I live is all surrounded by mountains. I get lonesome sometimes when at home and have nothing to do, so if you write I will thank you, and will try to answer all that write to me.—Mary Landers, Hague, N. Y.

DEAR CADETS: I live on a farm of 120 acres, away out in Idaho. We have big crops of fruit, and enjoy eating apples. We raise alfalfa and let it make seed. Sometimes it does better than at other times. I am seventeen years old and love farm life. I would like to hear from the girls and boys.—Elvira Lundt, Fayette, Idaho, R. F. D. 2.

DEAR CADETS: Don't you think it would be nice for the Cadets to start circle letters? Mother and all of her brothers and sisters have a circle letter. Each member of the circle writes his letter, and every other member reads it. Then when the letter returns you take your letter out. In that way you get to keep all the letters you write to the circle. Will not some of you join in a circle with me? I would like to have a Cadet from every state to write to me, and I will start the circle letter and give directions. Mother owns a farm here, and I like country life very much, but I work at the auto trade. Last year mother and my three brothers killed twenty-seven rattlesnakes. We have unlimited range here, and mother and my brothers are running a turkey ranch. They hatch the eggs in incubators. I was born July 18, 1892, and I will answer all communications I receive. Up-to-Date is doing splendid work.—F. A. Lipcomb, Blocksburg, Cal.

DEAR CADETS: I am a Virginia girl of twenty-one years. My mother takes Up-to-Date Farming, and thinks it a fine paper, I enjoy reading the Cadet page, and think there are some very interesting letters. I live on a small farm, but I enjoy city life much better than the country. I visit the beautiful city of Washington, D. C. I was employed there last winter, and I expect to return when the weather gets cold. I would be glad to exchange cards or letters with the Cadet boys and girls.—Ada Cooper, Bristow, Va.

DEAR CADETS: I am a farm boy of 16 years, and live on a farm of 125 acres in the good old state of Pennsylvania; I would not live in town. We have taken this paper about four years, and we think it is a fine paper. I will try to answer all cards and letters I receive from the boys and girls.—John E. Conrad, Big Run, Pa.

DEAR CADETS: I am a sixteen-year-old blue eyed farmer girl from Louisiana, and live on a 400-acre farm, where we raise corn, cotton, sugar cane, and potatoes. We have taken Up-to-Date Farming for two years, and think it is the best farm paper we ever did read. I would like to exchange cards, letters and photos with all the Cadet boys and girls; so please write.—Laurence Derowen, New Iberia, La.

DEAR CADETS: I live on a farm and our principal crops are corn, wheat, tobacco and potatoes, also some fruit. Now, Cadets, don't get me mixed up with my cousin Anna Belle, just because my name is Belle. I am paying her a visit now, and if she knew I put her name in my letter I expect I would get a paddling. She writes to some Cadet in Kentucky, but she won't tell me who it is. If you boys or girls can tell me I will send you my photo. She only writes to this one, but I can't blame her for his photo is a beauty. I am seventeen years old. Now, don't address your letters to Anne Belle, but this way.—Belle Branard, Harrison, O.

DEAR CADETS: I live in the country and you may know I have a good time and am on the go.

My hair is black, my eyes are blue;
My mouth is large, my freckles too.
I am five feet eight, both up and down,
When measured last I was in town.
I weigh one hundred and thirty-two,
The last time I weighed I was rather blue,
My age was twenty-four last year
And from the Cadets I want to hear,
All who write will be answered straight,
And here's three cheers for Up-to-Date.
—John King, Mayfield, Ky.

DEAR CADETS: I am an Indiana girl and live on a farm of 160 acres in the southern part of the state. I am fond of music, and have an organ. My brother has a violin, and we play together. He is thirteen years old, and I am sixteen. Papa has eight horses. I am fond of horseback riding. I have a flock of hens of my own, and I have four hens setting on duck eggs. Would be glad to exchange cards or letters with the Cadets.—Ray Doolittle, Fredonia, Ind.

DEAR CADETS: Will you allow a Philipino farmer's daughter to enter your circle? On our 2012-acre farm we raise sugar cane from which we make sugar. I am the fourth of five sisters, and am thirteen years old. One of my sisters plays the piano, another plays the violin, and another sings. I am studying the violin too. Father teaches us, and we have fine times with music in our home. I would like to exchange letters and cards with the Cadet boys and girls.—Conchinta H. Lopez(Hda Faraon, Fabrica, Occ. Neg., Philipine Islands.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

About fifty years ago the first agricultural college was established to teach better agriculture and soon they were in every state. Yet in fifty years the average yields of crops has not increased. Then came the experiment stations; then farmers' institutes to take the teachings to all the counties; these were followed by Gospel of Greater Production trains, and demonstration farms by railroads, but still, down to 1912, no material increase in the average acre yields has resulted.

—o—

Somebody estimated that the cost to the county to teach farmers how to farm better to produce more has been costing $500,000 a day. But we see in the Year Book of the department of agriculture, that, as far as accomplishing the desired results goes that all this money has been wasted. That is, the yields have not increased. This is a strong assertion and people who have not access to the Year Book may doubt it, so we give a few examples.

—o—

The average yields of corn, in bushels, an acre, from 1866 down to 1911, forty-six years, were: (The dash separates the time in five-year periods.)

25.3, 23.6, 26.0, 23.6, 28.3—29.1, 30.8, 23.8, 20.7, 29.5—26.2, 26.7, 26.9, 29.2, 27.6—18.6, 24.6, 22.7, 25.8, 26.5—22.0, 20.1, 26.3, 27.0, 20.7—27.0, 23.1, 22.5, 19.4, 26.2—28.2, 23.8, 24.8, 25.3, 25.3—16.7, 26.8, 25.5, 26.8, 28.8—30.3, 25.9, 26.2, 25.5, 27.7—23.9,

—o—

The average yields of wheat, in bushels, per acre, in the same period, were as follows:

9.9, 11.6, 12.1, 13.6, 12.4—11.6, 12.0, 12.7, 12.3, 11.1—10.5, 13.9, 13.1, 13.8, 13.1—10.2, 13.6, 11.6, 13.0, 10.4—12.4, 12.1, 11.1, 12.9, 11.1—15.3, 13.4, 11.4, 13.2, 13.7—12.4, 13.4, 15.3, 12.3, 12.3—15.0, 14.5, 12.9, 12.5, 14.5—15.5, 14.0, 14.0, 15.8, 13.9—12.5.

—o—

The same thing is noticed in oats, which started at 30.2 bushels average in 1866, forty-six years ago, and was 24.4 bushels in 1911. The greatest average was 34.5 bushels for 1902 and the smallest was 19.8 in 1900. The yield of barley in 1866 was 27.9 bushels, and in 1911 was 21.0 bushels. The highest was for 1902, 29.0 bushels. Potatoes made an average yield of 100.2 bushels in 1866, but only 80.9 bushels in 1911. The greatest yield in this time was in 1875, 110.5 bushels, and the smallest average yield was in 1881, 53.5 bushels. The average yield of hay an acre was 1.23 tons in 1866, and 1.10 tons in 1911. The highest average was 1.55 tons in 1898, and the lowest was 1.06 tons in 1895.

—o—

The average yields of cotton per acre, in pounds, from 1890 to 1911, inclusive, twenty-two years, were as follows:

187.0, 179.4, 209.2, 148.8, 191.7—155.6, 124.1, 181.9, 219.0, 184.1—194.4, 169.0, 188.5, 174.5, 204.9—186.1, 202.5, 178.3, 194.9, 154.3—170.7, 208.2.

—o—

It will be observed that the greatest acre yield was 219.0 pounds. This occurred in 1898. By refering to the cash prices in New York, also found in the Year Book of the Department of Agriculture, we find that large yields had the same effect on prices then as now. For instance the highest price on the 1898 crop was 7 13-16 cents and it sold down to 5 5-16 cents a pound. Since that crop the price has not been so low.

—o—

So we say again that as far as all of the enormous effort and expense, over forty-six years, to increase the average acre yields of crops is concerned, it has been wasted. If we are not forced to this conclusion, then what other conclusion can we arrive at? There can not be a question about the efforts being made. The United States Department of Agriculture that spends its millions for increased production, one or more agricultural colleges and experiment stations in each state, a farmers' institute in every county and greater crop trains run over nearly all railroads at the enormous expense estimated now at 500,000 a day all to teach the farmers how to farm better and raise more, and all at the expense of the people, yet the average yields stubbornly refuse to rise a bushel or fraction of a bushel per acre and maintain the rise.

—o—

We are forced to the conclusion that something has been lacking. What has been lacking in the program? What is the thing needed?

—o—

Failure in any good cause is to be regretted. But to persist along the same lines and increase the expense, perhaps to double it, and in the end to announce continued failure borders on a crime. And this is exactly what the exclusive larger crop teachers are preparing for through the country demonstration agents' propaganda.

—o—

Purdue Experiment Station, of Indiana, is trying to put a demonstration agent in each of the ninety-two counties in Indiana. The expense will be $3,000 for each county, or 270,000 for all of the counties if they succeed. And this will be the approximate expense each year. Of course, producers and consumers must pay this much more because this is a new movement and new offices are created and new employes will fill them. In short all of these people will be added to the middlemen class that we hear so much complaint about. And what we say of Indiana applies equally to many other states now, because the plan is to put a demonstration agent in each county in the country.

—o—

As long as the big crops sell for less money than the small ones, and as long as farming does not steadily yield enough money to afford the farmer to buy fertilizers, and as long as farmers are without a marketing system that will find all of the demand, resulting in larger markets for larger crops it is the worst kind of folly to increase the effort and expense toward increasing yields because it can't and won't be done.

—o—

But give the average farmer profitable prices year after year and you can depend on him to increase his production without any outside help whatever. PROFIT develops manufacturing, merchandising and fills the professional fields without any driving the people in, by outside forces. And it will be the same way with agriculture. First solve the marketing problem to guarantee the profits and there will be no need to teach scientific methods of getting good crops from impoverished soil, because the soil won't then remain impoverished.

No PROFIT drives the people out of any business and reduces the volume of any business. PROFIT brings people into a business and develops any business. And there you are. PROFIT is the one thing that has been lacking. PROFIT is the one thing needed. Was there any profit to the average cotton grower in the record-breaking yield of 1898 of 219 pounds average to the acre, at the highest cash price in New York of 7 13-16 cents, or $17.22 per acre? Suppose the average farmer had ten acres of cotton, it would be only $172.00 for his year's work.

—o—

So we can't condemn the exclusive greater crop workers too much. But we see that it's their living to continue along the same line. As soon as they take up the other side, too, the marketing side and work for a PROFIT in agriculture the whole problem will solve itself.

—o—

We appeal to every farmer to not go all through this year working exclusively for production, but to prepare now for marketing the crops when they are produced.

—o—

The one thing needed is PROFIT. The profit depends on the price you receive. If you let others make the price they will be sure to pocket most of the PROFIT. But if you will see

The Voice of Reconstruction

When a flood sweeps over a vast area, desolating the cities and towns which lie in its course, the appeal for assistance gets a unanimous response from the whole country.

With all commercial and social order wiped out, an afflicted community is unable to do for itself. It must draw upon the resources of the nation of which it is a part.

In such an emergency, the telephone gives its greatest service when it carries the voice of distress to the outside world, and the voice of the outside world back to those suffering.

At the most critical time, the nearest telephone connected and working in the Bell System affords instant communication with distant places.

And always the Bell System, with its extensive resources and reserve means, is able to restore its service promptly, and in facilitating the work of rebuilding, performs one of its highest civic functions.

Write if you prefer open face or hunting case, ladies' or gents' size, and we will send this twenty-five year, fully guaranteed, thin model, American made, beautifully engraved watch for free examination and test. If you are satisfied with it and are sure it equals a $25.00 gold watch, pay us only $3.95 and the watch is yours. Write today.
Drexel Jewelry Co., Dept. 23 Chicago

SILOS and SILAGE FREE
Great 240-Page Book
Over forty illustrations. A vast amount of useful information boiled down for the practical farmer. Tells "How to Make Silage," "How to Build Silos," "How to Maintain Soil Fertility by Silage System." All about Summer Silos and the Use of Silage in Beef Production. Limited, Revised and Enlarged Edition now ready. Sent free for 25c to pay for a 1 year's subscription to FARM LIFE, Dept. U3, Spencer, Ind.

ALFALFA
The richest grass grown. Makes good feed for all stock; horses, cows, sheep, hogs and chickens. This seed should produce $60 worth of hay per acre. Our seed is all clean and free of weed seeds. Sow 20 pounds per acre early in the spring on well prepared ground or disk land every two weeks and sow in August. Will produce three crops of fine hay the following season. Write for prices. O. K. SEED STORE, Indianapolis

to it that a local union of the Farmers Society of Equity is organized in your community now you and your brother farmers will put most of the PROFITS taken by others into your own pocket when marketing time comes.

—o—

Remember, as soon as you have a local union you can immediately begin to do business through the established Equity System. No waits, no delay. Send the blank below with the names of your neighbors who you particularly want to be associated with you as charter members of the union. We will co-operate with you and all the others to organize your community.

—o—

Fill out the blank and send before you lay the paper aside. It means more for your whole community than you can now imagine.

Time for a Barber

He had had a little too much "tea." Wishing to see how he looked, he picked up a brush that had a mirror on the back of it. By mistake he turned the brush side to him. Gazing for a while, he laid the brush down with a sigh, and said: "I didn't know (hic) it was so bad as that. I certainly do (hic) need a shave."

Polished Manners.

A pompous Englishman, it is said, once saw Abraham Lincoln blacking his own boots.

"An Englishman never blacks his own boots," said the Briton.

Lincoln's eyes twinkled. "Whose boots does he blacken?" he inquired.

THIS IS THE BLANK

S. E. FERRY, Indianapolis, Ind.

Free Pony

Who Wants Me—Quick?

Boys and Girls! Do you want this beautiful Shetland Pony all for your own? Then send me your name and address today—quick. Some one is going to get him—you can have him—*but hurry!*

My Name is *"Major"*

Well Broken Gentle Kind

42 Inches High

I Am Now 42-in. High and 3 yrs. Old I am a Pet, Too

My color is black. I am considered a very handsome pony. I am well trained. You can either ride me or drive me and I am just as kind and gentle as a kitten. I can go almost as fast as a big horse and can haul my carriage with my little owner mile after mile without getting tired or lazy. I do not scare because I know better—have been taught better. I want a kind little boy or girl as my owner. I'll go anywhere to find them. I am just waiting to come to someone. I'll make some boy or girl happy, because that's what I was made for. That's what I was intended for and it's what I like to do. If you want me, and I know you do, just send me your name and address on the coupon below (or a postal,) and I'll do my best to come to you in a hurry—I must go somewhere, so be quick. Send your name this very day.

Wagon and Harness, Too, Come With Me

This is one of the most beautiful ponies, that I have ever given to any boy or girl in all my life, and I have given away more than 25 Shetland Ponies. This one, **"Major"** is a beauty. He will make the heart of any boy or girl leap with joy. I wish you could see him. I just hate to let him go, but go he must, free of all cost to some boy or girl friend of mine who is willing to do me a small favor.

I am going to send a beautiful carriage along with him, and harness too, and I expect a saddle also. Might as well. I want to please and that's the way to do it. I want the boy or girl who gets this elegant Shetland Pony and outfit to be just the happiest person in all the world. I want them to remember me as long as they live, and they will, too. I have dozens of little boy and girl friends to whom I have given ponies and presents, all over the United States and I get letters from them every now and then. They send me pictures of the ponies I gave them, and tell me how pleased they are and that I always do as I say—Now my friend, if you want **"Major"**, just send me your name and do it quick. **I have a gift for you.** A postal card or the coupon in the corner, will do. Hurry! I'll send you the present, pony pictures and letters from boys and girls to prove what I say, so hurry!

Uncle Billy, Pony Man, 142 W. Ohio St., Chicago

I Want This Pony

Uncle Billy, 142 W. Ohio St., Chicago, Ill.

I want **"Major"** and I want you to send me the pony pictures, your free gift, and tell me how to get this pony. Below is my full name and address. Send quick.

IDAHO ORGANIZES STATE UNION

Pocatello, Ida., May 19, 1913—This city saw the organization of a state union of the Farmers Society of Equity today. Fifteen counties were represented by from one to fifteen delegates each. The greatest enthusiasm prevailed, and underneath it was plainly discernable a determination to build up the state organization on strictly business lines. The Society in this state is fortunate in securing leaders from the best business farmers of each county, and the state officials are men of known experience and ability.

A. Y. Satterfield, of Sterling, a man of exceptional ability in organization work, was elected president, and O. E. Scott, who has had long and successful experience as manager for a large co-operative shipping association, was elected secretary-treasurer. A capable board of directors was provided, consisting of one member from each organized county.

The convention met in the hall of the commercial club, and was opened by an address of welcome delivered by one of the members. During the afternoon session the body was invited to attend a banquet given in their honor by the commercial club. The invitation was accepted, and at 8:45 p. m. the convention adjourned and went immediately to the U. S. cafe where a magnificent spread awaited them. Banker Church presided as toastmaster. After-dinner speeches continued until every worker and member who desired to speak had his "say." Many of these speeches were worthy of permanent record. One noteworthy fact was established vividly—that all the fine array of food and clothing came from the soil, and it was in the welfare of the producers that the convention was held. After three hours of mental and physical feasting, we disbanded, a happy lot of delegates who were ready to turn homeward firm in our belief that we had taken a long step toward greater prosperity and the uplifted life.—R. A. Southworth, General Organizer.

All reports in Idaho must now be sent to the State Union F. S. E., Pocatello, Ida. A. Y. Satterfield is state organizer as well as president of the state union.

LOCAL UNION SUPPLIES

HEADQUARTERS has sent samples of office stationary, including letterheads, envelopes, report of shipment blanks, statements, remittance blank, trade marks, etc., to all local and county unions. The idea was to suggest what is needed for business, and prices were quoted at which headquarters can supply them. We also sent forms for appointing township canvassers and the necessary blanks with a request to make a complete canvass at once to get every member possible with the acreage of crops growing for 1913, and another blank to list farmers who will not become members and the acreage of crops they are growing.

The time has come when every farmer should declare himself whether in favor of establishing his own business system, or in favor of continuing the speculators' system—to separate the goats from the sheep. The information such a canvass will bring to the local unions, and through them to county, state and national union, about how farmers themselves look on practical business co-operation and the crops represented by members and non-members, will be of immense value.

A communication was also sent to the secretary of each local to be read in the next meeting. Members should attend the next meeting and take part in the matters that will come up.

Fence Posts

All locals and members that are now, or will soon be in need of fence posts, should get in touch at once with John W. Oaks, Secretary, Wawina, Minn., and make arrangements for their needs. The members of the local at Wawina have 50,000 tamarac fence posts ready for delivery. Quality guaranteed.

A Co-Operative Cannery Established

Our local is putting up a canning factory, and have the building, a 30x30 structure, erected, and are installing the machinery. We bought the city lots, and the members got together and did all the work during spare time, saving considerable expense. All Florida newspapers are giving us credit for our enterprise.—C. H. Carroll, Zephyrhills, Fla.

A Busy Manager

I have opened an office, with telephone connections. We pay in cash for all produce we handle as soon as it is unloaded from the wagons, as buyers have placed funds here in our banks to pay for our stuff as it is loaded. Prospects are very good, and we are sure of "doing things" this summer. We have arranged for cash payments for our coming crop of cucumbers, also.

You should see the smiles of satisfaction pass over the countenances of our members as they receive the cash for their produce when it is delivered. There ar many other things I will write about as soon as time will permit. It is almost impossible for me to handle this work alone, and I shall have some competent help very soon.—C. B. Lozier, Business Agent, Baldwin, County Union, Alabama.

Results Produce an Awakening

Only ordinary interest was manifested in our locality until just recently when one of our members made a shipment through the Equity System and realized $60 above the market price on two cars of potatoes. We look for results in the future.—Robt. Andrus, Ucon, Idaho.

Moving Along

We unloaded a car of feed yesterday, shipped sixteen cases of eggs, gave an order for $20 worth of seeds, and a car of corn, so you see we are moving along.—John Peterson, Galesburg, Kas.

We Want You to Know

A book of much value will be sent to any one interested in a silo filler. It is full of information every farmer with a silo wants to know. Sent free by Jos. Dick Manufacturing Company, Canton, O.

Every reader with three or more cows who has no cream separator should send for the catalog of the New Butterfly Separator. It was advertised in a full page, in May 15th issue. Look up the advertisement. Or, better still, send a postal to Albaugh-Dover Co., Manufacturers, 2298 Marshall Blvd., Chicago, Ill.

A very handsome and valuable catalog has been received from the Witte Iron Works, 1975 Oakland avenue, Kansas City, Mo. Farmers who do not have a gas engine should send for this catalog and learn how valuable an engine can be on the farm.

A refrigerator that does not require ice is a great convenience, and money saver. Such a device will give many farm homes refrigeration that have not had it before because of lack of ice. About ninety-nine out of every hundred farm homes need the Iceless Refrigerator made by Iceless Refrigerator Co., Box 75, Winchester, Ind. Send for catalog.

Farmers who bale their hay make more money from it. Bale and sell for highest prices. For price of a standard Hay Baling Press to suit your needs (and pocketbook, too) write P. K. Dederick's Sons, 521 Tivoli street, Albany, N. Y. Sent postal.

The work in many dairy barns could be cut in two with small investment in equipment. For information how to do it write J. E. Porter Co., Ottowa, Ill.

A Genuine Rupture Cure Sent On Trial

Don't Wear a Truss Any Longer. After Thirty Years' Experience, I Have Produced an Appliancs for Men, Women and Children That Actually Cures Rupture

If you have tried most everything else, come to me, Where others fail is where I have my greatest success. Send attached coupon today and I will send you free, my illustrated book on Rupture and its cure; showing my Appliance and giving you prices and names of many people who have tried it and were cured. It is instant relief when all others fail. Remember, I use no salves, no harness, no lies.

I send on trial to prove what I say is true. You are the judge, and once having seen my illustrated book and read it you will be as enthusiastic as my hundreds of patients whose letters you can also read. Fill out free coupon below and mail today. It's well worth your time whether you try my Appliance or not.

Others Failed But the Appliance Cured

Mr. C. E. Brooks, Marshall, Michigan.

Dear Sir:—Your Appliance did all you claim for the little boy, and more, for it cured him sound and well. We let him wear it for about a year in all, although it cured him 3 months after he had begun to wear it. We had tried several other remedies and got no relief, and I shall certainly recommend it to friends, for we surely owe it to you. Yours respectfully, WM. PATTERSON.

No. 717 S. Main St., Akron, O.

Bad Case Cured at the Age of 76

Mr. C. E. Brooks, Marshall, Michigan.

Dear Sir:—I began using your Appliance for the cure of Rupture (I had a pretty bad case) I think, in May, 1905. On November 20, 1905, I quit using it. Since that time I have not needed or used it. I am well of rupture and rank myself among those cured by the Brooks Discovery, which, considering my age, 76 years, I regard as remarkable. Very sincerely yours. SAM. A. HOOVER.

High Point, N. C.

Child Cured in Four Months

Mr. C. E. Brooks, Marshall, Mich.

Dear Sir:—The baby's rupture is altogether cured, thanks to your appliance, and we are so thankful to you. If we could only have known of it sooner our little boy would not have had to suffer near as much as he did. He wore your brace a little over four months and has not worn it now for six weeks. Yours very truly, ANDREW EGGENSBERGER.

Pennsylvania Man Thankful

Mr. C. E. Brooks:—Perhaps it will interest you to know that I have been ruptured six years and have always had trouble with it till I got your Appliance. It is very easy to wear, fits neat and snug, and is not in the way at any time, day or night. In fact, at times I did not know I had it on; it just adapted itself to the shape of the body and seemed to be part of the body, as it clung to the spot, no matter what position I was in.

It would be a veritable God-send to the unfortunate who suffers from rupture if all could procure the Brooks Rupture Appliance and wear it. They would certainly never regret it.

My appliance is now all healed up and nothing ever did it but your Appliance. Whenever the opportunity presents itself I will say a good word for your Appliance, and also the honorable way in which you deal with ruptured people. It is a pleasure to recommend a good thing among your friends or strangers, I am Yours very sincerely,

80 Spring St., Bethlehem, Pa. JAMES A. BRITTON.

C. E. Brooks, inventor of the Appliance, who cured himself and has been curing others for over 30 years. If ruptured, write him today.

TEN REASONS WHY

You Should Get BROOKS RUPTURE APPLIANCE

1. It is absolutely the only Appliance of the kind on the market today, and in it are embodied the principles that inventors have sought after for years.
2. The Appliance for retaining the rupture cannot be thrown out of position.
3. Being an air cushion of soft rubber it clings closely to the body, yet never blisters or causes irritation.
4. Unlike the ordinary so-called pads, used in other trusses, it is not cumbersome or ungainly.
5. It is small, soft and pliable, and positively cannot be detected through the clothing.
6. The soft, pliable bands holding the Appliance do not give one the unpleasant sensation of wearing harness.
7. There is nothing about it to get foul, and when it becomes soiled it can be washed without injuring it in the least.
8. There are no metal springs in the Appliance to torture one by cutting and bruising the flesh.
9. All of the material of which the Appliances are made is of the very best that money can buy, making it a durable and safe Appliance to wear.
10. My reputation for honesty and fair dealing is so thoroughly established by an experience of over thirty years of dealing with the public, and my prices are so reasonable, my terms so fair, that there certainly should be no hesitancy in sending free coupon today.

REMEMBER

I send my Appliance on trial to prove what I say is true. You are to be the judge. Fill out free coupon below and mail today.

Why the Motorcycle Keeps Boys on the Farm

DON'T expect your boy to be happy on the farm if the summer season brings only work. When the day's work is over don't tell him the horses are too tired for road work, because it is this tying to the farm, this inability to join his chums in their pastimes or to seek his own pleasures that often makes farm life distasteful to him. Get him a

HARLEY-DAVIDSON

It will let down the bars and take him where he wishes in a fraction of the time he would use by team. It will open up a thousand and one pleasures heretofore denied him. You will find he will return at bed time, happy, contented and satisfied with his lot in life. But when you buy him a motorcycle, be sure that you obtain one that is economical, reliable and durable. Buy him a Harley-Davidson, because

It is the Most Economical

The Harley-Davidson holds the world's official record for economy.

It is the Most Reliable

The Harley-Davidson is the only machine which has ever been awarded a diamond medal and a thousand plus five score in an endurance contest. The plus five was for its super-excellent performance. These awards were made by the National Federation of American Motorcyclists.

It is the Most Durable

The first Harley-Davidson made, over eleven years ago, has covered now over one hundred thousand miles and is still giving satisfation and today retains even its original bearings.

Seven departments of the U. S. Government use a total of nearly 4000 of these machines.

Over 3900 R. F. D. Carriers daily cover their routes on a Harley-Davidson, a fitting tribute to the reliability of this machine.

Call on our nearest dealer for demonstration or write for catalog.

Second Nature

"He married a widow with three children."

"That's just like Einstein; even his children are in his wife's name."

Turn About

"Earlie, why don't you let your little brother have your sled part of the time?"

"I do, ma. I take it going down the hill, and he has it going back."

This Superb Artist Model Piano Shipped

FREE

Yes, Free, absolutely Free. We merely ask you to accept it on a four weeks' free trial in your home. We do not even ask you for any deposit or any guarantee—not even any C. O. D. payment to us. We even pay the freight charges to your nearest railway station. All we ask is that you tell us which one of our superb Evans Artist Model pianos you prefer so that we can send you the one that you want on free trial. There is no obligation on you whatsoever. This offer is made direct from the factory to you without any middlemen's profits, no jobbers' profits, no dealers' profits between us and you. You get this magnificent Evans Artist Model piano under our direct selling plan from $100.00 to $200.00 less than you can buy a cheap commercial piano from your local dealer. Write today—get full particulars of this great free trial offer.

Easy Payments

Never mind the money. Our low rock bottom wholesale price and easy payment terms are so liberal that you never think of money. Remember, on this great offer you get the piano direct from the factory at the bed-rock wholesale price. You do not pay one cent in advance, we allow you to keep this genuine Evans Artist Model piano in your home for four full weeks without paying anybody anything. You play on it, then decide for yourself. This offer places you in the very same position as if you were the dealer. You buy our Evans Artist Model piano at exactly the same price as the dealer pays, you do business direct with the factory and get the piano at our low bed-rock price with all middlemen's profits cut out.

Unlimited Guarantee

Our guarantee is not for five years or ten years, but for life. It means that we guarantee our Evans Artist Model Piano to you for life from the day you begin to use it. My factory gives you a guarantee bond. I endorse this guarantee bond direct to you. Our reputation and financial responsibility is your protection. You simply can't wear the piano out. It is built to stand the test of time. We want everybody to have the best piano. That is why we are making this great free trial offer and easy payment plan. Fill out the coupon—mail it today and get full particulars of this sensational trial offer.

Mail Coupon NOW

Write today; get a free copy of our handsome art catalog and full particulars of the greatest piano offer ever made. Learn all about our rock bottom wholesale price and direct selling plan. It means the saving of $100.00 to $200.00 on the purchase of the piano. To the first buyer in each locality we offer two years' course in music free. Write today—NOW.

F. O. Evans Piano Co.

UP-TO-DATE FARMING

16th Year, Number 12 — JUNE FIFTEENTH, 1913 — Indianapolis, Ind.

A Herald of Farm Progress and Prosperity. Published Twice a Month

With the Up-to-Date Farmers

A Department for Live Folks who want the best. Our readers are asked to contribute their thoughts. If you have a helpful idea pass it on. Be neighborly. Contributions always welcome.

There is a farmer who is yy
Enough to take his ee,
And study nature with his ii
And think of what he cc
He hears the chatter of the jj,
As they each other tt,
And sees that when a tree dkk
It makes a home for bb.
A yoke of oxen he will uu,
And their mistakes he will xqq
When plowing for his pp.
He little buys, but much he sells,
And therefore little oo;
And when he hoes his soil by spells
He also soils his hose.

The man who lives for himself lives for nothing.

Poverty is no disgrace, but that is all we can say in its favor.

"A weed" says Webster, "is a plant whose use is as yet unknown."

Man is the only animal that laughs; also the only one that hangs himself.

Talking about mutual benefits, bees help the clover, and the clover helps the bees.

The mission of UP-TO-DATE FARMING has been the same for ten years—more money for farmers.

Man should live to be one hundred years old, says some authority. But so few of us do all we should do.

Business men who take up farming usually make it pay. Business methods are not at all out of place on a farm.

A barrel of apples remove five cents worth of fertility from the farmer's soil, and five dollars from the consumer's pocket.

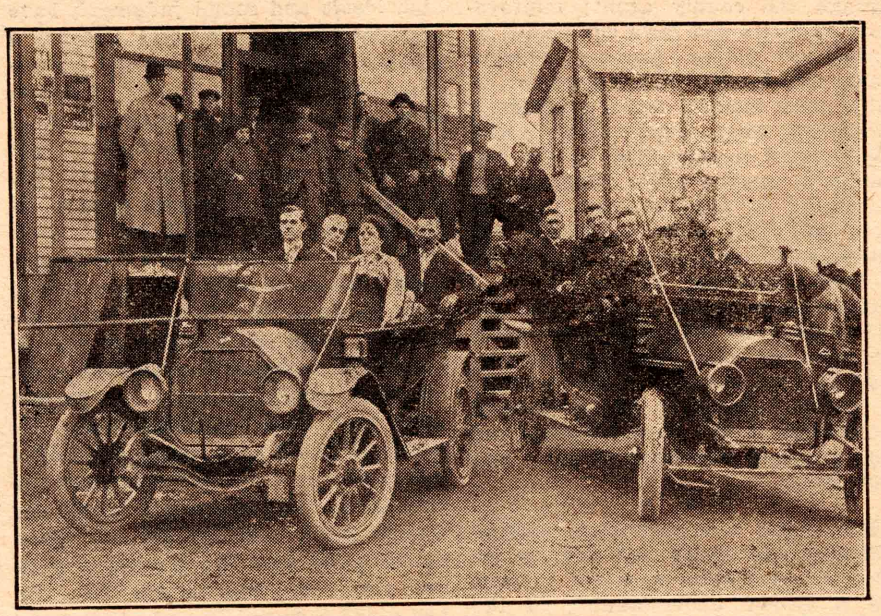
No longer cuss the cockle-burrs—a valuable oil is made from them, and they are being cultivated as a farm crop in some sections.

The last hour has passed behind me. I can not reach the one ahead. Therefore, it is up to me to take care of the one that is here now.

It is so easy to slip down a little and drift back a little that keeping up and getting ahead keeps a man's mind right on the job all the time.

About seventy per cent. of all the oats grown in the United States is used for feed. The other thirty per cent. is used in the manufacture of oat meal.

There is nothing that does us as much good as to have a friendly, cheerful neighbor drop in for an hour's chat. Do your neighbors say that about you?



Officers and members of Limestone (Pa.) local union of the F. S. E. in the autos. Left auto, front, Mr. and Mrs. E. M. Switzer; rear, Jacob Stahlman, president; P. E. Miller, vice-president. Rright auto, front, N. P. Sloan, W. H. Fleming; rear, B. G. Aaron, J. E. Switzer and L. M. Mohney.

The Farmers' Club

With all that is being written in agricultural papers, and spoken on agricultural platforms on the advisability and necessity of organization and co-operation, little can be accomplished until some definite plan is put in effect by some person or persons. UP-TO-DATE FARMING is engaged in practical work along this line, and the illustration above is one of the great number of evidences that its efforts bring forth good fruit. The Limestone local of the F. S. E. is one of the most progressive and prosperous farmers' clubs in the country. There should be thousands more like it, and this paper is ready to give its assistance in their establishment.

(See Page 13)

The Tenant's Fate

(By Sam Saxon)

The man who owns a patch of dirt has means to buy his baby's shirt. The guy who works another's land, must moil and toil to beat the band, and drift around from place to place, and feel that he is in disgrace. He moves about from north to south and lives along from hand to mouth. For him there's neither wealth or fame; he leaves no grand ancestral name. His years are many and his toil brings riches from a stubborn soil, for he who farms another's land finds it's been run to beat the band. From break of dawn to close of day he toils along his weary way, and takes his earnings in his hand to give the man who owns the land. His legs are seamed with bramble scars, his landlord rides in motor cars. To labor hard for fifty years, endure the burdens and the tears; to have no grateful weeks of rest; to tug and toil and do his best, and grind and moil and delve and save, and at the last to get a grave! It's six feet long and two feet wide, and it's not his until he's died. This strip of earth is his reward; 'twas given by his last landlord. Our Uncle Sam is good and great, and rich in wealth and real estate. There's land enough for every man, but he who gets is he who can. Yet when we reap our last reward, 'tis six-by-two of grassy sward. No matter whether poor or rich, we all go down into the ditch. Though great or small may be our worth, we all must tenant Mother Earth, and there we sleep in sweet content, and let our children pay the rent.

The Open-Minded Farmer

(By One of Them)

AGRICULTURAL college men and farm paper publishers complain that the man they can help, and hope to help, the farmer who does not succeed, will not go out of his way a step to make use of their proffered aid Also, that he is the very man in greatest need of their particular assistance They declare the farmer hasn't availed himself of his opportunities, through lack of interest and ambition, or utterly fails to grasp the value of the service to be rendered him. On the other hand, the farmer who neglects or refuses to interest himself in these matters either doesn't know, or doesn't believe it worth his while. He thinks his time is worth more employed otherwise. Then, too, there has been a tendency on the part of the farmer to resent the idea that a soft-handed professor, or an inky-fingered editor can give him any advice about farming that is worth anything.

We can't all see things alike. Some see what others never would be able to observe. We can all learn from others. The wise man is one who wants to learn all that any other man can teach him. Farm boys who go into city offices, after working there a short time are often able to point out some improvement, some simple method that is better, not because he knows the business better than those who have worked there for years, but because he brings new ideas, a new vision to the office, and sees things in a different light. This is the method by which farmer boys have forged to the front in the city. One farmer, no more intelligent or successful than another, seeing things in a different way, can give helpful suggestions and ideas. An indifferent checker player, watching a game played by experts, can often see opportunities or dangers the others miss, not because he knows more of the game, for he does not; but because he looks on the board from a different point of view, and sees what is not apparent to the others. Many a manufacturer who has made a success of his business, and grew up in it, has had it reorganized by others with only a fraction of his experience, and found the reorganization highly profitable. A well-known contractor who has been unusually successful, says that he seldom had a man in his employ but what he learned something new from his work.

The farmer who thinks the agricultural paper, the demonstration work, or the institute can teach him nothing, do him no good, is only standing in his own light. Instead of holding their work in contempt, or treating it with indifference, let him be open-minded and try to get some good from it. Man left entirely to his own devices would never make much progress.

"It seems to me a waste of money

More Help for Farmers

What the Indiana Conference Did, and Did Not Do

NEARLY five hundred people, comprising bankers, grain dealers, institute workers, ministers, editors, members of commercial clubs, members of agricultural associations, educators from the agricultural college and the public schools, and a few farmers met in Indianapolis on June 3, and held a conference lasting for two days, the purpose being to discuss the importance of the improvement of country life, making it more attractive, more profitable and more conducive to the upbuilding of a better citizenship on the farm. The object was to devise means whereby all the institutions represented might, through co-operative effort, do something practical to help bring all these good things about.

* * *

Notable speakers, including eminent authorities on agriculture and country life delivered a series of addresses, touching on the high cost of living, the necessity for better farming, the proper education of the boys and girls who are a few years hence to have, to hold, and to manage the stupendous task of producing food and raiment for our teeming millions, increasing rapidly.

* * *

The discussion was not alone along the line of the importance of teaching the farmer of today better methods of raising crops and feeding stock. It was acknowledged that the country furnishes, to the largest extent, the brain and brawn that is to maintain our nation in all its phases; in the government, in the education of its people, in the building of business, and in all lines of human endeavor.

* * *

As one speaker put it, "the farm is the best breeding place in the world for citizenship—for men and women of mental and moral vigor and worth; but, unless good blood, and brains, and ambition can find satisfaction and profit in country life they will not remain. Unless conditions are such that the farm home can supply the boy and the girl natures with those things which develop manhood and womanhood of high mental and moral force, and appeal to their ideals and ambitions and satisfy their desires, the best blood of the country will continue to leave the farms for the greater opportunities and emoluments of city life and enterprise. Thus deprived of its best, the standard of country life will be lowered, which must result in lowering the standards of our civilization." This, in short, was the meat of the conference, and the ideas evolved were indicative of what our leading educators and business institutions consider the most important matters before us.

* * *

"More prosperity for farmers, and a better use of it," was the big idea in every address.

* * *

The methods to bring this about, as advocated by the speakers, were progressive. Better education by means of vocational training in public schools; better methods of farming by means of agricultural extension work of the colleges, and farm demonstration through the county agent; improvement of farms and farm equipment by means of giving farmers cheaper money and longer time of payment, or better farm finance; better methods of marketing; improvement of the social life in rural communities, by the formation of country clubs, bringing the people of a neighborhood together more frequently, under conditions that will be an incentive and an inspiration to them; and last, but not least, a better understanding between the city and country, so that each may realize the interests they have in common, and that the welfare of the workers in one is essential to the welfare of the workers in the other. A great and good program, replete with great and good ideals.

* * *

But, while this conference will be productive of direct and definite results in awakening a wider interest and a deeper understanding of the needs of country life and agriculture, and to no small degree will promote active endeavor in many parts of Indiana, and possibly other states, in the development of the ideas advanced, it failed in one essential and important matter. While it ground the axe which it declared would hew a path to greater civilization and prosperity, it left it without a handle. The only means whereby these things can be readily and efficiently done—organization—was overlooked or disregarded. Thus has another great conference stood at the gateway to great accomplishments, and then passed into history loaded down with pleasant memories and neglected opportunities.

* * *

Money-making alone is not the end aimed at, it is true; but the end cannot be reached except through profitable agriculture; and as long as profit depends upon the market price of farm products, the profitable marketing of those products is and must be of first importance. After all is done that can be done along other lines, the problem of profitable prices will still confront us, and the only way to solve this problem is through co-operative marketing, which can be made possible only by organization. Inasmuch as organization would furnish the most desirable and efficient vehicle for conveying all the suggested reforms to the farm home, and putting them in effect, UP-TO-DATE FARMING still maintains that practical and complete organization is the first and most important step to be taken by the farmers for protection, for advancement, for profit. Everything which can be done without organization can be done so much better with it; and as so many things can be done through organization that are impossible without it, to ignore this phase of country life and activity is to obstruct and postpone progress to a large degree. Give our farmers a complete, practical and efficient form of organization, encouraged and aided by the friendly and helpful interests that offer so much assistance in other things, and they can and will develop agriculture and country life to a degree beyond the dreams of its idealists.

Two lines that are of importance to the farmer's wife are the clothes-line and the telephone line.

Idaho's State Union

THE farmers of Idaho are putting a crimp in the argument of those who still insist the farmers will not organize. In a few months' time three or four farmers, men of vision, faith, high ideals and sound judgment, have organized scores of local unions, a number of county unions, and a state union that has taken a grasp of affairs in a way that is astonishing, even to those who have accomplished it. All of which demonstrates that the founder of the Farmers Society of Equity was right when he believed that, given a practical plan for organizing a business system for marketing their products, the farmers would approve it, unite and establish it, and as long as they found it a profitable institution, would maintain it. In the years past, when conditions were different, it would have been a more difficult matter to do what the farmers are now doing. Experience has taught the farmer much that he did not know twenty years ago. He is a better business man today than he was then. He has a wider knowledge of affairs, and knows of the necessity for better business principles. He has a broader vision, can see farther into the future, has more faith in himself, and understands how to safeguard his interests through organization. In other words, twenty years ago farmers were not prepared for a business organization, nor capable of making a success of it. Today they are both.

We want to direct the reader's attention to extracts from reports sent to the headquarters of the Society by the president of the state union, and by one of the county organizers, which will be found in the organization department of this issue. These reports show that the farmer, when properly organized, becomes a business man in name and in fact, and that opportunities for profit are open to organized agriculture.

To know conditions as they are is no more important than to know how they became so.

Better Farming or Greater Profits

WE PRINT an article from one of our subscribers who is a warm advocate of the agricultural college, the experiment station, and county demonstration work. In a personal letter he takes us to task for not doing more in behalf of the "better farming" movement. We do not oppose better farming. We certainly agree that the farmer should cut down his production costs; but we have not been greatly enthusiastic on the matter of greater production because we have seen all the great bumper crops sold for prices so much less than small crops have brought the farmer that we could not conscientiously engage in an endeavor to induce the farmer to do a thing that would, under present conditions, cut down his income. As we have so often said, money and not big crops, is what the farmer wants. If greater production actually meant greater profit, we would do all in our power for a greater production. Better farming we are always ready to advocate, but better farming should not mean a production that cannot be sold at a profit. With two or more farm papers in each state, and state and national departments of agriculture, a dozen or so farm papers of national scope, farmer's institutes and demonstration work all teaching greater production, it did not seem that we were particularly needed in that field, so we have given our undivided attention to the problems of getting more money for what is produced, a course we intend to follow until farming is made as profitable as it should be.

There would be economy in the present styles for women if the materials were as cheap as they are scant.

High Living and Hard Times

THE Bureau of Labor Statistics reports that during the latter part of 1912 the cost of living in this country was higher than at any other time in twenty-three years. The lowest cost in this period was reached in 1896, during the hard times. It is not a certainty, then, that low cost of living and prosperity go hand in hand at all times. Where is the workingman that, in order to obtain the low cost of living of 1896 would also be willing to return to the other low stages of activity and business which prevailed during that distressing period? Good prices all around are the stepping stones to a higher plan of prosperity. And those who attempt to force on this country a lower cost of living may, if they succeed, also bring about a lower standard of living. It all depends on how they go about it. If they begin by reducing the prices paid to the producers they will strike a fatal blow to the very foundation of prosperity. Producers are also consumers. To curtail their incomes is to curtail their purchasing power. Cut out the extravagance in the cost of delivering the products of the producer to the consumer, simplify the system of distribution, reform the methods of marketing the farmers' crops, so that he is not compelled to suffer on account of prices too low for profit, and the high cost of living problem will be on the way to a safe and sound solution.

The movement "back to the farm" we hear so much about isn't visible to the naked eye.

Fly Aphorisms

A fly has natural enemies; the most persistent and most effective should be man.

It costs less to buy a screen door than to get sick and lay off for a month.

It's a short haul from the garbage can to the dining table via the fly route.

Flies in the dining room usually precede nurses in the sick room.

A fly in the milk may mean a member of the family in the grave.

If at first you don't succeed, swat, swat, swat again.

Screens in the windows prevent crepe on the door.

Flies, as well as bad water, spread typhoid.

Look Ahead a Little

PROF. ANDREW M. SOULE, formerly of Tennessee and Virginia colleges, now of Georgia, has figured out the great profits the Georgia farmers could make by increasing their corn yields from twenty bushels to one hundred bushels an acre.

It is the same the country over. Every state college is doing its utmost to induce the farmers to produce big yields, showing them by figures the money they can make by so doing.

What happens to a merchant when he over-stocks? What happens to a manufacturer when he produces more than the demand requires? What will happen to the farmers if they do produce immense crops? Let these experts in figures take the average yields for years past, and the prices paid, and on the basis of these facts and figures, make an estimate of what corn would sell for if the average yield throughout the United States be increased ten bushels an acre.

We are heartily in favor of cheaper production. We also know that as the years go by, production must increase, but we maintain that when great increases occur, the temporary surplus ruins prices, and farmers lose profits that should be theirs. It is wholly untenable to argue that a great increase in total yield will mean a corresponding increase in income. The price of the surplus sets the price for all.

If the colleges would truly serve the farmers, they would look ahead to the profits as well as to the production. Surplus crops are desirable only when profitable. The colleges now serve only those who follow their teachings. There is lament in every college that so few are reached. Then why not use the college to assist in a work that will be of value to every farmer, whether or not he reads the college bulletins or follows its advice? Why not make the colleges instrumental at the marketing end? With the assistance and co-operation of the colleges, farmers could quickly build and put in operation a national organization that would make every crop grown yield greatly increased profits to the farmers. A temporary surplus would no longer be ruinous.

The farmer is his own boss, but a poor boss at that. He works himself long hours and pays himself low wages.

Higher Freight Rates

FOR several years the Interstate Commerce Commission has had a hand in making freight and passenger rates for railroads, and its policy has been to make them lower, and uniform. The reductions have been opposed by the railroads, and approved by the public. Now come the railroads before the commission to pray for the privilege of advancing their rates, giving as reason the claim that on account of greatly increased expense, in constructing new tracks, repairing old ones, building new cars to accomodate the greatly increased traffic of the country, increased wages paid to railroad workmen from section hands to division superintendents, and providing means to meet the still greater demands to be made in the future in way of prompt and efficient service, the present rates are insufficient to do all these things. As proof, they offer the fact that in order to secure funds to make these improvements, they must issue and sell bonds. In other words, must borrow the money, giving mortgages to secure the loan. The financial world refuses to loan them the money at the old rate, or stated differently, railroads can no longer sell their four and one-half per cent. bonds, because they are unable to show that with present freight rates they can make enough profit to pay the interest on the mortgages. and pay the mortgages themselves when due. That is, capital does not care to risk its funds in railroad investments at this time when its expenses are rapidly increasing and its income is held down by the Interstate Commerce Commission. The railroad companies, therefore, are asking the commission for permission to lay before it the proofs that their rates are too low for the good of the country.

Farmers are interested in lower rates, of course, and unless there is good reason for an increase in rates, will oppose any such movement. They depend upon the Interstate Commerce Commission to deal justly with both the railroads and shippers. The farmers know that their own business can not be in good condition, or profitable, if what they have to buy (labor and material) is too high in comparison with what they have to sell (farm products). They can easily understand that the railroads cannot thrive and prosper and give good service if it cannot sell its product (transportation) at a fair profit over expenses. They are willing to pay a fair price for what they must buy, but they justly demand a fair price for what they have to sell. If the claims of the railroads are true, and if rates are too low for progress and prosperity, then the railroads have a taste of the bitter dose the farmers have had to take for all these years—prices too low for permanent prosperity.

There is one other feature of this matter of interest to farmers. If the railroads can prove rates are too low, they will get higher rates. If rates are really too low. they should have higher rates; yet higher rates will mean less money for farmers. The railroads are backing the government in its effort to get farmers to raise more in order to lower the prices on farm products, so they may have larger traffic to handle at the higher rate. Now, just where does the farmer come in? Is not the prosperity of the farms as important as the prosperity of the railroads? Is not the farmer as important a personage as the railroad man? Should not the farms pay a profit, as well as railroads? Is not the farmer in need of capital to improve his farm and increase his service to the country, the same as the railroads? And should he not obtain the capital by selling his products for profitable prices, just as the railroads are asking to be permitted to do? If public welfare demands that railroads be paid good prices for their services, to enable them to grow and prosper, will public welfare also demand that farmers be paid good prices for their services, so agriculture may also grow and prosper?

There are two sides to this question, and if the railroads expect the farmer to be concerned in giving the roads a fair profit, it might be well for them to interest themselves slightly in profits for farmers, and to remember that price, and not production, is the measure of profit. In order to provide for more cars, more roads, more efficiency, the railroads ask for higher rates; but the farmer must merely produce more crops. He must not ask for higher prices. The railroads desire to increase their efficiency by raising rates. The farmer must increase his by raising more stuff, and cutting down the cost of production, regardless of how that may affect the price. Just as long as farmers are forced to take unprofitable prices for what they produce, that long will they oppose any increase in the cost of getting their produce to market. The farmer is not unreasonable, but he wants and is entitled to equal rights and fair treatment.

A fine, large, handsome stalk of corn often fails to produce an ear. It is results, not appearances, that count.

Mr. Dooley and the Dizzy Whirl

"Good mahrnin', Hinnissy!"

"Good mahrnin', Mister Dooley. Did ye survive thim autymobeel races all roight?"

"Did I survive thim? Hinnissy, I simply dragged through thim, but me ould brains is still whirlin' round an' round an' whiniver I think iv an autymobeel with th' wheels shpinnin' an' th' injines choogin' an' nothin' showin' iv th' driver but his goggles an' th' shpot where he wuz tin minutes ago thin I sez to mesilf, 'Mister Dooley,' sez I, 'kape all th' solid airth ye can oonder yer fate. Ye nivir wus daysigned to be whizzin' through space an' ayternity in wan iv thim divil-may-care machines."

"But they till me, Mister Dooley, that they're boostin' ricords nearly iv'ry day."

"Yis, an' I vinchoor to say that they're also boostin' their nicks. I till ye, Hinnissy, this craze f'r shpeed is wan iv th' signs iv th' toimes in which we live. We're goin' so fast that we nivir take toime to think. We're loike th' shquirrel in its cage. It gits to goin' round an' round loike thim racers, an' it's so intint on makin' the wheel go round that it nivir takes th' toime to think whither it's goin' anywhere er not. As a paypul we've bin makin' some big mistakes in not takin' good notice iv th' shtart an' th' finish iv the race. Jist so we hear th' harn a-tootin' an' see th' wheels shpinnin' round we think we're gettin' somewhere whin as a matter iv fact we may be goin' th' wrong way altogither.

"Th' racer that can't use his head is loike th' fahrmer that nivir shtops to ask himself, 'Have I got th' roight systim?' Am I really goin' ahead frum year to year or am I loike th' whirlwind racer that goes so fast that he throws doost into his own eyes an' can't see what th' rist iv th' wurrld is doin'?'

"Hinnissy, there are tins iv thousands iv harrd-worrkin' fahrmers today in this coonthry iv ours that have bin racin' around their fahrms f'r years in th' same identical way. They git oop airly in th' mahrnin' before th' roosters have had their sivin winks an' thin they shtart to race around th' fahrm an' they kape it oop all th' day an' whin th' noight comes they're too tired to injoy their avenin' male. Whin their crops is raised they sell thim if they can, an' if they can't they half give thim away, an' thin th' next shpring they shtart in an whirl around through th' spring an' soomer an' fall moonths. Hinnissy, me son, why don't they shtop to rade th' signs iv th' toimes an' foind out that they must use their brains as will as their brawn if they want to win th' race an' git th' proize that ought to be theirs? Let thim arganize, I till ye, an' take th' shtraight course that leads from their fahrms direct to th' shtores an' homes iv th' paypul that wants what they raise instid iv choog-choogin' round th' same track an' landin' roight where they shtarted? Till me that, Hinnissy, why do they do it?"

"It must be their old-fashioned goggles, Mister Dooley."

Good Roads on Credit

FORMER United States Senator Jonathan Bourne, now leading a movement for national aid for a comprehensive system of good roads, declared in an interview that improving the roads will keep country people from drifting to the cities so rapidly. He says congestion of population in the cities is a national evil; that the city population is increasing three times as fast as country population, and that the production of food stuffs is not nearly keeping pace with the increase in population. Therefore, he wants to spend three billion dollars in building good roads to keep the farmers on the farms.

Hard work, long hours, low prices, lack of entertainment and leisure, inadequate educational facilities are matters that have far more to do with the exodus from country to town than bad roads. Some sections of the country have splendid roads. Is there no drift from those sections to the city?

Has the distinguished gentleman compiled any statistics to show that country boulevards keep the farm boy contented in the country? We think not. Good roads are not the cure for this national ailment, if it is an ailment. But Mr. Bourne is exactly right when he says that the farm life must be made more pleasant and more profitable and the way to make it more pleasant and profitable is to see that the farmers get good prices when they raise good crops. Give the farmer good prices, making him a good profit, and he will raise good crops.

If production of foodstuffs has not kept pace with the demand, it is because the price has not been encouraging to production. If, instead of spending three billions on good roads the government would spend three millions to put the farmers in possession of a marketing system that would insure them a fair price for big crops, it would get the results it desires.

We are heartily in favor of good roads, and want to see the good roads movement spread and succeed. We need road improvement and do not underestimate its value, but good roads alone will not keep country folks on the farm, nor make farming pay. The state of New York has an extensive system of excellent roads, yet it advertises "abandoned" farms by the score. Therefore, to spend a stupenduous sum to build expensive highways, putting a bonded debt on the county for a long term of years, without at the same time doing something to mitigate other evil conditions that have far more to do with the present lack of pleasure and profit on the farm than bad roads seems to us a lack of broad-minded vision and business acumen.

The high price of porterhouse doesn't worry the farmer.

The fine country home is nearly always found on a stock farm.

Information Wanted

SOME one writing under the title of "A Practical Farmer" in one of our exchanges recently called attention to the fact that European countries raise twice the amount of potatoes to the acre that our farmers produce, and suggests that our potato growers "whip up" their soils for larger production. Our potato farmers raised so many potatoes in 1912 that the market was demoralized. There was no profit in the crop at the prices received. Had the yield been twice as much, prices would have been very much lower, and much of the crop could not have been sold at any price. Just why, under such conditions, it is believed to be advisable to whip the soil into greater yields we are at loss to understand. Will some of the advocates explain?

Our Country Contributors

Semi-Monthly Prize Letter Competition:
Subject: My Most Profitable Crop

FIRST PRIZE	$5.00
SECOND PRIZE	$3.00
THIRD PRIZE	2.00

Notice to Subscribers

This department is designed to induce subscribers to contribute accounts of their most profitable crops. For the three best letters received each issue, the cash prizes offered above will be awarded and every letter used will be paid for at the rate of $1.00 each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell the story of what you consider your most profitable crop in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

To Readers of Up-to-Date Farming: This department of the paper is to be a semi-monthly experience meeting, bringing together the best ideas and practises of farmers from all sections. There is no story so interesting or so valuable as the story of how a successful crop was made and marketed. We want to fill this department with such stories each issue. We want all to try for the prizes. The story of your most profitable crop will interest all our readers. It will do you good to prepare such a letter, as it will help you to analyze your own work, and figure out the effect of the ideas you have and the kind of farming you are doing.

Now, let us have your stories. Tell them in your own words, and we will see that they go in the paper in proper shape. Tell the full story of the crop, from preparation to marketing, if you wish, or give just the essentials.

It is the idea that counts, not the amount of money you make. The corn club boy with his acre of corn, if it was the most profitable acre, has an equal chance to win first prize with the cattleman who sells $10,000 worth of prime beef cattle. The prizes are worth working for, surely, while the good you can do by carrying inspiration and encouragement to others is worthy of your best effort. It matters not how small or how large the crop, nor how large the amount of profit. We want to know what was the most profitable crop you ever had, and how you made and marketed that crop, and to what you ascribe your success.

Yours cordially,
The Country Contributors' Editor.

My Flock of Sheep

WHILE I have not figured out the percentage of profit my sheep pay me, as it would be a difficult matter in my case, I believe my sheep are the most profitable "crop" on my farm. I figure that the wool is clear profit, extra from the other profits I obtain from them. I am confident that in cleaning up the fields and fence corners, making use of what otherwise would be wasted or a detriment, and in improving the fertility of my farm, my flock of sheep would prove highly profitable, though I never sold a pound of wool or mutton. I consider these services rendered me by my woolly friends to more than pay what it actually costs me for their keep. Then, when in addition to these profits, I am able to sell my fleeces, averaging eight pounds of fine wool to the head for eighteen cents a pound, and a number of early lambs that cost me comparatively little for from five to eight dollars each, at four months of age, and turn my old sheep over to the butcher at a figure that more than equals the actual cost of grain and forage fed, the money that comes to me from my flock is just like money found in the road. I keep the Dorset, and find them highly satisfactory. They shear a good fleece of wool that sells well, provided it is in good order, and I take care of that. The lambs come early, grow rapidly, and the mothers are prolific, and good milkers. The old sheep fatten readily, and the mutton is fine-grained and gives good satisfaction. I take enough pains to keep my flock vigorous and healthy, and by keeping in touch with my markets and trying to give them just what they want, when they want it most, I get prices that would make my sheep profitable to me, if I charged them up with full rations of grain and forage all the year around, and gave them no credit for the good they do my farm. —J. C. B., Virginia.

The Boy and Girl Crop

YOU ask for an account of my most profitable crop. Figured out in living value, rather than cost, my most profitable crop is my crop of boys and girls. I have three boys, aged twenty-one, sixteen and nine, respectively, and two girls, the eldest eighteen, the youngest seven. Their value to myself and wife, in net profit, might be difficult to ascertain, but their worth to us, in joy of life, in comfort, in pride, in all that makes life worth living, is beyond all measure.

More than once I have heard a father say his children were not worth their salt to him. He meant it, too, and I am not sure but he was right. If so he has only himself to blame. It takes a lot of judgment, ability, appreciation and forbearance to raise up a profitable crop of children. They must be cared for, nurtured, supplied with their needs for proper development, the same as a crop of corn, or a prize winning colt. We farmers have studied how to prepare our soil, cultivate and feed a crop to make it produce what we want. We go to no end of expense, time, hard labor, and care to make things just right for the dairy cow. We read books on fruit growing, and prune, and spray, and care for our trees that we may have apples of perfect form, color and flavor. Then we turn our children loose to take conditions as they find them, and make something of themselves. Our work in nurturing children is haphazard, as a rule, and not constructive. We do little to build up the qualities we know are valuable in men and women, but content ourselves with hedging them about with a set of rules about what not to do.

Wife and I decided, with the advent of the first child, to do all in our power to develop whatever good qualities the boy might have. We cultivated our children as a florist cultivates his flowers. We tried to build strong healthy bodies. We fed our children as near a "balanced ration" as we could, and made the food palatable as well as nourishing. We taught them self-reliance and responsibility. As soon as they grew old enough to understand the affairs of our household and business, we took them into partnership. We encouraged them to have ideas of their own by asking their opinions on all matters of policy where they were capable of forming opinions. We gave them a share in the profits, made them share in the losses, held them to account for all their expenses, and thus taught them the value of time, money, and right judgment. In consequence, every child we have is very much interested in everything done on our farm, and understands why it is necessary to do things right, and they have learned to love success in accomplishment. They are ambitious, with high ideals. And we are a very happy, fun-loving, life-enjoying family, with the utmost respect and regard for each other's opinions, and we work hand in hand to make the most of what we have. Our farming operations have been quite successful, and as the profits we have made are to a great extent due to the aid and encouragement of our blessed boys and girls, they are undoubtedly the most profitable crop we have produced.—C. W. B., Iowa.

A Banker Makes Farming Pay

R. F. ALLEY, of Hale Center, is a Texas farmer who is making irrigation pay. It is as a farmer that Mr. Alley finds his greatest delight, although he is president of the Hale Center bank. But being bank president does not keep Mr. Alley away from his farm. He is irrigating 160 acres and dry farming 1,000 acres.

Last year Mr. Alley entered irrigation in the state industrial congress contest. His maize produced 127 bushels to each acre. This year he expects to grow a larger crop, because he has found out how to prevent some errors of last year. State officials took weights on his maize, kept a record of time spent cultivating and harvesting it, and the state is authority for the statement that after deducting a charge for all labor and other cost of production the maize yielded a net income of six per cent. on $600 for each acre.

"We keep a record of every crop we grow," says Mr. Alley, "so that we know just how much profit each one pays. We also keep account of errors made so that they will not be repeated. In that we are learning many things of value. In this respect you might call it an experiment farm. Everything grown must pay a profit—profitable farming is our purpose."

Agriculture will rise no higher than the ability and ambition of the agriculturist.

Lessons from the Younger Generation

Haven't you often watched a group of boys on a rainy day or Sunday get together and hold a jumping contest? First one, then another, toes the mark, swings his arms, and hurls himself through the air, throwing feet forward, and then with his toe marks where his heels struck. They try and try again, each time doing just a little better as they limber their muscles and warm up to the work. Then for a week afterward, when alone, they train for the next contest. Without these contests no jumping would be thought of or done. **Without getting together there would be no contest.** There's a lesson here for older boys. By getting together in local unions you match your ideas with your neighbors. He comes right back at you, and you try to go him one better. It arouses your mind, brushes away the cobwebs, eats away the rust. It stimulates thought, and then as you go about your daily work, you keep on thinking, and prepare yourself for the next meeting. If you stay at home, away from association with your fellow man, you lose a lot of life. Pattern after the boys.

The Open-Minded Farmer

(Continued from Page 1)

to pay taxes in order to support them fellers up at that college, and have 'em come down here, with their hard collars and soft hands to show us old horny-handed farmers how to farm," grumbles a hard-working and fairly successful farmer. This is the natural point of view, but nevertheless it is a narrow one. Some of those college men are old in years and experience. And on those college farms more farming is done in one year than one farmer could do in fifty. When the "professor" from the college comes to you, he has no idea of telling you theories. By study he has learned certain facts that the farmer could never learn for himself. He comes to bring you these facts for what they are worth to you. And that they are worth something to you he is prepared to show by giving you the results of the tests that not only the college has made, but many successful farmers as well. What farmer is prepared to prove there is no value in them, or that he already knew them?

The agricultural lands of this country are rapidly advancing in price. The population is rapidly increasing. Future years will demand a far greater production. And the prices prevalent now demands cheap cost of production. How much, brother farmer, have you increased your average yields per acre during the last ten years? How will you increase them during the next ten? How much have you cheapened the cost of production? How can you cheapen it still more? These are questions the farmer of today, especially the young farmer, will have to answer successfully if he is to make his calling and election sure, for, sure as fate, the farm lands of this country will go into the hands of men who can do these things, and those who cannot will become tenants, or laborers, living from hand to mouth. Men of broad vision and deep foresight have seen these things coming to this country as they came in turn to the countries of Europe, and the agricultural colleges with their earnest workers are doing all that intelligence and science can do to lead the farmers to a knowledge of the means of making large yields with less labor and expense. It is up to the farmer to say whether or not he will keep pace with the progress or be crowded to the wall.—J. C. G.

The Place for Old Folks

WE HAVE just read a little story of a farmer who had spent a long and happy life on the farm. He was satisfied and content. He had worked and acquired a good farm. Under it he had laid tiles, and upon it he had sown wide sweeps of clovers and planted fine breadths of corn. His barns were modern; his feedlots were the habitat of fat cattle. A son came home from an agricultural college, eager to take hold. While the father was not old nor worn out, yet he deserved rest from strenuous toil. The unfortunate American thing to do in such cases is to move to town, giving the farm over to the care of the boy. This farmer loved his land too well and had too clear a perception of what town living with its narrowness and stagnation meant to him.

On this farm, among some trees on a little hill, he built a little bungalow for two. There he and his wife "retired," on the farm, and yet they were partners in the place and interested witnesses of its activities. The young son took hold. He married. Children came and grandmother was just across the way. The old man and his son were two interested partners; often the older man could give good counsel; sometimes in emergencies his services were in demand. He did not rust out in town but remained young in the country where he belonged. It was far better than living in town.

Our Market Review

Semi-Monthly Review of Crops, Market and Trade

WHILE the crop reports are uniformly favorable, our late information is that there is coming to be a deficiency of moisture in a great many localities, and it is affecting growing crops unfavorably. Also the spring crops are late over large areas because of cold weather. Whether these conditions will be factors in the final yields no person can tell now, but if they should become more aggravated we will see prices on grain and hay advance. The wheat harvest is under way in the southwest, and by the time this paper reaches its readers will be begun in Kansas. The recent dry weather has reduced the early estimates in the southwest, but it will be the largest for several years. The price has been put down in anticipation of the dumper. Cash wheat at Kansas City is 8c a bushel under Chicago, and 11c to 12c under St. Louis. It is 16c to 18c lower than the Kansas City price a year ago. The visible supply of wheat decreased over five and a half million bushels since our last report, compared with nearly twice as much decrease a year before.

The corn acreage shows an increase. The stand is good, but the crop needs warmer weather. The present price is about 20 cents a bushel higher than the first prices paid for the crop. Corn is splendidly controlled, as shown by the visible supply, and the price is good. Oats are at about the highest of the season and farmers are exercising fairly good control. We predict higher prices for corn and oats.

That the supply of hogs in the country is increasing is evidenced by the larger receipts at the markets. The average price paid on June 6 at Chicago was $8.58. The prices on corresponding days in former years were as follows: 1912, $7.57; 1911, $6.26; 1910, $9.61; 1909, $7.43; 1908, $5.66; 1907, $6.24; 1906, $6.51.

Southern vegetables furnish the usual problems. Lack of knowledge of what the markets will take and what the other fellows are shipping and where is constantly bringing grief to some shippers. The whole industry needs the Equity plan of organization and business system, and nothing better need be expected short of it.

The following tables tell the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on May 31, 1913, with comparisons, are shown in the following table: (The sign — before figures means decrease, X indicates increase.)

	May 31, 1913 Bushels	Change from 2 wks. before Bushels
WHEAT	40,645,000	—5,633,000
CORN	4,319,000	—1,822,000
OATS	10,016,000	X 226,000
BARLEY	2,800,000	— 734,000

The visible supply of wheat in Canada on the same date was 23,812,000 bushels. This is 4,085 bushels less than two weeks before, and 6,696,000 bushels less than a year before. The visible supply of oats was 11,117,000 bushels on the same date, which is 151,000 bushels more than two weeks before and is 2,572,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets before as follows:

	June 7	2 Wks before	AYr. before

Minneapolis—Spring wheat, No. 1 hard, 92c; No. 1 northern, 90½@91½c. Two weeks before, 92⅛c and 90⅛@92⅞c, respectively. A year before, $1.15⅞ and $1.15⅛@1.15⅞, respectively.

Future Grain Prices

Chicago grain futures closed on June 7, 1913, and two weeks before, as follows:

WHEAT—July, 90⅜c; September, 89⅝c; December, 91⅞c. Two weeks before, 90c, 89½c and 91¼c, respectively.

CORN—July, 58⅛c; September, 58¾c; December, 56⅝c. Two weeks before, 57⅜c, 58⅛c and 56⅛c, respectively.

OATS—July, 38⅜c; September, 37⅞c; December, 38⅝c. Two weeks before, 38⅞c, 37¾c and 38½c, respectively.

Cotton

New York, June 7.—Cash cotton closed, middling upland, 12.10c; middling gulf, 12.35c. The price is the same as two weeks before. A year before the price was 11.65c to 11.90c.

Live Stock

Indianapolis Stock Yards, June 7, 1913.

CATTLE—Range of day's paying prices for steers	$6.00@7.50
Range of day's quotations for fat steers	7.25@8.15
Good to choice steers, 1,300 pounds and up	8.15@8.50
Good to medium steers, 900 to 1,200 pounds	7.00@7.85
HOGS—Rangs of day's paying prices	7.75@8.70
Range of day's quotations	7.25@8.70
Best heavies, 200 pounds and up	8.65@8.70
Common to choice lights, 120 to 180 pounds	8.65@8.70

Chicago Produce Market

June 7, 1913.

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets address the Farmers Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	140	125	69
Tuesday	56	112	28
Wednesday	42	80	26
Thursday	45	96	22
Friday	33	..	38
Saturday	36	145	27
Total, 6 days	352	558	210

Dullness pervaded the market today and prices were weakly held. Receipts were reported at 36 cars, making the total for the week 352 cars, or 142 cars more than for the same week last year. A good deal of stock remained on track at close of business and the condition of the market was unsatisfactory.

Sales reported were: Wisconsins, round whites and Rurals in bulk—5 cars at 30c.

Per bu., bulk or sacked, Wisconsin, Kings or Burbanks, common, mixed, to good sound	25@28c
Rurals	28@30c
Minnesota, round white, bulk or sacked	25@28c

NEW POTATOES—For several days there has been a declining market, due to good receipts. Texas is now furnishing most of the cars coming in. Louisiana stock has been cleaned up. Saturday is always a quiet day, and so it was today. Texas again a shade easier.

Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
—10,817,000	X 7,016,000	X 9,553,000
— 873,000	—3,029,000	—5,374,000
— 1,850,000	X 786,000	—4,161,000
— 407,000	X 2,008,000	X 1,573,000

Sales reported: Texas, per bu.—2 cars at 75c, 8 cars at 80c, 1 car at 90c.

Per bbl., Florida white, No. 1	$3.50@3.75
Alabama, red	3.50@3.75
Per bu., Texas, red, depending on size and appearance	.75@ .90

The prices of old potatoes are 30 to 40c a bushel lower than two weeks before. The prices a year before were 95c@$1.00 for good to $1.02@1.10 for choice. The prices of new potatoes are about $1.50 a barrel lower than two weeks before. A year before barrels sold for $3.25 to $4.50. Texas, red, at $1.25 to $1.55 a bushel.

We expect higher prices on old potatoes. We advise any of our readers who still have old potatoes to sell to be ready to unload when the reaction which is likely to come, because of the present light receipts now. See table of "arrivals" above.

STRAW—Rye Straw quotable at $9.50@$10.00. Oat Straw at $7.50@8.00. Wheat Straw $7.00@7.50.

All straw is 50c a ton higher.

HAY—Receipts, 1,105 tons. Timothy Hay steady. Demand rather good and offerings only fair. Prairie Hay in liberal supply and quiet. Demand light.

Choice Timothy Hay	$15.00@16.00
No. 1 Timothy	13.50@14.50
No. 2 Timothy	12.00@13.00

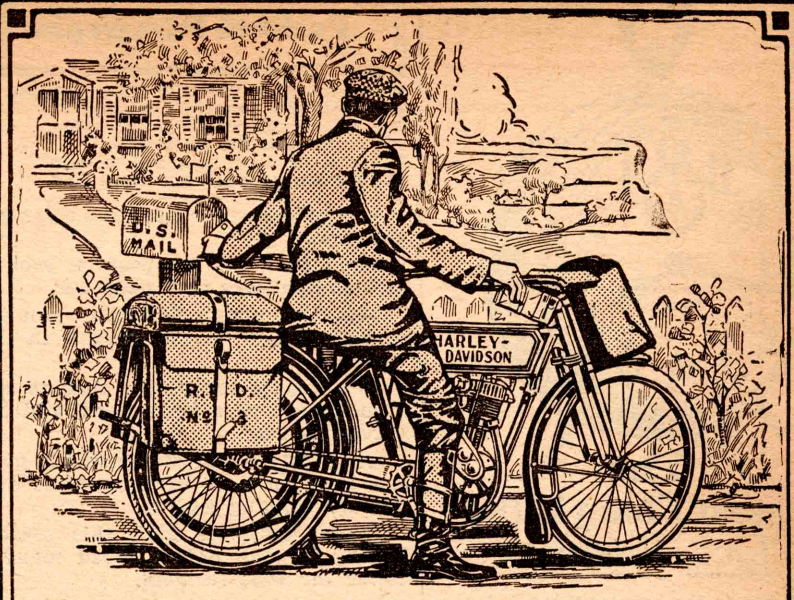
Timothy hay is $1.50 to $3 a ton lower than two weeks before. A year before the price of choce was $25.00 to $26.

BROOM CORN—Market quiet. It has been so for a long time. Dealers report no changes.

Per ton, Illinois Corn	$100@120
Oklahoma	50@ 80

BEANS—There has been nothing really new in this market lately. It has remained quiet. What business there has been doing has been in Pea Beans mainly, and buyers

(Additional Markets on Page Fifteen.)



Why the Harley-Davidson is the Best Motorcycle for Country Use

THREE hundred thousand farmers last year had their mail delivered to them by carriers riding Harley-Davidsons. We belive there are more R. F. D. Carriers today riding Harley-Davidsons than there are riding all other makes combined. This in itself proves that the carriers have found that the Harley-Davidson possesses in the greatest degree the two qualities which a motorcycle must have if it is to render satisfactory service on country roads, namely; Power and Comfort.

POWER

That the Harley-Davidson is the most powerful motorcycle built is conclusively proven by the fact that it has won this season such celebrated contests as:

Colorado Springs-Pueblo 90 mile Road Race.

Bakersfield, California Road Race. (In this contest the Harley-Davidson 8 H. P. twin attained a speed of 68 miles an hour.)

Seattle-Portland Endurance Run.

Oklahoma Road Race.

Springfield Hill Climb.

Missouri Road Race. (In this contest the Harley-Davidson defeated its nearest competitors by 29 minutes.)

Established a new World's Record at San Jose, California, when the Harley-Davidson twin cylinder traveled 346 miles in seven hours on a dirt track.

COMFORT

A motorcycle to be ridden in comfort on country roads must be so built as to assimilate all the jar, jolt and vibration which would come from irregularity or roughness of the road. For this purpose in building the Harley-Davidson, we incorporated the Ful-Floteing Seat, which places 14 inches of concealed compressed springs between the rider and the jars and has a play or action of nearly 4½ inches. Thus when the rider strikes rough stretches of road the Ful-Floteing Seat will assimilate all irregularities up to 4½ inches. Therefore, while the back wheel may vibrate up and down over the bumps the rider rides along in an even line.

The Ful-Floteing Seat is a patented device, found only on the Harley-Davidson. Unquestionably this one feature is partially responsible for the fact that there are more Harley-Davidsons to be found in rural communities than any other make.

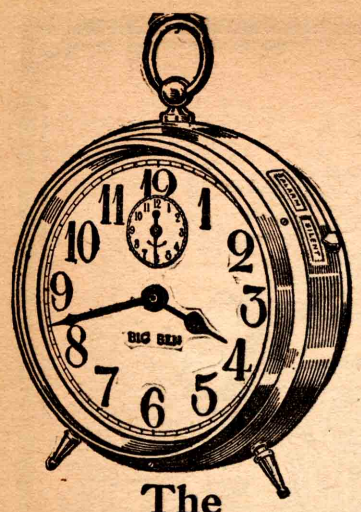
The Harley-Davidson holds the world's record for economy and will travel five to ten miles on a cents worth of gasoline. It costs nothing when idle and never tires. We have letter after letter from parents stating that the Harley-Davidson has been the means of curing the desire of their boys for city life and making them happy and contented with life on the farm.

We have issued a little booklet entitled "The Harley-Davidson on the Farm." Copy of this together with catalog can be obtained from our nearest dealer or will be gladly mailed direct on request. Call on our dealer or write for copies of these books today.

HARLEY-DAVIDSON MOTOR COMPANY

Producers of High Grade Motorcycles for Over Eleven Years.

788 A Street MILWAUKEE, WIS.



The Biggest Thing in the Clock Business

Big Ben is the biggest thing today in the alarm clock business.

He is only two years and a half old, but he's already getting more work from the States than any clock alive.

In two years and a half time, 18,000 jewelers—70% of the total number of United States watchmakers — have already adopted him. Two million and a half families leave it to him to call them up in the morning. Two million and a half families use him all day long to tell the right time by.

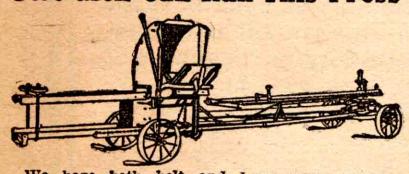
He is really two good clocks in one—a crackerjack of a timekeeper and a crackerjack of an alarm.

Big Ben stands seven inches tall. He is triple nickel-plated and wears an inner vest of steel that insures him for life. His big, bold figures and hands are easy to read in the dim morning light. His large, comfortable keys almost wind themselves. He rings *five minutes steadily or ten intermittently.* If he is oiled every other year, there is no telling how long he will last.

He's sold by 18,000 watchmakers. His price is $2.50 anywhere in the States, $3.00 anywhere in Canada. If you can't find him at your jeweler's, a money order mailed to *Westclox, La Salle, Illinois,* will send him anywhere you say, express charges prepaid.

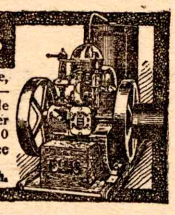
BIG BEN

Two Men Can Run This Press



We have both belt and horse-power presses. Write for free catalogue.
AUTO-FEDAN HAY PRESS CO.,
1542 W. 12th St., Kansas City, Mo.

ELLIS ENGINE



Run on gasoline, kerosene, distillate, any cheap fuel oil. Cost less to run—develop more power. Patent throttle gives *three engines in one.* Many other exclusive features—guaranteed 10 years—we pay freight—30 days' free trial. Send for catalogue today.
Ellis Engine Co. 115 Mullet St., Detroit, Mich.

Farmers and Stockme Send 25c for sample of the latest thing in tie ropes for horses, cattle, sheep, calves, etc., equipped with patent rope buckle. No adjusting; fits first time put on. Big seller. Special terms to agents. BARKER MFG. CO., Rochester, N. Y.

Cash Paid for all kinds of roots, barks, herbs, etc., used in medicines. Write for circular.
GRUND COMPANY, NORTH PHILADELPHIA, PA.

100 LETTER HEADS ENVELOPES $1.50

Be a business farmer—write your letters on your own private letterheads and use your own envelopes; printed stationery gives your correspondence a business-like appearance. For a limited time only we make this special introductory offer of 100 envelopes and 100 letterheads, with your name, address and business or the name of your farm neatly printed on them, all for $1.50, postpaid. Write today. Satisfaction guaranteed or money refunded.
WEST SIDE PRESS, 227 W. Wash. St., Indianapolis

Ky. Blue GRASS. Genuine and pure. The last you bought you probably paid about $3 a bushel for it. We will supply you at $1.65 a bushel. Send orders to O. K. SEED STORE, Indianapolis, Ind.

Pastoral Paragraphs

"The king may rule o'er land and sea.
The lord may live right royally.
The soldier ride in pomp and pride,
The sailor sail the ocean wide;
But this or that, whate'er befall,
The farmer, he must feed them all."

So live that your life lives after you are gone.

Don't overstock the pasture, even to accomodate your next neighbor.

The dust mulch is better than the sprinkling pot in the garden in dry weather.

Any time is the proper time to sow a good deed or a kind word, and the harvest is sure.

Get plenty while the getting is good is a good rule for the housewife during the canning season.

Binder twine is high this season. Buying in club orders saved many a dollar for wise farmers.

Try growing as much corn this year as you did last on half the acreage. Through this gateway lies the high-road to success.

When farmers have enough money they will have automobiles. When they have automobiles they will have good roads. Therein is the solution of the good roads question.

Be careful of the wire cuts. If the wound is deep and ragged call a veterinary quickly. Stop the bleeding by building with cotton and cloth bandages. Keep the wound clean and disinfected.

Now is the time to see that everything about the grain binder is in order and ready. Also fix any breaks about the harness. When the machine starts you can't afford to waste time tinkering.

The only way to keep up the supply of phosphorous in the soil is to buy it. Legumes and manure will supply nitrogen, but you must buy phosphoric acid in sacks. The same is true of lime.

OVERLOOKING GOOD MARKETS

MUCH is being said about better methods of marketing, and proofs that there is great need for such reform are abundant. The daily papers of Jacksonville, Fla., recently gave an instance of such a need in that city, which can doubtless be applied to nearly every city in the country. The account ran like this:

It is up to the Florida grower to develop the Jacksonville market. Growers conceive the idea that anything is good enough for the people of their home state, shipping only culls to this market, and then seem disappointed that these do not bring as much as the fancy products sold in northern cities. They seem to forget our people are as fond of good eating as any other, have money to pay for the best and are willing to spend it.

Or, they send fruits and vegetables to private customers, and then, having stocked up the possible customers of a commission man, send him the remainder, usually of inferior quality, and expect him to dispose of them at a good profit to the shipper.

Far too many growers ship stuff so green, or overripe, the commission man cannot offer it to his high-class trade, and is compelled to call in the street venders and induce them to take it off his hands at their own price.

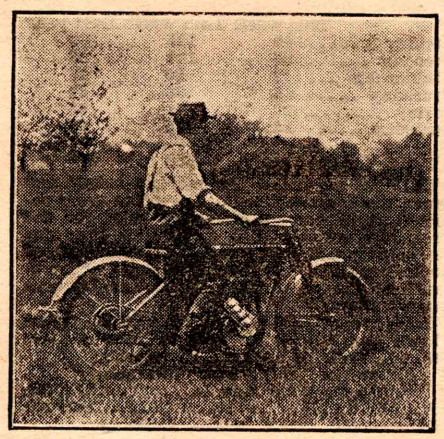
The individual shipper is unable to determine all these things for himself. Some few do, and strive hard to merit the successful trade. They are heavily handicapped, however, by the indiscriminate shipments of the uninformed and indifferent grower, with whose products they are forced into competition. No one benefits by this chaotic condition of marketing, not even the consumers. All suffer because of it. The remedy is simple. The growers must form a federation of shipping associations, each having its own expert shipping agent, and all having a system of grading, packing, and distributing, which, taken together with a system of reporting supply and demand will turn the larger portion of these losses into profit.

THE MEANING OF THE MOTOR

FARMERS are beginning to find that the motorcycle is a most valuable and indispensable article of farm equipment. The extent of its usefulness in the work of the farm can be seen in the fact that one out of every eight farmers in the state of Indiana has bought one.

The gasoline engine has been a factor which has served to introduce the motorcycle to the farmer. The increasing use of the gasoline engine as motive power in the operation of the farm machinery has made the farmer familiar with the good features of the motorcycle. There is nothing complicated about it, nothing to get out of order.

Farmers owning motorcycles find them economical. A gallon of gasoline gives from 75 to 100 miles of travel. It costs one-tenth to one-sixth of a cent a mile to operate the machine and the item of repairs on a well-built motorcycle does not amount to more than a trifle even after several years of service. The modern motorcycle can be operated safely by any one.



The farmers who use the two wheelers find the machines a big element in efficiency. It obviates the necessity of taking the horses from the work for errands. Breaks in farm machinery no longer incur hours of delay for the farmer who has the motorcycle at his disposal. Trips to town that took hours with the horses can be made in minutes with the machine. The motorcycle's usefulness on the farm, however, does not stop with its work. Its advent brings a world of pleasure. It is the one solution to the problem which faces the farmer today, that of retaining the interest of the young folks in the affairs of the farm home. He finds he must make life on the farm attractive. There is a dearth of efficient help to do the farm work, and unless there is created a greater incentive to live and work on the farm, this condition will grow more and more acute. The motorcycle is a deadly foe to lonesomeness on the farm. The women, especially, welcome it as a relief from the drudgery of farm existence. The farmer's wife and daughter find in the motorcycle freedom from restraint. The comfortable tandem seat enables them to participate in social and civic activities, and keeping the young folks on the farm is no great problem to the farmer who owns a motorcycle, which brings with its facilities for pleasure a new spirit of contentment.

GOING UP!

And now comes the agricultural implement manufacturers with the statement that, owing to increased cost of production, higher prices will be placed on the tools the farmer must buy. Wages, land, labor, tools, fertilizers, freight rates, all are climbing the ladder. It is but fair to insist that the prices of farm products go along with the rest.

Shorty's Shortcuts

(By Shorty Himself.)

NUMBER III

Friends, it is sometimes an uncomfortable thing to be both fat and ambitious. Ambition means action. Some folks think they have ambition when it is only a lazy wish to have what ambition put into practice might bring them. Desire isn't ambition—only the soil it grows in. To have great desires without having the energy to put in a lot of hard licks to gratify them is no sign of an ambitious person. Real ambition includes a lot of things, and chief among them is work. For a farmer it means a lot of vigorous thinking backed right up by a lot of vigorous hustling, and hustling is hard work for a fat man. But, as I learned years ago, the farmer who isn't ambitious has a harder time in life than one who is. I refused to give up my ambition if it was uncomfortable at times. And you will find this to be true, whether you are fat or not.

Milking cows, feeding and caring for them, raising hay and corn to feed them, is all hard work, and I wanted to make it count. That is, every bit of effort I put in along these lines I wanted to bring me in the largest posble returns. If there could be found a short-cut to the thing I was after—profit—I wanted to find it.

One of my neighbors had a few surplus cows for sale. I had just sold one of my old cows that had almost outlived her usefulness, so I went over to buy one of John's cows, provided we could make a bargain. John told me to take my pick of the lot for $40. He needed the money. I pointed out two that looked all right to me and said I would take which ever one of them he preferred to sell. He made his choice, and I took the other one home. Now, I knew he would keep the one he believed the best of the two, though from appearances I had no choice between them. Well, this is the point: I immediately began to weigh the milk, measure the feed, test the cream, to find out just what kind of a cow I had. I wanted to know whether I had a bargain, and a cow I should keep and save her calves, or if I should milk her for all she was worth as long as her milk could be made to pay for her feed and then turn her over to the butcher. After two months I was mighty well pleased, and during the year my new cow gave me 7,520 pounds of milk, testing 4.6 per cent. butter fat, equivalent to something over 400 pounds of butter. I told John he had sold me his best cow, and one that was worth $60 of many man's money. If he had been weighing and testing, he would have known the value of the cows in his herd. He would have sold two of the poorest of his cows for $20 each, and saved money in feed, got his $40, and kept his best payer. I have kept less cows than John, but I am quite sure I make more money, because I know what my cows are doing, and when I have one to sell, I know how much she is worth, and why, and I don't waste much time or feed on cows that don't pay. Knowledge, I have found, is a short cut to success with cows.

Yours as ever

Shorty.

Making Both Ends Meet

"Did your daughters marry rich men?"

"Not exactly. One married a farmer and another married an ultimate consumer. But the third may make up for all that."

"How so?"

"She's engaged to a middleman."—Louisville Courier-Journal.

COMING! THE CROWLESS COCKEREL

CROWLESS cocks is an achievement at which experts of the Bureau of Animal Industry are aiming, as a result of a communication from a farmer who asserts that he has solved the problem of divesting "chanticleer" of his early morning proclamations.

Secretary Houston and Dr. Galloway, assistant secretary, both city dwellers, are interested in these experiments which will be conducted as an investigation of the farmer's tip.

According to the farmer all that is necessary to stop a rooster from crowing is to remove one of the vocal cords or wrap absorbent cotton around the fowl's throat. It is not clear to the officials of the Department of Agriculture whether they are being kidded or not, but they propose to find out.

APPLETON

SILO FILLERS

APPLETON MFG. CO., 464 FARGO ST., BATAVIA, ILL., U. S. A.

A Cart Load of Fun

This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in **"A Cart Load of Fun"** are the following: "A Man With a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded Not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jones' Baby," "Breaking up a Cat Concert," and 148 others. **"A Cart Load of Fun"** is a book of sixty-four large double column pages, neatly bound in attractive colored paper covers. Price 10 cents each, 3 for 25c; postpaid.
COONER & FORTUNE, Indianapolis, Ind.

For 10 Cts

Coming Features

By R. E. Olds, Designer

From this time on, when you buy a car, these are things to watch for.

Left-side drive—
Center control—
Oversize tires—
Set-in dash lights—
Free entrance in front—

Right-side drive has been abandoned by the leading cars. Hereafter drivers will sit close to the cars they pass.

Skimpy tires are out-of-date. So are projecting side lamps. So is a blocked front door. These features are absent in the best cars now. They'll be absent in all cars soon.

Reo Rod Control

Note that Reo the Fifth has all these new features. And our center control is a one-rod control—an exclusive Reo feature.

All the gear-shifting is done by moving this rod three inches in each of four directions. It's as simple as moving the spark lever.

There are no levers, side or center. Both brakes are operated by foot pedals. So the driver's entrance on either side is clear. He need never dismount in the street.

When you see these features you'll not want a car without them.

Other Advances

Then the Reo marks the latest practice in some other great respects:

Analyzed steel—
Vast overcapacity—
15 roller bearings—
190 drop forgings—
A $75 magneto—
Doubly-heated carburetor—

Roller bearings cost five times what common bearings cost, but they do not break. Drop forgings cost twice as much as steel castings, but they don't have flaws.

In Reo the Fifth, steel is all made to formula. The gears are tested in a 50-ton crushing machine. The springs are tested for 100,000 vibrations.

Each driving part, for big margin of safety, is tested for 45 horsepower requirements. Each engine is given five long tests—48 hours altogether.

Parts are ground over and over. Important parts are hand-fitted. Nothing is left untested.

What They Cost

These things are costly. Oversize tires cost us $60 extra. Our unusual features, all combined, add $200 per car to our cost.

But we save this for you by building only one model. That saves about 20 per cent.

And these things are essential in a car that endures. A car without them may run well for a while, but the second season repairs and troubles come.

Reo the Fifth marks the best I know after 26 years of car building. I would not buy a lesser car myself, so I shall never build one.

In the years to come you'll save hundreds of dollars by having a car built like this.

Sold by 1,000 dealers. Showrooms almost everywhere. Catalog on request.

R. M. Owen & Co., General Sales Agents for Reo Motor Car Co., Lansing, Mich.

Canadian Factory, St. Catharines, Ont.

Made with 5 and 2 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, Prest-O-Lite gas tank for headlights, speedometer, self-starter, extra rim and brackets—all for $100 extra (list price $170).
(Gray & Davis Electric Lighting and Starting System at an extra price, if wanted.) (203)

MAKE YOUR OWN STOCK AND POULTRY FOODS AT

1c a Pound

As all readers of this paper are interested in Live Stock their attention is called to the economy and value of Arabian Stock Food Tablets. Experiment station bulletins are unanimous in their claims, based on many careful tests that a good tonic or Stock Food is both profitable and positively necessary to the feeders of today, but the great objection is the great cost. "Should be bought for about one-half of the usual price" (6 to 15 cents per pound). Farmers' bulletin 73 and 144, Department of Agriculture, Washington, D. C., show how Stock Foods are usually made, using about 90 per cent. cheap "Filler." You have a good "Filler" of your own. We give you here a formula proved and guaranteed as The Best Stock Food Known.

Formula: 50 pounds Common Bran, Chop or Meal 5 pounds Common Salt, mix and add a 50 cent package of Arabian Stock Food Tablets. Cost you only 50 cents for 50 pounds.

Arabian Stock Food Tablets are made from the seeds of wild flowers, the most reliable remedies known to medical science reduced to extract form for economy. For conditioning horses, cows, sheep, hogs and poultry this remedy has no equal. Satisfaction guaranteed or money refunded. We send by parcel post small package for 50 cents or large size for $1.00. Freely indorsed in United States Trade Reports.

SHEEP SHEARINGS

Tobacco dips are death to sheep scab.

The short-time tenant seldom owns sheep.

The early lamb gives you first chance at the profits.

Profit from wool comes from meeting market requirements.

Dirt and filth do less damage to wool than burs and chaff.

Sheep will go where cattle cannot, and will eat what cattle will not.

Wool held on the farm should be stored in a clean, dry place, in closely woven bags.

The breeding, feeding and health of the flock governs the quality of the wool produced.

A good shearing machine will secure fifteen per cent. more wool than shearing by hand.

The tripple-purpose sheep is the sheep for the average farmer. He wants lambs, mutton and wool.

Grade your wool, and don't mix the grades. Mixed lots bring the price of the most inferior wool in the lot.

Oil paint and tar marks do not come out in scouring wool. The manufacturer employs labor to cut them out, hence he pays less for marked wool than for wool not marked.

The farmer who has sheep should keep posted on the values of the different grades of wool. Knowing the value of the article sold enables the seller to bargain for a better price.

Sixty thousand western sheep arrived in Kansas City in one week a short time ago. Chicago received eighty-six thousand the same week. This caused a glut in the mutton market.

STOCK STATISTICS

TWENTY-FOUR years ago the highest price recorded in the Pittsburg stock yards was $4.20, paid for a load of 1385-pound steers. A load of 1857-pound steers sold at $4.10, good 1,100 to 1,200-pound steers at $3.75@3.90 and fair butcher steers at $3.25@3.50. Good feeders of 900 to 1,000 pounds were relatively high at $3.25@3.60. Fat bulls brought $2.50@3.25, one 1,480-pound bull selling at $1.75. Butcher cows were worth $2@3, and canners were quoted by the head. Veal calves were 75 cents higher that week at $4.75. Fresh cows sold at $20@35 apiece. The hog and sheep markets were not very exhilarating to producers either. Good hogs sold at $4.40@4.65 and best sheep at $4.35@4.50. A few spring lambs were on the market and sold at $5@5.25, averaging 44 to 48 pounds.

In a lump sum the horses of the United States are valued at the immense sum of $2,278,322,000. The average price of a horse has advanced $4.83 since 1912, and he is now held at $110.77. In the country there are 20,567,000 horses. Iowa has 1,568,000 horses, Illinois, 1,482,000, Texas, 1,181,000, Kansas, 1,099,000, Missouri, 1,084,000, Nebraska, 1,027,000. The range of valuation is from $147 in New Jersey to $58 in New Mexico.

In the matter of individual valuation, however, the horse must give way to the mule, that has a selling value of $124.31. In some states the mule is valued at $171.00. In Missouri, which produces 326,000 mules a year, the value is put at $117.00 each. Texas leads all the states in mule raising. Missouri, Georgia, Mississippi, Tennessee, Alabama, Oklahoma, Arkansas and Kansas follow in the order named.

In 1903 we had 16,557,000 horses, now we have 20,567,000; we had 2,728,000 mules, now 4,386,000; we had 44,660,000 other cattle, now 36,000,000; we had 17,105,000 dairy cattle, now 20,000,000; we had 64,000,000 sheep, now 51,482,000; we had 46,922,000 hogs, now 61,180,000.

PRODUCTION OF AYRSHIRES

Netherhall Brownie 13th, owned by J. W. Ogden, Morristown, N. J., produced in two years 1,159 pounds of butter, which, at 30 cents a pound, had a value of $357.70. The skim milk and two calves more than paid for her feed.

Bessie of Rosemont, owned by Geo. H. McFadden, gave in one year 11,784 pounds of milk, making 566 pounds of butter.

The Kansas Agricultural College owns a two-year-old Ayrshire cow named Canary Bell that gave 10,092 pounds of milk and made 434 pounds of butter in one year.

Queen Ester, an Ayrshire cow owned by H. C. Groom, has a year's record of 13,681 pounds of milk and 523 pounds of butter.

A college cow, by name of College Maude, owned by the Kansas Agricultural College, gave in one year 13,327 pounds of milk making 622 pounds of butter.

Jean Armour, a cow owned by Mrs. F. D. Erhardt, of Vermont, in one year produced 20,174 pounds of milk, which turned out 904 pounds of butter.

Mr. J. W. Clise, of Washington, is the owner of Gerranton Dora 2d, an imported Ayrshire cow that produced 21,023 pounds of milk and 947 pounds of butter in a year.

The 340 Ayrshire cows of five years of age and over that entered an official test contest averaged a milk production of 10,473 pounds each, testing 3.82 per cent. butter fat, and making 475 pounds of butter to the cow.

The farmer who fails to test his cows, record their production, and account for their feed does not know what his cows are worth.

Same Cost of Keep

"I should think you would get you a nice runabout."

"I've got one. She's in this store selecting a hat right now."—Houston Post.

AMONG THE HOGS

HAVE a good pasture for the sow and pigs, but do not depend upon grass alone, nor upon grass and the milk the sow may give. Provide other feeds including slops and some corn; but never feed sour slops.

See that the pigs have plenty of water. It does not matter so much whether they have wallowing places; clean water is better for drinking purposes. Plenty of shade and cool places are essential in hot weather.

Vigorous, thrifty sows, well matured, not too fat nor too lean, that have been accustomed to exercise, and males that are large-boned, well formed, in good flesh but not fat, are the best breeders.

Where several brood sows are kept on a farm it is better to have the pigs come near the same time. They will then be less trouble throughout their entire lives. Shoats of the same age, if they run in the same lot or pasture, are much more easily fed and cared for than if of different ages and sizes.

There are liable to be runts among the pigs, and they should have special attention and a degree of protection or their larger and stronger brothers and sisters are liable to fight them away from the feed, or even from their rightful share of the mother's milk. In such cases they will continue to be runts, whereas, if insured proper feed, they may grow out of their class.

A Pleasantry

The pretty storekeeper was unpacking and assorting some new goods when her best young man entered. She stooped behind the counter a moment and arose with flushed face.

"I'm glad to see you're stocking up," he said.

There's an unaccountable coldness between them now.—Judge.

Reason Enough

Lola, aged four, was present at a dinner one evening when a number of guests were being entertained by her parents, and during a lull in the conversation she began to talk very earnestly.

"Why do you talk so much, Lola?" asked her father.

"'Cause I've got something to say," was the innocent reply.

5 Year Guaranteed Buggies At-½-Retail Price

SEED STORE, Indianapolis

Save 40% to 60% on a Clear Fir Silo

Buy direct from us a Seattle Silo of famous Puget Sound fir—made of timber cut from our forests, worked in one of our six great mills. Sold to you at one profit above manufacturing cost.

Seattle Silos

are made of the finest fir in the land. Many trees grow 200 to 250 feet tall. For our silo staves we use only the choicest. Close and straight grain. Free from sap and knots. Wonderfully durable. Seattle Silos have *patented swinging doors*—quick detachable; no lifting; easily swing in or out; new iron cross-bar or hoop connection; door bars form ladder from which hoops are easily tightened.

Write today for folder. On a single silo we can probably arrange to give you practically carload shipment price. To one farmer in each township we have a very special offer. Write today.

SAVE 40% to 60% on Lumber and Millwork

You pay five middlemen's profits on lumber you buy of your local dealer. We sell you at *one* profit above *producing* cost. Give you choice timber as grows only in the Puget Sound region—give you the benefit of our wonderfully low cost of production. Our six great mills turn out twenty to thirty carloads of materials each day. All orders shipped within 24 to 48 hours. Reach our customers within average of two weeks. *Satisfaction guaranteed or money refunded.* Send for price list and catalog. Send bill of materials, if possible, for estimate.

Third Floor, Crary Bldg., SEATTLE, WASH.

POULTRY PICKINGS

Keep the duck pens dry.

Eggs are of two kinds, fresh and cold storage.

Milk will take the place of meat in the fowl's diet.

The little things are the big things in poultrydom.

The Minorcas are about the best layers of good sized eggs.

Failures in poultry ventures can be traced to either incompetency or neglect.

Birds are meat eaters by nature. If you cannot supply meat, supply a good substitute.

The flock of hens that are compelled to be strict vegetarians seldom pay big profits.

Even fresh eggs vary in flavor. Pure, wholesome food for fowls produces the finest flavored eggs.

The quality of the egg depends much on the quality of the material from which it is formed.

Lack of protein in the poultry food reduces the number of eggs obtained, and also the "hatchability."

The hen that produces the largest number of eggs usually produces the smallest eggs in size. Try keeping a record by weight, instead of by dozens.

FACTS ABOUT THE FARMERS' FLOCK

DON'T farmers consider their poultry a part of their livestock?

Some do, others do not.

Those who do, and treat them according to rules for success in keeping livestock make them pay. Others do not.

Pure-bred hogs, cattle, sheep and horses pay best. By the same token, and for the same reasons, pure-bred poultry pays best. The farm flock should be not only pure-bred, but well-bred.

No trouble about choosing a breed. Take any good general purpose fowl. Plymouth Rocks, Wyandottes, Orpingtons, Rhode Island Reds, all are good enough, and none are the best. Take the one you like best.

The farm flock that is not paying a profit is either one or the other of two things: The breeding isn't right, or the care isn't right. Quite often both these conditions hit the same flock, and the owner declares, and offers proof that poultry doesn't pay.

Blood will tell, even though it is chicken blood. But blood without care is of little value. Care without blood is no better.

The farm flock that is started right, and kept right will lay eggs, and produce chicks that will turn in a large profit.

Ten dollars is not too much to pay for a trio of well-bred fowls to infuse new life in the farm flock. But don't expect to take a lot of mongrels and by infusing good blood make a good flock of them. Bad blood will tell as much as good blood and a far different story.

Few ladies consider that they carry some forty or fifty miles of hair on their heads; the fair-haired may even have to dress seventy miles of threads of gold every morning.—London Tit-bits.

Where women are few in number they are highly prized. Alaska will grant them the vote.—Providence Journal.

A woman is as old as she looks before breakfast.—American Magazine.

In winter the female of the musk-rat species puts on a coat of fur; the female of the human species buys some low shoes and some open-work hose.—Louisville Courier-Journal.

DE LAVAL

The Best Constructed Cream Separator

EVERY year the superiority of the De Laval over all other cream separators becomes greater. Every year the De Laval offers separator buyers a better machine than the year before.

Woman's Work

THE FARMER'S WIFE AS A DRESSMAKER

EVEN women on the farm, who sometimes milk cows, feed pigs, often hoe weeds in the garden, and wear the old-fashioned sunbonnet like to be dressed stylishly and sensibly when occasion requires. She goes to town, to church, to parties, to picnics, to the local union, or farmers wives' club, and she wants to appear her best.

Her children go to Sunday school, and they, too, must be neatly dressed.

Fashion is a peculiar thing, a perfect tyrant to those who are willing to be tyranized. The farm woman is usually too sensible to follow Dame Fashion to her extremes. Besides, it isn't necessary. One can make their clothes neat, pretty, attractive, and at the same time follow the styles near enough to be stylish, without being grotesque and ridiculous.

Gowns worn by the willing slaves to fashion are often neither sensible nor pretty. The farmers' wife looks on them with amusement. She doesn't want them. But she does want new and pretty articles of wearing apparel, in good style and taste. These she can have, for patterns are plentiful, cost little, and the average housewife is her own dressmaker. So there is no reason why she cannot have stylish and sensible clothes both for herself and her children.

All house dresses and wrappers are built on far scantier lines than ever before, and they are very much prettier on the woman of average figure. If one be stout it is as well to use a little more material and trust to the flowing lines of the garment to conceal the fullness of the figure.

With the advancing summer we find the necks of dresses and waists cut very low indeed and the chemisette must fill in the opening. These do not come very far down in front, but there is no limit to their width and depth in the back. In color we see more white used for collars and cuffs than earlier in the summer. Sheer white lawn or batiste is self embroidered and the brilliant semi-oriental tones of the well-liked Bulgarian embroideries are found in the silk materials which are attached to the dress proper and generally have a thin white collar over them.

At first it was thought that the shirt waist would be no more seen in the land, as the one-piece dress is everywhere, but the tailored suit and the separate skirt are both too comfortable to discard and both these demand the shirt waist. The plain shirtwaists are made much as heretofore, but nearly all have the drop shoulder, as the one illustrated in No. 6071 will show. This gives a plain shoulder seam for the sleeve and a much better line to the figure.

In place of the regular shirt waist young girls are wearing the blouse made on middy lines and given the new touch which marks them as up-to-date. Often enough these hip bands or belts are made of contrasting color and material and it is not unusual to find satin belts on linen dresses and many other combinations that look a little queer to us at first.

Even the children's fashions bear the marks of change. The lines are straighter, the skirts of the small garments less full, belts are wider and collars are of exagerated shapes and sizes. Those who do not like to go to extremes find many ways of modifying these styles so that the garments are up-to-date and yet not freakish.

Materials, too, have changed very much this season. By far the best liked for ordinary purposes is ratine and its first cousin, eponge is a close second.

Ratine is soft, thin, loose in texture and washes as easily as a bit of rag. It needs almost no ironing and very little trimming to make it very stylish and it is just as suitable for the juniors as it is for their elders.

TEN LITTLE DUTIES

Ten little duties! Does no good to whine;
Skip out and do one, then there are nine!
Nine little duties; it never pays to wait;
Do one quick, and—presto!—there are only eight.
Eight little duties; might have been eleven;
One done in no time, now there's only seven.
Seven little duties; 'tisn't such a fix;
Do one more, and—bless me!—There are only six.
Six little duties; sure as I'm alive!
Never mind, one's over; now there are only five.
Five little duties knocking at your door!
Lead one off to Doneland, that leaves only four.
Four little duties, plain as plain can be!
Can't be shirked—one's over—leaving only three.
Three little duties; like a soldier true
Meet them and vanquish one; then there'll be but two.
Two little duties between you and fun;
In just a minute longer there'll be only one!
One little duty; now what will you do?
Do it! why surely; now you are through!

Willing to Work.

Mr. Wise—What would you do for me if I'd give you something to eat?

Willie Wantajob—I can saw some wood for you.

Mr. Wise—I have no wood; we do all our cooking by electricity.

Willie Wantajob—Well, you could let me turn on the electricity.

And He Did.

He (at masquerade ball)—That's a singular looking costume you're wearing. What do you represent?

She—Opportunity.

He—Well, I always embrace every opportunity that comes my way.

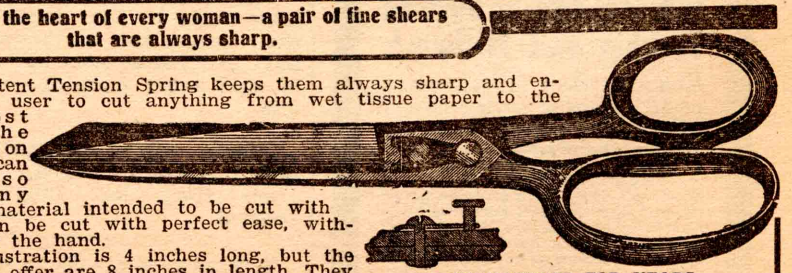
Dear to the heart of every woman—a pair of fine shears that are always sharp.

The Patent Tension Spring keeps them always sharp and enables the user to cut anything from wet tissue paper to the heaviest cloth. The tension on the rivet can be set so that any kind of material intended to be cut with shears can be cut with perfect ease, without tiring the hand.



The illustration is 4 inches long, but the shears we offer are 8 inches in length. They are made from the best carbon steel which insures strength, and a keen cutting edge. The manufacturers guarantee quality of the material and workmanship in every pair.

GUARANTEED FOR YEARS

Our Offer One pair of these Shears will be sent free for your renewal or a new subscription, one year at 50 cents

Up-to-Date Farming, Indianapolis, Indiana

HOME HELP HINTS

Never handle gasolene near a fire.

A cup of water placed in the bottom of the oven will prevent things from burning.

When cutting new bread or cake, put the knife in hot water first.

When cake raises in a point the oven is too hot.

Amonia will remove grass stains but must be used only on white clothes. Kerosene rubbed on the grass stains before washing will remove the stain from white or colored fabric.

When preparing old vegetables, such as potatoes, soak in cold water after paring. If a little salt is added to the water they become firm.

To keep things from boiling over, butter the edge of the sauce pan well and cocoa, candy, or rice will not boil over.

Irons will heat more quickly and will keep hot with less fuel if they are covered with a pan to hold in the heat.

In washing glassware a good polish may be obtained by using a pinch of baking powder in the water.

The new alcohol or gasolene irons will save labor and fuel and can be bought for $3.50 or $5.

For bleaching table linen or white clothes that have become yellow, wash in soap suds and lay on the grass without rinsing out the soap. The sun and the dew will whiten them.

Delivered the Goods

"It is half-past one o'clock!" severely said Mrs. Gnagaway. "What kept you from getting home until this untimely hour?"

"I was detained at the office, making out statements," replied her husband.

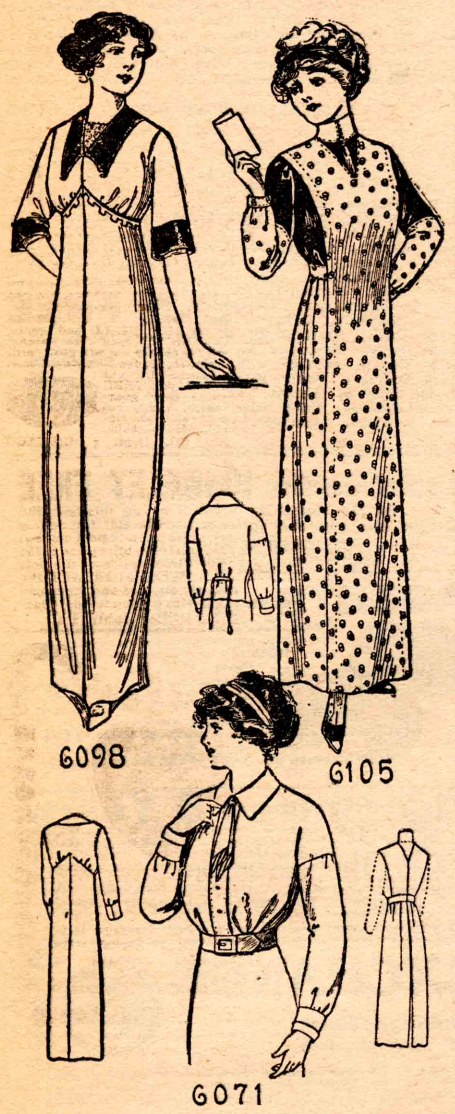
"And that is one of the statements, I presume?"

AN OPTIMIST

Mockin' birds a'singin' in de mulberry tree,
Ole mule in de furrow lookin' lazy-like at me,
Cotton fields a'smilin' an' a'shining in de sun,
Golly, ain't I happy when my day's work's done?

Little log cabin whar I rests at night,
Little ole fiddle makes my heart feel light,
Little yaller wife a'cookin' bacon an' pone,
Golly, ain't I happy when my day's work's done?

Patterns of Fashion



Free Monthly Fashion Guide We are unable to print all the fashion illustrations each issue that we would like to publish. However, with each pattern order mailed we will include free an advance Monthly Fashion Guide. Monthly Guide alone, without pattern, for 2c for mailing. All patterns are very latest and only 10c each, postpaid.

6098, LADIES' WRAPPER — Empire style, with short, shaped bodice and plain two-piece skirt. The sleeves may be either long or short and the neck is edged with a pretty collar. Sizes 34, 38 and 42 inches bust measure. Medium size requires 4⅞ yards of 36-inch material. Japanese silk, cotton crepe, lawn and other soft, clinging materials are used.

6105, LADIES' APRON.—This serviceable apron has a shaped front panel extending over the shoulders in broad tabs to the belt in the back. The side breadths end at the waistline, where there is a narrow band. Gingham is by far the best material for an apron. Sizes 34, 38 and 42 inches bust measure. Medium size requires 5 yards of 27-inch material.

6071, LADIES' SHIRT WAIST.—This is a tailored model and the regulation shirt sleeves, but this may be shortened if desired. The closing is in front, arranged in the usual box plait or without it. At the neck there is a soft roll collar, but a band finish may be used and detachable collars substituted. Pongee silk, linen, pique, plain colored gingham, cambric, percale, madras and batiste are used for these waists. Sizes 34 to 42 inches bust measure. Medium size requires 2½ yards of 36-inch material.

Price of each of above patterns, 10 cents.

No-Rim-Cut Tires
10% Oversize

11% Less This Year

Rubber has dropped a little. And our factory cost, because of multiplied output, has dropped a little more. Our new factories are completed, and we've equipped them with the latest labor-saving machinery.

Now we have a capacity pretty close to 8,000 motor tires daily.

As a result, No-Rim-Cut tires are costing about 11 per cent less than last year.

What You Save

You save, by using these new-type tires, all the ruin of rim-cutting. And that is what wrecks 23 per cent of the old-type clincher tires.

You get extra capacity. No-Rim-Cut tires are 10 per cent larger than the same rated size in clinchers. And that oversize, under average conditions, adds 25 per cent to the tire mileage.

And now you save on price—11 per cent under what these tires cost last year.

No Extra Price

No standard tire of any type costs less than No-Rim-Cut tires today.

Hooked-base tires—tires which rim-cut—now cost the same as these new-type tires which don't.

Tires just rated size now cost as much as these oversize tires.

Consider how it pays to insist on these savings when they cost you nothing extra.

Their Records

No-Rim-Cut tires, when they cost more than clinchers, came to outsell all others.

The demand for these tires has doubled over and over. It has become the sensation of Tiredom.

More Goodyear tires were sold last year than in the previous 12 years put together. And car makers alone have contracted this year for 890,680 of them.

Now No-Rim-Cut tires cost no more than old-types, and our demand from users so far this year has jumped 85 per cent.

Just Be Fair

All we urge is fairness to yourself. Test the tires which, on countless cars, have shown the lowest cost per mile.

One glance will show that these tires can't rim-cut, that they are over rated size. Find out how this lowers tire bills.

Hundreds of thousands of men who have done that now use Goodyear tires.

Also be fair to us. For 14 years our experts have worked to lessen tire upkeep. And we are still spending $100,000 yearly on research and experiment.

Now comes this 11 per cent reduction. Doesn't this record, in your estimation, call for a test of these tires?

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

The Cadet writers never fail. Again we have a fine batch of letters that we print with much pleasure; the one regret connected with the department is that we can not print them all.

There is nothing in this world that so satisfies the soul as doing a kind and generous deed. Doing good to others is the greatest source of happiness ever found. If you doubt it, just put yourself out a little at some time or other, and make some one else happy by some generous act of your own. It will make you happy, as sure as God's sunshine makes daylight. In a recent issue we told of a Cadet who had the misfortune of affliction, not being able to walk, and it was suggested that the Cadets donate small sums to aid in the purchase of a rolling chair, that would be a continual source of comfort and satisfaction. We begin the letters this month with a letter from the crippled Cadet, that those who have contributed can realize the joy they have created in this shut-in's heart, and that others may help him to realize his hope that the long-coveted chair will soon be a reality.

DEAR EDITOR: I never will forget you and the kind Cadets from whom I have received letters and cards and contributions. I surely am thankful. I now hace $5.90 received from the following friends: Elvira Lundt, Jas. H. Whan, Albert Staltenbend, Walter Schofield, Floyd Girton, M. Miller, Eugenie Phillips, Mrs. Flo Gurger, Eliza Lundt, Lillie Scott, Ida Blan, Hazel and Nema Beaty and Victor Keene. Some one, signing themselves "A Friend" sent fifty cents. I want to thank those folks through Up-to-Date Farming and to tell them how much Iappreciate their kindness. After a little while I hope to be able to move about with little trouble to others. Yours gratefully, George Alderson, Hall, La.

DEAR CADETS: I am a Kansas boy of twenty-seven years, and live in Pawnee county, the banner wheat county of the state. My mother owns an 800-acre farm, four miles southwest of the beautiful little town of Larned, which is noted for its great number of automobiles. We raise wheat, corn, oats, barley and alfalfa. The Arkansas river runs for two miles along the south side of our farm. There are twelve children in our family, six boys and six girls, and all are living but myself and my brother are the only two left at home, and we are keeping batch. So, boys and girls, write. Every scratch will be welcome as the evenings are long and lonesome.—Logan Johnson, Larned, Kas.

DEAR CADETS: We made 1,600 pounds of cotton to the acre, and got from four to five cents a pound for it. We are to have thirty acres in cotton this year, besides having other crops and vegetables, and lots of chickens, ducks and turkeys. I am twenty-two years old, and would like to correspond with other Cadets.—S. M. Thompson, Senath, Mo.

DEAR CADETS: I am a farmer boy sixteen years old, and we raise mostly corn and cotton. We have about 110 acres in cultivation. I would like to exchange post cards and letters with the Cadet boys and girls.—Floyd Leverette, Mt. Vernon, Tex.

DEAR CADETS: My sister and I would like to join you. She is seventeen and I am eighteen years of age. We like Up-to-Date Farming, and would be glad to correspond with the Cadets.—Elva and May Walters, Aliquippa, Pa.

DEAR CADETS: I am a Hoosier girl, sixteen years old. We take Up-to-Date, and think it contains much information for farmers and poultry raisers. I would be pleased to exchange cards or letters with the Cadets.—Lois E. Jones, Fredonia, Ind.

DEAR CADETS: Will you permit another Missouri girl of sixteen to join you? I live on a farm. I have lived in the city, but I like farm life best. I would like to correspond with all the Cadet boys and girls, and will answer all that write.—Renia Gray, Wardell, Mo.

DEAR CADETS: I am a farmer's daughter, nineteen years old, and live on a farm of five hundred acres. I would like to exchange letters and postals with the Cadets.—May D. Burson, Rocky, Okla.

DEAR CADETS: Up-to-Date is a welcome visitor at our home. My father is the organizer for the local union here. I am fifteen years old, and would like to receive cards at any time, bet especially on July 3, my birthday. I will answer all I get from the Cadet boys and girls.—Rose V. Zeits, Provemont, Mich.

DEAR CADETS:
Here comes a girl from Michigan,
Where we catch trout and fish again.
The Up-to-Date, I'm glad to say,
Comes to our home, and there 'twill stay.
I am 15 and in high school,
A Michigander won't be a fool.
To hear from all I would be glad,
If you don't write I will be sad.
—Myra Hale, 402 Antrim St., Charlevoix, Mich.

DEAR CADETS: I am a Kansas girl sixteen years old. We conduct a store in a small town. Crops around here are all looking fine, except that they need rain badly (May 3). I am a lover of music. I would like to exchange cards, letters and photos with Cadets.—Ruth Beavers, Burlington, Kas.

DEAR CADETS: I am a boy of sixteen from the far western state of Oregon. I am not a farmer, but I have an uncle who is, and I stay much of the time with him. I like the idea of Equity very much, and will be glad when it is adopted everywhere. I will gladly exchange postcards and letters and photos with the Cadet girls and boys.—Nick Michels, 1901 Division St., Oregon City, Ore.

DEAR CADETS: I take Up-to-Date Farming, and enjoy reading it, especially the dear Cadet letters. I live on a farm of about two hundred acres of bottom land near a creek, where I go bathing in the summer. I very much enjoy working on the farm. We raise corn and cotton, besides vegetables and fruit. I am 21 years of age, and would like to correspond with all the Cadet girls and boys; will answer all I get.—Luther Sudduth, Hamilton, Ala.

DEAR CADETS: I am fifteen years old, and I used to live in Mt. Eaton, O., but we have lately moved to Akron. I will graduate from high school this spring, and would like to exchange cards and letters with any of the Cadets. Some of my chums from Mt. Eaton have written letters and become Cadets.—Freda Holub, 847 Holloway St., Akron, O.

DEAR CADETS: Here comes a farmer boy from the mountain valleys of Idaho. I am 18 years old, and live on an eighty-acre farm, four miles from Rexburg. My father is a member of the Farmers Society of Equity, and takes Up-to-Date. I think it is a splendid paper. I would like to exchange cards, letters and photos with the Cadet boys and girls; will answer all.—J Henry Heppner, Rexburg, Idaho.

DEAR CADETS: I have been reading the Cadet letters for two or three years, as my father is a subscriber. I am thankful I live in the country and have a good home. Father owns a farm of 340 acres, and a married sister and her husband own one of 440 acres. Our crops are potatoes and wheat, oats, corn and other grain, and vegetables. We have nine horses, eighteen head of cattle, and a number of hogs. Farm life is the happiest kind of life. We can make money on the farm, and enjoy ourselves as we go along. If we were in some city or town, caged up in an office or behind a counter, we would not enjoy that, would we? I am seventeen years of age, weigh 175 pounds; and am five feet nine inches tall. My brothers and sisters are a jolly set. We all like music, and have an organ, banjo, violin and harmonica. Hoping to hear from Cadet girls and boys, I am—Mabel Patterson, Brays, Mo.

DEAR CADETS: I live in a small town, but I like the country best. I have been reading Up-to-Date for a year, and enjoy its pages very much. I would like to exchange letters or cards with all the Cadets if they like.—Orpha Barnette, Pleasant City, O.

DEAR CADETS: I am a farmer boy of twenty-five. My father lives on a farm of 175 acres near Hickman, Ky. I like farming very well, but I would rather cut timber than farm. I do a lot of contract work in timber. I would like to exchange cards and letters with the boys and girls, as I have been a reader of Up-to-Date Farming for some time. I will answer all letters and cards I receive.—Ben Carter, Hickman, Ky.

DEAR CADETS: I will be nineteen the 18th of June, and would be pleased to have a card shower from the boys and girls. Will answer all. I am the oldest of seven children. My mother is dead, and I am left to keep house and do for the rest of the family. Will answer all cards and letters that I may receive from the girls and boys.—Erma Wohnhas, Sardis, O.

DEAR CADETS: I am 15 years of age. I live with my father, four brothers, two sisters, and my grandfather. Our farm consists of 108 acres, and our main crops are wheat, oats, corn, hay and potatoes. I would like to become a friend of all the Cadets. I live six miles from the nearest railroad, but I get my mail every day at noon. Would like to get cards, letters and photos from the boys and girls, and will answer all I receive.—Hazel Wohnhas, Sardis, O.

DEAR CADETS: I live on a farm of 160 acres, and will be seventeen years old next December. I would like to exchange cards or letters with the Cadet boys of about my age. I have a camera and will exchange pictures with any desiring to do so.—Floyd Michell, Rockville, Ind.

DEAR CADETS: I live on a farm of sixty acres, about three miles from town. Our principal crops are corn and cotton. I would like to exchange letters and cards with the Cadets.—Obed Lamb, Numez, Ga.

DEAR CADETS: I am writing to join in with you Cadets. Up-to-Date Farming is a real nice paper. I am a farmer's daughter, but I am crippled, and have been all my life, but I have a wheel chair and can wheel myself around wherever I want to be. I am seventeen years of age. We live on a farm of 160 acres. I have two brothers and four sisters. We all like farming. I will be pleased to receive cards and letters from all Cadet boys and girls, and will answer all I receive.—Minnie Johnson, Clinton, Iowa.

DEAR CADETS: I have only taken Up-to-Date a short time, but I think it is a dandy paper. I am a homesteader, and have 560 acres of land, located about sixty miles from the Wyoming state line. I am twenty-four years old, and think it is a fine thing for young people to exchange thoughts with one another. Woulld be pleased to hear from the Cadet girls and boys. Will answer all.—Henry J. Walsworth, Angora, Neb.

DEAR CADETS: We live on a farm of forty acres, and raise horses, cattle, hogs and chickens. Our crops are corn, hay and beans. My father has taken Up-to-Date Farming for five years, and thinks it the best paper printed. I am twelve years old, and will answer all who write me.—Laura Dupie, Standish, Mich.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

We were confident that we were right a few years ago when we published what we claimed was the first plan for a sound and enduring farmers' organization, and gave to the American farmers what we said would prove a practical system for marketing to always secure profitable prices.

—o—

Naturally, then, we are pleased to see the universal acceptance, by people and press, of the doctrine that this paper first promulgated, viz., controlled marketing of farm crops will compel the price and that farmers can control what they produce. But we are particularly gratified to get endorsements first-hand, direct from the farmers themselves. Every day brings fresh evidence that our first convictions were correct.

—o—

For instance, the following are from one mail:

Mr. Everitt: I believe you are engaged in the greatest work of the age, and I believe you are doing your utmost to bring the needed reform in marketing, with the means at your command. I will tell you you that if you could talk with our farmers, who are members of the Farmers Society of Equity, you would find them thanking you from the bottom of their hearts for the excellent plan of Equity. One man told me today that he sat up all night, until the break of day, reading the Society's literature.

—o—

Another wrote:

The Equity marketing system delivers us from the maze of competition and starts us on the straight road of co-operation. All honor to the man who studied out this perfect business system and gave it to we farmers. I will not believe there is a single farmer, who produces crops to sell, who will refuse to accept the benefits and share in the advantages that the Farmers Society of Equity gives, when he once understands it. Our paper—UP-TO-DATE FARMING—cannot do too much to educate farmers on marketing and explain the successful plan of marketing at profitable prices.

—o—

An organizer wrote:

A column or two in UP-TO-DATE FARMING devoted to the organizers and organization, to the end that a good man in each community may be induced to get his neighbors together and start the Equity business system, is one of the great needs of the hour. Also that department should instruct the organizers how to leave the unions working and not helpless. There is no excuse for dormant unions in the F. S. E., and such unions are worse than useless to the organization.

—o—

Another organizer asks for an article in the paper along the line of incorporating local unions and the advantages of such corporation. We will take this for the subject of our message this time and we hope that what we say below will cause a good man in each community to offer his services as a leader to organize. We append a blank to fill out.

—o—

Always keep in mind that the local unions of the F. S. E. are organized for business. True, there may be other objects in the minds of the members and there usually are. But the matter of business is the most important, and if business is not done there cannot be much excuse for the organization. And no matter what other objects the members had in view, the local union will not last long if not used for business. Therefore, soon after organization the matter of business should be taken up and discussed.

Each local and county union should

—o—

have its own meeting place or hall. Farmers ought to see to it that when they go to the village or county seat on business or pleasure that they have their own home to walk into and a place to meet friends or rest and to transact business. There is no good reason why farmers, who have created nearly all the wealth of such cities and towns, should be obliged to hang around a store or sit on their haunches in the shade of the village pump, or why their wives and children should sit in the wagon and wait for them while they attend to duties and perhaps be jeered at by unthinking town people. Farmers are entitled to the best, and the Farmers Society of Equity is making it possible for them to have facilities for business and comforts at home and abroad.

—o—

After the Equity hall will come in the natural order of things the need for warehouses, elevators, cold-storage houses, canneries, creameries, slaughter and packing houses, grading sheds, etc.; to receive, store, preserve, manufacture and market the crops as the demand needs them.

—o—

All of these things can be provided for through raising the membership fee to join the local union, or through increased annual dues, or by assessments on the members, or by a small commission assessed against the crops sold through the Society and on supplies bought. The property thus acquired will be owned mutually by the members.

—o—

But a better way is to incorporate. The corporation is the approved modern form of associating a number of people in business, defining the rights of each, limiting responsibility and establishing necessary credit which, with the F. S. E. unions, is desirable when they buy supplies.

—o—

If it is decided to incorporate the amount of capital stock should be first decided upon. Then appoint a committee on articles of incorporation and constitution and by-laws. An attorney who is familiar with the corporation laws of your own state and others, should be employed to assist. (Headquarters of the F. S. E. will send a draft of constitution and by-laws on request.)

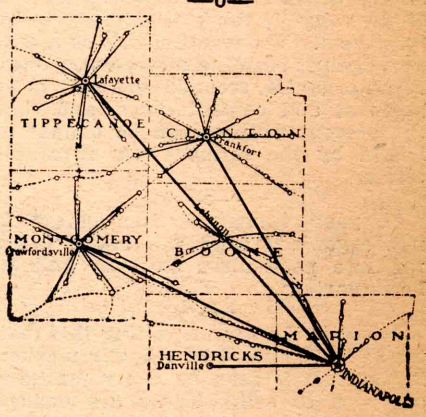
—o—

Keep in mind this fact, that your local union is, or will be connected with a county union, and that the business of selling crops and buying supplies will be done in county units. Therefore the chief responsibility will fall on the county union and it should have a capital stock in proportion, while the local union can get along with a small capital stock. But the county union may be the only corporation and issue of its stock to the locals to an extent to provide for their responsibility. Also the county union should own and control all of the utilities in the county, such as warehouses, etc., as named above. This plan centralizes the authority and operations in a county unit, which is necessary when it comes to reporting to and dealing with the National Clearing House. The county control makes for more perfect co-operation than can be secured if the locals each owned independent utilities.

—o—

Assuming that the county union plan of ownership is agreed upon, members all over the county should subscribe to the stock in the same ratio as they raise crops to sell. A committee must be appointed by each local to determine this. When the committee reports members must be given an opportunity to protest if they think their apportionments are too high. If some members prefer to defer payments for stock until some crops are marketed and take it out of the proceeds, this arrangement should be made, whenever possible.

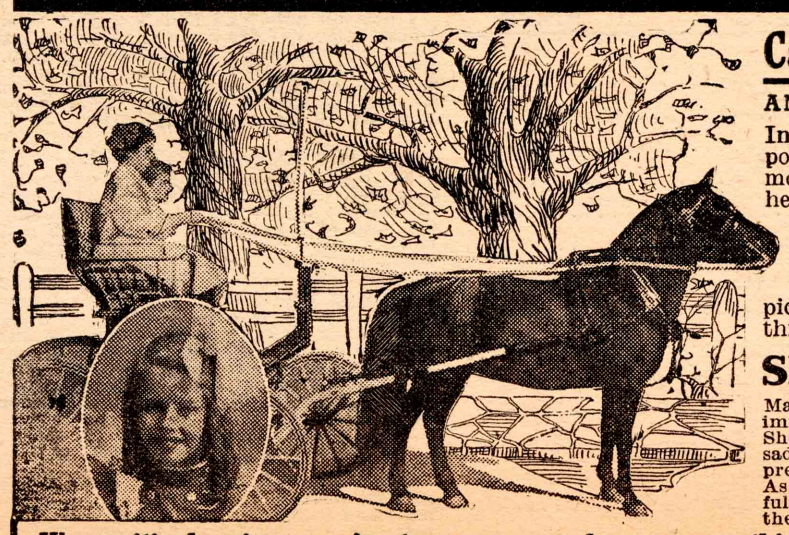
—o—



While we speak of county unions the divisions need not conform strictly to the political county. Local unions must eventually affiliate with the clearing house that is most logical for the best service. As an example see the local union in the southwestern part of Boone county in the map above. This town is Jimtown. It is not connected directly by railroad with Lebanon, but is on the railroad running directly to Crawfordsville. It belongs to the Crawfordsville district.

The Farmers Society of Equity is not a corporation for profits through dividends, and we caution all local and county unions to guard against this pitfall that has proved the destruction of innumerable farmers' corporations. The Equity corporation must be purely mutual and purely co-operative—the profits or dividends taken on each transaction at the time of the sale or purchase. A small commission shall be charged against each transaction to furnish the funds to meet the expenses and this commission can be made large enough to accumulate a fund that will take care of the extension of

FREE Shetland Ponies



Carriage, Harness, Saddle & Bridle

AND HUNDREDS OF OTHER FREE GIFTS

In the picture here you see Emma Williams and her pony. I gave her the entire outfit. She was the most delighted person in the world. In the picture here are seven hidden faces. Can YOU find them? I will give a beautiful Shetland pony, carriage and harness free to the one person who has the greatest number of votes to his credit at the end of this contest. For each face you can find in this picture I will give you 1000 votes as a starter. Now this is YOUR chance.

SEND NO MONEY—Just Your Name and Address

Mark the location of the faces with an X plainly, and we will immediately enter you as a contestant for this magnificent Shetland pony outfit, which includes pony, carriage, harness, saddle and bridle; all sent direct to your home, all charges prepaid. A more beautiful pony you never saw than this one. As soon as we hear from you we will send you his picture, also full particulars telling how you can easily secure him—besides the pony we have hundreds of other presents we give away.

We positively give a prize to everyone who answers this advertisement! So be sure and send your name in today with the hidden faces all plainly marked and get the free pony votes. It is the easiest thing you ever saw. I have given away over thirty Shetland ponies to boys and girls all over the United States, besides thousands upon thousands of other beautiful presents. Be sure to write today.

Address, MATT. YOUNG, Pony Man, 546 La Salle Avenue, CHICAGO, ILL.

utilities and facilities as the additional needs arise, or any surplus may be distributed to the members pro rata to the business done for them.

—o—

Equity corporations must not share the business benefits with non-members of the Farmers Society of Equity. But it is hoped to show such great advantages, benefits and profits that the business features of our Society will attract every producer from the soil and impel him to join with us.

—o—

We recommend incorporating under the laws of your own state, if it has a suitable law.

—o—

It is important, when preparing to do business, to keep in mind that as soon as the farmers of a community operate by the Equity system and control their crops, the present elevators and warehouses will become available for their use on practically their own terms, because such building will be of no value if there is nothing to go into them. We mention this as a caution against building unnecessary ones. First, organize, second, get ready to do business and control crops, and then the present utilities can be bought or leased by the farmers on favorable terms.

—o—

If your community or county is not organized send the blank below for free particulars and the help of headquarters.

—o—

What is the use of putting this matter off? The need of a better marketing system is seen by every producer of crops to sell. There are enough readers of this paper to start the organization in practically every county in the country in the next thirty days. And they are perfectly competent to do everything that would be required of them. If they will come forward now and offer their services, to be paid for by the Society, could not the organization be completed yet in 1913 and the National Agricultural Clearing House established this year?

—o—

In some sections the F. S. E. is growing by leaps and bounds. There is no reason that we know of why it will not be the same way in every other agricultural section, if once the start is made. The great need of the hour is men to make the start, to send the blank filled out.

—o—

Below is the blank.

THE FIELD

UP-TO-DATE FARMING will print in this department short letters from its subscribers on any subject of general interest and calculated to further the mission of the paper.

The Organized Farmers of Idaho

J. A. Everitt, President Farmers Society of Equity:

Dear Sir and Brother—I met with the three locals (a union meeting), Arimo, Marsh Center and Robins, all meeting at Arimo. The three locals combined voted to incorporate for $10,000 to build a grain elevator and provide for the co-operative buying of coal, twine, machinery, sacks, etc. On Monday, preceding this meeting, I met with three other locals at Clifton, where money enough was raised to buy a flouring mill of 50-barrel capacity. Tonight I am to meet with the Inkum local and assist in incorporating for the purpose of building a mill. As fast as we can do so, we are organizing locals and forming corporations.

Just imagine one hundred corporations, of the Farmers Society of Equity in the state of Idaho alone, all working along the same lines, to the same end. This we will have in a reasonable length of time. You are doubtless already aware that my home local at Sterling is incorporating for $10,000.

In our famous potato-growing districts potato cellars, frost-proof, large enough to hold the crop of the community will be established as rapidly as possible.

In the fruit-growing districts fruit cellars will be constructed. All this is to be done to enable our people to control their marketing in a business-like way. Special attention will be given to storing, grading, packing, selling and conserving the by-products. Dairying will be developed, as it is stated on good authority that Montana imports from the east at least 80 per cent. of its consumption of dairy products. Co-operative buying, in large quantities, through the state union will be developed.

This is rather an ambitious program, but the plan of the F. S. E. is so simple, so practical, so free from complications and difficult problems that we can carry it through.—A. Y. Satterfield, President State Union, Sterling, Idaho.

Big Sack Contract

Things are commencing to "pop" in Idaho. We have just closed a deal with one of the largest sack companies in the country, contracting for ten carloads of sacks at the best figure we have heard of in three years, from the Ames-Harris-Neville Company, of Portland, Oregon. The deal was arranged by our state union through W. M. Donohue, Box 254, Salt Lake City, Utah. We have opened a produce house in Rexburg, and will make it headquarters for the farmers in this county. Our county board of directors meets next Monday to consider a proposition made by a large implement company which will mean large savings to our members through this channel. We will have delegates in the next annual meeting, and will choose them in our July meeting.—O. S. Paul, County Organizer Fremont County, Rexburg, Idaho.

Equity Demonstrates Its Superiority

I am sending herewith signed duplicate of the commission appointing me local union organizer of the F. S. E., and will engage actively in the work immediately after the rush of work is over. We are now in the midst of shipping our cucumbers. We are receiving from 90 cents to $1.10 cash on track at loading station per hamper. Members of the local independent association here are consigning their crops. Some were at our loading station yesterday, consigning their crops, and as they saw us making out checks for our members, at satisfactory prices, it not only opened their eyes, but their pocketbooks as well, for I took applications for membership in our society from nine members of the independent association. Our local will put up a warehouse, office, and weighing scales before the first of the year. These highly satsfactory results are largely due to the splendid management of our county union business agent, Mr. C. B. Lozier.—Truman C. Smith, Loxley, Ala.

Equity's Banner Local

We are sending in another batch of names of new members. We now have 300, and I am going out in the country a few days next week, and that will mean some more. I have really more work than I can attend to. We did over $10,000 worth of business last month. We are shipping nearly day. Shipped two cars of cattle last Monday, and two cars are going next Monday. We are shipping wool, beans and hides today. We have a car of corn coming from Iowa.—L. H. Brockman, Secy. Parkers Prairie Local 6975, Parkers Prairie, Minn.

(Note—This local was organized in February of this year (1913), and is a demonstration of what farmers can do when they will.—Ed.)

A County Business Agent

The Boone County (Indiana) Union has placed itself with the progressive county unions in appointing Robert Stephenson, of Lebanon, the president of the county union, the business agent for the county.

Believes in Federation

The members of our local of the F. E. & C. U. are favorably impressed with the idea of federating on the plan proposed by the F. S. E. Please send us all the information you can as to how to proceed. I want a general organizer's commission, as I will be in Hillsboro county, Florida, for a while, then am going to Texas, and from there to Indiana, and I want to do organizing wherever I go. Yours for Co-operation. —C. M. Maxwell.

Getting Down to Business

The Oregon division is getting business matters under way. Locals are holding meetings, taking inventories of their products which they will contract to handle through the Equity Warehouse Company, in Portland, and also taking orders for supplies, such as stock, salt, cement and binder twine. This plan, if pursued along the line of practical business policy, will prove highly satisfactory and profitable. Co-operation is a success in business, when business principles prevail.

A Business Local

Clarkes Local 6956, meeting in regular session at the school house on April 5, transacted the following business: Chas. D. Haynes admitted to membership. One truck wagon listed for sale. A delegate was chosen to represent the local in the state convention. A committee was appointed to investigate warehouse proposals. The proposition to erect a local, co-operative cannery was discussed, and a committee appointed to investigate market conditions for canned goods. cost of equipment and supplies. By-laws were drafted by the committee and given first reading. Second and third degree work in initiating members to this local adopted by unanimous vote. Adjourned to April 19.—John L. Gard, Sec'y Oregon City, Ore.

The Auto in Organizing

I own an auto, and find it a good help. I have a farm of 320 acres and I do almost all of my own work, so I am a busy man. But at night, when the day's work is done, and sometimes at the noon hour, I jump in the car and take a spin for charter members.—H. C. Click, Chadron, Neb.

Work Opened in Florida

Mr. S. J. Cowan, of Athens, Georgia, an able and experienced organizer, and a man of unusual ability who knows thoroughly the need of organization in the south and understands the requirements of successful co-operation, will take the field at once in Florida. The trucking sections will first be brought into line, and as these are confined to certain counties it will be neither a long nor difficult task to organize the truckers solidly. Mr. Cowan will hold conferences with organizers officers, and members at the Albert Hotel in Jacksonville, June 14, and at the Arlington Hotel, Palatka, June 17.

A Crazy Clock.

One of the inmates of a New York insane asylum, an Irishman, was sent to an adjoining ward to find out the correct time. He returned in a moment and announced:

"Twinty minutes t' twilve."

"Pat, are you sure that clock is right?" he was asked.

"Roight, is it?" he replied. "D'ye think it wud be in this place if it wuz roight?"

Law Should Stop Sale of Leg-Strap and Spring Trusses

Wrong to Buy Anything for Rupture Without Getting 60 Days' Trial

Depending on leg-strap or spring trusses—like shown below—is little less than slow suicide. They are almost sure to shorten your life. It's next to impossible to make them hold without hurting—they are simply a curse to wear.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City

Selected Novels from Favorite Authors **FREE**

We want to give you this big collection of thirty-nine Novels, Novelettes and Stories. Each is a complete story in itself. All are printed on book-paper and are firmly bound in paper covers. We will give you this whole grand collection of the best reading just to make you acquainted with our paper, **Good Stories.**

The Desmond Blood	Etta W. Pierce
A Doctor's Story	Mary Kyle Dallas
Secret of the Holly-Tree	Charlotte M. Braeem
Unmasked	S. Annie Frost

Additional Markets

(Continued from page 5.)

as a rule calling only for good ones. Offerings are not pressing of any kind, so prices remain in their late position.

Pea Beans—

Hand-picked, choice	$2.25@....
Really fine, bright	2.30@....
Prime	2.00@2.10
Stock faulty, lower	1.25@1.75

Mediums nominally same as Pea Beans.

Limas, per 100 lbs.	6.00@6.25

The price of Pea Beans is 10c a bushel lower than two weeks before. The price a year before was around 60 cents a bushel higher.

EGGS—Receipts for the weeks at Chicago were 129,642 cases, against 118,746 cases the week before and 121,462 cases the corresponding week a year before.

The receipts from April 1 to June 7 have been 1,530,851 cases. Same period last year, 1912, 1,512,957 cases; same period in 1911, 1,308,441 cases, and the same period in 1910, 1,522,225 cases. This shows the receipts this year the largest of the four.

Price—Ordinary firsts, 16½@17c. Two weeks before, 16¾@17¾c. A year before, 16c.

Firsts, 17½@18c. Two weeks before, 18¼@18¾c. A year before, 17@17½c.

We're Thankful

Yes, UP-TO-DATE FARMING is thankful
For its kind and faithful friends,
And upon its frequent visits
Its best thoughts to them it lends.
But it always seeks a favor,
That will bless not it alone;
Get us one more new subscriber—
Each one, you know, counts one.

The members of our local meet every first and third Saturday in Danelson's hall, at Colton. At our first meeting in April we made provision for marketing all our eggs, butter, cream, poultry, pork and veal in Portland, to the Hazelwood Creamery Company. We will also make arrangements to purchase our feed in quantities from Portland.—W. H. Gorbett. Colton, Ore.

The teachings of UP-TO-DATE are just fine—I like it splendid. We have a farmer's organization here but we need to market on a different plan. Can you not come to our county and town, and show us how to do?—J. W. Pressley, Saltillo, Tenn.

The March 15th issue came just in the nick of time to give us the county union business plan. There was a growing desire among our people to establish retail stores, but all seem now satisfied to go ahead and attend to our own business.—P. W. Meredith, Oregon City, Ore.

I'll tell you why I am interested in UP-TO-DATE FARMING. I have graduated from the College of Agriculture and the Ohio State University, and am now doing advanced work in the Michigan University, preparing to apply myself, as far as possible, to social and economic principles in rural problems. Your paper strikes the key-note that finds a responsive chord in my heart. Your booklet, the "Crop-Rich Money-Poor Farmer, gives the keystone to prosperous farming.—G. R. Rinehart, Ann Arbor, Mich.

I send along a dollar for UP-TO-DATE for three years. Every old scrap of agricultural publication we pick up to read urges us to raise more, even double our crops, but never a hint at what we are to get for our products. It makes me tired. There is and can be but one way for farmers to succeed, and that is to organize thoroughly, and then fix a minimum price at the local market—a price that will leave the producer at least a small profit on every crop. As it is now, there are many crops sold at an actual loss to the farmer, but we have grown so accustomed to it that some of us really seem to like it, for we do nothing to remedy matters. A farmer here who loads a car of potatoes gets 25 cents per bushel. We are told the consumer down in Kansas pays $1.25 a bushel and blames us for the high cost of living. I wish there was a J. A. Everitt in every county in the country. Success to UP-TO-DATE.—P. L. Riegel, Rochester, Minn.

Mother's Little Pet

The house was in an uproar; everybody and everything was upside-down. The police had been sent for, and the fire alarm rung. Little Willie, the apple of his mother's eye, was missing—lost, stolen, or strayed.

But, joy—oh, joy!—he is seen coming down the road, and his mother rushes out, and clasps him to her bosom.

"Where have you been, my pet—my little lamb?" demanded his mother.

"Oh, I've been playing postman!" replied her "pet." "I gave a letter to all the houses in our road—and they were real letters, too!"

His mother heaved a sigh of relief; she feared her darling had been getting into mischief.

"Where did you get them, my love?" she asked, in amusement.

"I found them in your wardrobe drawer, tied up with ribbon," replied the dear boy, in innocent tones.

Little Willie still finds it more comfortable to stand up, for they were mother's and father's old love letters!

Some Time Ago

"See here, waiter, you don't mean to tell me this is a fresh eggg?"

"It was when it was laid, suh."

"But when was that?"

"I don't know, boss; I'se only been here a year."

A Differing View

"I asked your husband last night if he had to live his life over again if he would marry you, and he said he certainly would."

"He certainly wouldn't."

Table Manners.

"Speaking of etiquette, did you send the dollar for those advertised instructions on 'what to do at table?'"

"Yes."

"And what did you get?"

"A slip with one word printed on it: 'Eat.'"

Old Methods Inadequate.

"I remember you cured me of the same trouble a dozen years ago. Why don't you use the same treatment now?" "A dozen years ago?" echoed the doctor. "My dear sir, the medical profession has made wonderful strides since then, and I couldn't think of such a thing."

A Clergyman Embarrassed.

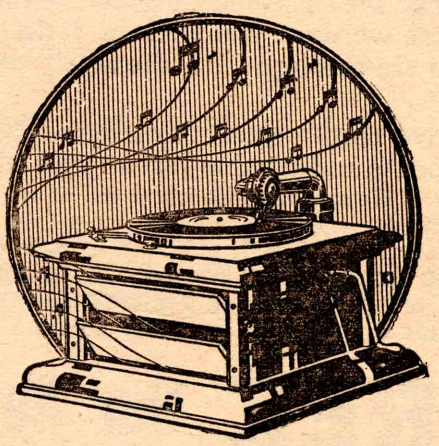
On a rainy Sunday morning the country pastor on his way to church, thinking to protect his trousers from the wet, had turned them up at the bottom. Upon reaching the church he forgot all about his trousers. His good wife, from her pew, discovered the oversight, and when the plate was passed she dropped a note to the pastor. Thinking the note was a church notice of some kind, he placed it with the rest. Imagine the consternation of his wife and the congregation when the pastor read: "Henry, turn down your pants!"

WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING

Columbia Records
Trade Mark

Every great artist who has ever made records--without one exception--can be heard on your Columbia Grafonola.

Among those who make Columbia Records exclusively are: Bispham, Bonci, Destinn, Fremstad, Garden, Gay, Harrold, Josef Hofmam, Nielsen, Nordica, Pasquali, Segurola, White, Ysaye, Zenatello ---and Scores of others.



The Columbia "Eclipse," $20 Oak, $25 Mahogany, plays any disc record. It is larger, better built, and has far better tone-quality than any instrument you ever saw or heard or may have seen advertised at anything like the same price.

There are fourteen other Columbia models, ranging in price from $17.50 to $500.

All Columbia Records (double discs from 65c to $7.50) may be played on Victor talking machines.

Likewise, all Columbia instruments will play Victor records.

Wonderful NEW Edison Shipped FREE

Mr. Edison's Pet and Hobby

He realizes the wonderful value of his phonograph as a cementer of home ties and as a maker of happy homes. And for this reason he **worked for years striving to produce the most perfect phonograph.** At last he has produced this new model, and his friends have induced him to take the first vacation he has had in over a quarter of a century. Just think; **over twenty-five years of unremitting work on many new inventions**—his pet hobby perfected—then a vacation.

Write today for our new Edison Catalog that tells you all about the wonderful new model Edison with Mr. Edison's new model R Reproducer and the new parlor grand equipment. With this catalog we also send full explanation of our free shipment offer.

Mr. Edison says:
"I want to see a phonograph in Every American Home."

Read this remarkable—**Free Shipment** offer on the first lot of the new style Edison Phonographs—these new Phonographs to be shipped **free** on this special offer **now.**

The Offer

We will send you the new model Edison Phonograph and your choice of over a thousand records on an absolutely free loan. We want you to have all the waltzes, two steps, vaudeville, minstrels, grand operas, also the sacred music, etc., etc., by the world's greatest artists. Entertain your family and your friends. **Give plays and concerts right in your own parlor.** Hear the songs, solos, duets and quartettes, the pealing organs, the brass bands, the symphony orchestras, the choirs of Europe's greatest cathedrals, the piano and violin concerts, virtuoso—all these we want you to hear **free** as reproduced on the new Edison. Then, when you are through with the outfit, you may send it back to us.

The Reason

Why should we make such an ultra-liberal offer? Why should we go to all this expense and trouble just so **you** can have all of these free concerts? Well, we'll tell you. We are tremendously proud of this magnificent new instrument. When **you** get it in your town we **know** everybody will say that nothing like it has ever been heard—so wonderful, so grand, so beautiful, such a king of entertainers—so we are pretty sure that at least some one, if not you, then somebody else, will want to buy one of these **new style** Edisons **(especially as they are being offered now at the most astounding rock-bottom price and on easy terms,** as low as **$2 a month).** But even if nobody buys, there is no obligation, and we'll be just as glad **anyway** that we sent you the **New** Edison on our free loan; for that is our way of advertising quickly everywhere the wonderful superiority of the **New** Edison. But don't delay sending coupon today.

UP-TO-DATE FARMING

16th Year, Number 13 — JULY FIRST, 1913 — Indianapolis, Ind.

A Herald of Farm Progress and Prosperity. Published Twice a Month

With the Up-to-Date Farmers

A Department for Live Folks who want the best. Our readers are asked to contribute their thoughts. If you have a helpful idea pass it on. Be neighborly. Contributions always welcome.

Any old time is springtime if you're willin' to help it along;
Any old time is a holiday if you'll furnish the laughter and song.
The birds can't be singin' always an' the blossoms can't bloom without rest,
But there's hope an' there's light an' the sky seems bright fur the feller that's doin' his best.

A real big stick—the Farmers' Club.

You had better be sure than be sorry.

Shallow cultivation of corn is a product of deep judgment.

Every man is a greenhorn in any business other than his own.

Stick-to-it has won many a great victory. Give-it-up never won one.

A pessimist is a weather-vane always pointing in the wrong direction.

The man who trusts to luck usually finds that bad luck is the only kind he can depend on.

A man who makes enemies by doing the right thing may be proud of the enemies he makes.

If things keep on this way, we had better elect a bunch of detectives to the United States Senate.

Some men are so "broadminded" they will not try to get into a working harness that fits them.—R. N. Y.

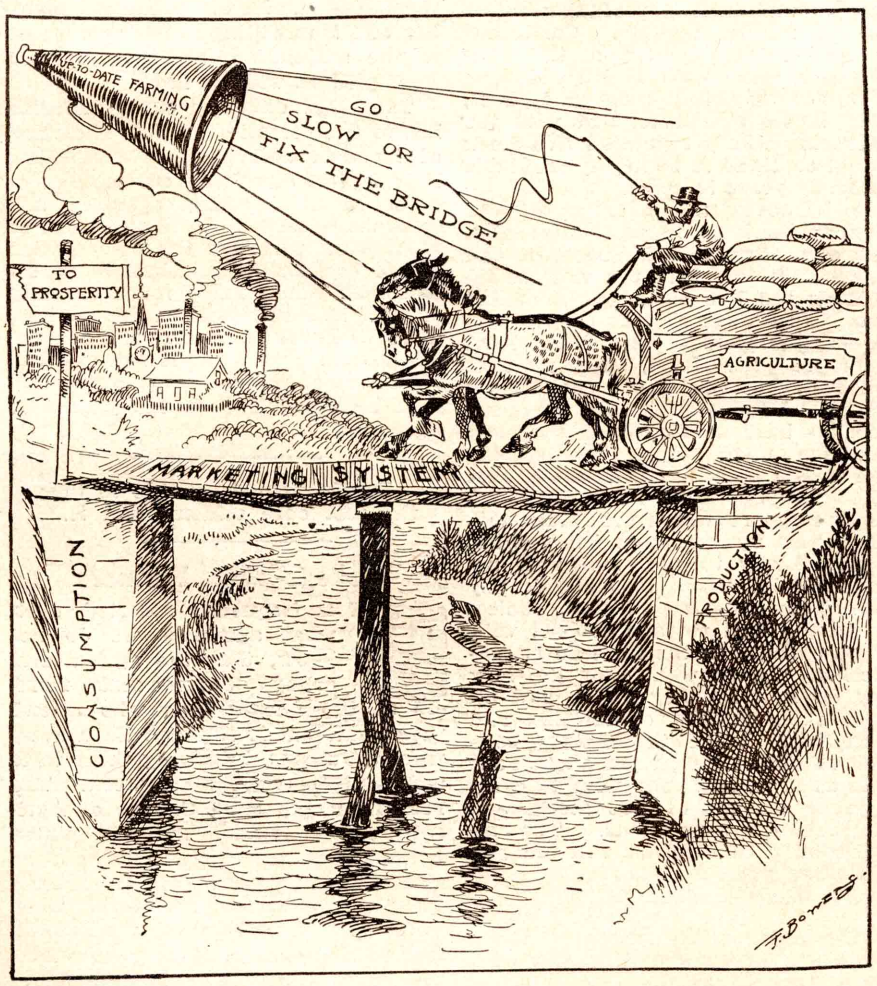
Why not create a "Bureau of Investigation" in the Department of Justice, and let the lawmakers attend to their lawmaking?

No matter how good a reputation for gentleness your bull may have, don't trust him. He doesn't care a cent for his reputation.

If every gold mine would turn out the way the fellows who sell the stock say it will, gold nuggets would be as cheap as old potatoes.

There are always a few folks in every community who oppose any progressive movement, but the world goes forward and drags them along behind.

Higher prices paid by consumers, and lower rates of transportation are not to be expected. Therefore, larger profits on the farm must come by reducing the cost of production, marketing and distribution.



QUESTION: Farmers are producing more now than the marketing system will carry, at times, safely, then is there not great danger of breaking the system down entirely with the loss of all, if the efforts of the exclusive greater crop teachers are successful?

Six Men Control

Half a dozen members of the Chicago Board of Trade have a monopoly of terminal and country grain elevators, and control three-fourths of the grain shipped into Chicago, according to evidence elicited by the United States government in its action against the Board of Trade as a monopoly in restraint of trade.

The Good Old Way

By Sam Saxon

Joe Wilkes was always proud to say he liked to live the good old way, and through this life he did sashay in simple manner. He said it was a lot more fun to do things just like daddy done, and so he toiled from sun to sun 'neath pater's banner.

He'd rise up early in the morn, and milk the cow with crumpled horn, and feed the pig an ear of corn as father did it. From break of dawn till close of day he toiled along the well-worn way, and tried to make his farming pay, but luck forbid it.

A yoke of oxen pulled his plow. The road was pasture for his cow, the oaks grew acorns for the sow without expense. For cover crops the ragweed grew. For sheds he made the strawstack do. For fruit the blackberry briers grew along the fence.

The good old way may be O. K. for those who want to go that way, but I feel pity for the jay that wants to try it. For those who reach the golden gate must go by methods up-to-date, and hustle or they'll be too late, you can't deny it.

Thoughts at Random

OWNING a home is a wonderful thing. I do not believe a man is quite as good a citizen of his country as he should be until he owns a home under its protection, pays taxes for its support, and thus comes to feel a sense of proprietorship in it. To love our country as patriots should it is almost necessary to love some spot in it with ties of real affection. It is easy to do this if once we realize what that spot means to us. Why, I have often seen tears in the eyes of tenant farmers' families on leaving a place where they had lived for several years, notwithstanding they were going to a better opportunity. The love of home is as natural as the love of a mother for her offspring.

* * *

The tenant system of farming is deplorable for other reasons than that it creates a shifting population, and tends to "skinning" the farms. It thwarts, stultifies and even destroys the home spirit and all it means to people as individuals and to the nation as a whole. The children of the nomadic tenantry hardly know the real meaning of home. Their very method of living creates a taste for change, a spirit of unrest that cannot make aught for good citizenship. From one farm to another, from one state to another, from country to town, from town to city, the homeless drift without the home-builders' constructive ambitions, entirely lacking the community spirit so essential to right living and useful citizenship. Our tenant system must be changed, more permanent homes must be created, or the welfare of our country will be weakened, and the standard of our citizenship lowered.

* * *

It is not the country alone that suffers from irresponsible citizenship. The same is true in our cities and towns. Too many tenants, too many people without the home spirit, the community interest. Whether a man lives in a fashionable apartment, and receives a high salary from some corporation, or whether he is a day laborer renting a tenement in an alley street, or a three-room cottage in the factory district, it is all the same. It is easy to drop out of the scheme of things in one town, and into another. There is no interest in the town or city as a home—as a good place to live out a useful life and rear a family of useful citizens. The "job" seems to be the only thing of importance, and jobs are always temporary things, especially if the job-holder does not own a home.—C. H. Taylor.

Something for Nothing

Visitor—Digging potatoes, eh?
Farmer's Boy—Yes.
Visitor—What do you get for digging potatoes?
Boy—Nothin'. But I get something for not digging them.
Visitor—What do you get for not digging them?
Boy—Licked.

The Editor's Message

THE editorial page is devoted mostly to a discussion of what we consider the most important affairs that should interest our great family of readers. The editors, however, now and then want to talk straight to the subscribers about the paper itself and its mission. UP-TO-DATE FARMING has a mission beyond that of the farm paper that teaches practical methods of doing the work on the farm, or provides entertaining reading matter. It has a real work to do. This work is to build up a community interest, a co-operative spirit, in every neighborhood. We believe most heartily in organized communities, in farmers' clubs, in social advancement, and hold that when farmers are properly organized their means for making farm life more enjoyable and profitable is greatly enhanced. We not only **teach** these things, but we **do all in our power** to aid the farmers of any community who will accept our assistance to accomplish them. The whole country is now talking about the great advantages, aye, the necessity of organized agriculture, and organized community life. Co-operation is declared to be the progressive principle to make farm life what it should be, and we all know co-operation without organization is impossible. Our message to you this time is this: We are not only willing, but anxious to lend our aid in promoting your local welfare through local co-operation. A careful reading of these pages will show you how you can do this, and how we can be of service to you. In this connection we say again, and believe we speak truthfully when we say it, "There is no other paper like this in the world."

The agricultural college should be a great place for field sports.

Live Stock Farming

THE president of the Iowa Beef Producers' Association is credited with saying that it will take the United States seven years to get back to producing its normal supply of cattle. Just what is meant by "normal supply" we do not know, and it matters little. The important matter is that there is a pronounced scarcity of beef cattle, at least so far as numbers are concerned, if we can depend upon census returns. High prices for cattle on foot have induced farmers to sell freely, and as long as veal and beef stock continue high the farmers will continue to sell.

The population of the United States has practically doubled every twenty-five years since 1685. There is no reason to believe this rate will not continue. Twenty-five years hence this country will in all probability possess a population of 150,000,000, at a conservative estimate. Meat always has been the most popular food of mankind, and doubtless always will be. Those who abstain from meat, or eat it in small quantities do so because they are unable to use more. The market for meat will continue to grow in proportion to the growth of population and the increase of prosperity.

Live stock farming, on the average farm, can be made the most profitable agricultural industry. Sheep, cattle and hogs should engage the attention of a larger number of farmers each year. The more grain that is fed to live stock, the less grain will appear in the markets, which will assist in maintaining profitable prices for the marketed grain. Conditions are such in this country at the present time that there is little danger of immediate over-production in beef, milk, butter or cheese, and with the marketing wisely regulated live stock should continue to be highly profitable for many years to come.

It behooves the average farmer, whether he lives north, south, east, west or central, to study his farm and local conditions, with the view of increasing the live stock quota on his farm. Just what plan he should pursue is absolutely dependent on local conditions—the farm, the markets and last, but not least, the farmer himself. Upon him and his judgment rests the burden of choosing the most profitable plan. A certain specific plan should be adopted, however. Just drifting along, with no well-defined aim, is never rewarded with much success. The farmer must know what is most likely to pay, and then arrange all his plans to make it pay well. Before making a definite choice, he will do well to take counsel with others engaged in the lines he is considering. Learn what they do, how they do it, why they do it, and all about their method of farming and marketing. Write the state experiment station, telling them about your farm as it is, and your wish to carry a larger amount of live stock, and ask them for suggestions. The information thus received will aid you in making your decision.

In business, the success of the outcome depends on the size of the income.

Long Island Farmers as Busness Men

EVIDENCES that farmers are waking up multiply with a rapidity that is little short of startling. Though the last class in this country to adopt the modern ideas of business economy and efficiency, they will soon become the first class in the importance and magnitude of their work along business lines in matters of production and marketing. Heretofore the farmer has lived more or less an isolated life, and one reason, and probably the chief one why he has not kept pace with business progress is because he has not kept in touch with it. This condition is rapidly being changed. The farmer is awakening to what is going on around him by the more progressive business classes, and his awakening results in activities of an unusual order.

The potato growers on Long Island have an organization, which was begun five or six years ago. Early in June an annual meeting was held, and the attendance was surprisingly large. A report of the business done during the past year disclosed the fact that the organized farmers handled co-operatively 6,000 sacks of seed potatoes in comparison with 1,700 the year previous. They marketed co-operatively 294 cars of potatoes, which was 55,000 bushels more than the year before. They handled 42 cars of coal, against two cars the year before. In addition to these items they purchased 1,557 tons of fertilizers, 80 tons of lime, 30 cars of stable manure, two cars of auto gasoline, 15,000 pounds of grass seed, two cars of apples, 600 barrels of flour, 92 cars of grain, and many other materials of common use. In short, they did a $285,000 business on a capital of $6,500. The members, as the president of the association remarked, got behind their organization and pushed, instead of insisting that they should get on and ride, and compel two or three to do all the pushing.

The loyalty of the members to their association is the one thing that brings them success. No one becomes a member who is unwilling to pledge his crop to the association, and they redeem their pledges without fail.

The chief difficulty the association has to overcome is one that it cannot, of its own accord, remove unaided. This is the damaging competition of other farmers, some organized and some unorganized. Until there can be provided a plan for the co-operation of the farmers' associations to an extent that would make for uniformity of price and an equalized distribution, there will ever be present the dangers of glutted markets and low prices. The federation of shipping associations will soon be recognized as the guarantee of success.

People financially able to take the rest cure seldom need it.

College-Made Farmers

IT is frequently asserted, upon what authority we do not know, that the agricultural college does not make farmers of the farmer boys who attend them, but that it educates them away from the farms, by giving them taste and equipment for other work. The records of the Iowa College of Agriculture demonstrates that this opinion is far from the facts. It must be remembered that these colleges are not entirely devoted to agriculture. They have courses in literary, mechanical, and professional lines as well, where the boy and girl may fit themselves for the vocation in life that appeals to their taste and talent. The aricultural course is only a department in a great school for the training of youth.

Those who take up the agricultural course do so to make use of it in their life work. Out of every hundred who graduate from the agricultural department of the Iowa college, forty return to the farm and become farmers. Twenty three become teachers of agriculture in colleges and high schools. Eleven find places in the United States Department of Agriculture. Thirteen engage in such lines as dairy manufacturing (butter-making and cheese making), and agricultural writing, lecturing, etc. Out of the entire hundred graduates only thirteen fail to follow a pursuit related to agriculture.

It must be remembered that, in addition to the graduates, a great many boys and girls attend the school for a few terms, to gain as much knowledge as possible in the shorter time they are able to attend. And a great many farmers themselves attend the short courses instituted by the department for their especial benefit. It would seem, therefore, that the extent of the agricultural college's influence in matters of agriculture is greater than is generally supposed, and there is little doubt but that it will greatly increase in the near future.

A hoe with a polished handle never has a rusty blade.

Pay as You Go

GOOD roads are of most benefit to those who use them most. A county or state toll-tax system might be the logical way to raise funds to build and maintain good roads. Then, if bonds are voted, the toll money could be used to help retire the bonds. The burden would thus fall heaviest on those who use them most and receive the most benefit from them. While the farmer wants and needs good roads, the most of his time he spends in his fields. There are doubtless a dozen town vehicles to pass over the road for each farm wagon. Let the traffic that uses the roads pay its proportionate share in making and keeping them good. A traffic toll tax would enable every section of country road to have a road man to drag it, and keep it in condition. Earth roads are excellent, and inexpensive when kept in good condition, and a system of dragging and oiling will keep them in condition. The farmers have not started the good roads movement. Left to themselves, without the question being agitated by good roads enthusiasts, they would seldom, if ever, vote a bond issue for macadamizing roads. The good roads agitation is fostered by the automobilists.

We are in favor of such agitation. We are advocates of good roads. If no better way in found than the bonding plan, then buy good roads with bonds. But we also believe that the traffic should bear the expense according to usage, and some plan for providing such a system is in order.

The Popularity of Parcel Post

THERE is no doubt about parcel post being popular. The writer stood in line for twenty minutes waiting his turn to have a handful of parcels weighed and stamped. Up to May 1, 150,000,000 packages had been sent under parcel post, and the rate of increase is 10,000,000 packages a month. So far the movement has been mostly merchandise from city to the country. Shipping produce from farm to city by the post is of small extent. It can never develop until the local shippers form organizations to look after ways and means of getting city customers, learning their needs, and providing for a system for handling the business. System is the keystone of successful business. Success is almost impossible without it. And the only way farmers can have system is through organization. This is just one more instance that shows how emphatically a national system for organizing farmers in order to systematically and successfully market their crops is needed.

Our Wheat Special

THE August first number will be particularly a wheat growers' number. Wheat is one of the oldest cultivated crops. We feel quite certain, without definite information, that wheat grew in the Garden of Eden, and that Father Adam raised wheat before he raised Cain. However that may be, wheat is one of the most valuable and important crops grown in this and other countries, and we propose to devote one issue of our paper to the grain that supplies the "staff of life." We hope to make the Wheat Special a number of unusual interest and value, dealing with all phases of the production, marketing and use of the wheat crop.

Some Editorials

By John P. Stelle

Still the Tariff

WE have not said much about the tariff for some time, because in previous issues we discussed the tariff principle freely and impartially; and it is the policy of this paper to give lawmakers, both state and national, a free and untrammeled opportunity to discharge their duty to the people, reserving the right, of course, to discuss questions that are before them and to urge what we consider the interests of the people require. The press, though it often attempts to do so, cannot decide complicated questions in detail and mark out the different steps that shall be taken by the authorities. The schedule details must be studied out and adjusted by those whom the people have elected for that purpose. Our plea has been, and still is, for fairness and justice to all. If the tariff protects it should protect all alike under similar conditions. If it protects and increases the profits on manufactured goods, it should in equal proportion protect and increase the profits on the products of the fields. This is a claim not often made by the public press, not even by the agricultural press, but "UP-TO-DATE FARMING is different."

Still the discussion goes on in the halls of Congress, in the lobbies, and in the press. Monopolistic influences are naturally the most active. The President unhesitatingly declares that there has never before been in Washington "so numerous, so industrious and so insidious a lobby," and that the "newspapers are being filled with paid advertisements calculated to mislead not only the judgment of public men but also the public opinion of the country itself." This is a charge against newspapers never before made by a President of the United States, and it is one too serious to pass lightly by. To that statement the President adds: "There is every evidence that money without limit is being spent to sustain this lobby, and to create an appearance of a pressure of public opinion antagonistic to some of the chief items of the tariff bill."

This is another serious charge coming from a nation's chief executive. But there are two sides to these lobby charges. Congressmen are elected to make laws for the people as the representatives of those people. May not the people consult with the congressmen as to what laws they prefer shall be enacted? When congressmen enter the halls of legislation are they no longer amenable to those who elected them? Dare not their constituents confer with them on important measures? Is the President so fearful of the honesty and stability of his supporters in Congress that he would segregate them and forbid consultation with their constituents and others who are interested in legislation?

A few years ago Congress was anxious to have capitalists and business men establish the beet sugar industry in this country and enacted tariff laws that were thought necessary to afford protection from cheaper labor in other countries. The industry was started, was successful and has developed until it is the mainstay of many sections of the country, both to the farmers and laborers, as well as to business men.

But now a new administration, with different ideas, proposes to go the limit and take away all protection from domestic sugar. At the call of Congress to develop the business and with the co-operation of the Department of Agriculture, hundreds of millions of dollars have been invested in an industry which, the manufacturers claim, will be ruthlessly destroyed if sugar is made free. Whether it will be so bad we do not know, but what we want to emphasize is that the people having their money in the sugar factories in this country have a right to go to Washington to plead for their business, and they have a right to create public sentiment in their favor. It is then for Congress to decide whether there have been abuses of the protective principle, and if so remedy them. Also, if the protection was too much to reduce it. But we doubt whether an industry that it was impossible to establish several years ago without protection can flourish under free trade. Some people say that it cannot exist.

We have contended from the beginning that the party so recently admitted to power is going to an extreme in tariff revision, and is dealing recklessly with some of our great industries, but what is worse even than that, their very extremity seems to be selfish and unequal, the proportion of reduction being far from equitable.

Investigating lobbies. Investigating everything. Investigation gone to seed. Avoid extremes. Let the people rule. We propose to talk on public subjects to Congressmen, or even to the President himself.

The Absurdity of it All

A FEW of our readers may misunderstand our position as to progressive agriculture. We are progressive and up to date if we are anything, but, as we understand it, progress must bring with it benefits to the human family, especially to those in the line of work in which the progress is made. Unless it certainly does that it is not progress, no matter by what name it may be called.

We regret to say it, but it is a fact that the present craze for what is called progress in agriculture will not measure up to that standard. It is given attractive names and is extensively advertised by speakers and the press, and is heralded as marking a progressive epoch in farming, but it is planned and propagated by those who are not farmers, and mostly by those who are most interested in farm products after they have left the farms and no longer belong to the farmers. Many good and sincere men are deceived by the liberal propositions that are made and the glowing statements of what may be accomplished, and they are supporting the schemes in the sincere hope of benefiting farmers. But the leading propagators of those schemes know better, and have selfish interests in them.

We refer, of course, to the schemes that largely had their origin in the Lever bill, not long ago a prominent feature in Congress, or that, at least, were greatly stimulated thereby. We refer now more particularly to the county agriculturist or farm expert feature. Not a few counties in several states have made provision, or are attempting to make provision for the employment of such an expert. Meetings to arrange for the employment of these "experts" show clearly that the real farmers have little faith in the benefits they will receive from the great expenditures involved or from the nature and quality of the instruction that will be given. The meetings are dominated by leaders in other callings, but who have interests that center in farm operations before the crops are planted or after the products are sold. The whole purpose seems to be to urge the farmers to produce more by the constantly increasing use of fertilizers, the ultimate result to be the oversupply of markets and consequent reduction of prices to farmers but not necessarily to consumers. At a recent meeting of this character a speaker referred to marketing conditions, and made the statement that increased production without increased demand would certainly result in lower prices and thus reduce farm profits rather than increase them. The chairman asked the speaker to desist from that line of talk, as that was no part of the object of the meeting. But the farmers present demanded that he continue, which the chairman was compelled to permit, and he closed with applause.

But the absurdity of this whole business is seen in an order recently issued by the national department of agriculture. Counties may employ experts to teach them how to farm. They may furnish their part of the cost of such teaching, and may employ an instructor in whom they have confidence, and whose teaching they really desire, but that instructor must submit what he desires to teach, if to be taught in the county papers, to the state leader, and by him it must be sent "to the offices having in charge the territory in which the writer the head of the office for his approval." Articles which go into periodicals having a wider circulation are "treated in the office in much the same way, except that after having been submitted to the other offices of the department which are interested in the subject-matter, if any, and then to the chief of the bureau," may even be required to be submitted to the Secretary of Agriculture himself. Two copies of local notices and three copies of articles for wider circulation must be sent to the department.

The absurdity of such a procedure is too plain to require comment. Such red tape is ridiculous and contemptible in business, and much more so in teaching. Problems come up for immediate solution, but in this roundabout way the solution cannot be given until too late for the instruction to be of benefit. It looks more like putting farming under the tyrannical rule of a distant head than was ever before attempted in any line of human effort. Did such an order grow out of the fear that county instructors might not sufficiently urge the purchase of commodities the leaders in this movement have for sale? The absurdity is so transparent that we certainly expect a modification of the order.

Yes, we are in favor of progressive farming. We are in favor of big crops; but we want big demands to accompany them, so as to maintain equitable prices. But we are able to see the ridiculousness, the bald absurdity of it.

Last Year and Now

THE entire world of those who are understood to direct public thought and to lead in public action, including most of those in legislative authority, are directing all their efforts to reduce the prices paid for farm products as they come from the fields. They persistently refuse to recognize the fact that these prices, the prices paid the farmers, are not high and never have been, and that they are rapidly going lower. In this statement we are fully sustained by the national department of agriculture that gives its figures each month. Those figures verify what we have claimed throughout this entire discussion; that the high prices so much complained of are made by and paid to the handlers and speculators in these goods and not to the producers of them. Every effort to increase farm competition, and to make lower the prices paid to the farmers makes a bad situation worse, and those efforts should take a step upward and hold in check or limit the great profit-carrying prices made by the dealers. These are the prices the consumers pay, and which they are scarcely able to meet.

To show the tremendous reduction of prices paid the farmers for soil products, we again quote the department of agriculture. The average price paid the farmers for corn per bushel June 1, 1912, was 82.5 cents; June 1, 1913, it was 60.6 cents, a reduction of nearly 22 cents a bushel. Other soil crops are quoted as follows:

	June 1, 1912. Cents.	June 1, 1913. Cents.	Loss Per bu. Cents.
Wheat	102.8	82.7	20.1
Oats	55.3	36.0	19.3
Barley	91.1	52.7	38.4
Rye	86.1	64.1	22.0
Buckwheat	84.8	70.8	14.0
Flaxseed	205.0	115.8	89.2
Potatoes	119.7	55.2	64.5
Apples	129.0	94.0	35.0
Beans	252.0	218.0	34.0
Onions	177.0	87.0	90.0
Sweet Potatoes	119.0	93.0	26.0

This shows a remarkable reduction in price within the short period of a single year, and we doubt if any other business but farming could stand it. Other farm commodities, not soil products, such as livestock, dairy and poultry, have held their own fairly well during this period, but these are all more or less controlled by marketing combines and great trust holders. In them the farmers are little considered.

In the face of these figures we cannot understand how the farmers themselves can be so indifferent. They must know that as individuals they are helpless, but that "in union there is strength." Again, how can the official representatives of farmers ignore these facts, and still do their utmost to compel lower prices for soil products?

Farm Prices and Crop Reports

WE are somewhat fearful that Secretary Houston may follow in the footsteps of Secretary Wilson in the matter of exaggerated crop reports. History makes it indisputable that excessive production invariably results in lower prices to farmers, often to the complete wiping out of the value of the excess, and not infrequently taking with it some of the value of the normal yield, making the big crop actually worth less to the farmer than the usual production. Those who so persistently urge increased production and pretend to show gains by estimating values at normal prices are making deceptive arguments and misstating facts.

Exaggerated reports of prospective yields have the same effect upon prices. Speculating buyers watch these reports eagerly, and seize them as reasons for reducing prices. Mr. Wilson's reports were notoriously of this character. Whether their purpose was a reduction of prices we do not care to say, but that was the unquestionable effect of them. We trust Mr. Houston will pursue a different course in his reports.

There seems to be in official circles, however, such an unyielding determination to reduce the prices paid farmers for their stuff that we are not without fears. The advocates of increased production have not succeeded to the extent they desired, hence they have turned to the official powers to aid them. What they can't induce American farmers to grow they seek to bring in from other countries by reducing or removing entirely tariff protection, and also by encouraging the report of big crops. Not long ago agents of the market manipulators were sent throughout the country, or reported as though they had been through the country, and the reports, of course, agreed that there were prospects of immense yields. Note the reduction of prices shown in another article in this paper. Since then there has been abundant evidence that conditions over a wide extent of the country are decidedly against even normal crops for this year.

The Editor's Talk

OUR last issue, containing the announcement of this new department, was the first intimation our readers received that there was to be such a feature. Consequently, they haven't had time to get acquainted with the idea. For the first issue we had to call upon our staff correspondents to supply material to fill the page, and give the reader an idea of what we have in mind. And, as the matter that is published must be in type at least two weeks before it is read by the subscriber, there hasn't been time for many of our friends to prepare letters and get them to us for this issue. But from this time we shall expect our subscribers to keep us liberally supplied with profitable crops stories.

I will repeat what I said in this column last time, that there is no story more interesting to a farmer than the story of the management of a crop that made a good profit, and the story of **your** most profitable crop, reader, will interest every other reader of this paper. It will do you good to tell it. It doesn't matter how small or how large the crop, or whether the profit was fifty or five thousand dollars. That it was the crop worth most to you, in money, or experience, or otherwise, makes it eligible to this prize contest.—The Country Contributor's Editor.

Our Country Contributors

Semi-Monthly Prize Letter Competition: Subject: My Most Profitable Crop

FIRST PRIZE	$5.00
SECOND PRIZE	$3.00
THIRD PRIZE	2.00

NOTICE TO SUBSCRIBERS

This department is designed to induce subscribers to contribute accounts of their most profitable crops. For the three best letters received each issue, the cash prizes offered above will be awarded and every letter used will be paid for at the rate of $1.00 each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell the story of what you consider your most profitable crop in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

Hog-Harvested Corn
(First Prize)

In my experience, I find that the use a crop is put to often, if not always, determines its profitableness. I live in a section of country that is pre-eminently a corn country. Counting the cost of a crop by labor units, we have found that an hour's work produces less value in our corn crops than in any other cultivated crop we grow. Counted on the acre basis, giving each crop credit for its value on the market, oats and hay bring us larger returns per acre. I do general farming, trying to follow a rotation of corn, oats and hay. If I sold my crops as raised, I am quite sure oats would be the most profitable, from both the labor and acreage standpoint. That is, at market price for grain and hay, cost of production in labor, my oats crop would bring me in the largest net income per acre, and the largest wages per hour of time devoted to the crop.

I have found, however, that the best way to market the corn crop especially is in pork, and my most profitable crop for the past few years has been that portion of my corn crop I let the hogs harvest for themselves. Hogging down corn is a profitable business on my farm. I save five cents a bushel on husking, and four cents in shelling and hauling to market. I save the expense of a $200 corn crib, and the interest on that investment. I save a lot of waste in manure. Hog manure is most excellent for soils, and on most of our farms it is lost by remaining in the hog lot. What little is saved costs nearly as much as it is worth to dig it up and haul it out. My drove of Duroc-Jerseys, in hogging down a field of corn has the manure spreader whipped to a frazzle. The hogs get enough exercise to keep them in a thrifty condition, and enough to eat so they do not waste food in excess energy. I plant soy beans with the corn, which balances up the ration in good shape. Averaging my corn yield with the fields I harvest in the ordinary way, I find that a bushel of corn makes about fifteen pounds of pork. For the past five years I figure that I have marketed my "hogged-down" corn at $1.00 per bushel, saved ten cents per bushel in husking, storing and marketing, saved all the manure, worth at least $5.00 per acre, and increased the nitrogen content of the soil from the action of the soy beans, and plowed under a lot of humus in cornstalk and bean vines. It is true that the fodder is wasted, but as I save all the fodder from the other fields, I have all I can feed without it. Besides, I save cutting and handling it, as well as husking and storing the corn. Figuring it all around, hogged-down corn is the most profitable crop on my farm.—J. E. M., Iowa.

Hogs My Best Crop
(Second Prize)

Last year I made more money out of young hogs, which I consider my most profitable crop, than in any year previous. In the spring I bought enough woven wire fencing from one of the advertisers in UP-TO-DATE FARMING, and enclosed ten acres of oak woodland and six acres of alfalfa. The woodland contains a spring of never-failing water and furnishes a great many acorns. This woodland and pasture sustained my ten breeding sows from July to November, with very little corn and a few cull apples fed late in summer. A shed shelter was erected in the woods to give protection during the cool nights.

I raise two litters each year from my sows, one coming in April, the other in September. In the spring of 1912 I kept all my sow pigs, and bred them to farrow at one year of age. These I sold at public auction on April 4 of this year, having sixty-two head, which averaged me $21.00 each. I also kept twenty young boars, and put them on sale when weighing about 100 pounds each, and they brought me $16.50 apiece. Total receipts from eighty-two head, $1,632.

I never fatten many old hogs, as I usually have a good market for shoats, which I prefer to sell at the age of three or four months. Up to that age they require but little feed. I am careful in feeding my brood sows at farrowing time, giving water only the first day, and the second day add a handful of bran, then gradually bring them up to a full ration of shorts, ground oats, ground peas, corn meal, bran and skim milk. The pigs are fed skim milk and shorts in a separate trough when two or three weeks old, and soaked corn is scattered on the floor of their feeding pen. I feed lightly at first, only what they eat up clean. I encourage them to eat as much as they will, and feed the sow well to keep up a heavy flow of milk, taking care to keep them all in good appetite. I keep charcoal, ashes and salt where it it is accessible at all times. I love to work with them, which I think has much to do in making them profit earners.—John D. Underwood, R. F. D. 1., Ill.

Worth More Than Money
(Third Prize)

Crops may pay a profit in something else besides money. I don't count all my profits in cash. Profit, as I look at it, is anything that gives us what we want, or need to enrich our lives. The miser and the "tightwad," no matter how much money they make and save, live profitless lives. They never possess any of the real pleasures of living, because they find pleasure in only one thing—hoarding money. They miss the enjoyment of good things to eat, nice clothes to wear, comfortable and pleasing homes, intercourse with neighbors and friends, all those things which make us glad we live. So I might tell you of many a profitable crop I have grown that didn't pay a large dividend in net cash. I might tell you of the flower-garden I helped my good wife to care for, and the big bunch of enjoyment we all had from it. I paid out a good bit of money for seeds, bulbs and plants, and stuff to spray and powder and dust. It cost me something in cash to put a fence around the flower-garden so the chickens and the puppy couldn't use it for a gymnasium. We didn't sell a solitary cent's worth of stuff from that garden, yet when my day's work was done I came in to supper, my brown-haired wife would look across a table decorated with about the most beautiful things God ever made, with a rose in her hair, roses in her cheeks and stars in her eyes. I tell you, friends, if you count pleasure a profit, I believe that flower-garden is about the most profitable spot on my 320-acre farm. It makes the little lady happy and contented, and she thinks I am really worth the great wealth of affection she has given me. Now, how much do you think that is worth to me?—W. W. M., Ohio.

An Asparagus Bed

While I am not now a farmer, I "farm" nevertheless. I live a few miles out in the "country," and have a few acres of ground to "reduce the high cost of living." A few years ago I was a trucker, but now I and a son are owners and proprietors of a green grocery in one of Chicago's suburbs. Another son and myself do a little farming on the side.

My family is very fond of asparagus. We consider it the silk-stocking, blue-blooded aristocracy of the vegetable kingdom. Not only as a table delicacy, but it is a leader in health-giving properties. It is very nutritious in some highly important food elements, and has a medicinal value, being a kidney specialist. One reason why I think asparagus is the most profitable crop on my little "farm" is because it is a staple article of diet with us, fresh in summer, canned in winter, and keeps us free from ailments, and makes our meals a source of great delight and enjoyment. Our asparagus patch helps make life worth living.

This is not all. Other people like asparagus, also. It is considered a treat and a great delicacy in every home that can afford it, for asparagus comes high at the grocery. As a market crop it has been highly profitable. Expense and labor considered, I think it pays a higher rate of profit than any other truck crop I ever raised. Many people overdo the business by making its care too expensive. My land is a light clay subsoil, with a shallow mixture of vegetable mold on top. It is good corn land. And I make it grow good asparagus by a very simple method. I set out my bed eight years ago, and from all indications it is good for eight years more. I planted two-year-old plants in rows four feet apart, setting the plants two feet apart in the row, placing the crown of the plant two inches below the surface of the ground. For fertilizer I use a good brand of commercial vegetable manure with a high percentage of nitrogen in readily available form. Before the young shoots appear in the spring I harrow the ground pretty thoroughly. I take care not to let the shoots get the least bit "woody" before cutting, and I cut for a period of six weeks only, though the rule is to cut eight weeks. Some even cut nine. I find I get better results next year if I do not cut too long this year, and I have a better grade of "shoots." In short, by cutting six weeks I get more good asparagus than those who cut over a longer period. I cultivate and keep the bed clean throughout the summer. My bed contains half an acre and in addition to giving me all we can use at home, pays me a net cash profit of $200 each year. —M. C. E., Illinois.

Our Hogs

The most profitable crop for us each year is our thoroughbred hogs. Missouri is an ideal home for the hog. Acorns, eatable roots and forage in all the timber pastures are plentiful. We only feed corn a couple of weeks before marketing our hogs, and they always bring the highest market price. Indeed, our butcher often keeps them for his own use.

I do not think the common "rooter style hog" can do as well. It takes more corn to finish them out, and thoroughbred stock of any kind will make a greater amount of gain, on the same rations, than mongrel stock.

We bring our hogs up each night and properly house and bed them. It's always well to have stock safely home at night. Pure water is always provided. We very seldom "slop" and medicine is never given to a well animal. Of course, if one wishes to fit hogs for the fairs a different course of feeding is advisable. But show-fed hogs are not the most profitable, as a rule. To make the most clear profit is what we are after.—Mrs. E. A., R. F. D. 1, Mo.

August First Number a Wheat Special

Our August first number will be devoted more to the wheat crop than to general matters. It will be a special wheat number. Good crops and good prices will receive a thorough treatment in both production and marketing. Letters for this department on the most profitable wheat crop grown will be seasonable, and in line with the rest of the special issue. It is not necessary that those competing for the prizes offered for the August first letters should write on Wheat, nor will wheat crop letters have preference over others. We only suggest that those who have made wheat-growing profitable take this occasion to compete in the prize contest.—The Editor.

Recognizing Genius

Merchant (to detective)—"Some fellow has been representing himself as a collector of ours. He's been taking in more money than any two of the men we have and I want him collared as quickly as possible."

Detective—"All right. I'll have him in jail in less than a week."

Merchant—"Great Scott, man! I don't want to put him in jail; I want to engage him."

Our Market Review

Semi-Monthly Review of Crops, Market and Trade

AN EXCHANGE said: "An instance of the lack of business sense in the average farmer is the recent 'cataclysm' in the potato market." To be explicit, potatoes had been "draggy" all the season. The crop was known to be large while receipts at the big markets had not been extraordinarily large. This caused buyers to be fearful that there were many potatoes back in the country and they did not stock up. The busy time came on the farms and several days of rainy weather combined to shut off deliveries from the farms. This caused a dearth of supplies on the market and prices climbed until the Chicago price reached 90 cents and the prediction was freely made that it would go to $1.00 and above.

Of course, everybody wanted potatoes and the telegraph was kept busy carrying the appeal for potatoes to every producing section. The farmers scraped their bins clean and rushed the potatoes to market and then came the deluge. From a demand that could not be supplied even at 90 cents a bushel, in two days the market was so demoralized that an offer could not be gotten. Everybody was afraid to buy. There was no bottom to the slide. Even freight charges would not be paid for hundreds of cars in Chicago. More than a hundred thousand bushels rotted in Minneapolis, according to reports. A report from Kansas City says that 125 carloads of fine Montana potatoes with an average of about $240 freight per car decayed in the hot railroad yards. And the same thing happened in practically every market in the country.

And the exchange says this was an instance of the lack of business sense in the average farmer. But country shippers and city buyers got caught just the same as the farmers, therefore they had no more sense than the farmer. But who is wise enough to guard against such an occurrence? The absolute lack of knowledge of how many potatoes were in the country prevented the exercise of business sense or wise judgment. People from the growing districts reported the potato crop practically all in and such reports were printed far and wide. But it was a false report, while exact knowledge would have been worth incalculable money to farmers, shippers and receivers. Our advice all through the year was to SELL, but it was only a guess, because we could not know how many potatoes were back. We congratulate those who acted on the advice.

The drought that threatened to work serious damage to crops over a wide extent of territory has been generally broken and some fear that wet weather will interfere with wheat harvesting has succeeded it. The crop reports are generally good. Oats, however, will not be a big crop, because of droughts in important producing sections. We can now advise holding old oats for better prices. The same with hay, we believe prices will be higher. The winter wheat crop will probably be the greatest ever harvested. Prices have been put down and will probably go lower in anticipation of the dumpers dumping. Conservative farmers will hold their wheat for at least $1.

The following tables of visible supplies, prices etcetra, with comparisons, should be studied carefully. They tell an interesting story of the markets.

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on June 14, 1913, with comparisons, are shown in the following table: (The sign — before figures means decrease, X indicates increase.)

	June 14, 1913 Bushels	Change from 2 wks. before Bushels
WHEAT	35,296,000	—4,349,000
CORN	9,348,000	X 5,029,000
OATS	11,416,000	X 1,400,000
BARLEY	2,475,000	— 335,000

The visible supply of wheat in Canada on the same date was 19,618,000 bushels. This is 4,194,000 bushels less than a year before. The visible supply of oats was 10,220,000 bushels on the same date, which is 897,000 bushels less than two weeks before and is 2,953,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets June 21, two weeks before, and a year before, as follows:

WHEAT, No. 2 RED

	June 21	2 Wks before	AYr. before
Chi.	$1.00 @1.04	1.07 @1.08½	1.07

Future Grain Prices

Chicago grain futures closed on June 21, 1913, and two weeks before, as follows:

WHEAT—July, 91c; September, 91⅜c; December, 94¼c. Two weeks before, 90⅜c; 89⅝c and 91⅞c, respectivelly.

Cotton

New York, June 21—Cash cotton closed, middling upland, 12.40c; middling gulf, 12.65c. The price is 30c a cwt. higher than two weeks before. A year before the price was 11.65c to 11.90c.

Chicago Produce Market

June 21, 1913

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets address the Farmers Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	18	48	34
Tuesday	24	36	17
Wednesday	10	18	15
Thursday	5	15	10
Friday	10	19	10
Saturday	8	30	10
Total, 6 days	75	166	98

Only eight cars were reported in. Good, fresh stock sold at 15c. Some old stock sold by railroads for less. There was very little doing. Demand is very tame.

Sales reported were: Wisconsin round white in bulk—3 cars at 15c.

Per bushel, bulk or sacked, Wisconsin round white or Rurals ...$.15@....

Occasional cars of extra fancy Dusty Rurals possibly a shade over.

NEW POTATOES—Sustained strength was shown by the market today and prices averaged 5@10c higher. A heavy rain kept a number of buyers away, but fresh receipts were only 20 cars, and an early clearance was made. The market closed in good condition and firm at the prices.

Sales reported were: Triumphs—Arkansas and Oklahomas—1 car heated at 85c, 5 cars at 90c; Texas—1 car at 80c.

Per barrel, Virginia, white .....$2.40@2.50
Red Star ..... 2.60@....
Per bu. Texas, red, depending on size and appearance ..... .70@ .85
Cobblers, white ..... .65@ .80
Arkansas, red ..... .85@ .90

The price of old potatoes is 10 to 13c lower than two weeks before. A year before the price was 75 to 80c a bushel. New potatoes are much lower than two weeks before. A year before the price was $1.20 to $1.30 a bushel.

STRAW—Rye straw quotable at $9.50@10.00. Oat straw at $7.50@8.00. Wheat straw, $7.00@7.50.

The price is the same as the year before.

HAY—Receipts, 700 tons. Offerings light and market firm. Demand good.

Choice Timothy Hay .....$18.00@18.50
No. 1 Timothy .....15.00@16.50
No. 2 Timothy .....13.00@14.00
No. 3 Timothy .....10.50@12.00

Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
—5,439,000	X 6,228,000	X 5,452,000
X 2,388,000	— 388,000	—4,353,000
—3,056,000	X 5,242,000	—5,730,000
— 135,000	X 1,638,000	X 1,360,000

The price is $2.50 to $3 higher than two weeks before. A year before the price was $21.50 to $22.50 for choice timothy.

BROOM CORN—No change from two weeks before. Illinois brush $100 to $120. Oklahoma, $50 to $80 a ton.

BEANS—The market has been ruling very quiet lately. Demand has been very tame. Of Pea Beans there are said to remain fair stocks in the hands of dealers, both here and in the country. Prices quoted as follows:

Pea Beans—
Hand-picked choice .....$2.15@2.20
Really fine, bright..... 2.25@....
Prime ..... 1.90@2.05
Stock faulty, lower .... 1.25@1.75
Mediums nominally about same as Pea Beans.
Red kidneys, choice ..... 2.10@2.20
Prime ..... 1.75@2.00
White Kidney nominal ..... 3.00@....
Brown Swedish, long ....@1.00
Round ..... 1.25@....

The price of pea beans is 10c a bushel lower than two weeks before. A year before the price of choice pea beans was $2.90@2.92½.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:s

	This week Cases	Last week Cases	Last year Cases
Total	106,316	113,689	94,417

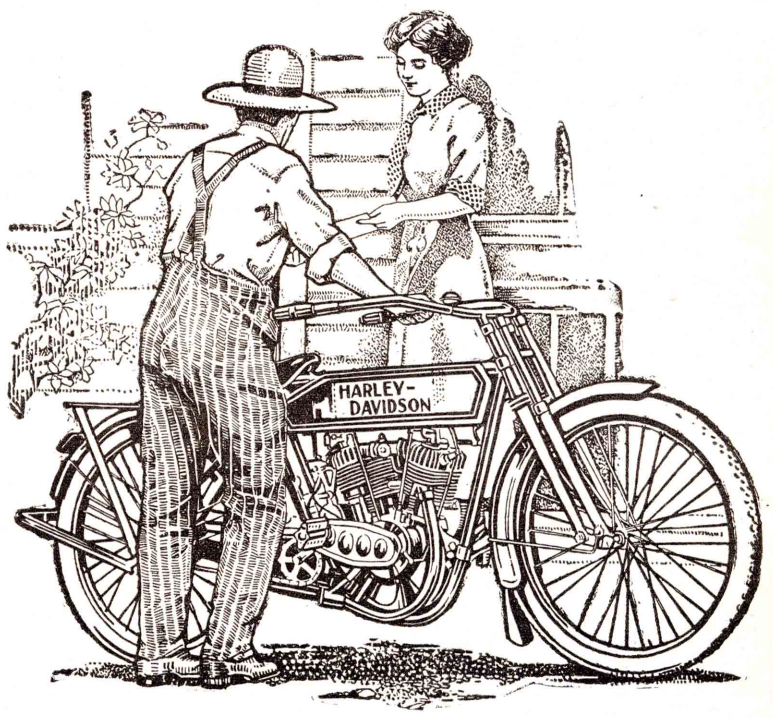
There is a steady feeling for good eggs, but an irregular and weak feeling for the poor stock.

Miscellaneous lots, cases returned, 15½@16½c, depending on quality.

Ordinary Firsts quotable at 16@16½c.

Firsts quotably 17@17½c. Some very fine northern stock, new cases included, were held a trifle above, but buyers not bidding over 17½c.

The price is a fraction of a cent lower than two weeks before.



King of the Country Road and Why

THE cost of operating a motorcycle; 1/10 to ⅓ cent per mile, combined with the fact that there is practically no upkeep cost makes it the ideal vehicle for use on the farm. Trips can be made to town, nearby lakes, or any place desired in a fraction of the time taken by team. Then too, the motorcycle never tires and stands always ready for use if desired when the day's toil is over. It does away entirely with the most objectionable feature of farm life, namely, the inability to "go" when the day's work is over and the teams are too tired for road work.

But in buying a motorcycle, be sure and get one that is comfortable; one with which you can ride on rough roads as well as smooth. The

HARLEY-DAVIDSON

is such a motorcycle. No motorcycle can do this unless the tension of the springs can be adjusted to just the right strength to carry the weight of the rider. No springs were ever built which, without adjustment, could properly carry all weights.

Consequently, in building the ordinary motorcycle, manufacturers depend upon the unadjustable leaf springs or coil springs to absorb the jolts, jars and vibration and it is necessary to build them with springs stiff enough to carry the heaviest rider without breaking.

Springs stiff enough to carry a 300 pound rider are little better than no springs at all for riders of light or medium weight.

This is not true of the Harley-Davidson. The adjustability of the springs in the Ful-Floteing seat (an exclusive and patented Harley-Davidson feature) makes it possible by the mere turning of a tension nut to adjust the strength of the springs, so that both the recoil and cushion springs are of just the proper strength.

This permits the weight of the rider to virtually float over bumps without jar, jolt or rebound, something impossible with unadjustable so-called comfort devices. The Harley-Davidson Ful-Floteing Seat will give you a degree of comfort which it is impossible to obtain with any unadjustable type of comfort device. This is but one of the many exclusive features which has made the Harley-Davidson so popular for country roads.

Call upon the nearest Harley-Davidson dealer for demonstration or write for catalog to-day.

HARLEY-DAVIDSON MOTOR COMPANY

Producers of High Grade Motorcycles for Over Eleven Years.

807 A Street MILWAUKEE, WIS.

$12.00 Brings $1000.00

This is for you— man or woman, young or old. This is **your chance** to start in business for yourself with **only $12.00** that will net you easily **$1000.00 this season.** Big money selling one minute post card photographs. Everybody buys—800% **profit** for you on each sale. NOT ONE BIT OF EXPERIENCE **NEEDED** to make a success at once with our

One Minute Camera

The biggest money-getter of today. Takes, finishes and delivers post card photos in one minute. **Not a tintype camera.** Takes pictures **direct on paper post cards.** The pictures are finished right within the camera **without a dark room and without plates or films.** This **One Minute Camera** makes pictures on 2½ x 3½ inch post cards and on one inch photo buttons. Takes groups also. Picnics, fairs, conventions, parks, street corners, country towns, and large cities—all regular gold-mines for the **One-Minute Man.**

Complete Outfit $12.00

This starts you in business. Outfit includes **One Minute Camera,** tripod, and everything to make 50 completely finished pictures. Small cost of additional supplies your only expense. Order your outfit today—or **write at once for complete, free information.**

Pastoral Paragraphs

Wild oats have never yet paid a profit.

Pushing on the lines is of little use unless there are husky horses pulling on the traces.

The man who praises himself does so because no one else has found occasion to do so.

Sam Saxon says that distress in the stomach from overeating is just as bad as the gnawing pains of hunger.

It is never too late to begin. History is full of stories of men who were failures at fifty and successful at seventy.

When the farmers in a community begin buying automobiles the good roads question is soon settled, and so are the roads.

We never know how much we can do until we try, and then we find we can do several times as much as we thought we could.

Twenty years ago a brainy man would have told you that any fool could be a farmer. Today any fool will tell you it takes a brainy man to be a farmer and succeed.

No matter how smart a girl feels when a beau in an auto car rolls up the drive, she isn't a bit better off than grandmother was when grandfather drove up with his horse and gig.

"When you think you have exhausted all possible ways and means, go down deeper and find more," says a philosopher. Mr. Farmer, put on an extra horse, and let that plow down about two additional inches.

Corn in Kansas

I am a young man and have farmed for other people all the time, but I have made a study of the corn crop. I will give you my plan for raising a profitable crop of corn.

In the spring, run a sharp disc harrow in full disc over the field, cutting the stalks and mellowing the soil surface. Then plow at least six inches deep and you have an ideal seed bed. Disc once again just before planting and go right on and plant without using the tooth harrow. Just as soon as the corn is up large enough to plow, cultivate as closely as possible, not letting the shovels in too deep. I cross-plow immediately, running the shovels the same. I keep the cultivator going, and the last time set the shovels to throw dirt to the row slightly. If it turns dry, I run a device with five teeth between the rows, maintaining the "dust mulch" so righteously famous. If it stays dry, I keep on dragging the rows until the corn is made.

Give the ground a rest in grass or clover every third year. Last year this method produced forty bushels per acre in a season that was a failure, as other fields all around us yielded only five bushels per acre.—Bennet S. McIlroy, Galesburg, Kas.

Sweet Clover Made His Farm

I own a farm in the stiff red clay section of Georgia. It was worn when I first bought it, and struggle as I would I could not raise a good crop. I tried to follow the advice of the farm papers, and planted cowpeas, and rye, and other crops to try to improve my soil. It was so devoid of humus and plant-foot that even these crops would not grow a good crop of vegetation. Commercial fertilizer was expensive, and while it stimulated plant growth to some extent, it was not profitable for me. At last I was advised to try sweet clover. I did, and it surprised me. In spite of the impoverished condition of the soil it made a good growth, which I turned under late in the fall, and sowed rye for a cover crop. In the spring I plowed under the rye, and planted corn. I harvested twenty-four bushels of corn to the acre on the land that previously gave me but fifteen bushels. Since then I have used sweet clover regularly until now I grow crops of all kinds that would be a credit to the best farms in the state.—C. M. O., Georgia.

HELPING THE CORN AND COTTON

Top Dressing With Nitrate of Soda

Many crops of corn are in a critical condition just now, when they are beginning to silk and tassel, and unless we can give them some additional nitrogen, the crop will be short.

The writer is applying 100 pounds of nitrate per acre on a four-acre patch of corn. You understand that nitrate of soda carries about 15 pounds of available nitrogen to every 100 pounds, that this nitrogen is soluble in water, and may be taken up by the plants immediately, and for this reason it is an especially economical fertilizer to use on crops that are nearing maturity. You are sure then that the crop will take up all of the nitrogen that you put on, and turn it right into the growth of the plant, and we have never used nitrate on any crop at a time like this that it has not paid us handsomely.

In some instances it will practically double the yield of corn. We have also used it on cotton, about 50 pounds to the acre, with excellent results. It strengthens the plant and prevents its shedding. All you need to prove the effectiveness of nitrogen on cotton at this stage is to try it on part of the field and note the difference. It will keep plants growing, help them to mature top crop and prevent shedding to a great extent.—J. C. B.

Advising the Court.

A colored man was brought before a police judge charged with stealing chickens. He pleaded guilty and received sentence, when the judge asked him how it was he managed to lift those chickens right under the window of the owner's house when there was a dog in the yard.

"Hit wouldn't be of no use, judge," said the man, "to try to 'splain dis t'ing to you-all. Ef you was to try it, you like as not would get yer hide full o' shot an' git no chickens, nuther. Ef you want to engage in any rascality, judge, yo' bettah stick to de bench, whar yo' am familiar."

Eats Up Silage

Almost Feeds Itself

There's no equal to the *original* ensilage cutter. Almost feeds itself. Works steadily. Takes everything fed, green or dry, without a hitch. The

Shorty's Shortcuts

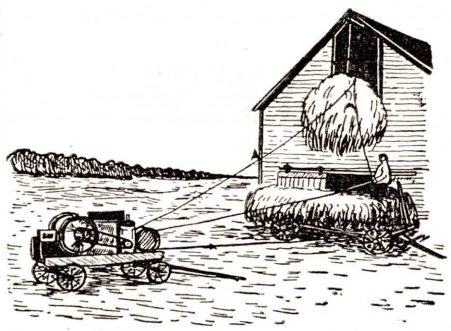
(By Shorty Himself.)

NUMBER IV

HAYING is hot work and hard work. Riding the mower isn't so bad on a man, though it is pretty tough for the horses to pull a six-foot mower with a man on it. Probably in no other season of the year is time so valuable as in haying and harvest, especially when the weather is threatening. Every contrivance possible to use in hastening the cutting and putting away of the hay crop we take advantage of. Hay is a necessary crop on my farm. I need it in my crop rotation as much as I need it for feed. You don't have to argue with any farmer to make him think a good sod turned under isn't a prime preparation for corn. We all know it, just the same as we know a drink of cold water is a fine thing about four o'clock in the afternoon of a July day. But I don't like to waste time mowing over an acre for half a ton, when in the same time I might as well have two. So I take care of my grass fields. In the first place, I haul practically all my stable manure out on my meadow, scattering it thinly and evenly with a manure spreader. If I had steep land I wouldn't do this, but my land is quite level. I spread this manure in the fall, after harvest. In the spring I top dress the grass field with nitrate of soda, 100 pounds; acid phosphate, 150 pounds, and muriate of potash, 25 pounds. I do this just as soon as the grass begins growing. You should see my hay fields—it would do your eyes good.

I am very careful to have the meadows smooth. Making the surface smooth gives better preparation, and often saves repairs on the mower. A rough-surfaced meadow soon shakes a mower and the hay-loader to pieces.

In the hay barn I use the most improved machinery, but the thing I get the most satisfaction out of is the contrivance to run my hay-fork and carrier. I do it with my portable gasoline engine. My wife became tired of driving the horses to the fork, and it is hot, tiresome work, as many a farmer's wife knows to her sorrow.



The Gasoline Engine Put to New Use

The farmer's wife usually has it to do, or another man must be hired. Hired men are not to be picked up any day, either. So I brought around my gas go-devil, and by a little ingeniousness rigged up a windlass, pulley and controlling the clutch from the load by means of a couple of lines, the little engine does my hoisting in great shape. Here is a cut showing how it looks in operation. I don't see why farmers don't try to make their heads save their heels more than they do. It cuts out the drudgery, and makes farming a most enjoyable business, and a profitable one.

Yours as ever
Shorty.

A Cart Load of Fun

This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in **"A Cart Load of Fun"** are the following: "A Man With a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded Not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jones' Baby," "Breaking up a Cat Concert," and 148 others. **"A Cart Load of Fun"** is a book of sixty-four large double column pages, neatly bound in attractive colored paper covers. Price 10 cents each, 3 for 25c; postpaid.
COONER & FORTUNE, Indianapolis, Ind.

For 10 Cts

Did You Ever Sow a Peck

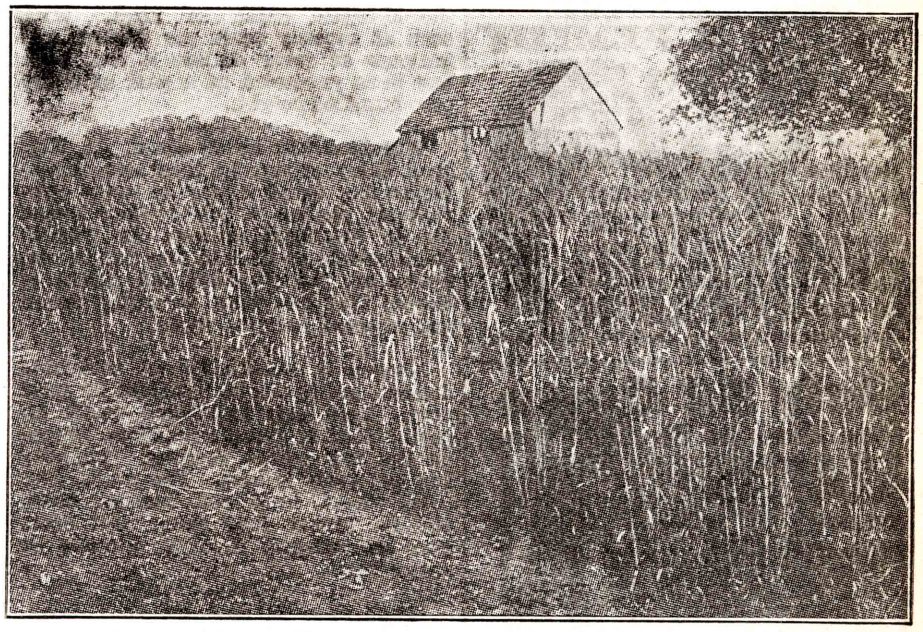
Of Wheat to the Acre and have all that could grow on the ground and a yield surpassing all other kinds sowed 1½ bushels or more? If you did not, then you should sow the new

Marvelous Wheat

The **new** wheat is really marvelous. Nothing like it was ever in the country. It marks the beginning of a new era in wheat culture, because it will not only save five-sixths of the seed to sow the winter wheat crop, but when the new Marvelous wheat is generally sown it will raise the average wheat yield a good many bushels per acre.

Five-Sixth of the Wheat is Saved

You're Skeptical Well, we don't blame you. But that is because you have never seen it grow. You never saw such wheat grow in your life, but you should vow that before another harvest time passes you will see this marvel with your own eyes. This wheat sends up 10, 20, 30, 50 or more stalks from a grain as easily as ordinary wheat sends up 3 to 5 stalks. Thus one peck of Marvelous wheat will make more stalks and wheat heads than six pecks of any other wheat we ever saw.



This illustration was made from a photograph of a field of Marvelous wheat sowed with only nine pounds to the acre in rows twelve inches apart. The heads are about as thick as wheat can stand. Marvelous wheat must have room to grow. If sowed like other wheat it will be a failure. Sow 15 pounds to the acre, on rich ground, with every other drill tube closed and it will astonish you. One grain has produced 142 heads. The Marvelous wheat is distinct from all other varieties. There is as much difference between it and other wheat as between the large-growing, heavy-yielding varieties of field corn and popcorn.

But don't take our word for it. Send for a full description, bank references and reports from growers, perhaps you know some of them. Naturally you are skeptical, as others were. But every wheat grower will be glad of the day he is convinced of the marvelous qualities of this new wheat, because it is a money saver and a money maker.

Live Stock and Dairy

JUST JOTTINGS

Regularity in feeding brings uniformly good results.

Water the horses half an hour before feeding, not afterward.

Wherever peanuts grow well there is opportunity for profit in pork.

It is claimed that no weed seed ever passes through the digestive tract of sheep, and grows.

A California Guernsey produced 444 pounds of butter fat in one year on a ration of alfalfa alone.

Two men can operate a four-unit milking machine which will draw the milk from fifty cows in an hour.

While the number of cattle are decreasing in the United States as a whole, Oklahoma announces a very satisfactory increase.

Sleepy staggers is caused by a stomach congested with undigested food. Ground feed mixed with chopped hay will prevent it.

Marketing the farm crops through live stock will always be profitable if the cheap forage is fed in conjunction with the higher-priced grains, and if the manure is carefully saved and utilized.

Corn and tankage produce about the cheapest gains in hogs. With corn at seventy cents per bushel, and tankage at forty dollars a ton, pork has been produced at a cost of $2.96 per hundredweight.

Wonders will never cease. A Holland dairy expert by long experimentation has found a way to make two-year-old cheese in twenty-four hours. By an electrical process he "ages" fresh cheese so that in one day it possesses all the ripeness and flavor of cheese that has been carefully stored and ripened for two years.

Heaves is practically an incurable disease, but it can be palliated by good care. Feed only nutritious, easily digested food in small quantities. Dampen the hay before feeding. Timothy hay cut early is best. For grain, give oats, wheat bran and flaxseed meal, and in winter feed some root crop, such as carrots, turnips, wurzels or sugar beets.

What does it cost on your farm, reader, to produce a quart of milk? What is the average cost? How many of your cows and which ones produce milk for less than the average, and which ones cost more? These are important matters to the man who keeps cows, whether a professional dairyman or not. The largest measure of success on your farm cannot be secured until you know these things to exactness.

Green Pastures for Pigs

Iowa Bulletin 136 from Ames, asserts that there is no doubt of the money for Iowa farmers than any other animal or crop, and consequently the Iowa Experiment Station gives a great deal of attention to the swine industry.

Iowa Buulletin 136 from Ames, Ia., claims that there is no doubt of the value of green pasture in feeding pigs. Compared with pigs fed on dry lot, forage fed pigs increased the profits more than 5-fold, in many cases; pigs grown on alfalfa in 1911 gave a profit of more than $3.00 apiece, as compared with 61 cents for dry lot pigs. Pigs grown on different forages gave a profit ranging from $50.00 to $80.00 per acre, charging the corn used in the ration at 50 cents a bushel and selling the hogs at $5 per hundred. When hogs were figured at $6 the profits ranged as high as $154, that being credited to an acre of rape forage. While this one trial of rape showed such unusual profits, experimentalists consider alfalfa to be the best forage crop for hogs. It may be counted on for the cheapest gains per pound and it meets a good many other demands that rape does not satisfy.

Cost of Raising a Three-Year-Old Horse

With high-priced crops, the cost of raising a colt to the beginning of its fourth year is considerable, reckoned in value of care and feed.

Reports have been received from about 10,000 correspondents of the Bureau of Statistics of the Department of Agriculture upon the cost of raising colts on farms to the age of three years. The average for the United States is found to be $104.06; or, if we deduct the value of the work done by the horse before he has passed his third year, namely, $7.52, the net cost of $96.54; this is 70.9 per cent. of the selling value of such horses, $136.17.

More than half the cost of raising a three-year-old horse on the farm is chargeable to feeds. It is readily observed, therefore, how important is the influence of variation in prices of feedstuffs upon such cost.

Coral Builders and the Bell System

In the depths of tropical seas the coral polyps are at work. They are nourished by the ocean, and they grow and multiply because they cannot help it.

Finally a coral island emerges from the ocean. It collects sand and seeds, until it becomes a fit home for birds, beasts and men.

In the same way the telephone system has grown, gradually at first, but steadily and irresistibly. It could not stop growing. To stop would mean disaster.

The Bell System, starting with a few scattered exchanges, was carried forward by an increasing public demand.

Each new connection disclosed a need for other new connections, and millions of dollars had to be poured into the business to provide the 7,500,000 telephones now connected.

And the end is not yet, for the growth of the Bell System is still irresistible, because the needs of the people will not be satisfied except by universal communication. The system is large because the country is large.

MAKE YOUR OWN STOCK AND POULTRY FOODS AT 1c a Pound

As all readers of this paper are interested in Live Stock their attention is called to the economy and value of Arabian Stock Food Tablets. Experiment station bulletins are unanimous in their claims, based on many careful tests that a good tonic or Stock Food is both profitable and positively necessary to the feeders of today, but the great objection is the great cost. "Should be bought for about one-half of the usual price" (6 to 15 cents per pound). Farmers' bulletin 73 and 144, Department of Agriculture, Washington, D. C., show how Stock Foods are usually made, using about 90 per cent. cheap "Filler." You have a good "Filler" of your own. We give you here a formula proved and guaranteed as The Best Stock Food Known.

Formula: 50 pounds Common Bran, Chop or Meal
5 pounds Common Salt, mix and add a 50 cent package of Arabian Stock Food Tablets. Cost you only 50 cents for 50 pounds.

Arabian Stock Food Tablets are made from the seeds of wild flowers, the most reliable remedies known to medical science reduced to extract form for economy. For conditioning horses, cows, sheep, hogs and poultry this remedy has no equal. Satisfaction guaranteed or money refunded. We send by parcel post small package for 50 cents or large size for $1.00. Freely indorsed in United States Trade Reports.

POULTRY PICKINGS

The business hen is a busy hen.

Furnish the fowls with a good dust bath.

The heaviest layers are not always the best breeders.

Small flocks as a rule have a higher average egg production than large flocks.

Powder and paint is good for young chickens and old hens—the feathered kind, of course.

The same thing that causes apoplexy in people causes it in fowls, and that is overfeeding. A fat fowl found dead under the roosts is a sign of too much corn.

Sell the Hens

Sixty days from July 1, your hens will have completed their season's work. If the hens would stop laying gradually and evenly, one by one, you would have one hen less laying each day; in a week you would be boarding seven loafers. In two weeks fourteen, etc. In a few weeks the eggs from the flock will not pay the feed bill, and for the remainder of the season the flock will be a dead loss.

Prices now are higher than they will be sixty days from now when plenty of young stuff will be on the market; does it not seem the part of wisdom to sell the hens as they get through business? It is not likely that the hens older than one year will come back to the lay, but do you know the old ones? Or do you know the young ones that are worth keeping through several months of idleness?

Another advantage of culling now is the added house room the young stock will have, and house room on the farm is always scarce. No business can support loafers, and every thing on the place not laying eggs (this includes roosters), or not putting on flesh, the young, growing stock, should go to market, week by week.—W. E. Vaplon, Colorado Aricultural College.

Easy to Raise Ducks

"Ducks are comparatively easy to raise if a few simple rules are followed, and the ducklings are kept out of rain storms until they get their first mature coat of feathers," says Prof. J. G. Halpin of the College of Agriculture of the University of Wisconsin.

"At the university farm we start the ducklings off on a mixture of two parts bran, one part middlings, one part corn meal, and about 3 per cent. of beef scraps, or a little skim milk mixed with the feed. We never give them skim milk or butter milk to drink. A little coarse sand or fine gravel should be incorporated into the feed.

"Ducks require plenty of water and enough clover or other green feed chopped up and mixed with the feed to make up about one-fourth to one-third of the ration. They should not receive the whole grain of any sort until they are full grown, for a duck does not digest anything of that sort economically.

"As ducks are very subject to sunstroke, they should be provided with plenty of shade. They do not absolutely need a pond to swim in, but they do require cool, clean water and enough of it so they can immerse their bills completely."

Didn't Want to Miss It.

A traveler in Indiana noticed that a farmer was having trouble with his horse. It would start, go slow for a short distance and then stop again. Thereupon the farmer would have great difficulty in getting it started. Finally the traveler approached and asked, solicitously:

"Is your horse sick?"

"Not as I know of."

"Is he balky?"

"No. But he is so darned 'fraid I'll say 'whoa' and he won't hear me that he stops every once in a while to listen."

You need a new DE LAVAL Separator NOW

1st If you are still using some gravity or setting process of creaming—

Because your waste is greatest and quality of product poorest in mid-summer, when the milk supply is greatest.

Because time is of greatest value on the farm at this season and the time and labor saving of the good separator counts for most.

Because the skim-milk is poorest without a separator in hot weather and often more harmful than helpful to calves and young stock.

Because the work of an improved De Laval Cream Separator is as perfect and its product as superior with one kind of weather as with another.

2nd If you have a very old De Laval or an inferior separator of any kind—

Because the losses of the poor separator from incomplete skimming and the tainted product of the difficult to clean and unsanitary separator mean most when the bulk of milk is greatest.

Because of the great economy of time at this season in having a separator of ample capacity to do the work so much more quickly.

Because an improved De Laval Separator is so much simpler and more easily handled and cared for than any other, and you cannot afford to waste time these busy days "fussing" with a machine that ought to have been thrown on the junk-pile long ago.

Because the De Laval Separator of today is just as superior to other separators as the best of other separators to gravity settling, and every feature of De Laval superiority counts for most during the hot mid-summer months.

These are all facts capable of prompt and easy demonstration, whether you have a poor separator or none at all. The new De Laval catalog, to be had for the asking, helps to make them plain. Every De Laval local agent stands eager to do so with a machine itself, with no obligation on your part to buy unless he does—and that to your own satisfaction.

WHY DELAY? Why put off so important a step as the use of the best cream separator, which you need more RIGHT NOW than any other time.

The De Laval Separator Co.

Woman's Work

THE VEGETABLE DOCTOR

By W. H. James

What's the use to call a doctor
When you have got a pain or ache,
Just go out and get the gardener,
And there won't be any wake.
If an onion's good for smallpox,
Would a carrot cure the pip?
Would a dose of spuds cure colic,
Or a parsnip knock the grip?
Would an allopathic pumpkin
Put pneumonia on the blink?
Or a modicum of spinach
Tie the measles in a kink?
Would the scallops on the squashes
Put a polish on the spleen?
Could you catch a floating kidney
If you'd eat a kidney bean?
Would a head of curly lettuces
Cure a misery in the head?
Would the place for an insomaniac
Be in a parsley bed?
Would a sweet potato sweeten up
A disposition sour?
If so, we know a lot of folks
Should take one every hour!
Horseradish, which is very hot,
Should surely cure a cold,
Would radishes preserve us all
From ever growing old?

WHAT ABOUT THIS?

Are Farmers' Wives the Cause of Egg Losses?

The United States Department of Agriculture has an ambition for "finding out" things that is almost a mania. Gathering statistics, computing averages, unearthing facts, running down clews to their ultimate conclusions and making reports is the business of quite an army of employes in our government's agricultural department. The report of investigations made by those who undertook to learn all about production and marketing eggs has received a great deal of attention, because of the statements made in the report that the farmers were to blame for the great losses that occur. Seventeen eggs out of every hundred go to the bad, the investigators say, principally because the farmers' wives do not take the right care of them. This loss all over the United States reaches the immense total of $45,000,000 annually. This loss is first borne by the dealer or the consumer. Dealers who candle eggs carefully throw out the bad ones, and of course must stand for the loss. Consumers who buy eggs in the average store pay for a dozen to find too often that some are unfit for use. The consumer has no protection against the loss, for if guaranteed eggs are purchased the dealer protects his interests by charging more to cover any probable loss. Dealers who candle eggs are careful to buy on a basis low enough to enable them to cover losses which thus occur. So it all reacts on the producer, who gets paid for a dozen eggs on the basis of seventeen per cent. bad.

The department asserts that the farmers are to blame for these losses, both to themselves and to the consumers and that it rests with them to remove the cause. In the first place, dirty eggs which were soiled by unclean nests, or by breaking of an egg in the nest because two biddy's were on the same nest at the same time, is one of the causes. Nests must be kept clean, and one nest for each four fowls in the flock should be provided.

In the next place, eggs should be gathered twice daily and kept in a cool, dry place. Eggs that are kept warm by any cause, whether by laying hens, or warm air, are started on the road to putrefaction. Then eggs should be sent to market twice each week, and, as infertile eggs are far less liable to become questionable than fertile ones, male birds should be kept with none but breeding hens, and as soon as the hatching season is over should be sold, killed or confined.

While it is no doubt true that very few farmers take the above precautions to place high-quality eggs on the market, it is also very likely that the local dealers in country towns and cross-roads stores need to improve their methods of handling the eggs after they receive them and before starting them on the road to the ultimate consumer. However, this is a matter for the egg dealers to take up. Our readers must first give attention to the quality produced on the farm. Raising the quality will eventually raise the price to producers, and very probably reduce the price to consumers.

Let high quality be the watchword of every poultry keeper.

How a Farmer's Wife Made Money Baking for Her Neighbors

In the current issue of Farm and Fireside, a woman who is making money baking tells her story in part as follows:

"'Oh, for a loaf of good bread'! That remark, made by a bachelor homesteader prompted me to start a home bakery. We had very little capital when we took up our quarter section in this Pacific Northwest region, and the fact that my husband was working twelve hours a day out-of-doors while I, with plenty of time and strength, was not earning a penny to help along, was a constant worry. Is is any wonder that as soon as I could get that bachelor homesteader's attention I offered to provide him, at moderate prices, with all the bakery supplies that he needed? He gladly gave a weekly order for four loaves of bread at ten cents each and for two pies at twenty-five cents each, for which he was to call on specified days. The second time that man came for his bread he brought orders from two of his neighbors, also bachelor settlers, and through those three men the news that I would do extra baking spread like an endless chain letter. Within a month I had eight customers and was regularly making three dollars and a half a week.

"My next step was to nail to a tree, at the side of the road passing our shack, a board stating that I was prepared to furnish bread, biscuit, cake and pies in moderate quantities, at forty-eight hours' notice, or to take orders for weekly supplies in the bakery line. It was amazing the way the orders came in, not only from the men of the vicinity who are their own housekeepers, but from women who are indifferent bakers or encumbered with large families of small children. Before many days, orders began to come from people who wanted the things done up so that the rural letter carrier, who in sparsely settled districts uses a two-horse wagon, could pick them up as he passed our house and leave them at their homesteads or at the place where their mail was customarily deposited.

"My charges for bread, cake and pie are based on the one hundred per cent. profit system. That is to say, having estimated the cost of all materials and the postage or other transportation for each article, I double its price and consider it only fair pay."

Those we can safely trust are they who never ask us to.

"Children Teething

MRS. WINSLOW'S SOOTHING SYRUP should best remedy for diarrhoea. Twenty-five cts. always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the

Dear Old Songs

FREE TO YOU

All the Words and Music

Unusual talent was certainly employed to produce this bound volume of eighty songs. This book has 96 pages, size 6½ x 9 inches, with the front cover in four colors. Each song has the words and music printed on extra quality of paper from new, clear type. A few of the songs are "Sweet Genevieve," "Santa Lucia," "Come Where My Love Lies Dreaming," "How Can I Leave Thee?" "Angels, Ever Bright and Fair," "When the Swallows Homeward Fly," "In the Gloaming," "Juanita," "Maryland, My Maryland," "Then You'll Remember Me," "Flow Gently, Sweet Afton," "Oh, Don't You Remember Sweet Alice?" and sixty-eight others, which are considered as among the best. So many of our subscribers have written us for just such a collection that we have purchased a large number and by so doing are able to give one book free and prepaid, to every one who will send us 10 cents for a 3-months trial-subscription to The American Woman.

The American Woman is one of the oldest and most popular household magazines, that delights all with its thrilling serials, pleases all with its interesting short stories, and helps all with its famous departments on home and needlework topics.

Remember, you get these 80 songs, bound in large-size book form, and The American Woman 3 months, for only 10 cents.

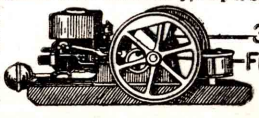
Try it in your home for thirty days, you to be sole judge. If the machine is not satisfactory, ship it back to us and we will pay the freight both ways and give your money back with six per cent interest. A postal from you will bring quick proof to you of our reliability and our free circular.



Newton Washing Machine Company
Newton, Iowa.

Some Home Helps

Men prepare themselves for business; then why do not girls prepare themselves for married life?

To make a dusty straw hat look like new, brush it well with a bit of velvet moistened with alcohol. The result is surprising.

Whenever there is a man who is a failure, look, and there you will generally find not far from him in his life some girl or a woman who was selfish.

If the watch in the sick room annoys the patient by its ticking, turn a tumbler over it, and kill the sound.

"Better Babies" is the subject of an educational crusade that is now sweeping over the country. If ex-President Roosevelt is asked to contribute an article, he will probably add just four words to the motto, making it, "Better Babies, and More of Them."

Get your druggist to make a solution of orange shellac and alcohol, and with a small brush apply this carefully to the heels and soles of your white shoes whenever the latter are polished. It leaves a satiny finish, and a ten-cent bottle has lasted the writer considerably over a year.

Look Over

An exchange recalls an old story of John Wesley, who was once walking with a brother who related to him his troubles, saying that he did not know what he should do. They were at that moment passing a stone fence to a meadow, over which a cow was looking.

"Do you know," asked Wesley, "why the cow looks over the wall?"

"No," replied the one in trouble.

"I will tell you," said Wesley. "Because she cannot look through it; and that is what you must do with your troubles—look over them."

DRESSMAKING LESSONS FREE

Complete Illustrated Course of Lessons Given to Women Readers of This Paper for a Short Time Only.

We have just published in one large volume one of the most valuable and most comprehensive courses of instruction in home dressmaking ever written. This course of lessons covers practically every phase of the subject of dressmaking. It tells you how to make most every garment, from the simplest house apron to the most elaborate evening gown.

This valuable book, "Every Woman Her Own Dressmaker," will be found of great assistance to beginners as well as experienced dressmakers. You can turn to this book and find a satisfactory answer to practically every dressmaking question which might come up. It illustrates and fully describes 200 very latest styles for ladies and children. It gives valuable instructions on fitting and finishing—instruction needed by every woman. Here are some of the interesting subjects taught in these lessons:

How to Sponge and Shrink Wool Goods.

How to Shrink Wash Materials.

How to Make a Tailored Coat at Home.

How to Make a Plain Shirtwaist by the Newest and Easiest Method.

How to Make a Boned Lining.

How to Make Stylish Suits, Skirts, Dresses and Dressing Sacques.

How to Make Wrappers, Kimonos and Underclothes.

How to Make Children's Coats and School Clothes.

How to Make Baby Clothes, Long and Short.

We are giving these valuable dressmaking books away absolutely free just to introduce our popular publication. Send us your name and address at once, together with 4 cents in stamps to cover mailing expense, and secure one of these valuable books before the offer is withdrawn. Address ARTHUR CAPPER COMPANY, Dept. DM-20, Topeka, Kansas.

Patterns of Fashion

Free Monthly Fashion Guide We are unable to print all the fashion illustrations each issue that we would like to publish. However, with each pattern order mailed we will include free an advance Monthly Fashion Guide. Monthly Guide alone, without pattern, for 2c for mailing. All patterns are very latest and only 10c each, postpaid.

6141, BOYS' DRESS.—A simple Russian suit with diagonal front closing. The neck opens over a chemisette and is edged with a wide collar. The sleeves may be short or long. Blouse and skirt are in one, with a belt at the waistline. These suits are made of linen, pique, duck, galatea, gingham and similar materials. Sizes 1, 2 and 3 years. Medium size requires 1¾ yards of 36-inch material, with ¾ yard of contrasting fabric.

6062, CHILD'S DRESS.—An unusual design, cut on sacque lines, with a tuck extending from shoulders to waistline, forming an underturned plait at each side. The closing is in front, the sleeves long and there is a wide shallow collar at the neck. Challie, serge, gingham, linen, ratine, etc., are used for these dresses. Sizes 2, 4, 6, and 8 years. Medium size requires 3 yards of 27-inch material, and ⅝ yard of 27-inch contrasting goods.

6173, MISSES' BLOUSE.—In this waist the long middy effect is combined with the popular Balkan idea by the addition of a hip belt to the plain blouse. The closing is at the side, the neck a trifle low, edged with a small, fancy collar and the sleeves long or short. Linen and pongee silk are the most favored materials for these blouses, but other soft fabrics may also be used. If desired the hip band may be omitted and the blouse allowed to hang straight. Sizes 14, 16 and 18 years. Medium size requires 4⅛ yards of 27-inch material.

Price of each of above patterns, 10 cents.

Very Accommodating

Broker's Clerk—Here's an order from Mrs. Peterkin-Smythe.

Broker—Really? Clever woman, Mrs. Peterkin-Smythe. We must do whatever we can to oblige her.

Clerk—She wishes us to purchase a thousand shares of stock on her account at 75 and sell it at 90 and send her a check for the profits by 12 o'clock today.

Dangerous Pastimes

Bennie, aged four, met Henry, aged five, and the following conversation ensued:

"Whatsamatter your head?"

"Bumped it on the ceiling. I was playin' 'th my papa on the floor an' I was sittin' on his tummy."

"An' nen what?"

"Papa sneezed."

Shetland Ponies Free to Boys and Girls

105 Lucky Children Already Made Happy More to be Given Away

Dear to the heart of every boy and girl is the idea of owning a real Shetland Pony, and proud indeed is the child who is fortunate enough to possess one. Genuine Shetlands are well known to be the cutest and most lovable little creatures in the world, and nothing delights them more than to play and frolic with children. But they are sturdy little fellows, too, and can haul along a buggy full of children at a faster pace than most horses. Owing to their great demand, however, Shetland Ponies are so costly that few children can afford to buy them.

But you have an excellent chance to get one absolutely free. The Farmer's Wife, of St. Paul, Minn., will give you a real Shetland Pony and complete outfit consisting of a buggy, harness, saddle and bridle if you are willing to do them a favor. Isn't that fine? You have probably heard of The Farmer's Wife, the only woman's farm journal in the world, and one of the largest and best papers published. The publishers of The Farmer's Wife are giving away ponies to advertise this great paper, and the work they require you to do to own one is so easy that any child who can ride a pony can do it.

The Pony they are now offering is "Peaches," and he certainly is a beauty. He is a beautiful black and white pony just like ponies you have seen in a circus parade. Wouldn't you like to own "Peaches," with his nobby buggy and harness and saddle and bridle? You would be the proudest child alive and the envy of all other children for miles around. If you want "Peaches," send a letter or post card to The Farmer's Wife, 549 Webb building, St. Paul, Minn., and say: "I have no Shetland Pony and want to own 'Peaches' and his outfit." Just as soon as they hear from you they will tell you all about their easy plan. Don't miss this opportunity to get a pony free. It won't cost you a penny and you'll be awfully glad if you write them, because there is a big surprise waiting for you that will double your chances of winning a pony.

Remember, just send a postal or a letter to **The Farmer's Wife, 549 Webb bldg., St. Paul, Minn.,** and you'll soon know how to get a Pony and complete outfit. **Better do it now, hadn't you?**

Simple Enough

"What's the trouble now?" demanded his employer, when the office boy came in half an hour late.

"The ice on the pavements," said the lad. "Every step I took, I slipt back two."

"You did, eh? Then how did you ever get here?"

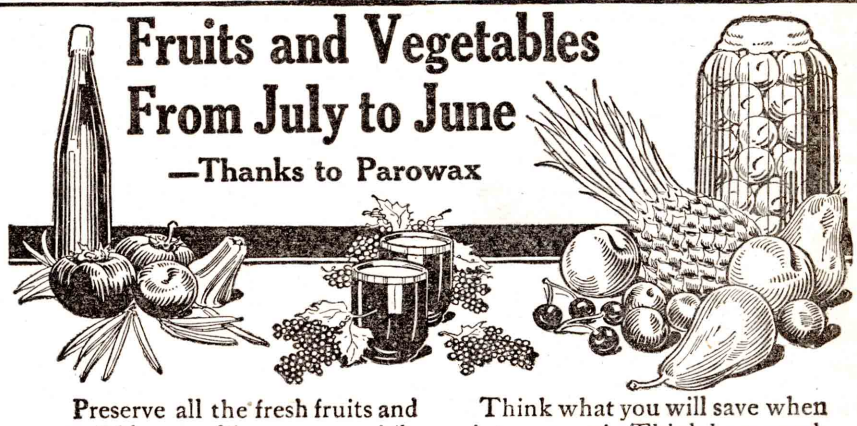
"I started back home."

Worthy of Emulation

An inscription on a monument winds up with the following touching obituary: "She lived a life of virtue, and died of the cholera morbus caused by eating green fruit, in the hope of a blessed immorality, at the age of 21 years, seven months, and 16 days! Go thou and do likewise."

Fruits and Vegetables From July to June

—Thanks to Parowax



Preserve all the fresh fruits and vegetables you like—now, while they are plentiful and cheap. Seal them with Parowax and they are bound to keep. Parowax will never fail you.

Think what you will save when winter comes! Think how much better "table" you can set—how your family will devour your own home-canned vegetables, preserves and jellies.

Seal Jelly Glasses Thus

Parowax

Seal Jars This Way

is used as indicated in sealing jars, bottles and glasses. It's about the easiest, simplest work one can imagine. But so sealed, vegetables and fruits will keep *fresh indefinitely*.

The Parowax way is very inexpensive. Two of the four handy layers contained in the 16-oz. carton will seal several gallons of fruit. And what's left over will be found invaluable in the laundry. Parowax shavings in the wash boiler clean and whiten clothes, without the rubbing. A little Parowax in the starch imparts a beautiful finish in the ironing.

Relief For Rupture Without Operation

We Allow a 60-Day Test
Entirely at Our Own Risk—To Prove It

No longer any need to drag through life at he mercy of leg strap and spring truses. No reason in the world for leting them force you to undergo a

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

A ROSENBERG, TEXAS., person is sending to the Cadets of Equity a printed circular letter under the pretext that it is a letter from a Cadet friend. On the contrary, it is an appeal for money, and other help in getting subscriptions for some publication. It is utterly misleading, if, indeed, it is not a fraud. We are glad for the Cadets to correspond and have for each other a common feeling of sympathetic union, but when it comes to circulating deceptive letters for selfish purposes, it is entirely foreign to this friendly association.

DEAR CADETS: Living in the state of Michigan, near the point of the Upper Peninsula, noted for its severe winters. I would like to exchange letters and postals with Cadets living in warmer climates. I am fifteen years of age andd a freshman in the high school at Calumet, our nearby town. I go to school on the electric car, and have only five minutes' walk to the station. We had a severe winter, but when the weather permitted we went out. Our winter sports are skating, tobogganing, skiing and sleighing. Our mail comes twice a day. I hope to hear from the Cadet boys and girls.—Signe Kutramo, Kearsage, Mich.

DEAR CADETS: I have been reading Up-to-Date for a year. It is a fine paper for the farmers. I like to read the Cadet letters very much. I am a farmer's daughter and will be seventeen years old August 16. I am the oldest of a family of five. I can do most all kinds of housework. I have done the sewing for our family for the past three years. I did most all the hoeing in the garden last summer. We had lots of vegetables and lots of flowers. I love to raise flowers. Some people think hoeing and milking make their hands large. I do the milking winter and summer, and my hands are no larger than the hands of some girls who never hoed a tomato plant or milked a cow in their lives. Papa owns 280 acres of land, which is mostly all cleared. So we generally have several hands to cook for through hay harvest and threshing. I am a member of the M. E. Church, and I love to read and study the Bible. I never let a week pass without reading one or more chapters. I love to attend Sunday school, and I expect to attend almost every Sunday this summer. I am a graduate of the common schools, and I expect to take music lessons this summer. I would like to hear from boys and girls in every state in the Union, and will answer all if I have to sit up till midnight to do so.—Naomi Weaver, Sims, Ill.

DEAR CADETS: I am a farmer boy and wish to become a Cadet of Equity. I am twenty-four years of age, and live on the farm with my mother. My father is in the far beyond. He was a soldier and belonged to the home guard of Company L, Thirteenth Kentucky Cavalry. We have been taking Up-to-Date for a year, and I think it is the best of all farm papers. I am sure all farmers would be up-to-date if we would practice its teachings. I sure like to read the Cadet letters. So all you boys and girls write to me. I will gladly answer all letters or cards I receive.—Pater Sexton, Campbellsville, Ky.

DEAR CADETS: I am not a farmer girl, but I want to introduce myself to the Cadets. I correspond with several boys and girls now, and I want to get letters from more of them, for I enjoy letters so much. I am twenty-one years old, and live in the heart of the Adirondacks. This place is a great health resort for consumptives, and it is also a great summer resort. Saranac Lake has a population of 8,000, and is quite a city. I like Up-to-Date real well, especially the Cadet page. In a recent paper I read about George Alderson, and I feel so sorry for him. I shall write to him and will send him some money. Perhaps my sympathy was aroused because I am a cripple girl, and have been since last August; but I expect to be O. K. soon as I and my mother are going to New York, where I am to be treated by Dr. Gibney, the world's best known specialist. When I return I will answer all that write, and tell of my trip, treatment and recovery. All write.—Dorothy Dudley, No. 6 Dorsey St., Saranac Lake, N. Y.

DEAR CADETS: I am seventeen years old, and we live on a farm of 160 acres, but we own four hundred acres. My father takes Up-to-Date, and thinks it is a fine paper, just what the people need. We raise most all kinds of grain, but it is hard for us to raise corn. We raise apples and the smaller fruits. I have lived on a farm all my life, and think it is better than city or town. I like working out of doors better than housework. I don't suppose many girls are that way. I stay at home with my father and mother, and take music lessons. We live in the upper peninsula or northern Michigan. It is very cold here in winter, and very warm by spells in summer. I would be glad to receive cards or letters from the Cadet boys and girls; will answer all I receive.—Barbara Yula Mabel Pierce, Pickford, Mich.

DEAR CADETS: I am a South Dakota girl, eighteen years old. I have just finished reading the Cadet letters, and take great interest in them. We have taken Up-to-Date for about five years, and think it is a grand paper. I live on a 160-acre farm, eight miles from Kenebec, our nearest town. We raise wheat, oats, barley and speltz. I would like to exchange letters or cards with the Cadets, and will gladly answer all I receive.—Bessie E. Whitford, Kenebec, S. D.

DEAR CADETS: I am a Connecticut boy, twenty years of age. I am working with a tree specialist. We do trimming, spraying and landscape gardening. I have not been able to work since February 17. The limb on which I was standing broke, and I fell and broke both of my wrists. I am getting along quite well now, but have to be careful. I am renewing my subscription. Hope to hear from many of the Cadets, and promise to answer all.—Wallace Ackerly, South Norwalk, Conn.

DEAR CADETS: I think Up-to-Date is a grand paper. I like to read the Cadet letters. I live on a farm of 160 acres, and like pets. I have rabbits, pigeons, dogs, cats and chickens. I will be glad to exchange letters and post cards with all other Cadets. I am 16 years old.—Leo A. Duman, Ebensburg, Pa.

DEAR CADETS: I am sending in my subscription for a year, and I wish to express my appreciation of the great system of co-operation. I hope every farmer will unite with these efforts, and help the co-operative marketing to be a success. I live on a farm about eighty miles southwest from Chicago, and near the small town of Kempton. The soil is very productive, and this part of the state is known as the corn belt. There is no timber here, but so many groves have been planted as to give it the appearance of a timber country. I enjoy reading the letters from the different parts of the country, and will exchange cards.—Grace F. Walker, Kempton, Ill.

DEAR CADETS: I live on a farm of 160 acres in Minnesota. We raise wheat, oats, corn, potatoes, cane, etc. I enjoy reading the Cadet leters very much. I would be pleased to correspond with the Cadets and will answer all I receive.—Lottie Wilkinson, Amboy, Minn.

DEAR CADETS: We still take Up-to-Date Farming. We all think it is a fine paper, and hope everybody else thinks the same. The first thing I read is the Cadet letters. We still live in Oscaloosa, but I would rather live on the dear old farm. But my papa isn't able to farm any more, so we had to move to town to rest. We are going to Pasadena, Cal., before very long, and I can hardly wait until the time comes.—Lela Burkes, 421 College Hill Ave., Oscaloosa, Iowa.

DEAR CADETS: I own a farm, but do not live on it. I am twenty-eight years old and a subscriber to Up-to-Date Farming. When the paper comes I always turn to the Cadet page, for I like to read the young people's letters. I would like to become a friend of all of them, and to that end I would like to exchange cards and leters with all.—F. E. Shafer, La Grange, Ind.

DEAR CADETS: I live in Eastern Oregon, near Pendleton, the famous "round-up city." My father farms a section of land. We take Up-to-Date, and I think it is a splendid paper, especially the lively Cadet corner. I am seventeen years old, and am a freshman in high school. My sister and I ride seven and one-half miles, over sand and sage brush to school at Echo. This country is fast settling up. I would like to recive letters and cards from other Cadets; will answer all I receive.—Ruth Moore, Echo, Ore.

DEAR CADETS: I am nineteen years old, and live in Missouri. I think Up-to-Date Farming a fine paper, and we get much valuable information out of it. We raise corn, wheat, oats and other grain. I would like to hear from all the Cadet girls and boys, and will answer all I receive. —Solomon Crouch, Gladden, Mo.

"Give Me My Own."

A very absent-minded member of the French Institute was reading a newspaper at the Casino at Dieppe. He was absorbed in his reading, and with his left hand he unconsciously pushed the files of newspapers on the table. Each moment he sent them farther from him. Beyond the papers was an inkstand, which at last the moving papers pushed over the side of the table. It fell on the trousers of a Paris banker, who was furious at the accident.

The absent-minded man offered his best excuses without appeasing the banker's wrath who shrieked that his new trousers were ruined.

"But sir, I will cheerfully pay for them. Be good enough to send me your card, and I will send the money to your hotel."

"To my hotel, sir! I don't know you. I must instantly have the thirty francs these trousers cost."

The member of the Institute drew forth the thirty francs and handed them to the banker. Then he said:—

"Now that you have been paid, I hope you have too much of the delicacy of a gentleman to remain in my trousers. You know they are mine, and I insist upon their immediate delivery to me. You have no confidence in me; I have none in you. My trousers!"

In vain the banker protested against such haste. The crowd that had gathered about the disputants said the member of the Institute was right, and the banker, after sending for another pair of nether garments, surrendered the ink-stained ones amid the laughter of the bystanders.

Simple Mathematics

"Hoo is it, Jeemes, that ye mak' sic enairmous profit aff yer potatoes? Yer price is lower than ony ither in the toon and ye make extra reductions for yer friends."

"Weel, ye see, I knock aff twa shillin's a ton because a customer is a friend of mine, an' then I jist tak' twa hundredweight aff the ton because I'm a friend 'o his."—Punch.

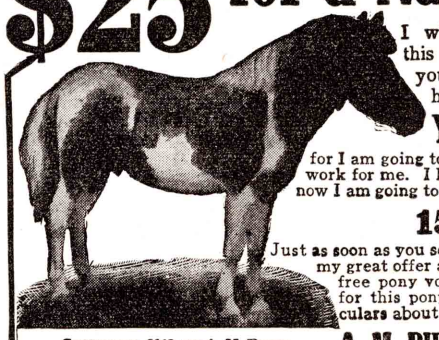
Wuxtra!

Newsboy—"Great mystery; Fifty victims! Paper, mister?"

Passerby—"Here, boy, I'll take one." (After reading a moment.) "Say boy, there's nothing of the kind in this paper. Where is it?"

Newsboy—"That's the mystery, guvnor. You're the fifty-first victim."—Missouri Oven.

$25 for a Name for this Pony



I will give **$25.00 FREE** for the best name for this beautiful prize Shetland pony. Send the best name you can think of right away, for not only do you have a good chance to win the $25 prize but

You Can Win the Pony, Too

for I am going to give him to some boy or girl who will do a little easy work for me. I have just given "Dandy," another beautiful pony, and now I am going to give away this pony. But first I want a name for him.

1500 VOTES FREE

Just as soon as you send me a name for the pony I will tell you all about my great offer and I will also send you a special coupon good for 1500 free pony votes. Remember I will give $25 for the best name for this pony, and I send you 1500 free pony votes and full particulars about the pony as soon as I hear from you. Write me today.

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

RATES—The Cost for Advertising Under This Head is 8c a Word Each Insertion

Each initial and number counts as a word. No display, except the first few words will be set in capital letters without extra charge. To bring sellers and buyers together there is no surer way than through this BUSINESS EXCHANGE. When writing please say: "I saw it advertised in UP-TO-DATE FARMING.

FARMS WANTED

FARMS WANTED—We have direct buyers. Don't pay commissions. Write, describing property, naming lowest price. We help buyers locate desirable property free. American Investment Association, 71 Palace Bldg., Minneapolis, Minn.

SELL YOUR PROPERTY quickly for cash, no matter where located, particulars free. Real Estate Salesman Co., Dept. 6, Lincoln, Neb.

FOR SALE—TOBACCO

FOR SALE—30,000 pounds best leaf tobacco, 3 and 4 years old. Mail stamps for sample to Anton Wavrin, Franklin, Ky. R. R. No. 5.

HELP WANTED

LOCAL REPRESENTATIVE WANTED. Splendid income assured right man to act as our representative after learning our business thoroughly by mail. Former experience unnecessary. All we require is honesty, ability and willingness to learn a lucrative business. No soliciting or traveling. All or spare time only. This is an exceptional opportunity for a man in your section to get into a big paying business without capital and become independent for life. Write at once for full particulars. National Co-Operative Realty Company, L-511 Marden Building, Washington, D. C.

500 MEN 20 TO 40 years old wanted at once for electric railway motormen and conductors; $60 to $100 a month; no experience necessary; fine opportunity; no strike; write immediately for application blank. Address Box 35, Up-to-Date Farming.

FOURTH-CLASS Postmaster positions now open to all. Examinations everywhere may be called any time. Full description of examinations free. Franklin Institute, Dept. P 26, Rochester, N. Y.

PATENT ATTORNEYS

PATENTS THAT PROTECT AND PAY. Advice and books free. Rates reasonable. Highest references. Best results. Watson E. Coleman, Patent Lawyer, Washington, D. C.

IDEAS WANTED—Manufacturers are writing for patents procured through me. 3 books with list 200 inventions wanted sent free. Advice Free. I get patent or no fee. R. B. Owen, 49 Owen Bldg., Washington, D. C.

MEN OF IDEAS and inventive ability should write for new "Lists of Needed Inventions," "Patent Buyers" and "How to Get Your Patent and Your Money." Advice free. Randolph & Co., Dept. 28, Washington, D. C

MISCELLANEOUS

GINSENG, Golden seal, roots and seed for planting. Write for prices. W. N. Long, Florence, Ky

Department of F. S. E.

Practical Organization and Co-operation

THE FARMERS SOCIETY OF EQUITY.

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No Capital stock. Membership fee, $2.00; Dues, $1.50 annually. Unity of marketing through county and district clearing houses, ultimately to federate in one national clearing house, the plan.

National Union Officers

Pres., J. A. Everitt, Indianapolis; V.-Pres., W. H. Mitchell, Hutchinson, Kas.; Sec., M. K. Sleight, Indianapolis; National Organizer, H. F. Cutting, Portland, Ore., or Indianapolis. Directors, Robert Stevenson, Lebanon, Ind.; Jacob Bretz, Bretzville, Ind.; S. W. Morris, Rochester, Minn.; Fred N. Parkinson, Rexburg, Idaho; W. S. Shure, Summerdale, Ala.; J. A. Harmon, Shawnee, Okla.; C. Hayes Taylor, Indianapolis, Ind.

State Union Directory

Locals reporting dues and fees of new members in states having an organized state union will make reports to their state union secretaries.

Idaho

President, A. Y. Satterfield, Sterling.
Secretary, O. E. Scott, Shelley.

Oklahoma

President, P. H. Thomas, Shawnee.
Secretary, J. A. Harmon, Shawnee.

UTAH.—A. Y. Satterfield, Sterling, Ida.

J. A. EVERITT, Pres.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

The 1912 crops collectively, and with very few exceptions individually, were much greater than the country ever raised before.

—o—

The money that the farmers received for these crops, in the aggregate, was more than a billion dollars less than they received for the smaller crops of the year before, 1911. A vivid picture of this is given in the editorial in this number headed "Last Year and Now."

—o—

Notwithstanding the great abundance of farm crops and the low prices the producers received the cost to the consumers was not less, but, as shown by the latest investigations by the Bureau of Labor at Washington, was higher than the year before and very much higher than the average price in the ten-year period, 1890 to 1899. The report says:

Every principle article of food, except sugar, of the fifteen staples, representing approximately two-thirds of the expenditure for food by the average working man's family, showed an increase in retail price on February 15, 1913, compared with February 15, 1912, of 3.2 per cent. Compared with the average retail prices in the period, 1890 to 1899, the increases are as follows: Round stead, 84.5 per cent.; rib roast, 62.7; pork chops, 89.4; smoked hams, 69.1; pure lard, 62.3; hens, 66.6; wheat flour, 27.4; corn meal, 58.1; fresh eggs; 56; creamery butter, 63.5; Irish potatoes, 23.6; milk, 40.1.

—o—

Thus, while the fields and orchards turned out a greater abundance than ever before the high cost of living lament continues to be heard from Canada to the gulf.

—o—

And while the people of the cities read of the great crops and they hoped to buy the necessaries of life at a less price their dollar bought no more, and oftentimes less than the years before when there was less production.

—o—

But, most shameful of all, while this condition existed in all of the big cities of the country and in numerous small cities and towns, millions of bushels of fruit and vegetables spoiled in the fields for lack of markets, and carloads and trainloads that had reached glutted markets were dumped out to rot. Even as we write this, carloads of fine potatoes are being abandoned by shippers and receivers in Chicago and other markets to the railroad companies, because no person will pay a price to equal the freight, yet the consumer is paying at the grocery store twenty-five cents a peck and eighty-five cents and up a bushel.

—o—

Why do the people the most interested permit this to continue year after year? It is wicked to perpetuate this condition if there is a remedy. If there is a remedy then the call is to every man and woman with red blood and a warm, sympathetic heart to join forces to apply the remedy.

—o—

If there is a cure for this trouble, and if the cure is accomplished, it will mean the emancipation of seven million farmers and their families and more than an equal number of laboring people and their families in cities, from slavery to a system that is the most inconsiderate and cruel of any thing that ever afflicted our nation.

—o—

To protect the producer of crops in his labor and profits, and to enable our millions of consumers to get all the supply at prices that are equitable and which, even the laborer earning a very modest wage can pay, is the great problem of the day that waits solution.

—o—

But before we can hope to solve the problem we must understand it. We have repeatedly stated it in these columns, but let us give a few more illustrations, which can be applied to every farm crop.

—o—

The farmer makes butter and sells it, or trades it to the local store keeper at around eighteen to twenty cents a pound, who sells it to a collector, who sells to a city mixer, who sells to a wholesaler or storer, who sells to a retailer, who sells to the consumer at thirty-five to forty-five cents a pound. Or, if the milk is sold the farmer gets three cents a quart and the consumer pays eight cents, including a lot of water added. For the wheat in a five-cent loaf of bread the farmer gets about one-half a cent.

The wastes we have referred to and the piling up of unnecessary and excessive middle costs are the result of ignorance of the amounts of supply and demand and the lack of a system to bring them together.

—o—

The solution of the problem is to substitute for the blind, impeded, roundabout system of distribution, beset with innumerable toll gates all along the way, an intelligent system of marketing that will know where every particle of demand is with the ability to send every particle of supply straight to it by the shortest and cheapest route.

—o—

This marketing problem can be solved by any one of three classes of people, or all three, or any two working jointly. We refer to the producers of the crops, the handlers of the crops and the consumers of them.

—o—

If it is true that any one of these classes can solve the marketing problem, then we should hope, considering how vital it is to the nation and the prosperity and happiness of all the people, that the time will not be long delayed.

—o—

FIRST, let us see how the handlers of farm produce can do this thing. Commercial lines are well organized now, therefore they can work in harmony in any matter agreed upon. Suppose then, they want to improve the system of marketing the products of the farm for the welfare of producers, consumers and themselves. The first step would be for the people who handle farm produce to have a central clearing house in each large market where all the demand would express itself and where the supply (the producers) could find the demand instead of each of the hundreds of wholesalers, jobbers, commission men and retailers representing demand that the producers can not find. We believe the time has come for the handlers to take this step for their own protection, but we don't expect them to do it. But we do look to the producers or consumers, or both, to revolutionize the system.

—o—

SECOND, the producers. Under the present system there are about three hundred places in Indianapolis where the wholesale demand exists daily and over one thousand places of retail demand, and similarly in other cities. Of course, it is impossible for the man or group of men who have produced to sell to know what demand exists at all of these places. Therefore, the only thing they can do is to sell to local buyers at what they will offer or take the risk of blind shipping hoping to strike a good market. The alternative is for the producers to quit shipping to the blind demands and establish a clearing house in each city and ship to it, where all the people who want any produce must make their wants known to the representative of the farmers, who will in turn communicate the orders to the places of production.

—o—

THIRD, the consumers. If the handlers or the producers will not take the step to provide a clearing house where all the demand can express itself and where the supply can find it, then the consumers should take it upon themselves to bring this about. The mode of procedure would be to district the city in plots large enough for one retail store in each district. Then organize in a simple club in each district and agree to buy only at the selected store, on condition that the retail stores so selected will co-operate in buying through one head, or they can establish the clearing house as referred to in first and second. The purpose always being to have one place where the supply and demand can meet instead of hundreds. We can see how the Housewives' League, with headquarters in New York city, could soon make a great showing with this plan. It is claimed by the officers of the league that there are over a million housewives, members now; that it has entered every state and is organized in more than one hundred cities.

—o—

The essentials are: The demand must be known and how much it is. The place where the supply is must be known and how much it is, and then the system must provide that the supply goes straight to the demand without interference and with as few intermediaries to take toll as possible. The clearing house for each market is the only way to accomplish this, we believe.

—o—

And the clearing house is by no means an impossible thing. On the contrary, considering the seemingly imperative demand that marketing be improved and that every family in the country will benefit greatly when a definite system of distribution is established, it does seem that one of these classes, or all of them working jointly, would see to it that the new system was established in a year.

—o—

Would such a combination be illegal under the Sherman law?

Old Folks What 15c will do

You have wished for a paper that is printed in type that you can read without straining your eyes; a paper that gives all the news of the world, and that tells the truth and only the truth. **The Pathfinder** is just the paper you have been longing for, and the little matter of 15c in stamps will bring it to you every Saturday for 13 weeks on trial **The Pathfinder** is an illustrated weekly, published at he Nation's Capital, for the Nation, now in its 20th year of increasing success. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time and money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, **The Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at least. Send only 15c to show that you might like such a paper as this and we will send **The Pathfinder** on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. **THE PATHFINDER, Box 7, Washington, D. C.**

One of our exchanges just received had this: speaking of the dangers from the Sherman law for farmers, who organize to market:

The small organization must come under the lash as well as the great, and the innumerable little combinations—although perfectly innocent and vitally necessary to the solvency of their constituents—will have to stand in suspense until a reaction of sentiment results in regulation instead of segregation. * * * West of the Rockies the feeling is growing stronger every day, that farmers of every description may as well make up their minds that until the slogan of "Knock the Combination" has sobered off they will have to keep on the legal side of the fence and continue to hand over to the system whatever it pleases to demand.

—o—

We do not subscribe to this idea. On the contrary we urge farmers to double their efforts to organize along lines this paper has taught so that there may be a combination for equity in all the business relations of life to oppose the inequitable combinations that prey upon the weak and defenseless, because unorganized, classes.

—o—

The Sherman law distinctly states, "In restraint of trade." What we advocate is an organization to MULTIPLY TRADE and it will unquestionably do it regardless of whether it is brought about by the producers, handlers or consumers.

—o—

Of course, our first choice is that the producers of the crops should establish, own, control and operate the system that deals wholly with their own stuff, and to that end we want more local and county unions in every state. Organization is increasing every week, but we can't see why enough of the readers of this paper do not come forward to organize one or a few local unions each to complete the organization in a few months. This is what we have been asking for in these "Personals" for months. The spirit nas moved many, but we want to see a general response and we hope it will come from this number. Farmers must be aroused to the great need of an improved marketing system and be told that there is one ready for their use.

—o—

We append the blank again. You have seen it before and may have passed it by, but we hope you will fill it out and send it in this time before you lay the paper down. Not because we want a great many blanks returned, but we want each person who sends one to sincerely want his community organized. You, with the co-operation of headquarters, can do it easily.

— — — — THE BLANK — — — —

Farmers Society of Equity,
Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them would be glad for improvements in our system of marketing.

These people market mainly at .....

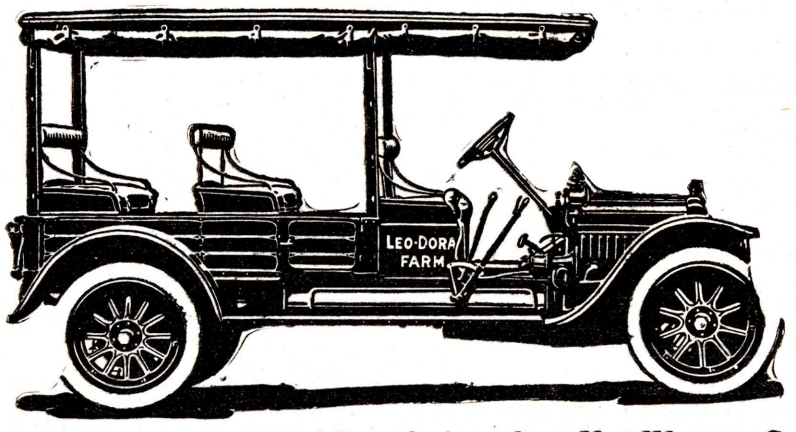
THIS WHITE Combination Car Will Pay You Back $2250

Whether You Now Own a Car or Not—This Is the Motor Car You Have Always Wanted.



The Car That Will Do Your Work as Well as Your Play—The Car That Will Last

Eight Passengers or 1500 Pounds Anywhere You Want to Go

We Built This Car Because It Was Right

There has always been a demand for a car just like this—but no car to fill it till now. We know it meets the exact conditions before you. We know it will do for you what no other motor car will do. Unlike most automobiles, the White Combination will earn money for you—not be just a dead expense.

You Have Long Felt the Necessity For It

You know as well as we what a benefit the motor car has been to people living in the country. It eats up distances as no horse ever could; it never tires; friends living many miles away whom you seldom used to see, are now the same as neighbors. Your town is now near-by, where it used to be some distance. These and many other things the motor car has done for you or your neighbors. But one thing it has *not*—it has *not* carried your freight. This is where the White Combination excels any motor car built.

It Does the Work of More Than Two Teams

Even if you have a motor car, you have had to use your horses to haul things to town. Frequently they are already tired from plowing or other farm work when you hitch them up for a long road haul. But you have *had* to use them. Other people, too, who own motor cars have *had* to hitch up when it came to hauling, because no other motor car built has a frame strong enough, nor body designed to carry freight as will the White Combination Car. Used as a freight carrier it not only does the work of from four to six horses because of its speed on the average haul, but also saves your horses the strain of the trip, or permits their being used *on* the farm while this car is working on the road.

It Has Twice the Capacity of the Ordinary Touring Car

It will carry eight passengers easily, with ample extra room for luggage, lunch baskets, etc. The seats are large and comfortable and are easily attached or removed by one person. In spite of its power and capacity, this car is as light and easy to drive as an ordinary touring car. There are very few—even the fastest—that can pass it on the road, and when fully loaded it will easily climb hills many cars cannot climb at all.

How You Get Your Money Back

It is cheaper to pay $2250 once than $1000 four or five times. Figuring mile for mile, the White Combination will outlast four or five of the ordinary touring cars of the $1000 or $1200 type. As a passenger carrier, it more than meets every requirement of the touring car and can carry twice as many passengers. As a freight carrier there is no comparison, as no touring car made even approaches it.

You Get Double Value In This Car

This car is designed by the same engineers, built with the same care and of the same excellent materials that have all combined to make White Cars the standard for the highest grade of automobile construction in America. It is the best *car* value you can buy, and the price you pay for a car is usually about what it's worth as a car. But the White Combination is more than a motor car, it does more. It gives you more than double service value in passenger and freight carrying.

Balance These Figures if You Can

The work and play this car will return to you is about equalled by *four* low priced touring cars. That would mean an investment of between $4000 and $4500, as against $2250 for the White Combination. Any *one* of the *four* would cost more to run and repair than the *one* White, and would have to be replaced three or four times over before the White really began to wear.

That Is Why This White Combination Car at $2250 Is The Best Motor Car Investment You Can Make. Let Us Send You Specifications and Tell You What The Car Has Done. Are You Ready to Discuss The Matter?

THE WHITE COMPANY

834C E. 79th ST., CLEVELAND

July 1st Dues Paying Date

All those locals whose dues paying date falls on July 1st are urged to make prompt remittance. Delinquent members must be reminded of their dues in a meeting or by letter. Members' names, when thirty days past due, may be posted in the club room. Forty cents out of each dues is retained in the local union treasury. This fact should impel the secretary to make a special endeavor to make all collections promptly. If more convenient, the amount of dues may be taken out of proceeds from crops sold through the union.

THE FIELD

UP-TO-DATE FARMING will print in this department short letters from its subscribers on any subject of general interest and calculated to further the mission of the paper.

Wants Hay

Hay is a very poor crop with us. We will need to buy. Can you put us in touch with parties having hay to sell, especially alfalfa, located near us, in Kansas or Oklahoma? Wheat is good, harvesting just begun, and we are going to try to do something toward marketing for profit.—E. B. Read, F. S. E. Local 7020, Sedalia, Mo.

Gets Good Results

I received the material for organizing, have been at work, and if all goes right we will organize on Saturday night. I have had good encouragement from our farmers. Once it is started, I think all the farmers will join us.—Luther E. Sinton, Shamokin, Pa.

New Man Does Great Work

H. G. Bundy, a newly commissioned organizer in Lincoln county, Neb., promises to be a successful worker. During his first week of preliminary skirmishing he called upon twenty farmers and secured seventeen members. Farmers know a good thing when they see it.

Flocks to Equity

The local at Loxley, Baldwin county, Ala., was small in membership before shipping season, and it was not expected that the local would ship cucumbers in carlots. But the highly satisfactory sales made through the efforts of County Agent C. B. Lozier, cash at the platform, was so clear and emphatic a proof of the superiority of the Equity System that the membership increased so rapidly that they soon began loading in car lots.

Another Alabama County Heard From

I have twenty-five names on our application blank and confidently expect to make it forty by tomorrow night. I shall call a meeting Wednesday, and by this time next week hope to have our application at headquarters and things in fine swing. I made a visit to Baldwin county, and Mr. Lozier gave me an inside view of the operations of the Baldwin County Union, and the practical workings of the F. S. E. It is fine, and just what we need.—D. C. McConn, Irvington, Mobile Co., Ala.

(This report came just as we go to press. —Ed.)

Getting Down to Business

Our local has decided to purchase an established elevator. We have secured subscriptions for the first payment, or one-half the purchase price. We intend to work on the "one man one vote" system regardless of how many shares a man may own. Send at once two receipt books and fifty membership cards. We took in $48 at our last meeting.—A. M. Satterly, Secretary, Ashton Local 6994, Ashton, Idaho.

We Want You to Know

Witte gasoline engines are sold with a five-year guarantee. Engines such as these are more and more being used on the farm. Let gasoline and an engine do your work cheaper than horse or man-power can. Write for valuable information from Witte Iron Works Company, 1977 Oakland avenue, Kansas City, Mo.

Young men, a Harley-Davidson "built for two" will give you more real pleasure than a horse and buggy ever did. It's the up-to-date way. Besides if you must do an errand quick the motorcycle is ready. And it doesn't cost a cent when not running. Write for book telling how good a motorcycle is to Harley-Davidson Motor Company, 788 A street, Milwaukee, Wis.

If you want to go to sleep and forget all about getting up time tell Big Ben to waken you. He'll do it gently but surely and never fail. Big Ben, a clock worthy of a name made by Westclox, La Salle, Ill. Write them.

Potato bugs and other bugs can best be killed with the Champion Duster made by Legget & Bro., 301 B. Pearl St., New York City. Send to them for valuable information.

Steel shingles made by the Edwards Mfg. Co., 641-691 Lock street, Cincinnati, O., wear longest. They are rust-proof and prevent leaks. Can't burn and cost less than wood. Don't build or repair a roof without investigating Edwards steel shingles.

Lightning rods without an agent gives you lowest prices. Write J. A. Scott Co., Dept. U. D., Detroit, Mich., for their special direct prices.

The Aermotor system of running water for all house and barn purposes is used by tens of thousands of farmers. Small cost; easy to install and operate. Send postal to Aermotor Co., 1144 South Campbell avenue, Chicago, for complete information.

Every silo owner should send a card to the Appleton Manufacturing Co., 464 Fargo street, Batavia, Ill., for information about their silo fillers, claimed to be the best.

Many a horse thought practically worthless has been made as good as "new" by using Absorbine. If you have a horse afflicted with thick, swollen glands, swollen tendons, muscles or bruises, don't fail to send to W. F. Young, P. D. F., 102 Temple street, Springfield, Mass., for valuable information.

Much valuable information about silos and silage can be gotten from three books sent free by the Jos. Dick Manufacturing Company., 1470 Tuscarawas street, Canton, O. Send for them—drop a postal today.

Eggs can be packed this summer and preserved until winter in perect condition, says the Department of Agriculture. Write Sure Keep Egg Preserver Company, Box 27, Anderson, Ind., for free booklet telling how.

A fine lawn free from weeds is produced by the Clipper lawn mower. Send for circulars. Clipper Lawn Mower Company, Box 5, Dixon, Ill.

Pesky flies! Get rid of them with a Wonder Fly Killer. Costs 75 cents for six, prepaid. Write Watson Company, Peru, Ind.

A folding bathtub that is proving popular with farmers is made by Robinson Bath Cabinet Co., 2075 Adams street, Toledo, O. It is cheap, serviceable and lasts for years.

Every boy should have a bicycle. It's easy to get one from the Mead Cycle Company, Dept. G 170, Chicago. Prices low. They will give you the opportunity to earn one as their agent.

Agents, if you want the largest line and best goods, write to the Thomas Manufacturing Company, 3081 West street, Dayton, O. Biggest supply house and they treat you right.

The home that does not have an Edison phonograph misses an instrument that will be of much value as an entertainer and pleasure maker. A new Edison has been perfected and will be sent free on trial by Babson Bros., distributors, Dept, 405 X Edison Block, Chicago, Ill. Send for their new free offer.

New Butterfly separators have been advertised in Up-to-Date for a number of years and are in daily use in the homes of our readers. The Albaugh-Dover Company, 2298 Marshall Boulevard, Chicago, Ill., guarantees the New Butterfly a lifetime, and give thirty days' free trial of any size you select. Besides, they offer any responsible farmer a year's time to pay for the machine out of his extra cream profits. Taking into consideration the excellent reputation of this separator and its advantages in easy cleaning and light running, this is a chance that no family without a separator should let pass by.

IRON WITHOUT A FIRE

Cut out the drudgery. Save time—labor—fuel. No walking back and forth to change irons—always the right heat for the best work if it's an

IMPROVED MONITOR SAD IRON

Self Heating. Satisfaction Guaranteed
Over half a million Monitors in use. Strong, simple, easy to operate. Heat regulated instantly, no dirt, no odor.

Agents, Salesmen, Managers Wanted $10 to $20 a Day

No experience required. Every household a prospect. Sells almost on sight. NOT SOLD IN STORES. Martin, Tenn., made $5000 in one year. Trimmer, Ill., writes, "Sold 12 in 10 hours." Mrs. Nixon, Vt., made $14 in half a day. You can do it too. Send for big colored circular, shows iron full size, explains everything. Exclusive selling rights—no charge for territory.

THE MONITOR SAD IRON CO.
257 Wayne Street, Big Prairie, Ohio

Awl Given

Needed on Every Farm

Save money daily with this awl by pairing shoes, harness, belts, rugs, gloves, grain bags, etc. Everything enclosed. Full size 6½ in. long. Makes lock stitch. Use any thread. Full instructions included.

OUR OFFER—Awl given with a two years' subscription for 75c. Satisfaction guaranteed or money refunded.

UP-TO-DATE FARMING, Indianapolis.

Free Pony

Who Wants Me—Quick?

Boys and Girls! Do you want this beautiful Shetland Pony all for your own? Then send me your name and address today—quick. Some one is going to get him—you can have him—*but hurry!*

My Name is *"Major"*

Well Broken Gentle Kind

42 Inches High

I Am Now 42-in. High and 3 yrs. Old. I am a Pet, Too.

My color is black. I am considered a very handsome pony. I am well trained. You can either ride me or drive me and I am just as kind and gentle as a kitten. I can go almost as fast as a big horse and can haul my carriage with my little owner mile after mile without getting tired or lazy. I do not scare because I know better—have been taught better. I want a kind little boy or girl as my owner. I'll go anywhere to find them. I am just waiting to come to someone. I'll make some boy or girl happy, because that's what I was made for. That's what I was intended for and it's what I like to do. If you want me, and I know you do, just send me your name and address on the coupon below (or a postal,) and I'll do my best to come to you in a hurry—I must go somewhere, so be quick. Send your name this very day.

Wagon and Harness, Too, Come With Me

This is one of the most beautiful ponies, that I have ever given to any boy or girl in all my life, and I have given away more than 25 Shetland Ponies. This one, **"Major"** is a beauty. He will make the heart of any boy or girl leap with joy. I wish you could see him. I just hate to let him go, but go he must, free of all cost to some boy or girl friend of mine who is willing to do me a small favor.

I am going to send a beautiful carriage along with him, and harness too, and I expect a saddle also. Might as well. I want to please and that's the way to do it. I want the boy or girl who gets this elegant Shetland Pony and outfit to be just the happiest person in all the world. I want them to remember me as long as they live, and they will, too. I have dozens of little boy and girl friends to whom I have given ponies and presents, all over the United States and I get letters from them every now and then. They send me pictures of the ponies I gave them, and tell me how pleased they are and that I always do as I say—Now my friend, if you want **"Major"**, just send me your name and do it quick. **I have a gift for you.** A postal card or the coupon in the corner, will do. Hurry! I'll send you the present, pony pictures and letters from boys and girls to prove what I say, so hurry!

Uncle Billy, Pony Man, 142 W. Ohio St., Chicago

I Want This Pony

Uncle Billy, 142 W. Ohio St., Chicago, Ill.

I want **"Major"** and I want you to send me the pony pictures, your free gift, and tell me how to get this pony. Below is my full name and address. Send quick.

Up-to-Date Farming is always found in the front of every movement offering genuine aid to agriculture.—C. H.T.

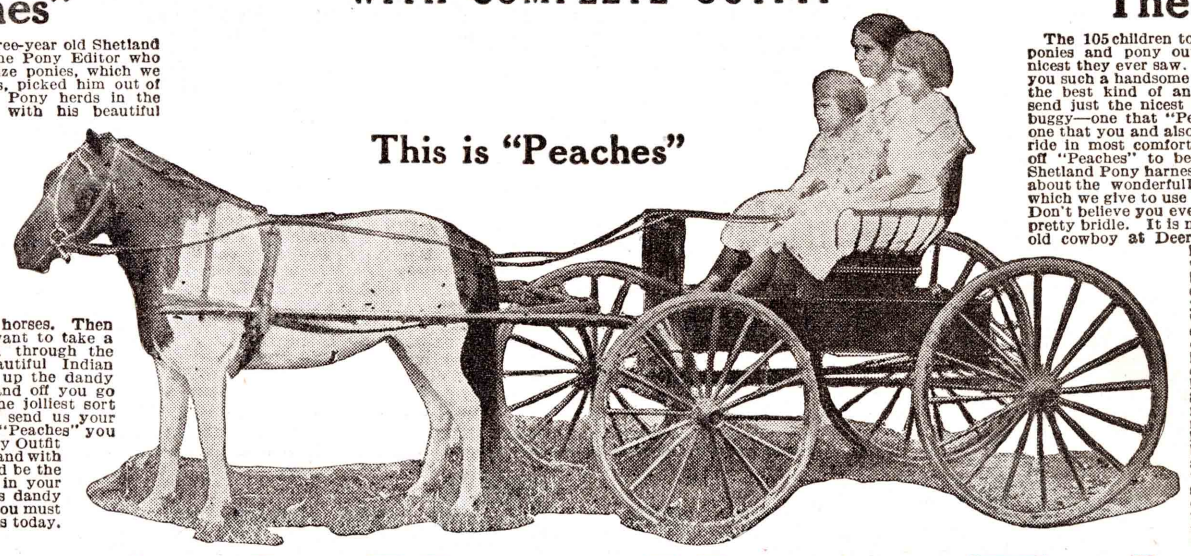
THIS PONY FREE

WE WILL GIVE YOU OR SOME OTHER BOY OR GIRL THIS PONY WITH COMPLETE OUTFIT

"Peaches"

Is about the cutest little three-year old Shetland Pony we ever gave away. The Pony Editor who has already selected 105 prize ponies, which we have given to boys and girls, picked him out of one of the largest Shetland Pony herds in the United States. "Peaches" with his beautiful silky black and creamy white markings makes you think for all the world of nothing so much as "Peaches and Cream" and he is just as good as he is handsome. He is about 42 inches high and weighs around 300 pounds. Hitched to his nobby pony buggy which we give with him he just steps right into the breast collar with his wide Sheltie chest and will haul you and all your girl and boy friends that can pile in, up hill and down just about as fast as most big horses. Then if when you get him you want to take a canter across the fields and through the woods, just slip on his beautiful Indian horse hair bridle and tighten up the dandy saddle (which we send too) and off you go to a lope, trot or canter for the jolliest sort of a horseback ride. If you send us your name and address and get "Peaches" you will have the handsomest Pony Outfit that ever came to your place and with all charges paid by us. You'd be the envy of every boy and girl in your town with "Peaches" and his dandy outfit, but if you want him you must send us your name and address today.

This is "Peaches"



The Outfit

The 105 children to whom we have already sent ponies and pony outfits say our outfits are the nicest they ever saw. We wouldn't want to give you such a handsome pony unless we also sent you the best kind of an outfit to go with him. We send just the nicest kind of a four-wheeled pony buggy—one that "Peaches" can pull easiest and one that you and also your father and mother can ride in most comfortably. The harness too sets off "Peaches" to best advantage and is a real Shetland Pony harness. And we want to tell you about the wonderful Indian horse hair riding bridle which we give to use with our special pony saddle. Don't believe you ever in all your life saw such a pretty bridle. It is made especially for us by an old cowboy at Deer Lodge, Montana. It takes him and his partner two whole weeks to weave this handsome bridle out of beautifully colored horse hair,—red, blue, yellow, white and black,—woven into remarkable Indian designs and mounted with colored rosettes and the horse hair reins ending in a real cowboy quirt. No matter how many Circuses or Pony Shows come to your town or no matter if some children of rich parents in your place happen to have ponies, nobody ever saw a prettier Pony and Pony Outfit than "Peaches" and his, which we shall send to you or some other boy or girl. If you want this lucky boy or girl to be you, you must send us your name and address now.

Send Us Your Name Today

If You Want To Own "Peaches"

As soon as we hear from you we will tell you how to go ahead to get "Peaches." Don't let anybody persuade you that you cannot get this beautiful little pony because our plan of giving away ponies is different from others. The fact that we have already given 105 ponies to 105 boys and girls all over the United States from the state of Vermont to the state of Washington, many going over 1500 miles from St. Paul, is proof that we give ponies away. The banker or postmaster in your town knows that the Webb Publishing Co. of St. Paul, who have been in business over 30 years, is one of the largest publishing firms in the United States and can afford to give ponies to boys and girls to advertise our papers. We never heard of one of these 105 boys or girls until they wrote us they wanted a pony and you should send us your name and address at once if you want us to send you "Peaches" and his dandy outfit.

THE PONY EDITOR AT THE PONY FARM PICKING OUT "PEACHES" FOR YOU OR SOME OTHER BOY OR GIRL.

MAIL THIS COUPON TODAY OR COPY ON A POST CARD

THE FARMER'S WIFE,
549 Webb Bldg., St. Paul, Minn.

Please send me Certificate of Entry, and pictures of "Peaches" and tell me how to take care of Shetland Ponies. I haven't any Shetland Pony and want to own "Peaches."

Write Your Name and Address Here

GOOD FOR 1,000 VOTES FOR "PEACHES."

Name_____

P. O._____ State_____

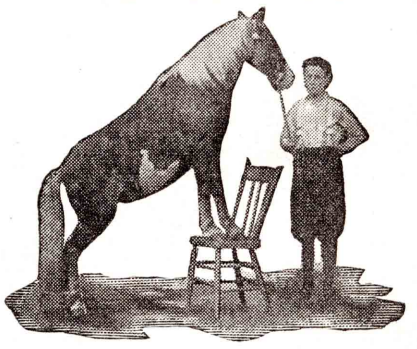
NOTICE we print the names of 23 of our 105 lucky pony winners which we wouldn't have done if it were not true that we give away real live Shetland Ponies. We haven't room to print the names of our whole 105 lucky pony winners but we will send you their names just as soon as we hear from you. Possibly some of these 105 lucky pony winners live in your county or some county near you and if so you probably know them because our lucky pony winners are now the best known children in their locality. However, it doesn't make any difference where you live if you send us your name and are the lucky boy or girl to get "Peaches," he and his whole outfit will be sent without one cent of cost to you. If you send us your name the day you read this we will send you 1000 free votes for "Peaches" and will send you a big surprise which will double your chances of getting a Shetland Pony even if you fail to get "Peaches."

Each Contestant A Prize Winner

The Farmer's Wife will liberally reward all children who send their name and address and become a contestant for "Peaches" with cash or other valuable prizes of their own choosing. Besides the Pony Outfit and Twenty-five Grand Prizes we shall offer Gold Watches, Base Ball Outfits, Gold Bracelets, Fishing Outfits, Fountain Pens, Hand Bags, Flash Lights, Rifles, Shot Guns and Dozens of other desirable prizes. Of course "Peaches" and his Outfit is the best prize of all, and you should not let anybody persuade you that you can't win him because you have the same chance as any other child.

Send Your Name Today

Our ponies are given away so quickly that you will stand a better chance to get this one if you sit right down and write us a letter or a postal card or send the coupon opposite filled out with your name and address (either way will be all right). The work we require you to do to become a contestant for "Peaches" is so easy that any boy or girl who could drive a pony can do it and any child who becomes a contestant will win a fine prize, even if he fails to win "Peaches."



"Roine," Clarence Busick, Adams Co. Indiana.

"I live seven miles from Decatur, Ind. I got a pony from The Farmer's Wife. My pony's name is 'Roine.' When I go to the gate and whistle 'Roine' will come to me. I drive him to school with my three sisters. Before The Farmer's Wife gave 'Roine' to me I was sick but now I am well again."

Part of a letter from one of our 105 Lucky Pony Winners. You will write like this if you send us your name and get "Peaches."

BE SURE TO ADDRESS YOUR POSTCARD OR ENVELOPE TO

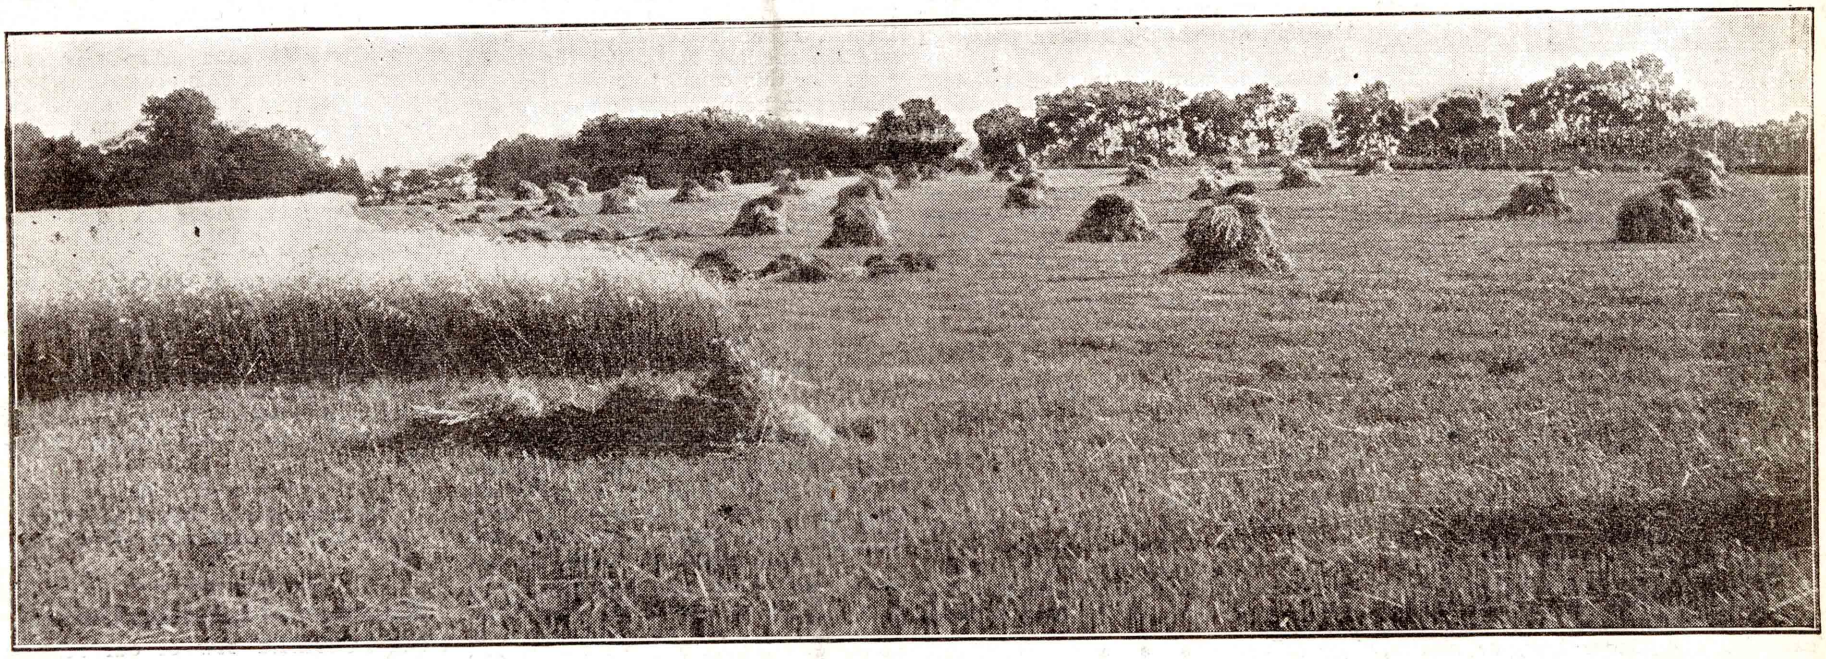
UP-TO-DATE FARMING

16th Year, Number 14 — JULY FIFTEENTH, 1913 — Indianapolis, Ind.

A Herald of Farm Progress and Prosperity. Published Twice a Month



I'd love to pay the income tax,
I'd pay it with delight;
I'd pile the stuff in precious stacks
I'd sit up half the night.
I'd try to be the first to pay—
I'd be it if I could;
And then I'd go my cheerful way—
At least, I think I would.

Of course, I'd want an income big,
So I could pay the more;
The deeper down I had to dig
The richer stream I'd pour.
If I had coupons piled in racks,
With millions to the good,
How joyously I'd pay the tax—
At least, I think I would.

—C. P. D.

Swat the fly or pay the doctor.

Many a howling success is more howl than success.

It takes more than strong language to shock a field of wheat.

Farmers work in the heat of summer, so why not Congress?

The summer boarder crop is always to be relied upon, wet or dry.

Just because a woman is a high-flyer is no sign she is an angel.

Making a woman happy is just as much a part of the marriage contract as making her a living.

Hayseed in the hair does no harm. So many men of the city have neither the hayseed nor the hair.

The telephone and the parcel post are doing more than orators to bring together country and town.

One of the wheels of progress is an old mower wheel dragged between the corn rows to make a dust mulch.

A woman's education is not complete until she can harness and hitch up a horse quickly and correctly.

Oat Harvest

By Sam Saxon

In hot July we shed our coats and sally forth to cut the oats. The binder clacks its merry song until we hear the dinner gong. Beneath the oak tree's cooling shade we keep a jug of lemonade. And yonder in the leafy vale there flows a spring of Adam's ale. But we stay out beneath the sun and sweat to get the harvest done. We trudge around the stubble field and speculate on price and yield. We grab the bundles in our fists and break our backs and scratch our wrists to get them all into the shock before the sun says six o'clock. The thickset shocks make pleasing sight when homeward bound, in fading light, we pick the briers from the sores and toddle home to do the chores, and milk the cows and slop the shoats, and then go back and shock more oats. The harvest moon lends us a light so we can work into the night, and go to roost at twelve o'clock with the last bundle in the shock. .. ...

I have a neighbor who thinks that new ideas are as bad as the measles, mumps, or smallpox. A "new fangled notion" is as distasteful to him as a dose of castor oil, and he shuns the society of a man who comes along with some labor-saving or time-saving or money-saving idea or apparatus as he would shun a pestilence or a leper. He once bought a lightning rod and put it on his house. The next summer the lightning struck his barn and burned it. Since that day to this he has kept a gun and a dog for agents of all descriptions, and as for spray pumps, cream separators, and all modern methods of doing farm work he looks upon them with contempt. He says they are the inventions of a lazy man and are fit only for lazy people, that they cost more than they come to, and don't do the work claimed they will. Now, while I have been describing a neighbor of mine, I'll bet every reader of this paper can fit the description to a neighbor of theirs, so you know exactly what kind of a farmer this neighbor of mine is.

Now, this same neighbor of mine has a very fine piece of bottom land. No matter what he does to that piece of ground he gets a fine crop from it. That field is his meal ticket; his argument for proving that "new-fangled notions" are not necessary to make a living from the soil.

This year the field was in wheat, and such wheat! It made us all mad just to see it and to think that such a narrow-minded, non-progressive cuss could have anything like it. Straw that would set the shocks so thick you couldn't drive a wagon between

Who Should Build a Silo?

MANY farmers have been thinking over the matter of building a silo, and are undecided as to whether or not such an investment would be a profitable one for them. There is no doubt but that silage has many distinct advantages over other foods for stock. Prof. J. H. Skinner, of the Indiana Agricultural College, recommends that before deciding for or against the silo, the farmer should first take carefully into account his present system of farming, the percentage of profits he now makes, and the changes in his method of farming that silage might entail. He should obtain data on the the cost of ensilage as compared with dry fodder. If in his present system he has an abundance of pasturage in summer, and clover hay, or alfalfa, and corn fodder in winter, and his barns are full of profit-paying cattle; and if he has hogs to consume all his corn, and does not desire to increase his dairy, or add beef stock to his farm operations, and does not want to build more accommodations for live stock, the silo might not be of any great advantage. Even then, however, a silo should pay the average farmer. It is a matter of arithmetic, and the farmer must figure it out for himself. To arrive at correct conclusions he must compare results obtained by farmers who have silos with those who have not, and these comparisons will be valuable only when all other conditions are equal. To find material for such comparisons is a pretty difficult matter, except on the experiment farm, where silos have been in use by experienced feeders for years in making just such comparisons. The best source of information in matters of this kind is the state experiment station, where not only careful tests are made, but close records are kept on the operations of many farms throughout the state. The farmer who considers building a silo can do no better than to describe his farm, his system of farming, and his farm equipment to the agricultural college, and ask for information and suggestions.

* * *

It is quite safe to say that as a general thing, the silo can be made a very profitable part of the farm system and equipment. It will enable the farmer to increase the stock capacity of his farm. It may call for additional buildings for stock, but the stock will soon pay for them. "Considering the advantages one may readily lose sight of the cost," says Prof. Skinner. "Silage produces palatable, succulent feed, which promotes health and thrift among cattle, hogs and sheep. It protects against drought, short crops and dry pastures. It makes possible a more complete utilization of the corn crop, and the manure is in a condition to be utilized to greatest advantage.

* * *

"Experiment stations have demonstrated the value of silage in making greater gains and greater profits on cattle and sheep. Many breeders and feeders all over the corn belt have found by actual test that the silo is a very profitable investment. The average farmer who raises cattle or sheep need not hesitate to put money into a silo, and those who do not raise live stock are pursuing a short-sighted policy. The farmer with a silo need not worry about a scarcity of food nor profit in feeding. The silo, like the corn crib, should never be empty.

* * *

"There are several essentials to a good silo. It should have rigid, smooth, air-tight walls, built of good material, wood, concrete, or glazed tile. The foundation and floor should be strong. There are many different types of silos. and many manufacturers. The farmer who contemplates building one should make a thorough investigation."

Silage is worth from five to eight dollars a ton when fed to beef or dairy cattle. It has been found by tabulating the reports of several hundred experiments that the average cost of producing and putting away a ton of silage is sixty-five cents. The average daily ration for a dairy cow is forty pounds. This shows the actual cost of silage per cow per day to be one and one-half cents. Pretty cheap feed, that. And the manure is worth no less than one dollar a ton, besides.

* * *

The time is drawing near at hand when the silo will have to be in readiness for filling. The forage crop will not wait on man; he must be ready and waiting for it. Those who have ordered silos and have not received them should rush the matter all they possibly can. Those who have silos on their farms should look after them; prepare them for filling by coating the inside with coal tar or give a good painting.

* * *

The necessary machinery for filling the silo should also be considered. Even though silage would be more profitable for a small herd, if the farmer must purchase an expensive cutter and power to run it, the advisability of the silo may be questioned. As a rule, however, the farmer has, or should have the power, and a cutter is not an expensive machine, unless a large one is purchased. Often three or four neighboring farmers purchase ensilage machinery co-opera- By arranging work to meet the requirements this can easily be managed to the satisfaction of all. On large farms, of course, the owners should have their own machines, and can well afford to.

* * *

The increasing welfare of our farmers is largely dependent on sustaining and increasing fertility of the soil. Nothing can do this so effectively as livestock husbandry, and the utilization of a greater proportion of the corn crop. The silo is a valuable adjunct, and its use is increasing rapidly.

The Institute, the Demontrator, and the Farmer

THE farmers' institute, which has long been a vehicle for carrying the better farming gospel to the farmer is to be replaced by the county demonstration agent, who will take the aforesaid gospel, not only to the farmer, but to the farm. A large num- of farmers have never made any use of the institute and some will be inclined to resent the idea that a county demonstrator can teach him anything of farming. But the farmer who is honest with himself will admit he doesn't know it all. No doubt he knows some things the demonstrator himself does not know. On the other hand, the demonstrator knows some things this farmer does not. It is the demonstrator's business to find out, from the farmers of his county, and from the agricultural college and experiment stations, new and valuable ideas, and take them to farmers who might not be able to get them for themselves. A farmer in one part of the county may have discovered new methods that are very profitable. A farmer in another part of the county may keep on with a much inferior method, unless some means are provided to give him the information. The agricultural colleges and experiment stations, through a great number of tests and trials, find new ways, and learn more about the science of agriculture, in a few years than a farmer could in a lifetime, should he live to be as old as Methuselah. Many farmers can not go to the college, or the experiment station, so the knowledge accumulated is turned over to the county demonstrator, who in turn, takes it right to the farm. The institute attempted to do this, and to a limited extent succeeded. The demonstration method is by far the better way. In this connection we urge our readers to keep in mind that growing good crops is only a part of the game. These same crops must be sold at a profit. The marketing must not be neglected, and better methods of marketing will be even more necessary to profitable farming when production is increased.

A man short on education may be long on common sense.

The Saturday Half-Holiday

SECURING a living is only one of the essentials of useful existence. The mind of mankind needs inspiration and enjoyment as much as the body needs food and raiment. Life is worth living only if it is so lived that it brings out the best there is in us, and shares that best with our fellows.

As our paragrapher aptly said in a recent number, "The man who lives for himself lives for nothing." A solitary life can be neither a happy nor useful one, and there is nothing so enjoyable, so satisfying, so uplifting and inspiring as the society of our neighbors and friends. We get too little of it on the farms. Living so much to ourselves narrows us, keeps the better part of our natures from expanding, and makes life on the farm a humdrum existence, and the farmer and his family commonplace people. As much as the farmer needs better methods of farming he needs a better manner of living more.

If the average farm community would adopt the Saturday half-holiday plan, and then all get together in one place for a few hours' recreation, giving the children a chance to meet and play, the boys an opportunity to have a ball game, the older folks the pleasure of a visit with a number of neighbors, it would be a great thing for that community. All work and no play makes more than Jack dull—it dulls the spirit of the entire community. Sunday should be a day of rest and worship. Yet, Sunday being the only opportunity for play and social intercourse, it is used for that, and its real blessing to country people is lost. Give us the Saturday half-holiday, and life on the farm will be filled with a new spirit of life, good will, brotherly love, contentment and progress.

Co-operation: Have a common cause and then work the other fellow's way when he won't work yours.

Maintaining Prices on Meat Products

THERE is no such thing as stability of prices paid for hogs, sheep and cattle, for the simple reason that there is no regularity in marketing. A heavy supply this week sends prices down, not because there are too many head in the country, but because with the yards full, and receivers anxious to sell, buyers can drive a better bargain. Prices of beef, pork and mutton do not vary much, if any to the consumer. There is no good reason why the producers should sustain these periodical losses. Stability of price, at a fair basis, is a desirable thing, and the price should be based upon a reasonable profit to the producer. This can be easily secured by organization, and co-operation in marketing. Where several thousand surplus cattle or hogs go to market at one time, and prices are forced down several cents per cwt., the total loss to farmers is immense, and the individual loss to each shipper is considerable. When this occurrence happens many times a year it means a deplorable loss to producers, and no corresponding gain to consumers. Just extra profits to the dealers. Now, if these extra profits were distributed throughout the country, amongst a large number of buying people, it would be better for the country than to concentrate it in the hands of a few who already have more money than they can spend in ordinary channels of trade. Moreover, the producers are fairly entitled to it, and by increasing the buying ability of the producers every line of business is aided. Let the producers get together and work out this problem.

Difficulties are things to show what sort of stuff men are made of.

Commercial Interests United

POSSIBLY few of our readers know that the chambers of commerce, representing the business interests of cities and towns have federated in a national organization known as the "Chambers of Commerce of the United States of America." Senator Fletcher, of Florida, chairman of the Agricultural Commission to study rural life in Europe has introduced a bill in Congress to incorporate this gigantic, national Chamber of Commerce, giving it a federal charter. Over seven hundred organizations will be merged in the federation, which, in point of influence, will be the most powerful and far-reaching organization ever perfected by mortal man, all the more powerful and far-reaching because the men composing the membership of the Chambers of Commerce are men who know the value and use of organization and co-operation. Isn't it time, brethren of the soil, for farming to have its national Chamber of Agriculture, a federation of all local and general organizations of farmers to promote and safeguard the welfare and interests of agriculture? We shall have more to say about this matter in our next issue.

Our Bounden Duty

As long as the chance big crops sell for less money than the small ones, and as long as farming does not steadily yield enough money to afford the increase we will not refrain from calling attention to the fact that this paper is the only one that is pointing the straight way to the solution of the marketing problem which is the key to the matter of PROFIT and the further fact that, until the present time, there is no road to successful marketing except through the Farmers Society of Equity and the proposed federation of farmers' organizations.

Some Editorials

By John P. Stelle

Two Departments of the Goverment

GOVERNMENT should be for the benefit of the governed, not part of the governed, but all of them. In a great nation like ours, with so many people so widly separated and interests so varied, it is difficult for acts of government to affect all alike. In such case the greatest number must be the governing rule, and the acts should be such that the same ones are not always the beneficiaries.

Recent years of the Department of Agriculture do not measure up to this rule. Reports of crops have been amazingly extravagant. Whether of condition during the growing season, or of yield at maturity, or actual production after harvest, the figures have been larger than the facts justified. This is so apparent that the average reader knows it, but to prove it beyond question Dr. Cyril G. Hopkins has made a comparison of the reports issued by the Department of Agriculture and those made by the government Bureau of Statistics. The former figures are vastly larger than those made by the statisticians.

But we wish to be fair in these things. Reasons for the excessive reports may be found outside of evil intentions. The crop reports are made up, it is understood, from reports sent in by local reporters. The local reporters are human, and they want their localities to show up favorably. Hence they wish everything to show at its best, and do not realize that a little overdrawing may result in evil. They are properly hopeful, and if they guess at all they guess large rather than small. And the department experts, those who have charge of the compiling of the reports, feel that the greater the promise of prosperity the more highly will the public appreciate their work. Hence their compilations conform to the best features of the reports received. Even the secretary naturally likes for his administration to show big things. That was certainly the case with Mr. Wilson.

But these extravagant reports are attended by evil. There are special interests, great buying interests, that are served by them. When production is abundant the supply is abundant also, and prices rule low. When the official reports show tremendous yields and bumper crops the effect on price is the same as if the stuff had been actually produced, and prices paid the producers are forced down, to the great loss of the farmers. But, as we have conclusively shown, and as the commercial world now reluctantly admits, the selling prices of the buyers and holders, those who buy to sell again for profit, are not affected because the markets are so controlled, the stuff so held, that high prices are forced upon the users whether the supply is great or small.

It was to curb these evils and mitigate their effects that Dr .Hopkins compared the contemporaneous figures of the agricultural department and the bureau of statistics. We sincerely hope that Secretary Houston will have these reports more carefully scrutinized, for unless crop reports are true, or at least not overdrawn, it is better that they be not made. Most of them are of questionable value anyway so far as the producers are conecrned. If the yields are small the reports come too late for the farmers to increase them; if they are excessive it is too late for the farmers to reduce them, and thus maintain a steady supply and steady prices. But they are always in time to help the speculating buyers. This is clearly a case where governmental powers benefit the few against the many, and the benefits go all the time to the same few.

Safe for Farmers to Organize

TOO much has been said by that portion of the press which supports the present speculating marketing system, the system that compels farmers to accept low prices and consumers to pay high prices, that farmers have became almost afraid to organize for co-operation in either buying or selling lest they make themselves liable to prosecution under the Sherman law. But Congress has emphatically declared otherwise. During the Taft administration a bill was passed by both houses exempting farm and labor co-operative organizations for mutual benefit, from such prosecution. Though an appropriation bill whose passage was urgent, President Taft vetoed it because of this exemption. Both houses of the present Congress adopted a very similar measure, containing the same exemption feature, and President Wilson has signed it, though, we regret to say, he did it under protest because of the exemption clause. Nevertheless it is a law, and farmers and laborers may dismiss their fears and push their organization for co-operative mutual benefit.

So far at least as the farmers are concerned, we see no reason why the laws, the courts, or the Presidents should discriminate against them. All other creators of commodities are expected to put the selling prices upon their products. It is taken as a matter of fact by the business world that they should do so. On the contrary the farmers themselves have not, until recently attempted anything of that sort, and, taking advantage of this surrender of a simple and universally conceded business right, a most selfish, profit-grasping, ruinous marketing system has been built up for the specific purpose of doing unwarrantably what the farmers themselves by force of habit neglect to do. The system enables the few that control it to draw exorbitant profits from both producers and consumers. The only way farmers can now overcome this sys- and regain what confessedly belongs to them, is to establish a marketing system mutual in its character, that will protect the producing sellers and the consuming buyers alike, and the law referred to fully warrants them in doing that. When once understood, everybody except the speculating market control will be in favor of it.

This does not justify monopolistic control by farmers any more than by the commercial classes, but it does give them the right to the equitable control of their business; which everybody else has without even asking for it. Farmers may, therefore, as we have said, dismiss their fears if they ever had any, and unite to establish a fair, just and equitable system of marketing—a system that will take the supply direct to the demand, that will satisfy all needs by the directest route, and that will make steady and dependable the three essential elements of business, demand, supply and price. In the language of another we may declare that, law or no law, presidents or no presidents, courts or no courts, some system must be devised whereby such co-operation may be carried on and fully developed. The exigencies of the times demand it, and the Equity System will accomplish it. Complete the organization for it.

Lack of Milk in Indiana

MUCH is being said of a shortage of milk in Indiana, and in other states as well. Purdue University has taken up the discussion, and James R. Garver, of the Purdue dairy department, says "The chief reason why Indiana has not reached a higher state of development in the dairy industry is that its farmers have not turned their attention to the art of profitable milk production."

That is the universal view taken of such things, and it is what the schools teach. Then they proceed to argue how profitable dairying is to the farms; that is not only maintains, but increased production profitable, and so on with the old story. They never think of the vital question, will increased production bring more money?

Indiana farmers do not lack thought in this matter. They know all about the opportunities afforded by having dairy cattle on the farms. The reason dairying is not developed is lack of profit in the business. Not profitable? Why, say the astonished scientists, consumers pay eight cents a quart for milk! Sure. But the producers get only three cents. Give the farmers four or five cents of that eight cents and there would very soon be no lack of dairy development in the state, nor would there be any lack of supply. And that price to the farmers would still leave enough of the eight cents to pay the handlers well even without the water that sometimes gets into it now after it has passed from those who own the cows.

Current Comments

The President and Laws.—The constitutional duty of the President of the United States is to execute the laws, not to make them. We admire independence in a President, and we are glad when he shows and asserts his individuality or personality. But a President is going too far when his attitude toward the law-making body is "Thus far thou shalt go and no farther!" He may veto measures that he does not approve, but he should not attempt to dictate to those elected by the people to make the laws.

The Old Idea.—Putting agricultural products on the free list and admitting to our markets such products from other countries will necessarily reduce the prices paid American farmers, but there is not the least proof that it will cheapen those articles as they go to the tables of the consumers. Those who control the markets in this country control the prices whether the commodities come from the fields of the United States or from Canada, or from Europe, or from South America. Hence the present theory of the tariff may do an irreparable injury to American agriculture without in the least benefiting those who now pay too much for what they consume.

How to Increase Production.—The world's effort today is to increase farm production. No matter what the object is that is what the world is calling for. In vain we show that enough is produced now, and more than enough. The world's demand is supplied at reasonable prices, and much goes to waste every year. But waiving all that, the sure way to increase production is to make production profitable. Other business has become so much more profitable than farming that rural population is diminishing and labor is deserting the farms. Yet it is the constant effort of commercialism to reduce the field prices of farm crops—to make farming less profitable. Change these tactics for awhile. Give farmers better prices; make farming more profitable, financially more attractive, and the tide of enterprise and accomplishment will set in that direction, and production will be multiplied. This does not in any sense mean a higher cost of provisions. Knock out the unearned profits after the stuff leaves the farms, improve and cheapen the distribution, find and supply every demand. Then will production increase and consumption will be satisfied.

Hog Losses.—The loss of hogs from disease last year was enormous, nine out of every ten being from cholera. The total loss of the year estimated by the Department of Agriculture on April 1, was 6,723,000 head. The states that suffered most were: Missouri, 175 per 1,000; Florida, 170 per 1,000; Georgia, 165; Iowa and Arkansas, 160 each; Mississippi, 154; Indiana, 150; Illinois, 140; Kansas, 120; Nebraska, Alabama and Louisiana, each 110 per 1,000. The average loss the year before was 89 per 1,000, and the average for the last ten years was 55 per 1,000.

The Ashland Plan.—The business men of Ashland, Wis., believed the surrounding country well adapted to dairying, but the farmers were not able to buy cows. The banks had money, but the farmers were not in position to furnish acceptable security; besides they did not care to take the risk of incurring bank debts. The business men realized that say one thousand cows in the vicinity, with the products marketed in the town, would add much to the business of the place. Therefore, they combined and obtained the money from the banks. Good judges of cattle were then sent into the best dairy districts and bought good grade cows. These cows were sold to the farmers at actual cost and on time payments, under contract to sell the milk or cream to the local creamery. Each month half the cream check goes to the farmer and the other half to the bank to be applied on the price of the cow. In this way the farmers soon own the cows and the bank is protected in the cream returns and in the credit of the business men. This involves neither land bonds nor mortgages.

More Inconsistency.—Referring to a plan for the sale of a great quantity of timber and the destruction of forest in Idaho, the government forester says: "The land will be better employed growing farm crops than growing timber." This in spite of the fact that lumber is scarce and high, and that some farm crops in that region cannot be sold at the cost of production, the demand there being more than supplied and freights to outside markets often as much or more than the market price.

Our forefathers worked on an average of five hours to produce a bushel of corn. The farmer of today does it in half an hour.

A farmer is amenable to the same laws that govern the use of other farm machinery. Good care makes them all last longer and do better work.

Patched farming and patched clothing are usually found together. Patches on clothes are not dishonorable, but patched farming is disgraceful.

The hot sun robs the soil of its moisture these days. You can lock the soil water up by means of the dust mulch. Keep the cultivators going.

The Editor's Word

Interest is growing fast in our Country Contributor's page. We have an excellent array of letters, and it is most interesting to see the different crops put forth as the money makers, and the methods employed in their production. Stories of highly profitable crops are always of great interest to every farmer, and in the recital of its production and marketing something of value to all farmers will be disclosed.

E. J. S., with the story of seed selection, wins first place because he shows plainly that in every locality there is an opportunity for some one who will get right down to business and become a specialist along some one line, which he can do by taking pains that others will not take. This letter demonstrates the truthfulness of the old adage, "Where there's a will, there's a way."

A. C. C., of Kentucky, who carries off second honors, shows that the man or woman who will give poultry the right attention can make the poultry end of farming one of its big features.

Our young Iowa friend, C. E. S., who is the winner of third prize, has, in his account of the sorghum patch, given a strong hint to farm fathers who would like to keep the boy on the farm, and interested in farm work. Give him an interest in it. Let him have an acre to plant to something not requiring too much work, and give him time to attend it, and the profits that would properly belong to him. A man likes the work best that brings him most. The boy will like the work that brings him something for his own. The farmer who wants to keep his boy must be willing to pay the price.

Our Country Contributors

Semi-Monthly Prize Letter Competition:
Subject: My Most Profitable Crop

FIRST PRIZE	$5.00
SECOND PRIZE	$3.00
THIRD PRIZE	2.00

NOTICE TO SUBSCRIBERS

This department is designed to induce subscribers to contribute accounts of their most profitable crops. For the three best letters received each issue, the cash prizes offered above will be awarded and every letter used will be paid for at the rate of $1.00 each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell the story of what you consider your most profitable crop in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

Seed Wheat a Specialty

(First Prize)

For many years we were seed corn enthusiasts. It was very interesting to study corn breeding, and building up a strain of high-yielding corn was not only a delight, but it paid us well, for our fields and cribs of corn were the envy of the neighborhood, and farmers came for miles around to buy seed corn of our breeding and selection. We had increased our average yield of corn from thirty-five to eighty-five bushels an acre.

All this time we were raising a crop of wheat each year. In good years the average yield would be about eighteen or twenty bushels. In less favorable years we were content with twelve bushels. In unseasonable years we had to console ourselves with much less. I estimate our average yield to run about fourteen bushels an acre. In figuring out the yearly profits of the corn, and comparing them with wheat, we were greatly impressed that while our corn averages increased rapidly, our wheat averages increased not at all. So we determined to try the plant-breeding principle in the cultivation of wheat as well as corn, and while it appeared to be a difficult and formidable task, we started in to see what could be done.

We had been selecting our seed wheat from the bin, by going in and sacking up the amount needed. Now and then we would renew our stock from some reliable seed house, and even went so far as to sow the seed thus obtained on a good plot of ground and saved seed from it the succeeding year for our next crop. To this occasional renewal of "blood" we ascribe the fact that our average yields did not decrease.

We began with the idea of hand selection. We knew that uniformity in size, weight, color, etcetra, was as essential in wheat as in corn. The vigor, vitality, productivity and general characteristics of the parent plant had to be determined. There was no way but to go right out in the wheat field, in the best part of it, and pluck the heads from the most vigorous stools. This looked to be a pretty big contract, but we considered it worth trying, and it was. First, we sent to our seedsman for three bushels of what he considered the very best wheat for our purpose, explaining fully our plans. We put this in our fanner under heavy wind, and reduced it one-third, taking out all lighter grains. The two bushels we drilled on one and one-third acres of the best land. From this plot we hand-selected in the field enough heads to give us seed for a half-acre plot the next year. This selection we have continued steadily, every year. Our best yields are now thirty to thirty-five bushels per acre. Our lowest from sixteen to twenty bushels, and our average is twenty-eight bushels. The average is gradually increasing. We are selling our wheat for seed at a big advance over market price, and have more orders than we can fill. We are now making more money from wheat than from corn, but we consider that our first crop of seed corn which demonstrated the possibilities of profit in seed selection the most profitable crop we ever made on our farm, for it opened our eyes to an opportunity. —E. J. S., Maryland.

Poultry Pays Best

(Second Prize)

When it comes to selecting the most profitable crop on my farm it is a very easy matter to do. My books explain everything.

I keep the cost of each crop, including interest on land, machinery, repairs, seed, labor and like expenses, and also all sales and the expenses attached thereto. (The latter is a big item with me, especially advertising. My advertising bill is about $1,000 a year, but I consider it pays me a handsome profit as I sell practically everything I produce by mail.) My crops to market go in the form of high-grade Shorthorn cattle, Berkshire hogs and Barred Plymouth Rock chickens.

I have always netted a nice profit on cattle with the exception of 1911, when it was so dry. That year I barely made expenses. I had a large herd, and had to buy practically everything they ate.

Raising Berkshire hogs is a pleasure. I now have fifteen brood sows and fifty spring pigs.

The Berkshires have never failed me when it comes to the financial side.

When I hear Barred Plymouth Rocks discussed I listen because they play a larger part in swelling my bank account than does the Shorthorns and Berkshires.

I attribute this partly to the fact that I have always been enthusiastic about poultry.

I took a special course in poultry husbandry at the agricultural college. The poultry business is really the backbone to my farming operations, while the majority of farmers do not consider the poultry at all as a money making part of the farm and usually leave it in care of the housewife who is already overburdened with household duties.

I raise about 1,500 or 2,000 high-class birds each year, and, of course, have a great many cockerels to sell every fall and winter, as well as my breeders which I sell each summer.

I keep about four hundred hens during the breeding season. When mated they occupy poultry houses that accomodate twenty-five females and two males alternately. I use large runs that are well shaded.

I do the most of my hatching with incubators and try to have them all hatched out by the first of May. They are raised in hovers and colony houses. After they are put in colony houses and scattered over the farm it costs very little to raise them to maturity. They gather the most of their food themselves. I keep a dry mash before them at all times and feed all grain in a deep straw litter both winter and summer. We sell a great many eggs during the hatching season at fancy prices ranging from $2 to $8 per setting. We usually have several cockerels that bring us from $25 to $40 each. A few exceptionally good ones which bring more than that, while we raise a great many that readily sell at $3 to $15 each.

Our books show a handsome net profit from our poultry yards and I believe anyone who loves poultry and is not afraid of work can make it a paying proposition.—A. C. C., Kentucky.

The Sorghum Patch

(Third Prize)

This little article written by a boy living in the north tier of counties of Iowa may not appeal to the lad living in the south, where crops of this kind are more bountiful. But to boys of this latitude it may be a "tip." My father owns a sorghum mill. One spring he gave me one-fourth acre of ground to plant to whatever I choose. I purchased some amber cane seed and planted it on the new breaking and when it came up we ran through it twice with the corn plow and gave it a little hoeing. About four days would cover the time spent in planting and cultivating this crop.

In September, just before frost, we stripped the cane, cut and bound it in bundles with the corn harvester, which was the work of only a few hours. We cut off the seed for poultry food. The work of putting the cane through the crusher and boiling required two more days. When ready for market we had eighty gallons of pure amber cane sorghum, which readily sold for seventy-five cents a gallon at the grocers. I could have sold any amount of it as there is a large demand for it here.

This gave me sixty dollars with which I could well afford to pay the lift my brothers gave me at the finish.

Now, boys, if there is a sorghum mill any where in your vicinity, just try a patch of cane on new breaking, even if you do have to pay twenty-five or thirty cents a gallon for the making.—C. E. S., Iowa.

How I Make Potatoes Pay

I make more clear money on my potatoes than any other crop I raise. I select a piece of sod ground; the heavier the sod the better. I plow it in the fall as deep as possible, and turn under a heavy coat of stable manure. In the spring I harrow and drag until thoroughly pulverized. The more I work it the better. I use a shovel plow (a very wide shovel) and furrow the ground as deep as possible. I apply in the furrow a good bone and potash mixture, about four hundred pounds to the acre, and run through the row lightly with the shovel plow and mix the fertilizer with the soil, then drop the potatoes about ten inches apart in the row. I cover with shovel plow, and before the potatoes come up I harrow over and as soon as they are large enough to see the rows I begin to cultivate and cultivate as often as necessary to keep the weeds down. Weeds must not grow with potatoes if a heavy yield is to be made. I consider the Irish Cobbler, for early, and Green Mountain, for late, the best varieties.

I like the Cobbler on account of their white color. They bring good prices in any market. I use the same piece of ground three years in succession, giving the same treatment each year.—W. N. W., Maryland.

If every gold mine would turn out the way the fellows who sell the stock say it will, gold nuggets would be as cheap as old potatoes.

Corn the Money-Maker

My most profitable crop is corn. I select my seed in the fall, in the field, and when husking I have a box on my wagon in which I throw good seed ears and in this way I have seed corn to sell. I manure my corn land in the fall, and plow it under, plowing no less than six inches in depth. In the spring, just previous to planting, I disc the plowed ground twice and harrow twice, then immediately plant the corn about three inches deep. I use fertilizer, and find that it pays to use it. I cultivate as many times as possible, usually four or five times. I always shell the corn before selling, as it gives me cobs for fuel, and when I have more than I can use I can sell the surplus.—W. J. E., Indiana.

My Cane "Patch"

In figuring out profits on my crops I find that cane for the manufacture of syrup is the most profitable, considering the amount of land required.

First, in breaking my land I take special care to break it good and deep. Afterwards discing and harrowing well to secure a perfect seed bed and to retain moisture. Also, enabling the soil to warm up better.

Last year I prepared one acre as above. Planted one-half bushel amber seed June 20th. I plowed it with a Planet Jr. Cultivator about every ten days. When well up, I thinned to required stand; hoed it three weeks later. "Layed" it by with Sweeps on cultivator on July 15.

Just as the seed was beginning to turn toward ripening I pulled the fodder, cut the cane, manufactured syrup with a yield as follows: One hundred and thirty gallons of fine syrup, worth fifty cents a gallon. Two hundred bundles of fodder, worth $3, and thirty bushels of extra fine seed, worth $1 a bushel. Total, $98, with a cost of something like one-fourth of that amount.

This was no uncommon yield, in fact, hardly the average. But it was grown without the use of commercial fertilizers, for which the south is famous, or infamous.—F. T. C., Georgia

Our Market Review

Semi-Monthly Review of Crops, Market and Trade

WEATHER is the chief factor in crops now and it has been very "spotted." Generally speaking the crop outlook is good. But there are many spots and large districts where drought has sadly injured the crops. A record large winter wheat crop has been harvested. Spring wheat is hanging in the balance, but it cannot be as large as lost year's within many million bushels. Oats is a short crop. Corn is in a good position, the fields clean and good or bad weather in July and early August will determine the crop. Hay is also short. It will probably be more than a third short of last year's record yield. Potatoes in the south generally satisfactory in yield in the north the crop is yet to be made. Tobacco promises a good crop, about equal to last year. Cotton prospects good. Apples look like a crop equal to last year, which was too large for the system of marketing.

PRICES—Wheat is 11 to 13c lower than two weeks before and about 20c lower than a year before at Chicago and corresponding prices are quoted elsewhere as the figures below show. The price has been put down because the new crop is now ready to be marketed and because the crop is good. The winter wheat crop will require a crop of 372,000,000 bushels to bring as much money at the present price. Corn is slightly higher and oats practically unchanged from two weeks before, but both are much lower than a year before, notwithstanding less favorable prospects for crops.

VISIBLE SUPPLIES—Wheat shows a good decrease but it still higher than one and two years ago. Future price of wheat depends on how well the winter wheat growers control their crops and this will be revealed in the future visible supplies. Its all up to the farmers themselves to keep the surplus wheat rather than to throw it in the hands of the speculators. Market as little as possible and watch the visible. Corn and oats visibles both show big increases over two weeks before and they are also higher than a year before. We particularly recommend better control of oats because it will be worth more money.

ADVICE.—Hold wheat for higher prices. Feed corn to stock if possible, if not then find sale for it direct to feeders who are paying a premium over city prices. Hold oats unless they can be sold at a premium for feeding. Market old cotton. Market potatoes as ready, but do not rush them to market rather let them get good growth. The price will be only modcrate, therefore size will count. Hold hay awhile. Handlers of broom corn, report says, have formed a league to teach farmers the art of growing larger and better broom corn crops. Our advice is to not pay a cent toward any such propaganda, but keep the acreage moderate and grow a good quality. Vacuum sweepers have displaced many brooms and the growers must adjust themselves to the new conditions. Also they ought to be organized solidly. Sell old beans gradually. Live stock, sell when at maximum weights. Feed is cheap relatively to meat.

The government report for July, issued on July 9th, indicates yields, compared with last year's final estimates, as follows: Winter wheat, 483,000,000 bushels; 1912, 309,919,000 bushels. Spring wheat, 218,000,000 bushels; 1912, 330,000,000 bushels. All wheat, 701,000,000 bushels; 1912, 730,000,000 bushels. Corn, 2,971,000,000 bushels; 1912, 3,124,746,000 bushels. Oats, 1,031,000,000 bushels; 1912, 1,418,337,000 bushels. Barley, 165,000,000 bushels; 1912, 223,824,000 bushels. Potatoes, 343,000,000; 1912, 420,647,000 bushels. Tobacco, 926,000,000 pounds; 1912, 962,855,000 pounds. Flax, 21,000,000 bushels; 1912, 28,073,000 bushels.

This estimate would appear to suggest holding wheat, oats and barley for higher prices. The present estimates of the corn, potato and tobacco crops, can not go very far to indicate what the crops will finally be.

The following figures tell the balance of the market story:

Closing Prices of Cash Grain

WHEAT, No. 2 RED

	July 7		2 Wks before		AYr. before
Chicago	..89	@91	1.00	@1.04	1.08
St. Louis	85½	@87	.97	@ .98	1.13½
Kan. Ct.	84	@87	.88	@ .95	1.04
Cincin.	.89	@92	.99½	@1.02	1.14
New Y.	96½	@98			1.15

Minneapolis—Spring wheat, No. 1 hard, 92¾c; No. 1 northern, 91¼ @92¼c. Two weeks before, 83½c and 92½@93c respectively. A year before, $1.06 and 1.06½ respectively.

CORN, No. 2 WHITE

Chicago	63	@63¾	62	@62½	76
St. Louis	..64	@64½		62	77
Kansas City	61	@61½	59	@59½	80
Cincinnati	..66	@66½	65	@65½	82
New York	..	68¾		68¾	77¾

OATS, No. 2 WHITE

Chicago	....42¼	@42½	42	@42¾	53½
St. Louis	..42½	@43		42½	54

Cincinnati		45½@46		45	57
New York	..	48			59

Future Grain Prices

Chicago grain futures closed on July 7, 1913, and two weeks before, as follows:

WHEAT—July, 88⅞c; September, 89⅜c; December, 92¾c. Two weeks before, 91c, 91⅜c and 94¼c respectively.

CORN—July, 60⅞c; September, 61⅞c; December, 58⅝c.

OATS—July, 40¼c; September, 42⅛c; December, 43⅝c.

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on June 28, 1913, with comparisons, are shown in the following table: (The sign — before figures means decrease, X means increase.)

	June 28, 1913 Bushels	Change from 2 wks. before Bushels	Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
WHEAT	32,124,000	—3,172,000	—3,347,000	X 6,403,000	X 3,965,000
CORN	13,546,000	X 3,198,000	X 95,000	X 3,715,000	— 638,000
OATS	16,778,000	X 5,362,000	—1,694,000	X 12,298,000	X 370,000
BARLEY	2,904,000	X 429,000	— 141,000	X 2,208,000	X 3,067,000

The visible supply of wheat in Canada on the same date was 17,784,000 bushels. This is 1,834,000 bushels less than two weeks before and 583,000 bushels less than a year before. The visible supply of oats was 9,993,000 bushels on the same date, which is 227,000 bushels less than two weeks before and is 4,583,000 bushels more than a year before.

Cotton

New York, July 7—Cash cotton closed middling upland, 12.25c; middling gulf, 12.50c. The price is 15c a cwt. lower than two weeks before. A year before the price was 12.80c and 13.05c respectively.

Chicago Produce Market

July 7, 1913.

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets address the Farmers Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	100	150	60

Market was oversupplied and lower today. Demand was only fair and there was considerable stock around that showed heat and had to be disposed of quickly. Receipts were posted at 100 cars and there were many cars on track left over from last week.

Sales reported were: Per barrel—Virginia Cobblers—2 cars at $1.75, 3 cars at $1.80, 2 cars at $1.85, 3 cars at $1.90, 11 cars at $2. Per bushel—Oklahoma Triumphs—3 cars at 60c, 4 cars at 65c.

Per barrel, Virginia, white, Cobblers .....$1.75@2.00

Per bu. Arkansas and Oklahoma, red, depending on size and appearance ..... 55@ .65

OLD POTATOES—There were three cars reported sold today. 1 car at 10c and 2 cars at 12c a bushel. There is very little demand for last year's stock.

There were no old potatoes on market a year before. The price of new potatoes was considerably higher.

HAY—Receipts, 1,747 tons. Market quiet and steady. Demand and offerings fair.

Choice Timothy Hay .....$14.50@15.00
No. 1 Timothy .....13.50@14.00
No. 2 Timothy ..... 12.00@13.00

The price is about $3 a ton lower than two weeks before and about $9 a ton lower than a year before.

STRAW—Rye straw quotable at $8@9. Oat straw at $6@7. Wheat straw $5.50@6.

Rye straw is 50c a ton lower, oats straw $1@1.50 lower and wheat straw $1.50 lower than two weeks before.

BROOM CORN—No change from two weeks before. Illinois brush $100 to $120. Oklahoma, $50 to $80 a ton.

BEANS—Quietness prevails in the market with trading centered in pea beans. Prices remain on a steady basis.

Quoted as follows:

Pea Beans—
Hand-picked, choice .....$2.15@2.20
Prime ..... 1.90@2.10
Stock faulty, lower ..... 1.25@1.75
Mediums nominally about same as pea beans.
Red Kidneys, choice ..... 2.00@2.10
Prime ..... 1.75@1.00
White Kidney nominal ..... 3.00@
Brown Swedish, long .....1.00@
Round ..... 1.25@

The prices of all beans are practically the same as two weeks before. The price a year before was about 75c a bushel higher on pea beans.

July-August
BARGAIN SUPPLEMENT
SEARS ROEBUCK AND CO.
CHICAGO, ILL.
THIS SALE CLOSES AUGUST 31, 1913

Six Pairs Men's Socks, 79c. Guaranteed to Wear 6 Months

Pastoral Paragraphs

A fat soil will make fat crops; lean soil, lean crops.

Neither farmer or farm hand has to hunt for a job.

Men, like corn, are rated according to their ability to shell out.

Losing plant food in the manure and then buying it in bags is not good farming.

Grafting is all right in the orchard, but it is more common in politics where it doesn't belong.

There is no easier or surer way to lose money than to let the machinery stand out in rain and sun.

Sam Saxon says that nearly every farm boy wants to be a city man, and every city man would like to be a farmer boy.

INTERESTING COLD STORAGE FACTS

Over seventy per cent. of the fresh beef that is placed in cold storage is taken out within three months.

Very little beef, pork or mutton is ever kept in storage over ten months. In 1910, ten per cent. of the beef was carried over to the next storage year.

The average length of time that beef is kept in cold storage is 2.28 months; mutton 4.45 months; pork .88 of one month; dressed poultry, 2.42 months, and eggs, 5.91 months.

Of the national production annually three per cent. of the beef goes into storage; four per cent. of the mutton; 11.5 per cent. of the pork, and fifteen per cent. of the eggs.

The average expense for storing these products for the average lengths of time they are kept in storage is as follows: Beef, $0.009 a pound; mutton, $0.01 a pound; pork, $0.0035 a pound; poultry, $0.01 a pound; eggs, $0.03 a dozen.

The expense of cold storage is remarkably low, and adds but little, if anything, to the high cost of living. If it were not for cold storage, prices would go much lower when farmers were selling, and much higher to the consumer when the surplus was exhausted, and supplies short. Cold storage has done much to maintain higher prices on meat products and has helped to make the live stock industry profitable to the farmer.

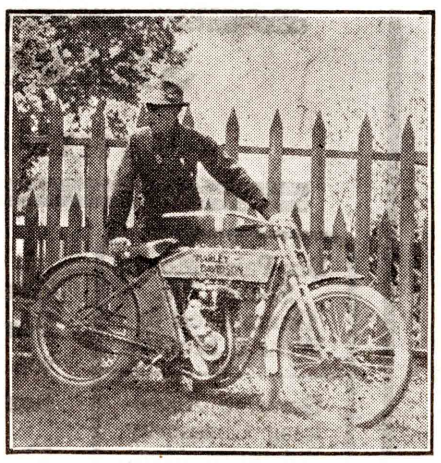
SOMETHING ABOUT SOILS

A FEW years ago the experiment stations in many states made made chemical analyses of soils, hoping to be able to show the farm owner just what his soil needed to make it productive. Later, it was found that the knowledge obtained by these analyses was of practically no value. The chemist could easily tell the amount of each element in the soil, but could not tell how much was available for plant food. Soils that analyzed an abundance of potash were found to yield small and inferior crops of grain, and upon the application of a good potash fertilizer the quantity and quality of the crop would be vastly increased and improved. There was potash in the soil, but the plant could not use it. We know that people often need iron for the blood; but the physician will not recommend the patient to swallow little iron nails. As another illustration, dry chips are no good for fertilizer, but what we call "chip manure" stimulates plant growth wonderfully. The same chemical elements exist in the dry chips that are found in chip manure, but it isn't available. So potash, and nitrogen, and phosphorus may exist in the soil in such shape that the plant can not use them. The chemist could tell what the soil contained, and in what quantity, but no way has yet been discovered by chemists to determine by soil analysis how much these elements are in such condition the plants can make use of them. So the chemical analysis of soils was abandoned. The one thing it could do was to determine whether or not any kind of plant food was lacking. In nearly every analysis made, however, no matter what the condition of the soil, it was found that there was an abundance of every kind. This shows us that soils are not likely to ever "wear out" completely. But the available plant food does become exhausted, and the soil is no better than if completely worn out, except that by proper treatment the plant food it contains can be made available.

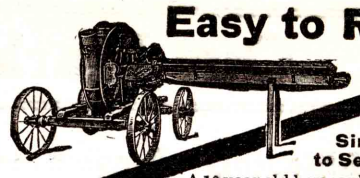
The physical, or mechanical condition of the soil more largely affects the yield of crops than anything else, even more than the readily available plant-foot applied in form of commercial fertilizer. In fact, the better the condition of the soil, the more profitable does the application of commercial fertilizers become, especially if good seed and good cultivation is given proper attention.

Farm Necessities

For business and pleasure the motorcycle is the perfect combination.



Easy to Run



Simple to Set Up

A 10 year old boy could set up a Blizzard Ensilage Cutter. Comes in three pieces. Can't be put together wrong. Self feed table. Almost runs itself. Big capacity with small power. The

BLIZZARD Ensilage Cutter

elevates to any height in any direction. Rigidly guaranteed. Lasts many years without repair expense.

THOUGHTS AT RANDOM

(By C. H. Taylor)

MY FRIENDS, the editors of farm papers, are continuously trying to help farmers keep their boys on the farms. Now, if a farmer just has one boy, and that boy has been brought up as a farmer's boy should be, and the farm is big enough to support another family, it ought not to be a hard matter to keep the boy on the farm. But unless a boy has a love for farming, a natural instinct for it, he will never be a successful farmer, and should not be constrained to stay. The farm deserves better treatment than it would receive at his hands.

* * *

I have been watching this matter of keeping boys on the farm for more than twenty years. As many boys do stay on the farms as there are room for. Not nearly as many farm boys leave farm life for town life as farm fathers. When a farmer boy becomes of age, if there is a place for him on the home farm he slips naturally into that place. If there is no room on the home farm he finds a place on some other farm. In the good farming sections of our country there are no "abandoned farms." If one man leaves a farm, another steps in to take his place, and that other nearly always comes from some farm, not from the city. It is true that cities grow faster than the country. It is natural that they should do so. One acre added to a city accomodates perhaps a hundred people. It takes a hundred acres added to an ordinary farm to accomodate another family. There are plenty of acres to add to cities, but scarce are the opportunities to add to farms.

* * *

The rapid growth of cities will continue until in the cities and towns of this country will be found a population out-numbering the country people ten to one. This is the inexorable law of development. Farm boys will go to city and town because there will be no other place for them. A sufficient number will remain in the country to till the soil, and provide food and raiment for all, but the surplus of country population will drift to the centers of business to take a hand in the building of business. There will never be a movement "back to the farm." For every man who leaves the town for the field at least two leave the field for the town. When a city dweller takes the place of a man on the farm, the man he replaces finds a place in town. Farms do not grow, but farm families do. Let us devote less time to a futile attempt to sweep back an inexorable tide, and devote more effort to the development of a better life for those who choose to remain in the fields to grow and garner the fruits of the soil.

* * *

They are teaching agriculture in the country schools—better methods of growing corn, feeding pigs, making butter and baking bread. This is a wonderfully good thing to do. It trains the young mind to understand the principles that underlie success in farm work and home-making. But field work or house work isn't all that concerns us. We should be good citizens as well as good farmers. We should know something of men as well as of crops and stock. We should help to make life pleasant for others as well as for ourselves, and work with others for the common welfare of all. Are our children being prepared for these duties as well—do they have their minds trained in the principles that underlie the welfare of the whole people? No, and there is but one way whereby this can be done. These are principles they must learn from the community in which they live, and the burden of instruction rests upon the men and women of that community.

Shorty's Shortcuts

(Concluded from Page One)

them; and heads that meant a forty-bushel yield of fine, plump grain. Our county demonstrator (who has a peevish feeling toward old Brown, because, of course, Brown has no use for him), turned green with envy every time he saw that field. The best farmer in the county couldn't surpass it.

I have always said that the man who isn't right in principle will get his lesson sooner or later, and this year it came to Brown, right in that wheat field. Just at the beginning of wheat harvest we had a lot of rain; local showers, but regular pour-downs. Brown's field was low, it wasn't tiled, and when the old binder, patched up to "make it do another year," was started, the trouble began.

That binder simply could not handle the heavy grain, especially on the wet ground.

Our local machinery dealer had tried to sell Brown a new binder, but he wouldn't have it. Then he tried to sell him a small gasoline engine to put on the binder to save a horse, run the machinery and make the work better all around. Brown chased him off the farm. Not a ding-busted new-fangled notion could come on his farm. The agent came over to me, and I was fool (?) enough to buy the outfit. I had to hustle my cutting between showers and I wanted help. I had some heavy wheat on low ground myself.

To make a long story short, I saved my wheat in good time, and Brown paid me a good price to try to save his. We didn't get it all, and his loss was nearly enough to have paid for the machine.

I send a photo of my machine. Improved machinery, to save what I have made, is the one big shortcut to success.

Yours as ever
Shorty.

FREE

A Swell Tailor Made Suit

Yes, that's exactly what we mean. Free—**absolutely** free to the lucky men who consent to be our agents. Swellest, niftiest, New York and Chicago styles. Be the fellow who sets the styles in your town. Here's the biggest chance you ever heard about. The most astounding tailoring offer made in the history of the business. Wads of money, **$8 to $10 a day.** Swell clothes to wear all the time. Biggest snap in years. Don't delay. Send the free coupon quick.

$10.00 a Day Easy

Yes sir, ten good hard round dollars every time the sun sets, besides the swellest clothes in town. Just think of it, **$10 a day, $60 a week, $250 a month.** You can do it. Our big new offer makes it easy. Two hours a day is enough. Sleep as late as you want in the morning. Put on your glad rags and take your time about going up town. Write today and get in on the big new scheme before the rush starts.

Be Our Agent

Wads of money at your finger tips. Swellest, niftiest clothes in town. All yours if you are our agent. Here's a proposition. Live Stock and Dairy

Whitewash the cow barns' interior twice each year.

Tankage in the ration for hogs greatly increases the strength of the bone.

Many Ontario farmers mix the third crop of alfalfa with the corn in filling the silo.

When a wound heals tardily swab it with tincture of iodine two or three times a week.

Rats in the stable often cause the nervous horse to kick at nights. Get rid of the rats.

A few drops of carbolic acid should be put in the water used to bathe a fresh scratch or cut.

Though silage and alfalfa are most excellent, there is great virtue in root crops for stock food.

No other food forms so good a basis for the ration of a dairy cow as alfalfa.—Jos. E. Wing.

The South Dakota station puts the value of skimmilk as pig feed at twenty-seven cents a hundredweight.

Top-dressing pastures in the spring with 500 pounds low grade sulphate of potash to the acre is a profitable practice on dairy farms.

Always water the horse after he has eaten his hay at night. Do not take a hearty drink yourself and go to bed leaving the horses thirsty all night.

Sweet sorghum, cut when the cane seed is hard, makes a good quality of silage and will not sour. Cane silage is especially good for feeding beef stock.

Calves should not be compelled to live on grass alone. Use a little dry feed. Good, dry clover hay is fine for them. Feed a little grain. A mixture of corn, oats and bran is excellent.

SUPPLEMENTS FOR SHORT PASTURES

RIGHT now is the proper time to go into the subject of a shortage of succulence in the cattle rations. Those who have a well-filled summer silo are well-fixed. Those who were far-sighted enough to provide special crops, such as very early corn, or clover, or other suitable feeds for midsummer green feeding are also well-prepared. Those who have neither the silo nor special crops are unfortunate, for under the best conditions the abundance of pasturage is sure to decrease markedly after the first week in July, and the quality also deteriorates. To sustain the regular gain in weight of the beef animal, or the flow of milk from the dairy cow requires some special provision of green food at this time. A decrease in the milk flow now is almost impossible to be regained before the cow again comes fresh. It is poor business to try to compel the milk-givers to sustain their milk production fighting flies on a short pasture. Supply the green forage and insure an even, steady thrift essential to large production and profit.

"On the modern dairy farm where corn, clover, alfalfa and oats and peas and peas thrive it is not necessary to plan an extensive and complicated system of forage crops to help out the pastures during the dry weather," says an Indiana dairyman. "Corn, clover and oats, the best crops for summer soiling purposes, harvesting as much of each crop as was needed to balance up the deficiency of pasture-grass. Corn silage has the advantage of being at hand in case the drouth comes unusually early in the season, when it is difficult to get soiling crops to growing early enough. Corn is both the best grain and fodder crop and the best summer forage crop. This fact has been a great stumbling block to many dairymen. In trying to save grain and silage for winter feeding they have allowed many dollars to slip through their hands by underfeeding in the summer. The same holds good when clover and alfalfa are saved for hay at a time when the cattle are suffering for succulent food. In no other way can we realize greater feeding value from these crops than by cutting and feeding them green. It is the height of folly to save clover and alfalfa for hay and allow it to lose feeding value from rain and heat before feeding it to our cows if they are suffering in a drouth-stricken pasture for want of this kind of food."

Butter and Oleo

A correspondent in the Nebraska Farmer has put the butter vs. oleomargarine controversy on such a clear-cut, clean basis that we take great pleasure in giving his "butter creed" to the readers of UP-TO-DATE FARMING:

"I believe in absolute fairness.

"I believe in order to be absolutely fair every article of food should stand on its own merits and have no artificial disguising color, nor deceptive appearance.

"I believe in every one who wants oleo having full liberty to buy it for what it is, and for what it is worth, without tax.

"I believe, however, that coloring is added to oleo not to make it more appetizing, palatable, digestible or nutritious, but to deceive, first, the buyer thereof; second, the eater; and third, the observer.

"I believe many people want colored oleo so they can sell it as butter.

"I believe many people want to buy colored oleo so they can palm it off on their guests (and children) as butter.

"I believe many people who say that oleo is as good as butter are, nevertheless, ashamed to be seen buying and eating it, and want it colored so as to deceive the chance onlooker who sees them eating or buying.

"I believe if any color is used it should be distinctive. Roquefort cheese is green, surely it is "appetizing."

"I believe that instead of making one unfair practice the basis or excuse for another, both should be corrected and that all fair-minded people should aid in such correction.

"I believe oleo made under sanitary conditions and kept cold is vastly superior to "soap grease" made from rotten, dirty, scalded cow juice, no matter whether made in a $100,000 creamery or in a careless farmwife's kitchen.

"I believe in giving intelligent, cleanly, careful people all that's coming to them whether they produce oleo, butter or cream.

"I, therefore, believe that all artificial yellow coloring of either butter or oleo should be absolutely prohibited. Of the one to two thousand pounds of butter produced on this ranch each year not one pound has ever been artificially colored. If once in a great while a batch was not up to the standard in color, it was not disguised and sold as standard, that's all. Ninety-nine per cent of it brings top price though, so I know right feeding and right milking and right churning in the working will make a gilt-edged article summer or winter. I shy at a too yellow article, in the winter time especially; I know it's doctored.

"I believe oleo should be colored green and cow-juice soap-grease brown.

"I believe this or prohibition of all artificial coloring would benefit all but the slovenly and careless, and why shouldn't they take just what's coming to them?"—Louis Macey, Lincoln county.

Save 40% to 60% on a Clear Fir Silo

Buy direct from us a Seattle Silo of famous Puget Sound fir—made of timber cut from our forests, worked in one of our six great mills. Sold to you at one profit above manufacturing cost.

Seattle Silos

are made of the finest fir in the land. Many trees grow 200 to 250 feet tall. For our silo staves we use only the choicest. Close and straight grain. Free from sap and knots. Wonderfully durable. Seattle Silos have ***patented swinging doors***—quick detachable; no lifting; easily swing in or out; new iron crossbar or hoop connection; door bars form ladder from which hoops are easily tightened.

Write today for folder. On a single silo we can probably arrange to give you practically carload shipment price. To one farmer in each township we have a very special offer. Write today.

SAVE 40% to 60% on Lumber and Millwork

You pay five middlemen's profits on lumber you buy of your local dealer. We sell you at *one* profit above *producing* cost. Give you choice timber as grows only in the Puget Sound region—give you the benefit of our wonderfully low cost of production. Our six great mills turn out twenty to thirty carloads of materials each day. All orders shipped within 24 to 48 hours. Reach our customers within average of two weeks. ***Satisfaction guaranteed or money refunded.*** Send for price list and catalog. Send bill of materials, if possible, for estimate.

Do You Want These 3 Dollies

We want to give all these to any little girl who will do us a little favor. You can do it. Now do you want the three dollies? Read how to get them all: The big doll is life size—2½ feet tall; she can wear your old baby clothes. The little twin dollies are six inches tall.

These dolls can not be broken. They are the prettiest dolls! Big brown eyes; red lips to kiss, and smiling pink cheeks.

You will just love these dollies so much. You can play and play with them and they will not break because they are beautifully printed on cloth in many colors. Mama will sow them up for you in a few minutes and then you will be delighted with my presents.

FREE TO YOU—All three dollies just as described, and sent post-paid if you send a new eight-months' subscription to UP-TO-DATE FARMING for 25c. This is a great offer. Hurry up your new trial subscription, girls.

UP-TO-DATE FARMING, Dept. A, Indianapolis, Ind.

POULTRY PICKINGS

Why not the F. S. E. trade-mark?

A dark, cool place is a good place for a nest.

Get your flock ready for the moulting season.

Sam Saxon says the mite is mighty if it is not destroyed.

Keep the eggs in a cool, dry place, a cellar is the best place.

Do not permit fresh eggs to remain all day in nests this hot weather.

Don't forget the fresh, cool water for the young chicks and old birds.

Never expose the eggs to the hot sun when taking them to market.

Proper ventilation and sunlight mean a dry house and healthy birds.

Three or four or more neighbors should form a "Case-lot Egg Club," shipping fresh eggs under guarantee, with a special trade-mark.

FEEDING FOWLS FOR EGGS

THERE are many inquiries as to how and what to prepare in the shape of food for poultry to secure the best results and not to be dependent upon any of the so-called prepared foods.

But a small proportion of the poultry raisers understand what constitutes a balanced food. What they want to know first is what kind of food will give the best results in egg production.

A balanced ration is one that contains ash, the bone-forming agent; protein, which is the muscle-growing and egg-producing agent; carbohydrates and fat, these last two being the material upon which the fowl lives while she produces eggs. We cannot manage to obtain this combination in grains to balance the matter. How to do this with beefscrap, potatoes, cabbage and mangel-wurtzel beets is what nine-tenths of those who are getting all, or a good share, of their living from hens want to know.

Let us give it to you in a nutshell—a morning mash—twenty pounds of corn, twenty pounds of good wheat bran, twenty pounds of barley. Have the mixture ground into a fine meal. To this add twenty pounds of best ground dried beefscrap or dried blood. Mix the whole thoroughly and use it for a morning mash. Pour scalding water on it at night and keep it covered until morning. If it is then wet and soggy, add wheat bran until it is a crumbly mash. You can soon learn to know just how much water is required to make it just right. Give to the fowls just what they will eat up clean.

Its warming influence will send the females to the nest and nine-tenths of the eggs will be secured before noon.

Open your dry mash feed boxes, which should be filled with a mixture of cracked corn, oats and barley, and let them fill their crops for the night. Keep before them all the time charcoal, grit and crushed oyster shells, so that they may help themselves as they please. In the absence of cabbage and beets during the winter time, give steamed alfalfa, or clover meal.

In summer, when they have the run of the fields, they get all the vegetable matter they need, and if there are not too many of them to the acre they get a good proportion of the necessary animal matter in the shape of worms and insects, and you can, therefore, feed less of the beefscrap.

Not So of Him

The little boy sat gazing at his father as if absorbed in thought. At last he asked:

"Papa, you think mama is the most beautiful person you ever saw, don't you?"

"Indeed I do," promptly replied the father.

Again the boy looked him over from head to foot, and then said solemly:

"Gee, but she can't say that of you, can she?"

DE LAVAL
CREAM SEPARATORS

Save Much Time and Labor in Summer

BESIDES greatly increasing the quantity and improving the quality of cream and butter DE LAVAL cream separators save much valuable time and labor.

This saving of time and labor counts for more in summer than at any other season and often alone saves the cost of a separator, aside from all its other advantages.

As compared with any kind of gravity setting and saving of man's time and labor and usually woman's drudgery with a DE LAVAL is a big item in its favor.

As compared with other separators the DE LAVAL saves much time and labor by its greater capacity, easier running, easier handling, easier cleaning and freedom from need of adjustment or repair.

These are merely some of the advantages which make a DE LAVAL cream separator the best of all summer farm investments, as every DE LAVAL agent will be glad to explain and demonstrate to anyone at all interested.

See the nearest DE LAVAL agent at once or if you do not know him write us direct for any desired information.

Old Folks What 15c will do

You have wished for a paper that is printed in type that you can read without straining your eyes; a paper that gives all the news of the world, and that tells the truth and only the truth.

The Pathfinder is just the paper you have been longing for, and the little matter of 15c in stamps will bring it to you every Saturday for 13 weeks on trial **The Pathfinder** is an illustrated weekly, published at he Nation's Capital, for the Nation, now in its 20th year of increasing success. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time and money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, **The Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at least. Send only 15c to show that you might like such a paper as this and we will send **The Pathfinder** on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. **THE PATHFINDER, Box 7, Washington, D. C.**

Woman's Work

MARKETING FOR HOUSEKEEPERS

Patronize the grocery that is kept clean.

The true economist buys sugar and salt by the barrel.

A can that has a "bulge" is full of spoiled material.

Watch the scales yourself. Honest men make mistakes.

A meat market with flies in it is no place for people. Keep out.

Cleanliness is just as important in the cellar as it is in the kitchen.

Chop your meat at home. Prepared" meats may be anything but wholesome.

Irons are kept in good condition by rubbing them occasionally with kerosene or lard.

Sam Saxon says that both the soldier boy and the society belle are supplied with powder for the ball.

A dozen small eggs weigh fifteen ounces. A dozen large ones weigh twenty-nine ounces. Buy eggs by the pound.

Before buying supplies in cans or cartons, read the labels and know what you buy. Standard goods are the safest.

The Housewives League Magazine says: "The housewife well knows she usually pays more for large than for small eggs. Somewhere between producer and consumer eggs are sorted and the price fixed accordingly." I have traveled in many states, lived in many cities and towns, bought my kitchen supplies in person, in fancy groceries, at the public markets, and never once in all my experience have I seen eggs graded and sold as to size. I have bought white eggs and brown eggs graded as to color. I have bought fresh eggs and storage eggs graded as to age. I have paid different prices for these grades, but never once have I seen large eggs quoted at one price and small eggs at a less price, in the same store or in the same city.—C. H. T.

TODAY MAY BE THE ONLY DAY YOU HAVE

WILLIAM JOHNSTON, writing some very sound advice in the June American Magazine, says:

"Good days and bad days exist only in your own head. The weather has nothing to do with it. Each day is what you make it for yourself. Bad weather is only an unfortunate opinion.

"Suppose it is raining pitchforks. You get word that your salary has been doubled or that a forgotten uncle has left you a million dollars. What do you care about the weather then? Or suppose the person you love is dying. Unexpectedly a turn for the better comes. The doctor says your dear one will live. What if it is hotter than Tophet? It is a good day, a great day, a happy day.

"It's what you think and feel about it that makes each day what it is. You within yourself, can make each day, every day, a good day. Put down in the notebook of your soul the poet Runeberg's thought:

"'Each day is a life.'

"When you get up in the morning throw back your shoulders, take a deep breath. Meet the new day like a man. Say to yourself:

"Another day—another life!

"For all we know it may be the only day we'll ever have. Let's make it the best day we can. Let's strive to see that it is a day worth while. Let's do all the good we can. Let's get all the happiness we can—today.

"Right now is the only time you can control. Yesterday is a record. Tomorrow is a secret. Today is yours, is mine."

"Children Teething

Mrs. WINSLOW'S SOOTHING SYRUP should best remedy for diarrhoea. Twenty-five cts. always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the

MID-SUMMER FASHION HINTS

ONE-PIECE frocks are modish and very practical. The one-piece frock for outing or street wear are, as a rule, simple but cleverly designed, displaying the chic seen in all American tailored garments.

The heavier materials, ratine, eponge, and crepe are used for outing wear and the softer, sheerer materials for the afternoon and street frocks.

Straight, simple skirts with perhaps a hint of drapery near the bottom are favored. Tunics appear on many, the lower edge frilled or boned to make them stand out from the slim, straight underskirt. Little trimming is used outside of the novelty buttons, buckles and bits of embroidery on collar or girdle.

Collar, cuffs and sash are generally of contrasting materials and colors, a fad which is pleasing and becoming, dainty motifs are often embroidered on these with pretty results.

There is beauty about the dainty sprigged muslins, flower strewn crepes and printed silks so fashionable this summer that is unsurpassed.

Quaint posy designs lend an old-fashioned air, harkening back to grandmother's days, memories of which are so dear to all women.

The sash still remains one of the most important features of the thin dress and also of the heavier frock and the tailored suit. The decorative possibilities of the girdle and sash are unlimited; the plainest frock or suit is transformed by a cleverly arranged sash. Well-cut underskirts are all important with the slender gowns. Every bit of unnecessary material must be done away with for if they are an inch too full the gown will suffer. Chiffon petticoats in pink or blue or any color that harmonizes or contrasts prettily with the dress are popular just now. Medallions of lace, Van Dyke points and chiffon flowers trim them. Net underskirts with matching underbodices are among the novelties.

Given to Ladies

35 Embroidery Designs WITHOUT COST

Here are 35 Beautiful Embroidery Designs that I have secured exclusively for the ladies of my large up-to-date family. In the assortment are 6 Embroidery Borders, 4 Butterflies, 5 Emblems, 2 Alphaoets, 2 Initial Wreaths and innumerable other beautiful and attractive designs.

Address JOHN M. STAHL, J. P. Sta. CHICAGO, ILL.

Dark messaline skirts are favored with the tailored suits,

The craze for lace and filmy effects is noted in the season's millinery also to a degree. Many hats are made entirely of net or lace and much of it appears in the trimming of others.

Hats of velvet the French hold, are most chic when worn with mid-summer frocks and the first warm days bring out many velvet hats in Paris; hence the mode of wearing tulle in January and velvet in August.

Medium sized hats have replaced the small ones somewhat for mid-summer wear and there are some charming large garden hats. The Niniche, tilted quanitly in back with a large velvet bow across the hair and a rose dropped carelessly on the brim, is the fancy of the moment.

Patterns of Fashion

Free Monthly Fashion Guide We are unable to print all the fashion illustrations each issue that we would like to publish. However, with each pattern order mailed we will include free an advance Monthly Fashion Guide. Monthly Guide alone, without pattern, for 2c for mailing. All patterns are very latest and only 10c each, postpaid.

6065, CHILD'S DRESS.—Pretty design for plaid gingham or any of the cotton crepes. The blouse is closed in front; the skirt is two-piece.

Cut in sizes 4 to 10 years. Medium size will require 2½ yards of 36-inch material.

6131. LADIES' DRESS.—Smart one-piece frock having a panel down the front and a high or rolling collar as desired. Closes on the left side and has a four-gored skirt. Cut in sizes 34 to 42 inches bust measure. Medium size requires 5 yards of 36-inch material.

6023. LADIES FIVE-GORED SKIRT.—A plain, well-cut design for the popular separate skirt. Very smart when combined with a tailored blouse showing good lines. Cut in sizes 22 to 30 inches waist measure. Medium size will require 3⅞ yards of 36-inch material.

No-Rim-Cut Tires
10 % Over-Capacity

Controlled by Secrecy

The essential feature in No-Rim-Cut tires is made under lock and key.

We control it by secrecy.

Other attempts to make tires which can't rim-cut have cost fortunes in faulty tires.

No-Rim-Cut tires, for years and years, have served hundreds of thousands well. Not one has ever rim-cut.

That is why the demand centers on them. Goodyear tires have come to outsell every other tire.

The Secret

The secret lies in six flat bands of 126 braided wires. They are vulcanized into the tire base.

That makes the tire base unstretchable. The tire can't be forced off without removing a rim flange. So we don't hook the tire to the rim.

With this hookless tire you turn your rim flanges outward—not inward as with clincher tires. Then the tire, when wholly or partly deflated, rests on a rounded edge. Rim-cutting is made impossible.

Extra Capacity

No-Rim-Cut tires have 10 per cent more air capacity than the same rated size in clinchers. And air is what carries the load.

This over-capacity, on the average, adds 25 per cent to the tire mileage.

So the tires save rim-cutting and save over-loading. They save so much that they have become the most popular tires in the world.

The Vital Bands of Wire

But our braided wire bands are considered essential to a faultless tire of this type.

Again and again other ways have been tried. And thousands of tires came back for replacement because the ways were wrong.

So the demand has come to Goodyears, in an overwhelming way. We have sold over one million automobile tires in the past 12 months alone.

No Extra Price

Now, our mammoth production has brought down the cost of this wanted type of tire.

No-rim-cut tires used to cost one-fifth more than clinchers. Little by little the cost has been cut.

Now no standard tires of any type cost less than No-Rim-Cut tires.

Think what that means—tires that can't rim-cut, oversize tires at no higher cost than old-types.

Don't you think that it pays to insist on them?

Write for the Goodyear Tire Book—14th-year edition. It tells all known ways to economize on tires.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

A PILE of letters lie before us, more than we are printing or even noting in the list of "Letters Crowded Out." These writers represent the progressive intelligence of the whole country, for they reside in all parts of it. The ambition of Up-to-Date Farming is to constantly lead onward and upward, and we are glad to bring these young people in touch with each other. We can see much good to result therefrom—extended knowledge, a broadening of views, a better comprehension of life, a more just appreciation of what the world is, and a keener sense of the requirements of humanity. Be watchful for opportunities of doing good. Remember Nellie Tipton and George Alderson.

DEAR CADETS: I am a girl 19 years of age. I used to live on a farm, but I live in town now. I would like to exchange cards with all the girls and boys. Will answer all I receive.—Mary Collins, Industrial, W. Va.

DEAR CADETS: I am 17 years old, and have always lived on a farm until this year, when we moved to Medina, a small country town. There are several corn growing and wheat growing contests here each year, and I think they are a great benefit to farmer boys. In this town is located the main plant of the A. I. Root Company, bee supply factory. It comprises a honey room, print shop, machine shop, tin shop, lumber yard, two large warehouses, bee hive factory, three saw rooms, sample room, mail room, main offices and private offices. Several hundred men are employed and it is so rushed with orders now that many work overtime. I enjoy getting long, lively letters and pretty post cards, and will positively answer all I receive.—Ernest Robinson, Medina, Ohio.

DEAR CADETS: I am a farmer girl 14 years old, and live on a farm of 260 acres. I have been reading Up-to-Date for many years and like it very much. My favorite flowers are ferns, chrysanthemums, roses, carnations and pansies. Our chief farm crop is corn. Would like to hear from some of the Cadets, and will be glad to answer all letters.—Gladys Rhodes, Fairmount City, Pa.

DEAR CADETS: I have been afraid to come out any sooner as the frost bites green things, but I guess there is no danger now. I am 19 years of age, and would like very much to correspond with the Cadet girls and boys near my age.—Ernest E. Bailey, Rocky Fork, W. Va.

DEAR CADETS: I am a farmer's daughter, and think it is fine to live in the country. Up-to-Date Farming is a fine paper, and I enjoy reading the letters the boys and girls write. I am 18 years old, and would like to exchange photos with the Cadets. I will answer all cards and letters I receive.—Sally Goodman, Cecilian, Ky.

DEAR CADETS: We have been taking Up-to-Date for about two years, and think no up-to-date farmer should be without it. I will answer all letters or cards I receive from Cadet boys and girls.—Clifton Dumar, Champagnoble, Ark.

DEAR CADETS: I live on a farm of 55 acres with my parents and three brothers. I have lived on a farm all my life. We raise corn, wheat, oats, rye, cane and soy beans, yes, and some tobacco. I often wonder what has become of Nellie Tipton. I hope she will get the use of her limbs. (She is happy with her rolling chair and Cadet piano.—Ed.) I just hate dishwashing, and I'll bet there are as many that don't like to wash dishes as there are that do. I have no sisters, but I wish I had; I get so lonesome sometimes. I thought I heard some one say, "Does she want us to send her some cards or letters? Wonder if she would answer them?" Sure. Send me all the cards and letters you will, and I will answer and tell you about the Raven Rocks two miles from our home. I am 15 years old.—Gladys Moore, Beallsville, O.

DEAR CADETS: I am a girl nearly 15 years old, and am just finishing my freshman year at high school. My parents are in the City Hotel here. I have read many of the Cadet letters, and wish some of the boys and girls would please write to me. I will answer all I receive.—Lucile Burrows, Truman, Minn.

DEAR CADETS: I am 15 years old, and live on a farm of 200 acres. We raise wheat, corn, oats, hay and potatoes. My father takes Up-to-Date, and I will be glad to exchange letters or cards with the other Cadet girls and boys.—Dewey Martin, Greencastle, Ind.

DEAR CADETS: I am an Illinois girl and live on a 160-acre farm three miles from the village of Dwight. I am 16 years old, and I like to read all the letters. I think Up-to-Date a fine paper. I like outdoor work, and help my father in the fields. I have two sisters and one brother. I wish some of the Cadet boys and girls would write to me. I promise to answer all.—Ella Fredericksen, Dwight, Ill.

DEAR CADETS: I am 16 years old, and live on a farm of 140 acres, near White river. We have been taking Up-to-Date almost two years, and think it a grand paper. I want all the Cadet boys and girls to write me, and I will sure answer all.—Mary Etta Clifton, Shoals, Ind.

DEAR CADETS: Here is another girl from the good old state of Maine. I am 17 years old, and live on a farm with my parents. We have electric lights in our house and barn, and an automobile, which we enjoy very much. We have a piano, and I am a lover of music. I took lessons the past winter. I play in the Baptist church in our town, and I like to do so very much. We take Up-to-Date and I do enjoy reading the Cadet letters. My birthday is July 15, and I would like a shower of post cards from the Cadets. I would be glad to exchange cards with any of the boys and girls near my age.—Gertrude Rouse, Caribou, Me.

DEAR CADETS: I am a Michigan boy of 28 years. I live on a farm of 80 acres. My brother takes Up-to-Date, and we think it the best farm paper printed. I own and operate a threshing machine. I just love to thresh. I get acquainted with so many different farmers. I thresh in four townships. I would like to exchange letters and postals with the Cadet boys and girls. Will sure answer all I receive.—Ralph DeGraw, Harvard, Mich.

DEAR CADETS: My father has been taking Up-to-Date for some time, and I think it is the finest farm paper I ever saw. We live on a farm, and I like farming. I like to work in the house. We have a pretty garden. I like flowers. I have lots of friends. I am 18 years old. My mother and I work in the garden. I would like to exchange letters or cards with any boys or girls. All will be answered.—Caroline Peck, Mineola, Tex.

DEAR CADETS: I live in Indiana, a state I am proud of. I am only 15 miles from Indianapolis, where this paper is printed. I live on a farm of 70 acres, of rich, black soil, but I am not staying at home; I am working for my uncle on his farm. We raise nearly all crops that can be grown. I have been a reader for quite a while, and think this paper is wonderful. It teaches better marketing and better prices as well as better crops. I will be 20 years old August 27, and I hope to hear from you all.—Louie Spier, New Palestine, Ind.

DEAR CADETS: I am a southern Illinois farmer boy, 13 years old, and I think Up-to-Date is one of the best papers ever published. We have taken the paper about two years. I like to read the Cadet page best of all. We have five horses and three little colts. I want all of you boys and girls to write to me, and send me your photos, then I will send you mine.—Laurel Turner, McLeansboro, Ill.

DEAR CADETS: I am a farmer girl, 15 years of age, and live on a farm of 150 acres. My father takes Up-to-Date and likes it very much. I read it and like it fine. I would like to exchange letters or postals with the Cadets.—Eva Wist, Mayfield, Ky.

DEAR CADETS: Here comes a Buckeye girl who is very much interested in Up-to-Date, and especially the Cadet page. We have taken the paper for some time, and think it a great benefit to all farmers. We moved on this farm two years ago from Cleveland. We have thirty-one acres, and are trying to make a successful fruit farm. We have set one thousand grapes, two acres of strawberries, one acre of raspberries, and we have cherries, apples, quinces and other fruits. We have three horses; one is a driving horse, Anna Belle, that won a race labor day at Lorain. We have 200 chicks, and expect some geese and ducks, soon. I am 19, and would be pleased to hear from the Cadets, and will answer all I receive. Would also exchange photos.—Laura Beard, Oberlin, O.

Up-to-Date Readers!

Do You Believe

1st., that Up-to-Date Farming is doing a work for your benefit?

2nd, that farmers have been victimized by the nefarious system of marketing that has hitherto existed?

3d, that if farmers knew how, they would establish a new system of marketing that would yield them better prices for their produce?

If you believe these things, don't you also believe you should help us bring all farmers into a knowledge of what can be done, and is being done by thousands of our subscribers who have organized themselves in local unions and are working with us and their fellow-farmers to rid the country of the evils of its present marketing system?

YOU CAN DO IT by showing your neighbor a copy of this paper, and getting him to subscribe. Tell him what you like about the paper, and what you learn from it. Tell him of the work it is doing to get more money for the farmers from what they have to sell. Ask him to take and read the paper for just one year.

Show This Copy to Your Neighbor.

Ask him to give you 50 cents for one year. Before the year is out both you and your neighbor will be glad you did it.

5 YEAR GUARANTEE

98 CENTS POST. PAID

To advertise our business, make new friends and introduce our big catalogue of Elgin watches we will send this elegant watch postpaid for **only 98 cents.** Gent's size, high grade gold plate finish, lever escapement, stem wind and stem set, accurate time keeper, fully **Guaranteed for 5 Years.** Send 98 cents today and watch will be sent by return mail. Satisfaction guaranteed or money refunded. **HUNTER WATCH CO., Dept. 34 CHICAGO, ILL.**

BUSINESS EXCHANGE

Practical Organization and Co-operation

THE FARMERS SOCIETY OF EQUITY.

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No Capital stock. Membership fee, $2.00; Dues, $1.50 annually. Unity of marketing through county and district clearing houses, ultimately to federate in one national clearing house, the plan.

National Union Officers

Pres., J. A. Everitt, Indianapolis; V.-Pres., W. H. Mitchell, Hutchinson, Kas.; Sec., M. K. Sleight, Indianapolis; National Organizer, H. F. Cutting, Portland, Ore., or Indianapolis. Directors, Robert Stevenson, Lebanon, Ind.; Jacob Bretz, Bretzville, Ind.; S. W. Morris, Rochester, Minn.; Fred N. Parkinson, Rexburg, Idaho; W. S. Shure, Summerdale, Ala.; J. A. Harmon, Shawnee, Okla.; C. Hayes Taylor, Indianapolis, Ind.

State Union Directory

Locals reporting dues and fees of new members in states having an organized state union will make reports to their state union secretaries.

Idaho

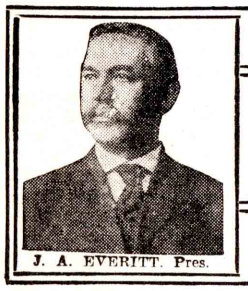
President, A. Y. Satterfield, Sterling.
Secretary, O. E. Scott, Shelley.

Oklahoma

President, P. H. Thomas, Shawnee.
Secretary, J. A. Harmon, Shawnee.

Oregon

President, Wm. Schulmeric, Hillsboro.
Secretary, F. G. Buchanan, Oregon City.



J. A. EVERITT, Pres.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

An organizer in Michigan, in reporting a new local union, said: "Please give this secretary all the help and instruction you can. The people want to better their condition but they must first learn how to do it."

—o—

The Farmers Society of Equity has many pieces of literature and a reading of them will instruct a secretary and the members how to make a local union entertaining, profitable and successful. Also each local is supplied with a book of instructions with business blanks, membership roll, pages for keeping minutes, etcetra.*

—o—

The instructions contained in this book, with the rules and laws in the constitution and by-laws are so explicit that the officers should soon be able to conduct meetings in order and with satisfaction and profit to all members. The secretary or business agent is also given instructions on his duties of selling crops and buying supplies. We cannot too strongly urge the officers, particularly the secretary, to study the "Instructions" and understand them and carry them out.

—o—

To make good members each one must know what he joined the Farmers Society of Equity for and how the benefits are to be realized. To this end the books and other printed matter, which are not sent in sufficient quantities to supply each member, must be read in meetings. First we recommend that the circular, "A National Marketing System"—115b—be read to the members. This is a brief outline of the plan of the F. S. E., how it is being organized and how the national marketing system is being established. This circular with discussions, can be made the lesson for one meeting.

—o—

The booklet, "Crop-Rich but Money-Poor Farmer"—E4—should be taken up next. There are five chapters in this work and one or more, with discussions that will naturally come up, may be made the lesson for a meeting. This booklet goes much farther in stating the condition of agriculture and the argument for a new marketing system as well as explaining the plan of the F. S. E., than the circular did.

—o—

Next in order should come "The Third Power" One copy of this book is sent to each local union for the use and education of all the members. Therefore, the only way all the members can get the truths it teaches is to have it read in the meetings. It has 312 pages of reading matter. There are twenty-four chapters and an appendix. Speaking of this book some of the readers have said this:

"The Third Power" will be a stronger power than all the boards of trade and exchanges united against a square deal for the farmers.

It is the voice of a new cause calling to the farmers.

It is the call for equity and justice in business, for honesty and fair dealing.

If this book was read by each farmer in the chief producing states it would convince them that they must unite and it would show them how to unite and it would not then take a full year to control the markets.

"The Third Power" ought to be read not only by every farmer, but by every farm boy. It reveals possibilities for profits and satisfaction in farming, easily attainable, that few have dreamed of.

—o—

The members will get greatly interested in the Society by carrying out such a program in the first meetings. This program faithfully carried out will give to each farmer what he so much needs—a balanced education. This means as much on marketing as on producing. In other words, the F. S. E. teaches him how to dispose of his crops advantageously after he has produced them. But the business side must not be neglected. As soon as a local is organized the matter of doing business must be taken up and arranged for.

—o—

The local union that neglects business, the very thing it was organized for, will not be permanent. If the members cannot do business through the local union, the very purpose for which they joined, they will not support it long. They have abandoned former organizations not organized primarily for business and the F. S. E. will not be an exception.

—o—

The members have a right to look to the secretary or business agent to help them in selling their crops and buying supplies and on the other hand the secretary has as much right to expect the co-operation of the members so that all crops may be offered and sold as community units. The members must quit individual marketing —individual competition—and must co-operate by recognizing their secretary as their common agent to market their crops. Of course, the secretary will always work under the direction of the majority of the members and what looks good to the majority usually will be good for all. If there are one hundred members, each having one thousand bushels of grain, the secretary will offer 100,000 bushels of grain instead of one hundred farmers each offering his crop. The advantage of this plan will be apparent at once. When it becomes known that one man has 100,000 bushels of grain to sell the best and biggest buyers in the country will seek him out and pay more for it than would be paid in dribs.

—o—

And the advantage of the Equity plan is farther demonstrated when the development reaches a county union stage. Then, where there are ten locals in a county and each has 100,000 bushels of grain to sell, the county union business agent will offer one million bushels instead of one thousand farmers each selling his little lot competitively with all the others. To illustrate: North Dakota has fifty counties. When the state is organized there will be only fifty sellers directed by the boards of control in fifty counties. In this way all the grain, live stock, potatoes and other crops will be sold by fifty men against about fifty thousand sellers the old way.

—o—

But when North Dakota has a county clearing house in each county, or many of them, the entire selling can be delegated to the state union, or clearing house, providing the time has not arrived to begin operation through the national clearing house. In such case the state secretary would represent all the grain, live stock, hay, potatoes, etc., of members in North Dakotta. Then instead of the supply being represented by the fifty thousand or more producers, it will all be known and available at one place where the demand can find it. The whole plan of the Equity System of Marketing is fully set out in the books and literature. Each step is explained and easily understood and every man who once understands it agrees that it is practical and the only practical way to solve the marketing problem.

—o—

We believe practically every farmer is willing to delegate his marketing to his organization on this plan. It relieves him of a lot of detail, responsibility, anxiety, labor and expense, besides gives him an independence he never had before and, most important of all, he gets more money. Every county that thus controls its crops, at once sees the demand seek the supply while the other way the supply chases around to find a demand. It is the only way to solve the marketing problem—the supply must be controlled and let the demand come to it.

—o—

And with the supply controlled, the county boards of control can store grain and other commodities and get cash advances on them just like those people do who have been controlling them.

—o—

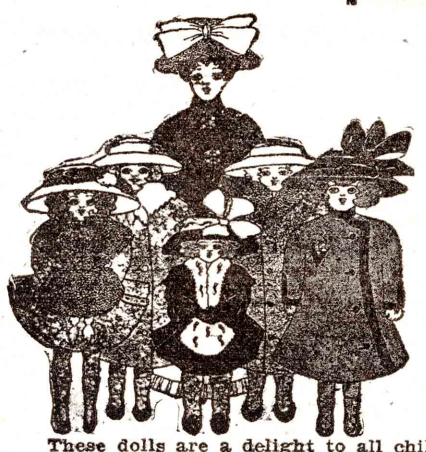
The Farmers Society of Equity plan is the only practical one ever proposed. It works just as described wherever established and will do as well in any county, no matter where. The only thing that can not be understood is why there still remains a county in the country that is not putting the system in operation.

—o—

And headquarters of the Society co-operates with the local and county unions in all of this work. A valuable help is the Society's Directory of Market Representatives, which is a part of each local union's supplies. Through this and the large knowl-

*This book was prepared recently and has been sent only to lately reported locals. Older locals can obtain it by sending 50 cents.

49-Piece Paper Doll Set FREE



6 DOLLS

21 HATS
14 DRESSES
8 COATS
49 PIECES

The greatest summer premium ever devised.

Fun for the Kiddies.

Mother's 5 darlings and nurse Marie. Six beautiful paper dolls and full paper wardrobe of 43 pieces, all ready to cut out.

These dolls are a delight to all children into whose possession they come. They are printed in four colors on paper carefully selected for the purpose and are equal in every way to the expensive imported cut-out dolls. They range from 8 to 12 inches in height. The dolls are printed on an extra fine quality of bristol board, sufficiently rigid and tough to be substantial, yet soft and pliable enough to permit of easy cutting. The dresses are printed on a thinner paper made especially for this purpose and will stand a great deal of handling.

In all there are 6 dolls; three girls, two boys, and their nurse, Marie. A family in which the child who owns it will take great delight. Each of the dolls possesses a full wardrobe of paper clothes, permitting of several complete changes, sufficient to keep the child mind pleasantly occupied with problems for properly clothing the paper family for all occasions. Unconsciously the youthful "parent" comes into possession of much useful knowledge and an independence and good taste in dressing that will be valuable as years and other more important things take the place of the now cherished paper dolls.

How to Get the Dolls

Every little girl will want this fine set of dollies and all you have to do is send 25 cents for one year or 50 cents for a three-year subscription and get them absolutely free.

FARM PROGRESS is the biggest semi-monthly farm and agricultural paper published in America. It is unquestionably the best and most reliable paper of its class published anywhere in the country. FARM PROGRESS is of inestimable value to every farmer, truck gardener, bee-keeper, hog, sheep, cattle or poultry raiser, and, in fact, to everyone engaged in agricultural pursuits. Articles are printed in each issue for practical uses—no theorizing or guessing. Its various departments are edited by men of wide and thorough experience. Special attention is given to answering questions of subscribers through the columns of the paper.

Besides the practical side, there are special features of interest to the housewife, excellent stories, and also a home department, edited by our lady readers. Two valuable prizes are given in our home department twice each month, and all in all, it is a big, fascinating paper and will be appreciated by every member of the family.

edge of markets, and buyers of produce that headquarters has, and which is furnished on request, valuable connections are soon made with handlers in the final markets. Following is an example:

The heretofore dreaded cucumber deal is finished for this season. I say "dreaded" because each season heretofore the grower has found himself very badly in the hole. Nowhere in the country can finer cucumbers be grown than in this, Baldwin county, but i thas been practically impossible to get the balance on the right side of the ledger when it came to marketing. This season, however, has been an exception in that it has been very profitable to the planters. Many growers report a net profit varying from $150 to $300 an acre.

Because of the F. S. E. organization and system we were able to make a uniform pack that meets favor in the best markets and with the best trade. The confidence that our methods inspire enabled us, also, to sell the entire crop for cash as soon as the grower placed his load on the platform. Our Irish potatoes were sold in the same way. These two crops were the only really profitable crops to the growers of this county for a long time and the credit is due to the system of selling. We have added to our work of producing, business methods in selling. We have now a line of customers who have confidence in our goods and they will look to this section each year for their supplies.

All things considered we are more than pleased and the more we see of the practical workings of the Equity system the better we like it.—C. B. Lozier, County Business Agent, Robertsdale, Ala.

—o—

Here is another report just received from the north:

The way our local is doing business in the short time since we organized is the talk everywhere for thirty miles around. What we have done in business has attracted all but about a dozen farmers to our union and we'll get them yet. Our purpose now is to organize the county as solidly as this community is organized.—A. H. Grothen, Parkers Prairie, Minn.

—o—

Similar examples are constantly being printed in this paper. With the strong evidence before us that at last any community of farmers can begin to work out its industrial salvation and at once take an important and necessary step toward the complete and perfect marketing system that all signs are pointing to, and, apparently, all efforts are tending toward, is there any good reason for farther delay in organizing your local union (the local unit that is absolutely necessary as a part of the great national plan)? Some person, in each community where the F. S. E. is not already organized, is urged to send the coupon below. And any local or county union now existing, and that is not doing business, is implored to begin to do business at once.

—o—

As an important help each local and county union should keep a standing announcement of meeting dates in the local paper. It should appear in the department devoted to lodge and church meetings. Don't fail to say when the public is wanted, otherwise the public will assume that the meeting is for members only.

—o—

The by-laws of the Society say that local unions shall meet at least once a month and as much oftener as they desire. Regular county union meeting shall be once in three months—January, April, July and October. So "forsake not the assembling of yourselves together as the manner of some is." But we want to say right here, that attendance at the meetings of the F. S. E. unions is not the best test of a good member. The good member will uphold the principles of the Society by doing business through it. Attending meetings IS IMPORTANT but the member who pays his small annual dues and does business through his local union, even though he may frequently be absent from the meetings, is the one that counts in solving the marketing problem.

—o—

Do business if you are organized and if you are not organized send the blank and get ready to organize to do business.

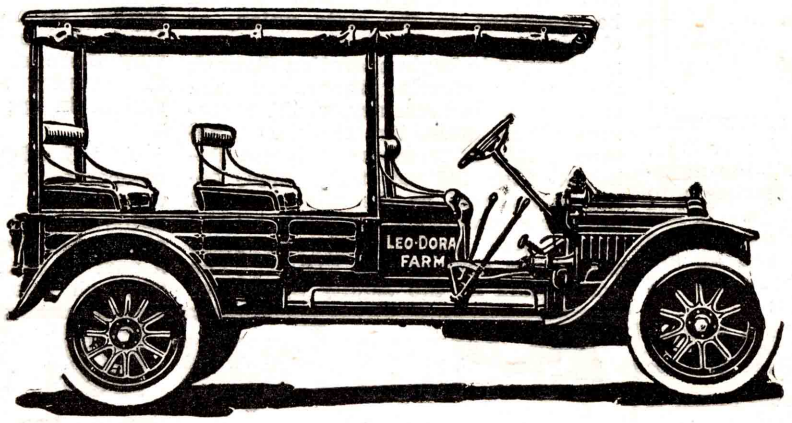
THIS WHITE Combination Car Will Pay You Back $2250

Whether You Now Own a Car or Not—This Is the Motor Car You Have Always Wanted.



The Car That Will Do Your Work as Well as Your Play—The Car That Will Last

Eight Passengers or 1500 Pounds Anywhere You Want to Go

We Built This Car Because It Was Right

There has always been a demand for a car just like this—but no car to fill it till now. We know it meets the exact conditions before you. We know it will do for you what no other motor car will do. Unlike most automobiles, the White Combination will earn money for you—not be just a dead expense.

You Have Long Felt the Necessity For It

You know as well as we what a benefit the motor car has been to people living in the country. It eats up distances as no horse ever could; it never tires; friends living many miles away whom you seldom used to see, are now the same as neighbors. Your town is now near-by, where it used to be some distance. These and many other things the motor car has done for you or your neighbors. But one thing it has *not*—it has *not* carried your freight. This is where the White Combination excels any motor car built.

It Does the Work of More Than Two Teams

Even if you have a motor car, you have had to use your horses to haul things to town. Frequently they are already tired from plowing or other farm work when you hitch them up for a long road haul. But you have *had* to use them. Other people, too, who own motor cars have *had* to hitch up when it came to hauling, because no other motor car built has a frame strong enough, nor body designed to carry freight as will the White Combination Car. Used as a freight carrier it not only does the work of from four to six horses because of its speed on the average haul, but also saves your horses the strain of the trip, or permits their being used *on* the farm while this car is working on the road.

It Has Twice the Capacity of the Ordinary Touring Car

It will carry eight passengers easily, with ample extra room for luggage, lunch baskets, etc. The seats are large and comfortable and are easily attached or removed by one person. In spite of its power and capacity, this car is as light and easy to drive as an ordinary touring car. There are very few—even the fastest—that can pass it on the road, and when fully loaded it will easily climb hills many cars cannot climb at all.

How You Get Your Money Back

It is cheaper to pay $2250 once than $1000 four or five times. Figuring mile for mile, the White Combination will outlast four or five of the ordinary touring cars of the $1000 or $1200 type. As a passenger carrier, it more than meets every requirement of the touring car and can carry twice as many passengers. As a freight carrier there is no comparison, as no touring car made even approaches it.

You Get Double Value In This Car

This car is designed by the same engineers, built with the same care and of the same excellent materials that have all combined to make White Cars the standard for the highest grade of automobile construction in America. It is the best *car* value you can buy, and the price you pay for a car is usually about what it's worth as a car. But the White Combination is more than a motor car, it does more. It gives you more than double service value in passenger and freight carrying.

Balance These Figures if You Can

The work and play this car will return to you is about equalled by *four* low priced touring cars. That would mean an investment of between $4000 and $4500, as against $2250 for the White Combination. Any *one* of the *four* would cost more to run and repair than the *one* White, and would have to be replaced three or four times over before the White really began to wear.

That Is Why This White Combination Car at $2250 Is The Best Motor Car Investment You Can Make. Let Us Send You Specifications and Tell You What The Car Has Done. Are You Ready to Discuss The Matter?

THE WHITE COMPANY

834C E. 79th ST., CLEVELAND

$10,000,000 A Year Wasted on Trusses

Wrong to Buy Anything for Rupture Without Getting Sixty Days' Trial

A conservative estimate shows that nearly ten million dollars a year—in this country alone—is practically wasted on worthless rupture appliances—all because people trust to a mere try-on instead of making a thorough test.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City

"Little Wireless Phones"

For the ears that will cause you to

HEAR

What eye glasses are to failing sight, my invisible Ear Drums are to lost or failing hearing. Just as simple and common sense and on the same principle, for **they magnify sound as glasses magnify sight.** They are really tiny telephones of soft, sensitized material, safe and comfortable, which fit into the orifice of the ears and are invisible. They can be removed or inserted in a minute and worn for weeks at a time, for they are skillfully arranged for perfect ventilation and anti-friction. These little **wireless 'phones make it easy to hear every sound distinctly, just as correct eye glasses make it easy to read fine print.** Among the nearly 400,000 people whom they have enabled to hear perfectly, there has been every condition of deafness or defective hearing. No matter what the cause or how long standing the case, the testimonials sent me show marvelous results.

Common-Sense Ear Drums

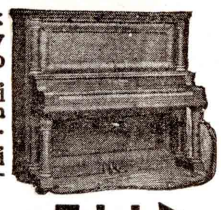
have restored to me my own hearing—that's how I happened to discover the secret of their success in my own desperate endeavors to be relieved of my deafness after physicians had repeatedly failed.

It is certainly **worth your while to investigate.** Before you send any money just drop me a line. I want to send you **free of charge** my book on deafness and plenty of evidence to prove to you that I am entirely worthy of your confidence. Why not write me today?

GEORGE H. WILSON, President
WILSON EAR DRUM CO., Incorporated
1069 Inter-Southern Bldg. LOUISVILLE, KY.

WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING

EVANS Artist Model PIANO Direct to You at Wholesale



Yes, at the rock bottom price; any Artist Model piano you select on approval, prepaid and at the bed rock price direct from our factory to you. Not a cent in advance, not a cent C. O. D. and no freight charges—all prepaid.

30 Days' Free Trial

Think of it. Absolutely free. Not a cent to pay. All freight charges prepaid and absolutely free trial for four weeks in your home. If you don't want it simply return it at our expense. You take no risk. If you decide to keep this superb Artist Model Piano you can have it at the inside confidential wholesale price and make settlement on the easiest monthly payments.

Limited Offer To advertise and quickly introduce this superb instrument, we will sell the first in your locality at the confidential wholesale price. This offer applies only on the first sale. Write today and save $100 to $200 on the purchase of a piano. Also learn all about our 2-year course in music free. A postal will do.

F. O. EVANS PIANO CO.
Room 456 Fine Arts Bldg., Chicago, Ill.

THE FIELD

UP-TO-DATE FARMING will print in this department short letters from its subscribers on any subject of general interest and calculated to further the mission of the paper.

Warmly Approves Our Work

Dear Mr. Everitt:

I am glad to see you have taken action along lines I suggested a year or so ago, and raised the subscription price and improved the quality of Up-to-Date Farming. I wish to make another suggestion, that you give first-of-the-month prices on products at the principal European points where such products are imported from this country, and compare them with prices at

our principal markets and ports, with cost of transportation. This would be most interesting to those of use at least who produce such products. I understand the Department of Agriculture at Washington is going to start such a bureau, and it would be well to keep tab on them and see how well they do their work. I heartily thank you for the good work you are doing for us farmers, and wish you all kinds of success.—H. G. Lilleman, Wendell, Minn.

Going After Big Things

Your plan of organization is exceptionally good. There are seventy-six townships in this (Johnson) county, and I have planned a canvass of the whole county and am determined to make the effort of my life, and visit every township in the county during July. Then, go right on until a county and a state union is organized.—T. J. Woodward, Clarksville, Ark.

Going Right Ahead

Our local is still going and unloaded three cars this week, consisting of coal, ice, flour and feed.—John B. Peterson, Galesburg local, Kansas.

We Want You to Know

Before buying an engine to help with the work write to Ellis Engine Co., 115 Mullet, street, Detroit, Mich., for catalog.

Send for full particulars about lands and opportunities in Aitkin County, Minn. Write Mr. L. B. Arnold, 76 Wolvin building, Duluth, Minn. He is land agent of the Chicago, Rock Island and Pacific Railroad, and will have a lot of information for you.

A Victrola or Victor Talking Machine can be tried in your own home free. There is more genuine enjoyment in such a machine than can be gotten any other way for equal money. Write for free trial and easy payment plan of Field-Lippman Stores, 1112 D Olive street, St. Louis, Mo.

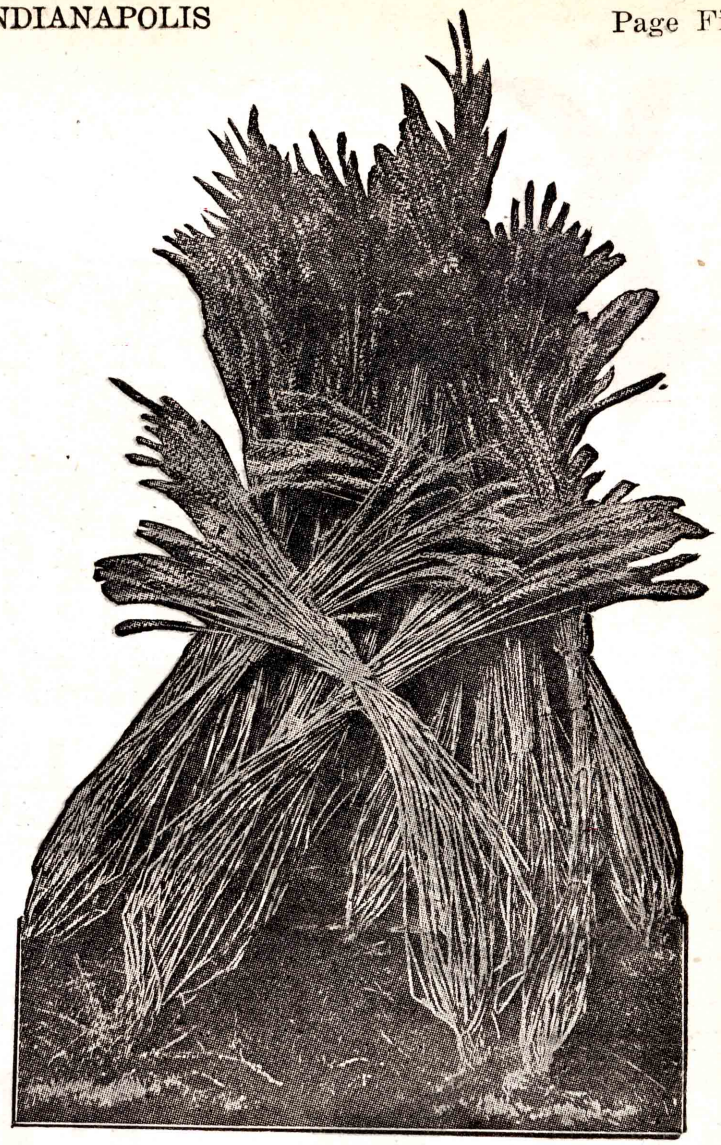
No ice expense or bother with an Iceless Refrigerator. The only refrigerator that pays its cost in a summer. It requires no ice. Write to Iceless Refrigerator Co., Box 75, Winchester, Ind., for full information.

Boys, if you want a big league ball outfit free and a valuable baseball course of instruction write to W. D. Boyce Co., Dept. 152, Chicago, Ill. They will tell you how to get all free.

Is there a boy or girl who would not like to have a pony and a real pony buggy. Boys, speak up! Girls, hold up your hands! Why, you all want the outfit! Then write right away to the Farmers Wife, 549 Webb building, St. Paul, Minn. They are giving away Pony outfits. They are perfectly reliable in every way.

If looking for western opportunities write to Mr. R. A. Smith, Union Pacific Railway, 262 Union Pacific building, Omaha, Neb. Full information free.

Save money on roofing. Send for the low prices of the Century Manufacturing Co., Dept. 377, East St. Louis, Ill. It is warranted for twenty-five years.



Mr. Wheat Grower:

Sell 20 bu. of your wheat, send us $12.50 of the money and we will send you new seed wheat for 10 acres.

No, don't send us any money, but send the coupon below for our full proposition. If you sow your own wheat you will take at least 20 bushels, worth, say 90 cents a bushel, and clean and grade it down to 15 bushels and sow 1½ bushels per acre.

Example

20 bushels of your wheat at 90 cents $18.00
Our proposition, wheat for 10 acres 12.50

YOU SAVE .....$ 5.50

Besides what you save at the start you will harvest more wheat next year and you can probably sell all you raise at seed prices until all your neighbors are supplied.

You can save one-third of your seed money

You're Skeptical? Well we don't blame you. But many others have done this very thing. So send the coupon and get our proposition if you are going to sow any wheat this year. The only expense to you will be a postage stamp.

This year our customers raised up to 63 bushels per acre. The common report was "double the yield of other kinds in the neighborhood." What others have done you can do.

The new wheat is all you claim for it. It is a great curiosity and many farmers look at it every day as they never saw any wheat like it. It is better than the best in this neighborhood.—Frank Stuff, Wawaka, Ind. **The new wheat is far ahead of other varieties for hardiness in winter and outstripped all in growth in the spring. I had six-tenths of an acre sown and the yield was at the rate of 63 1-3 bushels an acre. This is three times as great as any other yield I have heard of.**—H. B. Austill, R. R. 1, Booneville, Ind. **The wheat is better by half than other varieties; heads have 40 to 60 grains; every person who has seen my crop says it is the finest and best wheat they ever saw.**—Oscar Peterson, Rochester, Ind. **The new wheat is the best in the country. The neighbors all have their eyes on this wheat now, although they made fun of me when I got it.**—Sam Patterson, R. R. 6, St. John's, Mich. **It beats every thing I ever saw in the way of wheat. It outstripped every other variety in growth and will outyield them when threshed.**—A. C. Leech, R. R. 5, Salem, Mo. **I think the new wheat is the greatest variety ever produced. Dozens of my neighbors have seen it and pronounced it "wonderful." I cut it June 23 and will yield about 50 bu. per acre.**—J. H. Myers, R. R. Atchison, Kas. **The new wheat beats anything in the whole valley. I will do all I can to spread its good qualities.**—J. E. Davis, Sassin, Va. **The new wheat has more than doubled other varieties on all adjoining farms and will yield 25 to 30 bushels an acre. It has fulfilled every claim you made for it and more, too. Everybody is well pleased with it.**—Geo. L. Orndorff, Bunker Hill, W. Va. **It is a marvelous wheat.**—Geo. A. Phipps, Pendleton, Ind. **I am glad to say the new wheat is the finest ever raised in this neighborhood. My neighbors also say they never saw such fine wheat. It is not threshed yet, but will yield 50 to 60 bushels per acre.**—Larry Souash, R. R. 14, Amboy, Ind. **I sowed one acre of the new wheat and finished the field with other wheat. I will get more off of the one acre than off of three acres of the other.**—W. J. Willis and Son, Kittyton, Tenn. **From two pounds of seed I raised 340 pounds. It is miraculous.**—C. W. Graham, Rowan Co., N. C. **My new wheat looks good for 40 to 60 bushels per acre while much wheat around me was plowed up.**—John Gang, Towe Co., N. D.

Will you spend a stamp to save money and increase your next wheat crop?

Spend a stamp, send the coupon and get full particulars. Write to any of the people whose letters we print if you want to but they will sow all of their wheat or sell the surplus to their neighbors. It will be years before much of this wheat will reach the mills because it will be in demand for seed as no variety ever was before. We will be glad to hear from every wheat grower so we can send full particulars and place our proposition before them. Mailing this coupon places you under no obligation but, if you grow winter wheat investigate now

O. K. Seed Store
Dept. 3A Indianapolis Ind

O. K. Seed Store, Dept. 3A, Indianapolis, Ind. FOR BETTER WHEAT MAIL THIS
Without any obligation on my part to buy, please send me full particulars how to grow more and better wheat and save money on my seed.

NAME .....

ADDRESS .....

Let This Great Suit Offer Save You 1/3

This Sample Book is saving Clothing Dollars for Thousands of Satisfied Customers.

If you have not received your Free Copy of it—send us your name today.

This Big Tailor Book FREE

To get the finest made-to-your-order clothes, the swellest styles, and the most satisfaction—to get fine, perfect-fitting clothes like this with a guarantee of satisfaction so broad, positive and binding that you take no risk whatever—you must have this book. This is the only made-to-order clothing catalog which positively guarantees your satisfaction—it is the only book that shows you, by a short series of pictures, just how a first-class tailor measures—it is the only book that teaches you, in a few minutes, how to measure yourself or anyone as perfectly as any tailor can do it—and this book is issued by the only tailoring house which is big enough and liberal enough to say to you this: "By our simple, quick method it is next to impossible for you to make a mistake—but even if you should make a mistake in measuring—we and not you, stand the loss. We even pay the express charges both ways. No matter where you live you can now order your made-to-measure clothing without going any further from home than your nearest mail box. And in a few days your clothes come to you by Prepaid Parcels Post. Even if you live on a Rural Route you can order and have delivered to you complete, the finest made-to-order, Big City Style Clothes—and you don't have to leave your own home to get them." We deliver right to your door.

Low Wholesale Prices to Save You One-Third

We want to have fifty thousand new customers wearing our fine clothes. To help advertise and introduce them, we will let you order at our lowest wholesale prices—prices that save you from one-third to one-half—because they are the same prices the store-keeper must pay. In ordering of us during this great introductory offer, you save the retailer's profit entirely. This offer means, to you, the opportunity of ordering America's finest tailored-to-your-order clothes at an absolute saving of one-third. Instead of paying your store-keeper $15.00 to $40.00 for your made-to-order Suits, you buy them now at $9.95 and if you want the finest grades, we have them at $17.00 to $28.00 instead of $28.00 to $40.00.

Have You a Little Time to be Our Agent at $1.00 an Hour?

There are, within a short distance of your home, hundreds of men who will welcome the chance to order our fine clothes. Many of them are your intimate friends, your neighbors and perhaps even your relatives. You can do them a real service—the friendliest sort of a friendly favor by showing them our Samples and sending their orders to us. You not only supply them with the handsomest, finest and swellest tailored clothing to be had, but you also save big money for them. You can make from $2.00 to $7.00 on every order and do it so easily that you will, at once, realize what a truly great thing the tailoring business is and especially when you have the right house behind you. If you have a little spare time, we will show you how easy it is to make $1.00 an hour any evening or Saturday afternoon.

Would You Accept a Swell Suit Free Just to Advertise?

When sending our catalog and the other great offers, we will also tell you about our great Free Suit Offer—making it possible for you to get all your clothing absolutely Free of any cost whatever. This means exactly what it says—all your own clothes for nothing. Now if you want this fine, big Tailor Book, order blanks, instructions, tapeline and everything all free—just send us your name. But write us at once as this offer is good for a limited time only. Take a postal and your pen and simply say: Send Free Sample Book, Wholesale Price List, Special Suit Offer and the full proof of what your advertisement says. Address:

UP-TO-DATE FARMING

16th Year, Number 15 | AUGUST FIRST, 1913 | Indianapolis, Ind.

A Herald of Farm Progress and Prosperity. Published Twice a Month

With the Up-to-Date Farmers

A Department for Live Folks who want the best. Our readers are asked to contribute their thoughts. If you have a helpful idea pass it on. Be neighborly. Contributions always welcome.

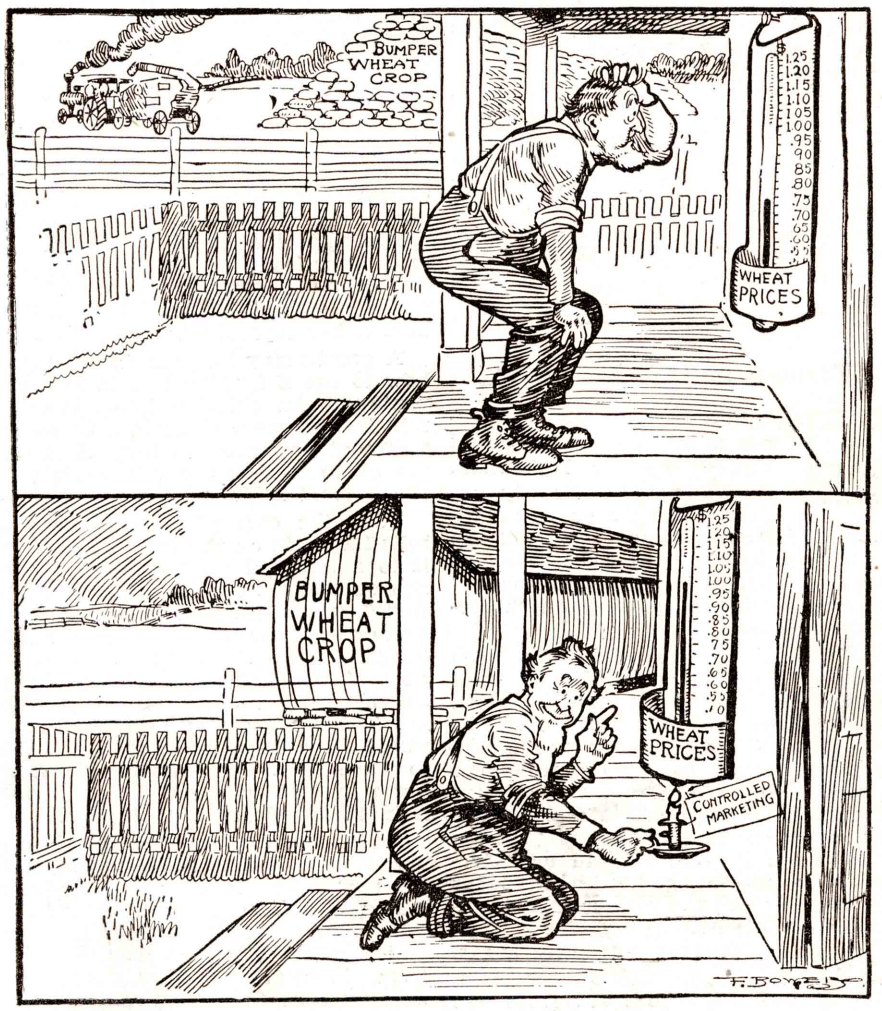
The World's Wheat

THIS number of UP-TO-DATE FARMING contains special matter on wheat production and marketing. Wheat is probably the oldest of all cultivated crops, and as it forms the "staff of life" for all civilized nations, is the most important of all. It was grown extensively in Egypt, in Ancient Persia, and in the valley of the Ganges as far back as history tells us anything. People of all nations depend upon it for the main part of their food. Canadians annually consume an average of nine and one-half bushels per person. The United States consumes five and one-half bushels per person. Some European countries consume about six bushels per person, annually, while in others the amount drops as low as two and one-half bushels. The Chinese, Japanese and East Indians consume only about one bushel of wheat per person in a year.

Wheat is being harvested in some parts of the world practically the whole year 'round. January finds the South American and African wheat being harvested. South America produces about 200,000,000 bushels, and Africa about 70,000,000 bushels. After these harvests are completed Mexico, Asia and Japan garner a total of about 440,000,000 bushels. Then harvesting begins in the southern part of the United States and goes gradually northward until the far northern Canadian provinces finish the work in late summer and early autumn, reaping nearly 850,000,000 bushels. During the same period Europe harvests practically twice as much as the United States and Canada, the total being 1,675,000,000 bushels. Russia alone produces a larger crop than the United States.

It has been our endeavor to give both information and inspiration in this issue to the wheat growers especially. There are great problems to be solved in both production and distribution. These problems are not difficult of solution, except as it is found difficult to interest the growers in them to the extent that they will inform themselves, and then act intelligently on the information.

The Problem of Price



The Inevitable

The era of co-operation is at hand. Nothing else will save mankind from the selfishness, immorality and the extent of misery it suffers today. Nothing else will prevent a repetition of the decline and fall of nations, of which history is full. Let us blindly close our eyes to the facts if we will, it is nevertheless true that only by the sort of equal opportunity and equality and social and business education and making over which co-operation affords can the foundation be laid for an understanding of practical equality and the possibility of democracy in all the joint affairs of human life. The co-operative system is not created but built up. It is economical and it increases production, because each is distinctly interested. It makes equality of incomes and living conditions in proportion to the industry and intelligence of each in doing his trading under equal conditions.

Trusts, syndicates and combines have set the example of the efficiency and economy of co-operation, but have selfishly converted to their own use all its benefits. Competition can no longer be considered the life of trade. On the contrary, co-operation is not only the life of trade, but it is the very life of national existence itself, but it must be unselfish, equitable co-operation. Are the people ready to assist in the great making over of our economic system and national life, or must we have another century of concentration of wealth in the hands of a few, unless perchance a greater calamity shall sooner overtake us?—The Business Farmer.

Shorty's Shortcuts

(By Himself)

Number VI

THRESHING time, like Christmas, and taxes, and other enjoyable matters, comes around once a year. As a rule it hangs around until it wears out its welcome. There is one good feature about threshing, and that is finishing. I don't know but what it is worth all the worry and work just to be able to feel so good when it is all over with. Anyhow we all heave a great sigh of relief when the last bundle goes head first into the vicious buzz of the cylinder, the last pint of grain runs from the spout, the last forkful of straw is dumped on the stack, and the whistle on the engine emits loud and long shrieks of glee. But, did you ever notice what a difference there is in the tone of the same whistle when it calls the neighborhood to assemble in the morning for the day's work? Along about four o'clock it begins to wake up all the roosters, feathered and unfeathered. There is no music in it then. It sounds sardonic, sarcastic, commandeering, and gives us a pain all over. And for fear we may forget that it is threshday over at Wentworth's, it keeps howling and shrieking until we would like to smash the whistle and the engineer with a club. There doesn't seem to be any sense in rubbing it in on a fellow like that.

When threshing on my farm, I always save the job of superintending for myself. Long ago I learned that to have nothing to do but look after things was a pretty big day's work, and that I had no business trying to "make a hand" around the machine. I would begin getting ready for threshing a week in advance, and have everything in complete readiness when the traction engine came puffing into the yard, sending pigs, colts and cattle to the far end of the pasture with tails and heads high in the air, the dog under the house, the cat up a tree, and the chickens into the bushes.

But what I intended to tell in the first place was my scheme for a perfect cleaning of grain. The threshing machine will not do this perfectly without a waste of grain. So I have my seed cleaner, a fanning mill of the most improved type, mounted on a truck, and I take it to the threshing site and place it where the grain runs direct from the machine into the hopper of my mill. I have a gasoline engine that operates the mill, and I put a neighbor who knows how to clean grain in charge, and right then and there I separate "the sheep from the goats." My grain that goes into the granary, or direct to our farmers' elevator, is thoroughly cleaned and perfectly graded, and I have all the

OUR ADVERTISERS—GUARANTEE

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this UP-TO-DATE FARMING stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in UP-TO-DATE FARMING" when writing to the advertiser. Medical advertisements are not accepted.

Entered at the Indianapolis, Indiana, Postoffice as second class matter, under the Act of Congress of March 3, 1879.

Preparing for Next Year's Wheat Crop

ONE of the best preparations for a wheat crop is to plow under a clover sod the previous spring, plant to corn, and follow with wheat.

A still better preparation, so far as the wheat crop itself is concerned, is to plant the clover sod to cowpeas or soy beans instead of corn, giving an application of phosphorus and potash to the cowpeas.

Steamed animal bone, applied at the rate of 200 to 400 pounds to the acre is one of the best fertilizers to use with the winter wheat crop, especially if clover or grass is to be sown in the wheat the following spring.

One of the most important things in making a good wheat crop is to make an ideal seed bed. This means the top three inches of soil must be very fine, and firm, and the soil below must be compact, but not too hard.

Deep plowing of stubble land is not good preparation for wheat unless the stubble surface soil first be disked until fine, then plowed early so the soil will settle before seeding time. This is of great importance if the season should be very dry after seeding.

About the best time to apply fertilizer to the wheat crop, when it follows corn or other cultivated crops, is at the time the spring crop is planted. By the time the wheat is sown it has been thoroughly incorporated with the soil, has become fully available, and will start the wheat off vigorously. Use heavier applications, as the summer crop will use part of it, but will pay well for what is uses.

Wheat after tobacco usually makes a good yield, compared to the natural fertility of the soil. There are two reasons for this. First, tobacco is a crop that is usually well fertilized. Second, thorough summer cultivation is given. If the tobacco crop was heavily fertilized, no additional application need be given in the fall when sowing wheat, unless it be given a light application of dried blood or tankage to supply nitrogen.

There is little profit in applying fertilizers to the wheat crop unless the soil conditions be made right.

Farmyard fertilizer, thinly spread over the wheat field, after seeding is one of the most profitable means of increasing wheat yields The manure spreader should be used always when top-dressing wheat, as it fully doubles the value and area of the application.

Just bear in mind that work spent in double discing stubble ground now, may save a lot of hard pulling and poor work when the time for plowing can be found. This at least will be true should we have much dry weather from now on. And it is certain that any work done with the disc will benefit the soil, regardless of the rainfall prior to seeding.

The more a soil is stirred at this time of year, the more insoluble plant food will be changed into soluble forms, ready for the young wheat as soon as its roots begin to ramify in the soil. Wheat is not what is known as a gross feeder; it is a rather delicate plant, especially in its early stages of growth. It cannot make use of the mineral elements in a coarse condition, so to speak, like corn or oats or rye; hence the importance of thorough cultivation before seeding time to liberate as much soluble plant food as possible.

Farmers and Grain Grading

THE matter of national inspection of grain will come about without further legislation. It will not be directly operative like the present state and exchange systems, but will be conducted by the pure food inspectors who will have the "standard grades" as their guide in passing on "interstate" grain.

But the farmers who have been rushing a great deal of dirt in their wheat shipments to northwestern markets will find that practice will be stopped. The grain from the farms, going forward insterstate from the farmer himself or from the country dealer, will be subject to seizure if it be not of the standard grade, just the same as if it were shipped by a terminal elevator at the head of the lakes or elsewhere to the east or to the seaboard for export.

The new standard will mean a better quality of grain and cleaner grain, but it will have to start from the farm. It will mean buying on the merits of the grain as never before; and that is not going to be pleasant. Screenings will probably not have the value they have had in the past when shipped as grain; and the farmer will have to learn how to utilize their value at home. If he does he will like the new grades—in time; but until he does come to see that it is more profitable to feed screenings at home than to give them to the elevator men in town he is likely to be sore over the new grades. The mixer, too, and the hospital owners will likely find—in time, too— some of their profits disappearing because—in time—the trash will stay on the farm where it belongs, and—in time—the farmers will grow wheat more free of weed seeds, because, they will thus escape the expense of cleaning to make their grain marketable, as of standard grades.

Oh, yes, those who have been clamoring for national inspection—especially the farmers—will have it; but in a different form than anticipated; for it will not be lop-sided, as expected.—National Hay and Grain Reporter.

Improving the Wheat Crop

(By Seager Wheeler)

IN THIS article I shall not deal with theory, but, as a farmer talking to farmers, will take up the practical work of improving grain crops by hand selection and the cleaning mill. There is at present a great need of work of this kind, and it should interest every farmer. There are four million farmers in the United States growing cereal crops, and three out of every four select their seed grain with a scoop shovel only; that is, they take their seed from the threshing machine or granary without making any attempt at cleaning or grading the seed. So you have seventy-five per cent. of your farmers sowing scoop-shovel grain instead of good, clean, plump, sound seed properly prepared. If farmers would only wake up and look after this end of it, both increase in yield and quality would result.

There are two methods by which seed may be prepared before sowing, viz: Hand-selection and fanning mill selection. The two combined are best, making greatest improvement. Of those who pay some attention to seed selection the great majority have adopted the fanning mill method, while very few have adopted the method of hand selection. It is not essential to improvement that the seed be hand-selected, but it is essential that the grain be fanned, for it is practically impossible to make improvement without the use of a fanning mill. The two combined will beat either separately.

A great many farmers do not know how to use a fanning mill to best advantage. An old out-of-date fanning mill has no more right to exist on an up-to-date, progressive farm than has the old, out-of-date cradle a place in the harvest field.

Take the case of the farmer who sells his grain on the market, or ships it to a terminal elevator. The dockage on account of dirt and low grade would, in many cases, pay for a good mill on each car lot shipped. I have it on good authority that the dockage on grain shipped from western Canada this season amounts to over six hundred car loads of feed wheat. It would have been far more profitable to have kept the inferior wheat at home to feed to stock. A good mill is indispensable on a good farm.

As the grain comes from the threshing machine we find the following mixture: Large plump grains, broken grains, shrunken grains, chaff, "white caps," weed seeds, etc. The only grains suitable for sowing are the large plump grains. Now, suppose we were to take this scoop-shovel grain, put it in the seeder or drill, and sow it. We would have to sow at least two bushels to the acre of all ordinary and standard varieties. This would be practically throwing away half a bushel of good feed, for at least one-fourth of the two bushels will not bring forth any increase.

Many farmers who own and use fanning mills seem to believe that when they have run the grain through the mill once, in an ordinary manner, they have done a good job. But on examination it will be found that, although all the chaff, trash, and weed seed has been removed, there still remain broken, immature, and shrunken grain, and a large percentage of small grains. All this should be taken out of seed wheat. Only the largest and best should be used for seed. A little more care, a little more wind, and a little larger screen in the mill will more than repay for the labor expended. It is possible and wholly within a farmer's power to increase present and past yields by this method alone. Increased soil fertility and a better seed bed are subjects taking up the attention of the farmer, but why waste a good seed bed by using poor seed. Good seed and a good seed bed is the right combination.

As it is seldom we find two varieties alike or even similar (in fact, I may say that there are no two exactly alike), each variety has its own characteristic. If the heads of grain are apparently similar, there may be a difference in the grains. Some varieties are tall growing sorts, others shorter in the stem. Some reach maturity sooner than others, many kinds grow round kernels, others long and narrow, and so on. It is easily understood where there is any admixture of these varieties there can not be a uniform crop. One variety of wheat may mature several days before another variety and admixture of early sorts with later maturing varieties means a loss. Where an early sort is sown and there are later sorts amongst it, when the crop is ready to harvest, the late sorts are immature, resulting in an uneven grade and loss in weight. Where there is any mixture of varieties there are differences in the color or shape of the grain, when threshed, it gives uneven quality and lowers the grade. According to the percentage of mixture of different varieties so is the loss. A good sample of grain to weigh will and grade high should be uniform in color, shape and size.

It is necessary, then, if one wishes to obtain big yields and uniform quality throughout, he must adopt a system of hand-selection. This is done by selecting by hand in the growing crops, the best heads from the most vigorous, healthy plants. All that is necessary is to select enough so that when thoroughly cleaned and graded enough seed will be had to sow one-fourth an acre. The next year select again from this plot for another one-fourth acre, and after threshing and thoroughly cleaning the fourth-acre plots' yield, sow it on a larger, or multiplying plot. By thus selecting by hand the superior types each season, one can soon build up a strain of good seed.

There are great possibilities at the hand of every farmer along these lines, if he will take up the work of seed selection. He may reach out still farther and select for stiff straw able to stand up in heavy wind and rains; that will resist rust; that will ripen earlier or later, and so on. But the best system for the average farmer is to make selections of the most vigorous plants, choosing the heads that are large, well-developed and compact. Some heads contain as high as twelve spikelets, some only four. The grains at the tip, and at the base are the small grains. When the heads are short, the percentage of small to large grain is greatly increased, lowering the grade. If, therefore, by selection we can increase the number of spikelets, and thus the amount of large grain to eight or ten, why allow a less number to occupy the land? Again, some plants mature two stalks, others develop five or a dozen. I have found plants that matured fifty large heads, but these will not produce the same another season, as conditions were practically perfect where such a plant grew; but there are plants that will produce more heads than others under equal conditions. It is a matter of virile productivity inherent in the seed, and such plants will produce the largest grain also. Then why have but two small heads of small grain, when we might have four large heads of larger grain?

In taking up seed improvement the first step is to secure seed of a variety adapted to soil and climate, and absolutely pure as to variety. Eliminate all inferior grains by the ener-

Some Editorials

By John P. Stelle

Better Farming, Marketing and Price

A FEW superficial readers are almost ready to conclude that we are not in favor of improved farming and increased production. Such readers are mistaken. We are an earnest advocate of the very best of farming. We want science to have the right of way in agriculture. Not only maintain the fertility and productiveness of the soil, but increase them; and bring into cultivation the waste lands, no matter where they are, so that there may be more room for people's homes. To these ends let the agricultural schools do their best and give them every possible aid and encouragement. Bring the experiment stations to their greatest efficiency and make their discoveries the common property of all soil tillers that the greatest benefits may be derived from them.

But let not this progress all be on one side. The production side is the labor side. It is the side where the slaves were kept in the ancient years, and if progress is only in cultivation and production efforts may be much like they were in the old time past, but called by different names.

We often speak of big crops as being losses to those who produce them, and that is true. That, however, is not so much the fault of the crops as it is of the marketing and distribution. When the supply exceeds the demand the surplus is a loss, isn't it? Or the needed supply and the surplus may be dumped together and the loss thus distributed to all the producers by means of reduction of price.

Improve the farms, increase the yields, and make the crops, but see to the demand also. Keep these equal and thus maintain the price. Farm workers are no longer slaves. They do the work, but in many cases they own the lands—in all cases they own what they produce. It is theirs to use, theirs to keep, or theirs to sell. They are, therefore, business men as well as laborers.

And here is where exception is sometimes taken to our persistent writings, and it is where we except to the general teachings of the schools. They teach but one side of farming; we teach both. We want farmers to sell profitably as well as to produce abundantly. To do that production and consumption must understand each other; supply and demand must have a common level. Under present conditions the thing that will surest bring that about is for supply and demand to find each other. The present method of piling production in market centers to be expensively and poorly distributed or to rot in unused heaps is to wrong both producers and consumers, to discourage scientific farming, to prevent proper soil fertilization, to drive progressive people from the farms, and to bring agriculture into disrepute in the business world.

These are the evils we would remedy. There is a greater demand than farmers know, and there is enough to supply hundreds and thousands who need the stuff. Bring these together. Maintain equitable prices. Cut out the losses in glutted markets. Close the unnecessary toll gates of trade and speculation that rob producers and consumers alike, and then farming will take its place as the one human calling that the world can not do without. It will not then take demonstration trains to create an interest in it, nor county "experts" to teach how to do it. The common ambition of men and women, the desire to get into a good business, the American longing for independence in life as well as in government, will then take care of farming. We are sure the most casual reader cannot fail to understand us.

The Cotton Crop and the Price to Planters

WE HAVE so often presented what we think we have shown to be a fact that the crop reports of the Department of Agriculture are a greater benefit to the speculating buyers than they are to the producers, that we regret to again refer to the matter. But the farmers and not the speculators have a right to the service of that department of government, and our purpose is to secure that right for them. We are amazed that the secretary and the heads of the various divisions of the department so stubbornly persist in doing those things that they must know are not only no benefit to the class for whom the department was ostensibly created, but that they are of great benefit to the farmers' worst enemies, and enable still greater advantages to be taken of the farmers themselves.

We quote from a cotton crop report issued by the department in July:

> The crop reporting board of the Bureau of Statistics of the United States Department of Agriculture estimates, from the reports of the correspondents and agents of the bureau, that the area of cotton in cultivation this year (1913) in the United States is about 35,622,000 acres, the revised estimate in cultivation a year ago, being an increase of 856,000 acres, or 2.5 per cent. The condition of the growing crop on June 25, was 81.8 per cent. of a normal condition, as compared with 79.1 on May 25, 1913, 80.4 on June 25, 1912, and 80.2, the average condition for the past ten years on June 25.

Thus we are informed that there is more cotton in cultivation than there was last year, that the condition of the crop is better than it was a year ago, and that it is better on an average than it has been for ten years. If that is entirely true, what benefit can the information be to the planters? They know how much was produced last year and what they received for it. They know also that increased production will reduce the price, but it is too late now for the farmers to reduce either the acreage or the yield. On the other hand, the information is eagerly sought and promptly taken advantage of by the buyers. The meaning of the report to them is this: There is to be a big cotton crop. There are 856,000 acres more in cotton this year than there was last year, and the condition of the crop is not only better than it was last year, but it is better than it has been, on an average, for the last ten years. Therefore, be careful how you buy. If there is still cotton on the market it is better for you to reduce the price, for it is sure to go down when the new crop comes in; and specially make your arrangements to pay lower prices next fall.

That is exactly the way the buyers understand the report, and upon that understanding they take prompt action. It not only reduces the prices paid the planters for the growing crop, but it reduces the prices paid for what is still unsold of last year's crop. We have many times appealed to the Secretary of Agriculture to consider these effects, but apparently all to no purpose. We hoped a change of administration would result in a change of this palpable play into the hands of the buyers to the almost unfailing loss to the producers, but the mill still turns and the same grist is ground out.

Our hope, therefore, returns to the farmers themselves. They labor under manifold disadvantages, and so long as prices are made by seculating boards thus aided by official reports, they may expect their profits to dwindle year after year. They must unite to manage and control their own business.

The Currency Problem

WHATEVER record may be made by the present national administration, and whatever the final verdict of the people and history may be concerning it, it has fearlessly taken up two of the greatest problems the nation has. These are the tariff and the currency problems.

The currency question is truly a vital one. It can not be denied that under existing laws a few great financiers (so-called) and wealthy corporations control the circulating medium of the country; and it is another undeniable fact that those who control the money of a country control its national values including its labor products.

This great question, like the tariff, should be handled prudently. It may not be much compliment to our government and its rulers to say that the present power over the country's money is such that danger attends radical measures however honest and sincere the lawmakers may be or how much they may be in the interest of the people.

There is not a doubt but that a few men and corporations could any day withdraw money from circulation and create a financial panic that would destroy values, stagnate business, and paralyze the industries of the country. It is unfortunate that conditions are such that the lawmakers of America need to fear or have a dread of that class of people, but it is a fact nevertheless. We ask them, therefore, to be careful and prudent. Rule for the people, but do it in such a way that the least jar may be felt when the change takes place.

There is no doubt as to the changes that should be brought about. The money of the country should be an unquestionable and steady measure of value, and there should be enough of it to transact the business of the country on a cash basis. Whether of metal or paper, it should be a legal tender, and its volume should be regulated by national law. The quantity in circulation should be controlled by the government, and its issue and withdrawal should be such as to meet the varying demands of business, or to counteract the hoarding or withdrawal from circulation to create a stress or panic in the interest of those who constitute themselves a "money power."

Such reforms will be opposed by those who now control the money and may oppose them to the extent of bringing ruin upon the country; and here lies the great necessity of being prudent in the treatment of this question. The rights of the people are paramount and their welfare should be the one thing ever kept in sight by the law-making power, and that itself means prudence as well as wisdom in handling all great questions.

Parcel Post in Trouble

ON JULY 20, Postmaster-General Burleson issued an order making important changes in the parcel post service in first and second zone territory, which will affect the zone boundaries, the rate of postage and the size of parcels as follows: The first zone is to include only the territory served by a given postoffice, by carrier or rural route. The second zone will include all territory not in the first zone, within a radius of 150 miles from a given postoffice. The rate of postage applicable to these two zones only, is reduced in the first zone to five cents for the first pound and one cent for each additional two pounds; in the second zone, the rate is changed to five cents for the first pound, and one cent on each additional pound. This will make the rate on the present eleven pound package, ten cents in the first zone instead of fifteen cents as heretofore, and in the second zone will reduce the rate on an eleven pound package from forty-six cents, as now, to fifteen cents, a saving of thirty-one cents. The maximum weight of packages in these two zones is increased by the postmaster-general's order from eleven pounds to twenty pounds, making it possible to send a twenty-pound package 150 miles for twenty-four cents, whereas heretofore two packages would have been necessary to transport the twenty pounds 150 miles, the cost being eighty-four cents, a saving of sixty cents.

This is a long step toward making parcel post of great value, especially to farmers. But this order has stirred up a hornet's nest in Congress. Members of the postoffice committees in both House and Senate declare the postmaster-general is acting prematurely and without proper anthority, and that the proposed change will cause the postoffice department an enormous loss.

The law, as enacted, plainly gives the postmaster-general the right to make just such changes, with the consent of the Interstate Commerce Commission.

Not enough is known, as this is written, to form a correct idea as to whether or not the postmaster-general has acted wholly within his rights, and is justified in ordering the changes. It would seem, however, that the department should be able to determine accurately whether or not the changes are desirable from every point of view; also, that the reduction in rate and increase in weight for the short haul involved are both desirable and justifiable. It is quite possible that the proposed changes draw real blood from the express companies, which may account for the commotion in Congress. We shall watch the proceedings closely, and report further in our next issue.

Greater Credit for Farmers

Much is still being said about rural credit. Our idea is that if farmers could get steady and equitable prices for their stuff they would not have much need to borrow money, still, when farmers need money they should have the same privilege of getting it that other business people have, and they should get it at just as low a rate of interest. But there is danger in land bonds and mortgages like transferrable stocks for financial investment. Many manufacturing concerns are working on bond-secured capital. The bond owners control the concerns. Most of the railroads are built and operated in the same way. The bond owners control the railroads. If the farms and homes of the people were covered by marketable and stock-jobbing bonds, the owners of the bonds would some day own and control the farms and homes of the people—an immeasureable calamity.

Comment by the Editor

ONE of our old time friends has written us that the Country Contributor's page makes good reading. That is a compliment we cheerfully pass right along to those who merit it fully, the contributors themselves, and we want to say now that on every farm where this paper is read, one crop has been grown this year that is the most profitable crop on that farm. What the crop is, and what made it the most profitable, and how the owner knows it is, are the things worth telling.

W. R. C. got a highly satisfactory profit from the seed of co-operation that took root in his mind, and is now bearing good fruit. We always rejoice to learn of co-operative successes. Here again it is all in the management. The Bigstone Farmers' Elevator is conducted on the right plan, and when this is done, success always comes. There was seldom, if ever, a co-operative failure when the blame for failure could not be justly laid at the door of the members themselves.

Our Missouri neighbor who has raised a boy worth bragging about offers some very sensible advice to every farmer who has boys to raise. If his methods were more commonly employed, there would be more happy homes and prosperous farms than there are today.

C. F. S. took rather long chances on profiting by holding hogs for so long a time, though he could hardly lose more by holding than by fattening to sell for a low price. One thing about the hog business is that pigs can be kept in a thrifty growing condition on inexpensive feed, and when in this condition can be quickly put in prime condition for the market when the price is right. Profit in farming is always more a matter of good judgment than of hard work.

Our Arkansas subscriber has done well with his potatoes, but we advise him to change the land another year. Replanting land to potatoes tends to invite plant disease. We note with pleasure that L. C. believes in controlled marketing, and follows it with profit.

Notice how all these most profitable crop folks lay stress on good and thorough cultivation. R. E. H. outdone all his neighbors in results because he outdone them in management. Sorry he didn't tell how much he made, clear profit. A goodly sum, no doubt, for everyone who eats roating ears nowadays has to pay well for good ones.

Kansas is a good wheat state, yet F. S. B. gets nearly double his wheat income from his corn fields. Of course, the corn expense is greater. Counting his income as wages per day, possibly his wheat paid as high wages as the corn. Have you figured this out, brother?—The Country Contributors' Editor.

Business Methods Pay

(First Prize)

A merchant declares his most profitable transaction to be where he has bought at a bargain and sold at a profit, or in other words, where the most money is made with the least trouble. Such a transaction is said to be the most profitable.

If I have the right idea of profits, the crop I have made the most money on was a grain crop. I delivered at the Farmers Elevator, at Big Stone, S. D., my crop of grain. I received the price per bushel for my grain when I sold it there that I could get anywhere tributary. Then at the close of the year I got in addition 8 per cent. dividends on my money that I had invested in shares in the elevator, and besides this a net extra profit of two cents a bushel for the grain I had delivered at this elevator.

I consider the act of delivering my grain at the Farmers Elevator made me more money at less trouble than any other work I have done in connection with farming. The most profitable thing to do in connection with a crop is to look out for the selling of it.—W. R. C., S. D.

Our Country Contributors

Semi-Monthly Prize Letter Competition:
Subject: My Most Profitable Crop

FIRST PRIZE	$3.00
SECOND PRIZE	2.00
THIRD PRIZE	1.00

NOTICE TO SUBSCRIBERS

This department is designed to induce subscribers to contribute accounts of their most profitable crops. For the three best letters received each issue, the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell the story of what you consider your most profitable crop in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

The "Crop" Worth While

(Second Prize)

Webster's definition of profitable is, "useful, beneficial—for profit; any advantage, benefit or gain, good accruing to benefit."

My son is of more good to me than all the crops I have ever raised; of more benefit than all the stock I ever sold. He stands ready and willing, is kind, generous, good natured, appreciates a joke on himself as well as on others, and takes an interest in all our affairs. With him it is "Pop, Mother, and me."

Some farmers will boast big crops raised, of some great sale of stock they have made, of the money in the bank, of the fine farm they have bought, and paid for.

Farmers, have you cultivated your sons as well as your crops? Have you been as careful to raise that bright baby boy to future usefulness as you have that slick colt in the pasture? Think well the difference in the value of the finished product, a fine horse, a few hundred dollars, or a fine, manly, pure, clean young man. The horse may eat out of your hand. You may have treated him kind and true—will the boy come and stay by you or have you given him less kindly treatment than the colt and now he says the town for him. You may say you have given him a good home, good food and clothing. True; but didn't you do as much for the colt? Isn't the boy worth more? When he went to work for you was it to the tune of "go, boy and do this or that," or was it "Well, son, shall we do this?"

I treat my fourteen-year-old son as I want to be treated. I believe in teaching a boy to work, and to work hard when the occasion requires. A boy who has learned the reason for and the value of hard work will not loaf and bum, but the man who attempts to drive a boy on the farm usually drives him away from it to the town.

Don't think you can fool the boy. You may give him a half-dead colt to raise as "all his own," and when it is grown sell it and pocket the money. Don't think the lad will forget; he never will. You may gain a money benefit but it will bring about a much larger loss—be true to the boy; treat him fair and honest and it will pay better than any crop you can raise.—E. A., Union, Mo.

High Prices for Holding Hogs

(Third Prize)

The crop that made me the most and easiest money was a crop of hogs raised and marketed two years ago this spring. My plan for raising hogs is to save ten to fifteen good gilts and breed them in December so the pigs will come when the weather is warm. These gilts will usually raise from fifty to sixty pigs, perhaps not so many as older sows, but I am getting some growth on the gilts that I would not get on the old sows. Fifteen of these young sows will raise all the pigs I can handle.

The year I refer to was an exceptional one. The season before hogs were plentiful; the price was low, while corn was around eighty or ninety cents a bushel, hogs not being worth over four cents. I knew to feed hogs on high priced corn and sell for that low price would yield a loss, so I concluded not to feed for the market. I fed lightly on corn and clover hay and when fall came I bred the sows again for the next spring, when I had a bunch of about one hundred and twenty-five in all. With corn still high and the price of hogs not much better than the year before, nobody seemed to want hogs. Farmers could buy their meat already fattened for less than they could feed hogs. In June a good soaking rain assured a good corn crop. Corn dropped from ninety cents a bushel in the spring to thirty-five cents. I had some old corn on hand and not being able to resist the ninety-cent price, I fed my hogs as little as I could to keep growing until the new crop came on, and sold the corn in the spring at the high price. I started to feeding a part of the hogs in August, being careful not to feed too heavy on the new corn at first. By the middle of September I had hogs ready for the market, and began dressing and selling them to local butchers. The first sold brought nine and one-quarter cents a pound, dressed; but I received $10.75 a hundredweight for the bulk of my hogs on foot, which was the best price I ever received. I sold about $1,500 worth of hogs out of the lot and as I raised the corn and hogs also, it was practically all net profit.—C. F. S., Illinois.

Corn Pays in Kansas

Last year I had out two hundred acres and from them raised a little over seven thousand bushels, or an average of thirty-five bushels an acre, and corn was selling at forty-five and fifty cents a bushel, which made me an income of over $8,000, or $15 an acre, while wheat averaged about twelve bushels and sold as low as seventy-five cents to eighty cents, which made about $9 an acre. I always keep a nice bunch of cattle, twenty-five to thirty head, and they make enough manure so I can manure the land every five years. I cut my stalks in the early spring and double disc the ground and begin planting about the 20th of April, taking a lister and four horses. I list about six inches deep and make the furrows from three feet to three and one-half feet apart. I use the edge drop planter because it only drops one kernel at a time and plants the kernels from eighteen to twenty inches apart, which is plenty close enough for this part of the state, and when the corn is three and four inches high I take a double-row disc cultivator and throw the dirt away from the young plants which enables the sun to shine on them and gives them plenty of air. I then harrow and in a few weeks or ten days, disc again, but this time throw the dirt toward the corn, making the ridges level in fifteen days. I cultivate and the corn is laid by. Last but not least I take a five-tooth cultivator and after each rain go through it again and by so doing we are almost sure of a good crop even during the six weeks' dry spell we had here in 1911, the corn averaged twenty-five bushels an acre.—F. S. B., Kansas.

Two Potato Crops a Year

Last August I planted one acre of potatoes, fertilized with commercial fertilizer, costing $10. Got a good stand, cultivated five times, dug seventy-five bushels of potatoes, and stored them until the middle of December, when I sold them for $1.25 a bushel. The crop netted a profit of $65. Besides, we had potatoes all the winter.

The following spring I planted to potatoes again and from it obtained sixty-two bushels, which I am holding, believing they will be a better price later on. I make it a rule to hold until mid-winter. I get a better price by so doing. Figuring all around, potatoes are my most profitable crop.—L. C., Ark.

Field Peas in Idaho

Peas are my most profitable crop. A great deal of the luck in raising a good crop depends on the preparation of the seed bed. I plow the land intended for peas early the previous fall, and as soon as dry enough in the spring I harrow thoroughly so all weed seed will sprout and grow. After I do this I let it lay for about three weeks and when all weed seed are started I double disc and harrow and prepare a fine level seed bed. I sow the peas with a Buckeye disc drill and follow with a plank drag. This leaves the surface of the ground level so when cutting there are no ridges to clog the mower knife.

I irrigate three times during the season. Last year my peas (of the Admiral variety) gave forty-five and one-third bushels an acre, which sold for two and one-half cents a pound, bringing $68 an acre. Yours for better farming—Tom Yeamans, Idaho.

Roasting Ears

In the spring I had an acre of ground plowed deep and harrowed well. The second week in May I planted a few rows of sugar corn along one side. One week later I planted a few more rows and continued planting every week up to the 10th of July. By planting this way I had corn coming on steadily and none was wasted.

I cultivated to keep a good dust mulch at all times. The corn grew like weeds and was ready for use long before any other around here. The ears were large and there were plenty of them. My customers were glad to get such corn and willing to pay a good price for it. I made more off of this little patch by taking good care of it than my neighbors made off of two or three acres.—R. E. H., Ohio.

Cane Syrup at a Profit

Two years ago I had three acres of new ground just cleared. I plowed it and sowed cane seed. I harrowed with a common harrow two or three times and let it go until September. I got one hundred gallons of nice syrup which brought fifty cents a gallon, and twenty bushel of seed which brought $1.50 a bushel. I was not out any cash and received $81.50 for about a week's work.—T. P., Missouri.

Our Market Review

Semi-Monthly Review of Crops, Market and Trade

CROP reports are, in the main, good but there are few big records. The crops are just such as could all be marketed at splendid prices if there would be a centralized direction of supply. Without this some crops have brought too little money to net the producer a fair profit and this will continue through the season. New potatoes, for instance, were very low for a couple weeks, when the price advanced 30 cents a bushel. Central controlled and directed marketing could have fed the supply to the market so as to have maintained the price steady and sufficiently profitable every day. Peaches too have had their periods of oversupply on some markets and prices demoralized. The peach crop, as a whole, is not a large one and the only reason that any of them go for less than they are worth is the ever present fact that marketing is all guess work—a gamble.

Winter wheat has made a new record as the final report will show. Spring wheat, over nearly all the district has had much needed rains and indications are for a moderate crop, probably 75,000,000 bushels less than last year's. Reports on the corn crop are generally good. In Indiana the crop rarely promised as good at this season of the year. Nearly all sections report excellent cotton crop conditions. While the fruit crop, apples and pears, is not as flattering the country over we predict the total crop will be even larger than last year because of the enormous increase in bearing trees. The visible supplies in our table date back one week farther than usual, because the last published report was not available From private advices the visibles of wheat and oats have increased considerable since this report. Price of wheat is down 2 to 3 cents a bushel since our former report and is 11 cents under a year before at Chicago to 20 cents lower at Cincinnati. Corn in 1 cent hgher in Chicago to 5 cents higher in Kansas City, but is 10 to 15 cents below the price a year ago. Oats fractionally higher compared with 10 cents plus higher a year before.

We want to center attention on wheat. If comparatively few more wheat farmers would hold their crops, or part of them, instead of dumping them on an over-supplied market there would be such a change come in the markets and prices as would make the world take notice. Marketing, it's more correct to say "dumping," has been free and the price has been put down to gather this distress wheat in. As far as such farmers are concerned we have no particular sympathy for them, and they are not entitled to any. But they make a condition that injures for months the wheat grower who is inclined to market sanely. For instance they build up a great surplus that will be used as a club to beat down the prices for months to come. To plead that the people who are marketing excessively now have no alternative, is not a good excuse. The time was when it was more difficult to store grain, but now ready-made grain bins or elevators can be purchased at a low cost and will last many years. If it is a matter of money for some, they can store their grain and borrow money. Or, if those would

"You better get your wheat in as quick as you can before the price goes lower."

Question: But why does the dealer want it if he really thinks the price will go lower?

hold who can afford to hold, then those who must raise money could sell without oversupplying the market. This matter of marketing will take care of itself if each person will set his price at $1 a bushel and those who can hold would hold. We guarantee that the price would soon go to $1 and by keeping the price in mind and asking it all would get it. If wheat growers do this, and the same rule will work for other crops, there would be no opportunity for grain speculation. Then, instead of a law to prohibit gambling in grain the farmers would break up the practice by making prices stable.

ADVICE: Hold wheat for higher prices. Market corn gradually. Country points usually pay more than city prices. We will publish a notice of corn for sale if the price is set and if it is an equitable price, because we daily have requests for corn or where to buy it. Hold oats for higher prices. Hold barley. Market cotton gradually. Allow early potatoes to grow to good size then market. Market old beans. Hold hay and when you sell be sure you get what it is worth. Country buyers frequently offer a couple to several dollars a ton under what they can afford to pay. Better become a member of the F. S. E. and market direct. Broom corn is uncertain. We give no advice whether to hold or market.

All crops should be marketed through the Equity System. It avoids many of the old toll gates and what they charged goes into the producers' pockets. How to use it can be learned by addressing Farmers Society of Equity, Indianapolis, Ind.

What follows tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on July 5, 1913, with comparisons, are shown in the following table: (The sign — before figures means decrease, X means increase.)

	July 5, 1913 Bushels	Change from 1 wk. before Bushels
WHEAT	31,862,000	—262,000
CORN	13,853,000	X 309,000
OATS	17,626,000	X 848,000
BARLEY	2,664,000	—240,000

The visible supply of wheat in Canada on the same date was 15,806,000 bushels. This is 1,978,000 bushels less than two weeks before and 2,433,000 bushels less than a year before. The visible supply of oats was 9,510,000 bushels on the same date, which is 483,000 bushels less than two weeks before and is 4,096,000 bushels more than a year before.

Closing Prices of Cash Grain

WHEAT, No. 2 RED

	July 21	2 Wks before	AYr. before
Chicago	87¼ @88	89 @91	99
St. Louis	84 @85	85½ @87	99
Kan. City	81 @81½	84 @87	93
Cincinnati	88 @89	89 @92	1.08
New York	95 @96¾	96½ @98	1.06

Minneapolis—Spring wheat, No. 1 hard, 91⅝c; No. 1 northern, 89⅞ @91⅝c. Two weeks before, 92¾c and 91¼ @92¼c respectively. A year before, $1.04⅝ and $1.04⅛ respectively.

CORN, No. 2 WHITE

Chicago	64 @64½	63 @63¾	76
St. Louis	68 @68½	64 @64½	77
Kan. City	@66½	61 @61½	79½
Cincinnati	68½ @69	66 @66½	81½
New York	71	68¾	77¾

OATS, No. 2 WHITE

Chicago	43	42¼ @42½	53½
St. Louis	42 @42½	42½ @43	54
Kan. City	41 @41½	41	45½
Cincinnati	44 @44½	45½ @46	56½
New York	46	48	59

Future Grain Prices

Chicago grain futures closed on July 21, 1913, and two weeks before, as follows:

WHEAT—July, 86½c; September, 87¼c; December, 90⅞c. Two weeks before, 88⅞c, 89⅜c and 92¾c respectively.

CORN—July, 62⅛c; September, 63¼c; December, 60¼c. Two weeks before, 60⅞c, 61⅞c and 58¾c respectively.

OATS—July, 39¾c; September, 41¼c; December, 43¼c. Two weeks before, 40¼c, 42⅛c and 43⅝c respectively.

Cotton

New York, July 21—Cash cotton closed middling upland, 12.40c; middling gulf, 12.65. The price is 15c a cwt higher than two weeks before. A year before the price was 12.80c and 13.05c respectively.

Chicago Produce Market

July 19, 1913

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets address the Farmers Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	60	100	50
Tuesday	50	40	35
Wednesday	50	50	20
Thursday	60	35	35
Friday	40	25	20
Saturday	20	15	40
Total, 6 days	280	265	200

Market was quiet but firm at recently advanced prices. Owing to unsatisfactory transportation service, many cars expected early in the day had not been sighted at noon. Business was restricted on that account, but buyers were looking around for nice stock.

Per barrel, Virginia, white, Cobblers ..... $2.65@2.75
Per bu. in bulk, Virginia Cobblers ..... .90@ .95
Per bu. Kaw Valley, Early Ohios .80@ .85

The price of Virginias is 75c a barrel and 30c a bushel higher than two weeks before.

BEANS—Market for pea beans continues weak, and the feeling for other descriptions is also easy. Supplies are not heavy, but there is only limited inquiry and buyers show much indifference.

Pea Beans—
Hand-picked, choice ..... $2.00@2.05
Stock faulty, lower ..... 1.25@1.75
Mediums nominally about same as pea beans.
Red Kidneys, choice ..... @1.90
Prime ..... @1.75
White Kidney nominal ..... 3.00@
Brown Swedish, long ..... 1.00@
Round ..... 1.25@

The price of pea beans is 20c a bushel lower than two weeks before. Red kidneys 10 to 20c lower and others unchanged.

HAY—Receipts, 534 tons. Offerings light and demand good. Market firm.
Choice Timothy Hay ..... $15.50@16.00
No. 1 Timothy ..... 15.00@15.50
No. 2 Timothy ..... 13.50@14.50

The price is $1.00 to $1.50 higher than two weeks before.

STRAW—Rye straw quotable at $8@8.50. Oat straw at $6@6.50. Wheat straw $5@$5.50.

Rye and oat straw are unchanged to 50c a ton lower and wheat straw is 50c a ton lower than two weeks before.

Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
—3,078,000	X 8,148,000	X 2,767,000
—1,889,000	X 4,911,000	— 679,000
—1,029,000	X 13,536,000	X 1,583,000
— 177,000	X 32,000	X 1,671,000

BROOM CORN—Buyers are taking hold cautiously. The price is Illinois, $100 to $120. Oklahoma, $50 to $90 a ton. Oklahoma is unchanged to $10 a ton higher than two weeks before.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week Cases	Last week Cases	Last year Cases
Monday	14,536	19,219	14,061
Tuesday	16,685	16,037	15,361
Wednesday	16,755	15,335	9,741
Thursday	12,059	12,977	8,185
Friday	11,817	14,309	12,015
Saturday	12,394	17,171	11,575
Total	84,246	95,048	70,938

Receipts, April 1, 1913, to July 19, 1913, 2,102,397 cases.
Receipts, April 1, 1912, to July 20, 1912, 2,057,976 cases.
Receipts, April 1, 1911, to July 22, 1911, 1,756,278 cases.
Receipts, April 1, 1910, to July 23, 1910, 2,056,592 cases.

Continue to rule about the same, with fine eggs firm and poor ordinary and heated stock dull at irregular prices.

Miscellaneous lots, cases returned, 9@14c, depending on quality.

Ordinary Firsts quotable at 14@14½c.

Firsts quotably 16@16½c, wtih buyers bidding strongly for the offerings and occasionally have to exceed the top figure for a particularly desirable lot.

Dirties — In good supply and in only moderate request. Quotable at 5@10c, depending on quality.

CANTALOUPE or GEMS — Market steady for western fruit, but Indiana and Illinois melons were quoted a shade lower. Shippers offered only 40 cents for best baskets, and sellers had to depend on this demand after retailers left. The melons from Indiana are of unusually fine quality this year, and many buyers are taking them in preference to the Arizonas, because of the lower prices. Several cars came in from Decker, too late to be sold, and had to be held over until Monday.

WATERMELONS—Receipts were reported at 14 cars. The quality was unusually common, the Melons being small and stale looking as though diverted from some other market. Lower prices had to be accepted to effect sales.

PEARS—Arrivals from Michigan were light and demand slow.

PEACHES—Market was easier. Receivers were loaded with liberal offerings, and had to effect a clearance in shorter time than on any other day. Trade was chiefly in choice Elbertas.

APPLES—Conditions in this market were about the same as they have been of late. Prices were firm for fancy fruit and easy for common kinds. Demand was limited because of its being Saturday, but receipts were more moderate. The trade is taking more to barrel stock and it is getting to a point where buyers will be willing to pay $4 to $5 for fancy Duchess and Transparents if they are packed in 3-bushel barrels, packed straight and are not overripe. Apples must also be of good color to attract this trade.

VEGETABLES

BEETS—Not much doing today. There is an ample supply for the requirements.

CABBAGE—Market well supplied with home-grown and easy.

CARROTS—Quiet and easy. There is an ample supply of home-grown.

CAULIFLOWER—Fancy would sell well but there is no really fancy stock coming.

CELERY—Receipts were smaller, about 2,600 boxes. There was very little demand.

CUCUMBERS—Market was oversupplied for Saturday, receipts being 7¼ cars. Early sales were at steady prices, but holders had to make concessions to clean up.

GREEN PEAS—Supply was higher today, but there was not much demand. The market was quiet and easy.

GREEN ONIONS—Quiet and easy. Not much demand on Saturday, and a moderate supply sufficed for all needs.

LETTUCE—Good sale when fancy. A little of the Eastern meets the requirements of best buyers and sells readily. Total supply consists chiefly of poor, leafy or heated stock that is dull and weak.

ONIONS—Market easier under increased offerings. A car of California onions on the market today. It met with fair sale. Louisville onions were slightly easier. Imported are moderate sale.

PIE PLANT—Sells slowly. There is a good supply and the market is easy.

PEPPERS—Receipts rather exceed requirements. The market does not clean up and some remains until poor and worthless.

RADISHES—Supply moderate today, but there is not much demand.

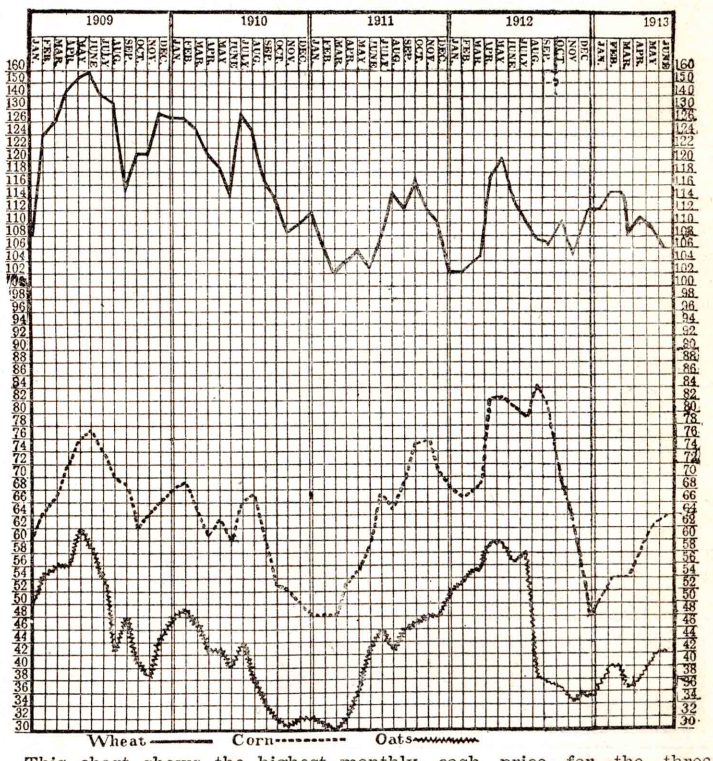
SQUASH—Supply is increasing, and market becoming weaker. Demand is very narrow.

SWEET CORN—Market weak. Receipts were 3 cars. Supply consisted chiefly of Illinois corn, which is mostly small and wormy. The Louisiana in barrels is dry.

STRING BEANS—Some fancy Mississippi green beans received sold well. The Baltimore and the home-grown were ordinary and did not sell so readily. There were no fancy wax beans offered. The home-grown were ordinary and easy, and Illinois baskets were coarse.

TURNIPS—Fair sale and steady. Supply of home-grown is ample.

TOMATOES—Receipts were 8 cars. If they had been fancy they would have sold at steady prices, as buyers were lookink for fancy stock. As it was, prices had to be reduced to attract cheap trade. The Tennessee are running very uneven; scarcely any of the Illinois are fine, and most of the Texas are ordinary. St. Louis are coming packed green and ripe mixed. The Baltimore included soft and green in the same package.



This chart shows the highest monthly cash price for the three leading grains at Chicago, for a period, 1909 to June, 1913, inclusive. The figures on right and left margins are prices in cents. The highest and lowest prices for June were as follows: Wheat, high, $1.06, low, 93c; corn, high, 63¾c, low, 59¾c; oats, high, 43½c; low, 39c.

Advertising Benefits You

Advertised goods must be good, if the manufacturers continue in business. Inferior goods may be advertised for a time but sooner or later the "chickens come home to roost" and failure is the result. Intelligent advertising is the best and cheapest way of finding a market that has yet been devised by business men. If goods are not sold by advertising they must be sold by salesmen alone, which is expensive and slow.

It may be taken as a safe rule that nationally advertised goods give the buyer more value, dollar for dollar, than goods not advertised. Advertisers in UP-TO-DATE FARMING are guaranteed. Write to them and then you will learn why you should buy from them.

THE EVOLUTION OF THE HARVESTER

THERE are several distinct types in the progress of the grain harvester—seven specific tools cutting grain. The writer has personally used five of these different classes of harvesting machines in harvesting crops covering a farming experience of thirty years.

The first type was the hand sickle, which was probably in use for thousands of years. Then the so-called cradle was invented, a vast improvement over the hand-sickle. After the cradle came the hand-rake reaper, the first harvesting machine to employ horse-power. Later this type was modified by providing a self-rake attachment. The next improvement was a machine that carried two men who "bound" the grain by hand in bundles, as it was delivered to them on a platform. The next step was the self-binder, now in common use. The seventh type is a machine used on the bonanza wheat ranches of the Pacific coast states, which cuts, threshes and sacks the grain at one operation. At a recent picnic near DeKalb, Ill., given by an "Old Time Harvest Society," these old methods of harvesting were demonstrated by people who had done the same work years ago when no other means were at hand. The exhibition began with the demonstration of the sickle, which was wielded by an old lady who in her youth had taken her place in the harvest fields and garnered grain with that implement. Then the cradle came into play, and old time experts "cradled" with surprising dexterity. The hand-rake reaper, the self-rake, the Marsh harvester and the self-binder (the latter drawn by an autocar) followed in regular order. The exhibition was unique and complete except that the western harvester and thresher combined was not present. Being limited to large ranches where grain can be left to ripen perfectly in the field, the latter machine is not properly a common method of harvesttng but may later become so. This, however, seems to be about the only change of method within the realms of practicability and further progress, except to improve the present type.

IMPROVEMENT OF WHEAT

(Concluded from Page 2)

getic use of a good fanning mill. Next, have the seed plot in good condition, clean and free from weeds. Summer fallow, or new breaking is best. Make the plot long and narrow, and watch carefully when the wheat is heading to pull out weeds or false types of wheat. The grain should become ripe before selections are made. Go through and select the best heads from the best plants, and select enough to fill three or four grain bags compactly. Thresh on a floor with a flail, in the bags, and then clean thoroughly in the fanning mill. Heads should be selected from the inside of the plot, heads that are compact, not open, good solid heads well filled from bottom to top, and as nearly alike as possible. These heads are to sow a one-fourth of an acre seed plot the coming year, and the rest of the plot harvested and sown in a larger plot to furnish seed for the crop the following season. This system should be kept up, year after year.

In a recent seed grain competition wheat was increased ten bushels an acre; oats, twenty bushels an acre by this method, an increase largely due to seed selection.

I will now give a little of my own experience, covering six years. I began with no knowledge of the work, but it appealed to me. I was growing a high-bred variety, but not fixed as to type. Some heads had white chaff, others yellow, the grain being both red and yellow in color. It was a grand mix-up. I had to go after the color of the grain, and could not determine it by the color of the chaff. But now my wheat is true to type, as to color of both chaff and grain. In 1910 my seed plots gave forty bushels an acre, while the balance of the field went twenty-eight bushels an acre. In 1911, my seed plot gave me fifty-three bushels an acre, and the multiplying plot yielded forty-eight bushels an acre. Last year (1912), a bad year, my seed plot gave me only forty-four bushels an acre, and the multiplying plot thirty bushels.

Thus it is seen that it is possible to increase the yield by seed selection. If I can raise the yield ten bushels an acre in three years, why should not farmers anywhere in the United States do the same? Results obtained in my own case were extremely gratifying, and in all this work the fanning mill played an important part.

Free Wheat and the Cost of Living

Blanchie: To the cost of wheat in a loaf of bread add the margin of the country buyer, the cost of transportation, the cost of storage, the enhancement of price because of speculation, the miller's margin for grinding the flour, and his expense of selling to the wholesaler or jobber, the wholesaler's or jobber's margin, the baker's cost and profit for baking the bread, and his cost to distribute the loaf to the retailer and the retailer's chare for selling it to you. From the sum subtract the price you will pay for a loaf after the duty is removed from wheat, and you will have the effect of free wheat on the cost of living. The difference will be .00.

Not So Troublesome

"I wish I was a star," said the eager young fellow who was trembling to say the right word.

"I would rather you were a comet," said the girl he was so anxious to please.

"Oh, why? asked he with bright anticipation.

"It is a long time before comets come back!" was the reply, and the door soon opened and shut.

What He Raised

"Did you have any luck with your garden in the back yard?"

"No, I couldn't raise anything but complaints."

This WHITE
Combination Car
Will pay you back $2250
Whether you own a car or not—this—is the Motor Car you have always wanted—the Car that would do your work as well as your play—the Car that would last for years.
The work and play this car will return to you is about equalled by *four* low priced touring cars. That would mean an investment of between $4,000 and $4,500, as against $2,250 for the White Combination. Any *one* of the *four* would cost more to run and repair than *one* White, and would have to be replaced three or four times over before the White really began to wear.
That is why this White Combination Car at $2,250 is the best motor car investment you can make. Let us send you specifications and tell you what the Car has done. Are you ready to discuss the matter?
THE WHITE COMPANY
834 D East 79th Street, Cleveland, O.

BEST METHODS OF WINTER WHEAT CULTURE

THE winter wheat farmer who would do all in his power to insure the success of next year's crop must give most careful attention to laying the foundation. The seed bed is the first consideration, after, of course, the selection of seed that has in its germs the possibilities of prolific production.

Prepare the seed bed early, the earlier the better. Not too deep, as the crop makes its growth while there is usually plenty of moisture in the soil, especially humus-filled soils. To stand the winter well, and get a strong start in the early spring, a good root system must be developed, and this is possible only with a fine, firm, compact but mellow seed bed.

Early plowing, allowing the subsurface to settle before seeding, is best. Then just previous to seeding harrow, pulverize and roll the top three inches until in perfect condition. The first rootlets will then have ideal conditions for strong and rapid development.

When the winter wheat crop is to follow a crop of spring seeded grain, disc the stubble as soon as the early crop is removed, and plow as soon as possible thereafter. Harrow the field each two weeks until seeding time. This semi-summer fallow will add materially to the yield. The bi-weekly cultivation should be shallow, one or two inches deep is best.

The best time for seeding depends upon location. Sow early enough to secure good growth before winter, and late enough to avoid the Hessian fly. The quantity of seed also depends first on the soil. On rich soil less seed is required, as heavy seeding on rich soil tends to induce lodging. The variety of wheat, the size and cleanliness of the grain also must be considered. With ordinary varieties on ordinary soils, one and one-half bushels of plump, selected and thoroughly recleaned seed is a safe rule.

Fertilization is a large, also a varied problem. Commercial fertilizers, if wisely selected and properly used, will be found profitable on the great majority of soils. No rule can be set down for the use of commercial fertilizers. So much depends on the soil, whether clay, or loam, or sandy; the crop grown the previous year; the crop to follow; the price of the plant food in the fertilizer itself. The use of commercial fertilizer is an individual problem for every farmer, and one he must solve for himself with the help of the experiment stations and the agricultural papers that are devoted to his section.

Now is the time to begin work with the crop of 1914, and the profit to be made depends largely upon what is done during August and September of 1913. Price is also to be considered, but the only way whereby the grower can ever hope to have influence over price is through means of organization. Local shipping associations and farmers' elevators, properly organized and ably managed are able to make very satisfactory additional profits, and where these local organizations are connected with a national association, so much the better. System and control in marketing will do much to secure satisfactory prices.—T. A. Thrasher.

Entitled to Consideration

A charming young woman walked into a store in a village, and asked to see some typewriting-paper. After making her selection, she hesitated for a moment. "Do you make any reduction to clergymen?" she inquired.

"Yes," replied the merchant promptly. "Are you a clergyman's wife?"

"N-no," she answered.

"A clergyman's daughter, probably," said the man, as he tied up the package.

"No," was the young woman's hesitating answer. "But"—and she leaned over the counter and spoke in a confidential whisper—"if nothing happens I shall be engaged to a theological student as soon as he comes home from college next spring."

Shorty's Shortcuts

(Concluded from Page One)

"screenings" separate, where we can use them for feed on the farm. When my threshing is done, my cleaning is done, though I always run enough wheat through my mill again to get my seed, screening out the smaller grains, running through about three bushels to obtain one bushel of seed. By doing this I save three pecks of seed to the acre and get a better yield.

Some of my neighbors hire me to bring my engine and mill to their farms at threshing time, and clean their wheat as threshed, but the most of them think it doesn't pay, though all I charge is three-fourths of a cent a bushel, they to furnish gasoline for my engine. As a matter-of-fact, I know it does pay, and pays them better than it pays me to do it for them, but every man for himself. I've got all I can do trying to run my own affairs without trying to run the neighborhood.

Yours as ever
Shorty.

It Came High

Seth Woodbury was a tight fisted, hard hearted old farmer. His brother William dying, the neighbors said, from lack of proper treatment, Seth hitched up and drove into town to have a notice about his death inserted in the weekly newspaper.

"There ain't no charge, be there?" he asked anxiously.

"Oh, yes, indeed," answered the editor, "our price is $2 an inch."

"Cracky!" mutter the old man, "an' Bill six foot two!"—Metropolitan.

Couldn't Be Otherwise

"Why is Bessie so sour? She never said a sweet word in her life."

"She always eats pickles for dinner."

Wood Shingles Won't DO!

In this **20th Century AGE OF STEEL,** wood shingles are fast disappearing, They cost too much; they rot out too quickly; too much trouble to put on; too apt to catch fire. That's why 100,000 men have come to put these beautiful **Edwards STEEL** Shingles on their buildings.

Edwards Steel Shingles **never** burn nor rot. Come in big clusters of 100 or more, which makes them ten times as easy to put on as **wood** shingles. Each Edwards **STEEL** Shingle is dipped in **molten zinc AFTER** it is cut. No raw or exposed edges. No chance for rust ever to get a foothold. And the patented Edwards Interlocking Device, which allows for expansion and contraction, gives **PERMANENTLY water-tight** joints.

Edwards STEEL Shingles

Get Prices As to prices, these **STEEL** Shingles are far below wood. For we sell direct from factory to user and pay the freight ourselves. Just get our latest Steel Shingle Books and Prepaid Factory Prices. Then **compare.** Then see if you can afford common wood shingles when you can buy genuine Edwards **STEEL** Shingles at these prices. Give dimensions of your roof if possible, so we can quote price on entire job. Send postal today and our Catalog 891 and Prices will reach you by return mail.

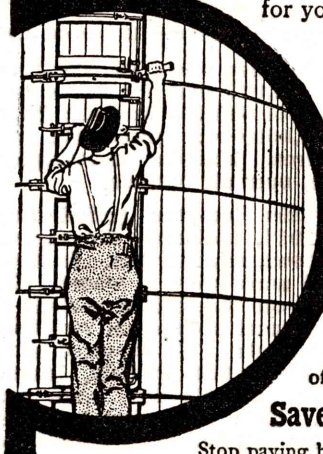
Buy Your Silo Now Save 40% to 60%

You can now buy, direct from our mill, a Seattle Silo of clear fir, at a price that will amaze you. We can underprice everybody because we own the lumber of which we manufacture the silo. Only one operating expense for us. Only one profit for you to pay.



Seattle Silos

are made from "Puget Sound" fir—the choicest that grows. Straight and close of grain. No knots or sap. Wear for years and years.

The doors are of a new improved swinging type and quick detachable. The door bars form a safe, strong ladder, from which the hoops can be easily tightened. A great idea!

Write today for special silo folder. Our low prices will surprise you. We can usually arrange to give you the benefit of practically carload rates on shipments of single silos. Write for special offer to one farmer in each township.

Save 40% to 60% on lumber and millwork

Stop paying hold-up prices to the local lumberman. He gets his materials fifth-handed. Four other middlemen get big profits. No wonder lumber is high and the quality low.

With us, quality is high and price is low. We own thousands of acres of choice timber in Oregon, Washington and British Columbia. We cut and log the timber. Manufacture it into choice lumber and millwork in six big mills. Only one operating expense—only one profit. Shipments made within 24 to 48 hours. Average delivery, two weeks. Send us your bill of materials for estimate. Satisfaction guaranteed. Write today for catalog and delivered prices.

I used Fly-Fuma on dogs for fleas and on chickens for lice with perfect result." F. McGAVOCK, Nashville, Tenn.

WHEAT: PAST, PRESENT AND FUTURE

THE real history of the wheat industry in the United States began in 1866, when the first statistics were compiled by the United States Department of Agriculture. This was also the beginning of the development of the vast wheat fields of the central west, and of improved harvesting machinery. It will therefore be interesting to draw comparisons as to production, consumption, exports, and the future probabilities for wheat in the United States, beginning with 1870 and then taking averages each twenty years thereafter.

In 1870 the acreage was 19,000,000; average yield, twelve bushels an acre. Total production, 228,000,000 bushels. Price, ninety-four cents a bushel. Exports, 52,000,000 bushels. Home consumption, 185,000,000 bushels. Population in 1870 was 38,000,000. Production, per capita, six bushels; consumption, per capita, four and one-half bushels.

In 1890 there were 36,000,000 acres sown. The average yield was eleven bushels. Total production, 400,000,000; price, 83 cents; exports, 100,000,000 bushels; home consumption, 300,000,000 bushels; population, 60,000,000. Production per capita, six and two-thirds bushels; consumption, per capita, five bushels.

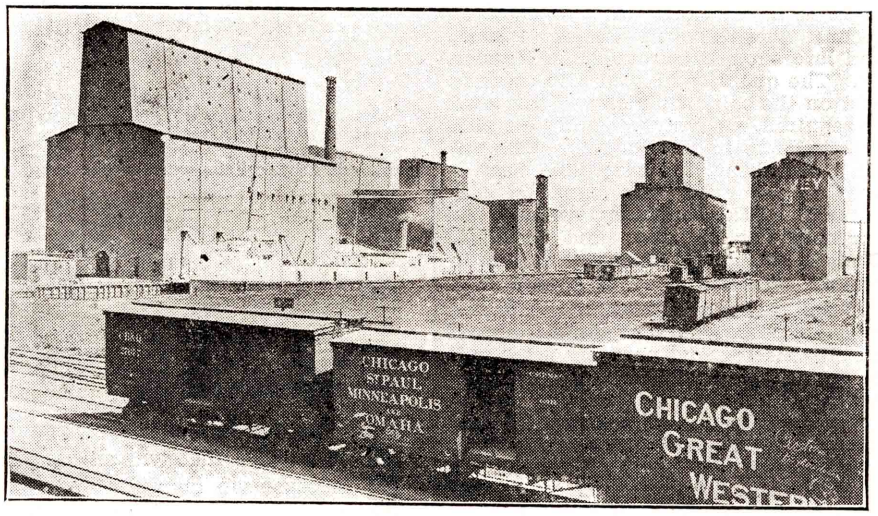
In 1910 the acreage was 45,000,000 millions. Average yield, fourteen bushels; total production, 630,000,000 bushels; price, 88 cents; exports, 70,000,000 bushels; home consumption, 560,000,000 bushels; population, 90,000,000; production per capita, seven bushels; consumption per capita, over six bushels.

During the ten-year period from 1901 to 1911, inclusive, the acreage has not shown any increase. In 1901, 49,896,000 acres were in wheat. The yield that year was fifteen bushels an acre. The total production was 748,460,000 bushels. We exported a total of 234,772,000 bushels, leaving 513,682,000 bushels for home consumption. This was a total production of nine and two-fifths bushels per capita, and a consumption of six and one-half bushels per capita. This, so far, has been our largest crop in point of both acreage and bushels. We have not equaled it since. The acreage has kept between 44,000,000 and 49,000,000 acres for the past twelve years, averaging 46,000,000 acres. The annual production during this period has held steadfastly near 650,000,000 bushels. Population has increased at the rate of nearly 2,000,000 each year. Our experts have dropped from 234,000,000 bushels in 1901 to 69,000,000 bushels in 1910.

In 1920 we can expect a population of 110,000,000 people, at the least. To provide them with bread will require 700,000,000 bushels of wheat. Our wheat acreage will not increase materially. Our exports will be wiped out, and we will have little or no surplus to provide against short crop years, when production may fall as low as 620,000,000 bushels.

It is clear we must increase wheat production by better methods of farming, or before many years be more or less at the mercy of foreign wheat-growing countries. It is deplorable to think we are so soon liable to become a wheat-importing country, and it is unnecessary. If our average yields can be doubled, which is possible, we can care for a population of 200,000,000 people, and still have an annual surplus of 300,000,000 bushels to export, or to store against possible short crops. If, by the same methods that doubles the yield we can somewhat reduce the cost of production, the cost of living should not increase, and wheat could be profitably grown for export.

The surest, safest, soonest way to bring about the increase in production is to make the production of wheat steadily profitable by insuring a steadily profitable price, by establishing a system for warehousing and marketing the wheat crop so the producer will obtain his fair share of the money that the consumers pay for bread. This can be done only by an organized and co-operating agriculture. The future holds prospects for great prosperity for the wheat growers of America, but these prospects can be realized only by preparing for them in time.



A PLACE WHERE VISIBLE SUPPLY IS KEPT

Calumet and Peavey Elevators, Chicago. Total Capacity, 4,900,000 bushels.

FARM STORAGE OF WHEAT

EVERY farm should be equipped with facilities for storing grain intended for market. The lack of such facilities compels thousands of farmers to sell from the machine, an enforced "dumping" that nearly always gluts the terminal markets, lowers prices overtaxes railroads and terminal elevators, and some one must suffer for all this. The farmer is almost always, if not always the victim.

Grain intended for market can and should be stored on the farm, in movable "bins," or storage elevators or granaries. A portable or take-down bin of 1,500 bushels capacity can be constructed for about $150, will last ten or more years, making the annual cost of farm storage not over one cent a bushel. The metal grain bin is not more costly, and in nearly every respect superior to the wood bin.

If a majority of the farms in the wheat producing sections were equipped with storage facilities, farmers would not only save their cost, but find them profitable to a high degree. They enable the farmers to safely hold the crop when prices are abnormally low. They will permit him to do his hauling at the most convenient season. They will keep the surplusses, the price-wrecking "visible supply" where it is not so painfully visible.

DE LAVAL CREAM SEPARATORS

ORGANIZED THRESHING RINGS

(I. R. Carroll, in the American Co-Operative Journal.)

WE ORGANIZED to purchase a threshing outfit and co-operate in threshing and delivering grain. A president, secretary and three directors have supervision over the property and business of the association. Each member was made responsible for an amount in proportion with the number of acres he farmed to the total number of acres farmed by the members. Responsibility and benefits are proportioned to the amount of business done, and the small farmer has equal chance with the larger farmer. (This is the true principle of co-operation: From every man according to his ability, to every man according to his needs.)

Our threshing ring is made up of both owners and tenants. We are thus compelled to take care of those who move out, and those who move in. This we do by making a provision for releasing a farmer who leaves the community, and turning his obligations over to the one who takes his place on the farm he leaves. In case the new-comer declines to unite with the association, the obligations of the departing member is pro rated amongst the remaining members.

Our by-laws touch on nearly all things that may occur in an association of this kind, such as the amount of help each is required to furnish, duties of officers, the price of threshing for members and non-members, arranging threshing dates, etc.

We have not yet purchased our outfit. When we are ready to place the order, all the members will jointly sign the order, and the notes offered in payment. We think we can buy a good second-hand outfit for a large saving over a new one.

There is a general movement on the part of threshermen to raise the price from two cents to two and one-half cents on oats, from four to five cents on wheat, and from one to one and one-fourth cents on shelling corn. This increase will increase the cost this year to our twelve members about $300.

AMERICAN VS. EUROPEAN YIELDS

WE ARE constantly being told of the high average yields in European countries, the much lower yields of the United States, and the idea seems to be to show that the American farmer is not nearly as efficient a farmer as the European.

In England, France and Germany, lands have been cultivated over a thousand years, and the acre yields as a rule, are over twice as much as the average acre yields in the United States at the present time. Notwithstanding this, it is quite safe to say that the average American farmer raises four times as much, as an individual as the average European farmer. While making comparisons, we should like to see statistics compiled showing how many hours of labor the European farmer gives for a bushel of wheat; or a peck of potatoes? Counting labor at $2 a day what does a bushel of wheat cost the European farmer, as compared with the American farmer? And while about it, let us include statistics to show how many bushels the American farmer gets from his farm, as compared with the number of bushels the European gets from his. In other words, compare profits rather than yields.

We believe that from this time on the average yields in America will increase steadily, and, while the European has been a thousand years reaching the present standard of production, the American farmer is likely to surpass it in less than a hundred years more. They will do so to a certainty if given proper encouragement. The weakest point today in the business of farming is the methods of marketing which so often robs the farmer of his profits. Those profits are needed to make the farms more productive. Labor can do it alone, but as Europe has shown, it takes labor alone a thousand years to do it, and even then labor gets little for its trouble. Take proper care of the markets, the price and the profits, and the American farmer will increase the yields as fast as the world can consume the increase.

Efficient Help

Susie—Who on earth helped you make such a fool of that young man?
Mattie—Nobody but himself.

Mr. Dooley and the Onions

Hinnissy, would mind passin' me thim onyuns?"

"I'll not mind a bit, Mister Dooley, an' yit I'll obey ye. Onyuns is a dish fit f'r a king."

"Yis, er f'r th' jack iv cloobs an' th' quane of hearts. What more can a mon ask whin he's atin' a peck iv onyuns. An' yit, Hinnissy, onyuns is a poor mon's dish, do ye belave me?"

"I'd belave yer breath, Mister Dooley, after ye've bin moonchin' thim."

"Will, me breath is mighty reliable. It carries some stringth with it. But wan thing is certain as th' poog nose on yer face an' that is that th' poor mon is havin' th' onyuns shtolen roight out iv his mouth."

"How's that, Mister Dooley?"

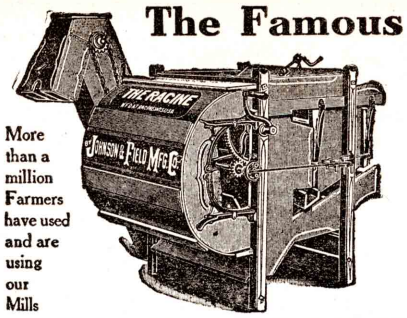
"I'll iggsplain, seein' that ye are thick-headed. A mon frum Ticksus where they raise onyuns by th' bushel basket full wint to Kansas City to see why folks wusn't atin' onyuns—big, foine Bermudy onyuns roight frum th' Lone Star shtate. He shtrung his belt with onyuns done up in tin-pound sacks. Thim grocery min wanted to kape roight on sellin' onyyuns at tin cents a pound er three pounds f'r a quarter. Says he to thim, 'I'll sell ye th' whole sack f'r two sints a pound an' thin ye can toorn roight around in yer tracks an' sell thim f'r thray sints a pound. This will fill oop the stummik iv th' laborin' mon and will hilp us min down in Ticksus to git rid iv our onyuns at a fair proice.' "

"What did they till him, Misther Dooley?"

"They told him to go roight back to Ticksus er avin Michsico where it wus red hot. They said they'd made oop their moinds to sell onyuns f'r tin sints a pound in shpite iv any Ticksus cyclone that might come swapin' oop. What do ye think iv that, Hinnissy?"

"Sich impudence! Thin what does he do?"

"What does he do? He toorns roight around an' threatens thim with competishun an' co-operashun, an' told thim th' fahrmer an' th' consumer wus entitled to a shquare deal an' he wus roight on th' job to see that they got it. We nade more leaders, Hinnissy, loike this mon frum Ticksus. We'll all take th' roight road whin once it's pointed out to us."



More than a million Farmers have used and are using our Mills

The Famous Racine Fanning Mill
WITH THE LATEST IMPROVEMENTS

Grades seed corn so your planter will drop from 100 to 400 hills without a mistake, thus giving enough extra corn on five to ten acres to pay for mill. The bagging attachment holds two sacks at once, enabling one man to clean more seed and grain with a "Racine" than three men can with an ordinary mill. If your dealer does not handle our mill, write us for information how to own one without costing a dollar.

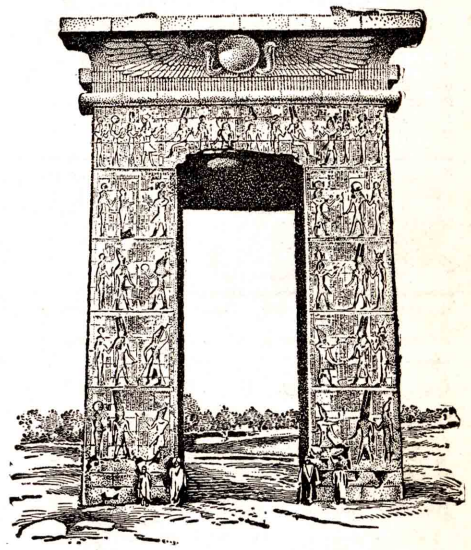
Symbols of Protection



Ancient Egyptians carved over their doorways and upon their temple walls the symbol of supernatural protection; a winged disk. It typified the light and power of the sun, brought down from on high by the wings of a bird.

Mediæval Europe, in a more practical manner, sought protection behind the solid masonry of castle walls.

In America we have approached the ideal of the Egyptians. Franklin drew electricity from the clouds and Bell harnessed it to the telephone.

Today the telephone is a means of protection more potent than the sun disk fetish and more practical than castle walls.

The Bell System has carried the telephone wires everywhere throughout the land, so that all the people are bound together for the safety and freedom of each.

This telephone protection, with electric speed, reaches the most isolated homes. Such ease of communication makes us a homogeneous people and thus fosters and protects our national ideals and political rights.

Given to Ladies

35 Embroidery Designs WITHOUT COST

Here are 35 Beautiful Embroidery Designs that I have secured exclusively for the ladies of my large up-to-date family. In the assortment are 6 Embroidery Borders, 4 Butterflies, 5 Emblems, 2 Alphabets, 2 Initial Wreaths and innumerable other beautiful and attractive designs.

The designs can be easily and readily transferred to the fabric without the use of a flat-iron, stamping compound or any other out-of-date accessories. Each design can be transferred six or eight times. This set cannot be bought in stores, but we give it free for a new trial subscriber.

How to Get the Designs

For a limited time we will give this complete 35-piece Embroidery Transfer Outfit for a NEW three-month trial subscriber at 10 CENTS.

This offer may not appear again.

UP-TO-DATE FARMING, Indianapolis, Ind

Woman's Work

EQUAL PROGRESS ESSENTIAL

The time has now come when we must move the flag of woman's comfort up to that planted for the men. Any farm that can afford a silo can afford electric light or gas, the vacuum cleaner, the dishwasher and the washing machine. Any farm that can afford a manure spreader and a hayfork in the barn can afford running water in the kitchen.—Farm and Fireside.

KEEP COOL

To do this, first have a grand housecleaning; eliminate all of the unnecessaries, and then see if you can't keep a comfortably cool house this summer with comparatively little work.

Don't leave a heavy, thick-napped rug on your living room or dining room this summer, for they are decidedly out of place and look hot.

Everyone recognizes the true value of temperament, and much depends on how cool your home looks.

Take up the heavy rugs and carpets and either leave the bare polished floor or put down some sort of inexpensive covering. Rag rugs that are woven in many pretty designs are very practicle and much used. Old-fashioned braided rugs are also in vogue, while jute or grass rugs, besides being pretty, are easily kept clean.

No living room seems perfectly homey without some sort of curtains, but draperies can be made of muslin, scrim, or even cheesecloth. A plain hem, and shirred at the top and hung on brass rods is a simple and effective method of arranging the curtain.

Now take every unnecessary piece of furniture out of the rooms, so they won't appear hot and stuffy. The portieres between the parlor and dining room should go. Should you have other rooms in which there are doors that might be removed, do so; for everything that you can do to create the feeling of largeness should be done.

Make it a point to keep the house closed as much as possible during the heat of the day. Then when it's cooler, in the evening, open all the windows and doors. Always remember, too, that a cool house is a clean one.

HOUSEWORK BY MACHINERY

By Ed. H. Witte

OUT on my farm the work divides itself roughly into three classes; the housework (under the direction of my wife), the yard work and the field work, under my direction. Some of the yard work runs over into the housework and the field work, and the field and housework run into the yard work.

The gasoline engine has as much place in the yard work, and in some of the housework, as the horses and mules have a place in the field work.

As yard work, there is what is usually called "chores" morning, noon and evening. And besides the chores there is such more or less regular work as feed grinding, cornshelling, wood sawing, grain elevation, tool grinding, water pumping and sometimes shop machinery to drive, for repair or building work. In some places the milking machine has come to have a regular call for machine power.

"Children Teething

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

Everybody knows about the "chores" of housework—the cooking, dish washing, scrubbing, bed making, lamp tending, etc., and the usual additional chores of separating milk and feeding or looking after the chickens. These two latter are yard work that gets over into the housework by a sort of common consent.

The up-to-date farm has a power house—or should have such a thing.

Out in the power house on my farm, we make electric lights for our house, besides for the barn, stable, garage, granary, poultry houses and other buildings into which we have to go or look, now and then at night. We also have some yard lights. All this does away with lamp trimming, cleaning, filling and mussiness of the old kerosene lamps. We have instantaneous light, day or night. For the hot days we have electric fan service, while sweeping and dusting is much shortened and greatly lightened by the electric suction cleaner. The sewing machine is power driven and so is the washing machine and wringer. All this work requires only one day's run of the small engine in a week. The storage batteries do the trick the rest of the time.

When the engine is making electricity, just to keep it decently busy we have it pump water into an underground air pressure water tank, which supplies a water service to house, barns and stock tanks that is the equal of any city service. This pressure water service operates the bath and toilet and makes lawn sprinkling and garden watering a delight instead of a drudgery. Another point is the matter of fire protection. An air pressure system, with gasoline engine pump and some small rubber hose, is a farm fire department.

The same gasoline power runs the cream separator and the churn and I suppose one of these days it will do the milking. If our little power house did nothing else but lighten, as it does, the women's work in the house, it would still be worth many times its cost. It has not cost in the first place, what I have had to pay for a single work team—and its working capacity will not be seriously lessened any when every horse I now own will be dead from old age.

So much for the gasoline engine as a capable assistant to the mistress of the house.

In the way of heavy work, it has the feed grinder to run as a rather regular thing. Also water to pump for stock watering, and more and more than ever—for irrigation purposes. In season it has to saw wood, cut ensilage, run the grindstone (especially for grinding mower sickles), run the fanning mill, shell the corn, saw the wood, etcetra.

The gasoline engine is the greatest invention of all the ages for taking the hard work out of the day's duties, and at the same time greatly increasing the output of the year's labor while lowering the cost of production. Contrary to the belief of many the present day gasoline engine is a very simple machine. Much simpler, indeed, and more readily to be understood than a self-binder, or a common sewing machine.

Every man, or woman either, for that matter, who can read, can now master all the operation of a gasoline engine easily, if only he or she will study for a few hours the instruction book furnished with each engine. Nothing that can be learned in such a comparatively short time is more worth knowing than to know how a gasoline engine runs, how it can be kept going, and how to use its power when it is going.

The farmer who, today, is getting along without a first-class, really high-grade gasoline engine, is paying more to do without it than it would cost to have it.

One Like Her at Home

A large touring automobile containing a man and his wife in a narrow road met a hay wagon fully loaded. The woman declared that the farmer must back out, but her husband contended that she was unreasonable.

"But you can't back the automobile so far," she said, "and I don't intend to move for anybody. He should have seen us."

The husband pointed out that this was impossible, owing to an abrupt turn in the road.

"I don't care," she insisted. "I won't move if we have to stay here all night."

The man in the automobile was starting to argue the matter when the farmer, who had been sitting quietly on the hay, interrupted:

"Never mind, sir," he exclaimed. "I'll try to back out. I've got one just like her at home."

When Papa Goes

"I hope you never go fishing on Sunday, my nice little boy," said the preacher.

"No, sir, papa says I would be just in his way."

The World's Greatest Power Washer

Direct from Our Factory to You. No jobbers' or dealers' profit to pay. It will cost you only a little more than half of what inferior machines cost. The **NEWTON POWER WASHER,** with reversible five-year guaranteed wringer complete, shortens the hours of wash days to minutes. Dirtiest clothes washed in six to fifteen minutes. Saves time, labor and money.

Save $3.50 to $25 depending on the kind of machine you buy. The Newton Washer is made for either hand power, gasoline engine or electric motor. **Get Our Free Circular Showing Styles.** Try it in your home for thirty days, you to be sole judge. If the machine is not satisfactory, ship it back to us and we will pay the freight both ways and give your money back with six per cent interest. A postal from you will bring quick proof to you of our reliability and our free circular.

A PRIZE FOR YOU

E	S	D	N
O	R	F	Y
R	U	O	P
Z	I	R	E

Can you arrange the sixteen letters given into four words? Try it and see. If you can we will tell you how you may own a $285 Motorcycle, or a $40 Bicycle, or a $25 Gold watch, or a $25 Diamond Ring, or a $23 Incubator and Brooder, a $20 Washing Machine, FREE of Money Cost to you. The first and third words contain four letters each; the second word three letters and the fourth five letters. Every person who answers, whether absolutely correct or not, will be entitled to be considered in the awarding of Grand Prizes in our great Motorcycle Contest, and for each correct word we will give you 250 Free Points toward the First Grand Prize. If you guess all four words you get 1,000 Free Points. Be sure and write your name and address plainly.

PRIZE DISTRIBUTORS, Dept. U Spencer, Indiana.

GO WATCH THE BOYS PLAY BALL

EVERY boy is a baseball crank. He just can't help it. Playing ball is the greatest game in the world, and the most fun. And, from the time a baby boy rolls the red and white sphere around over the kitchen floor, until, as a gray-haired old man he sits on the fence and watches the grandsons batting up flies, and knocking out grounders, the love of the ball game burns steadily in the heart. In our cities, where the big leagues play all summer long for the championship, hundreds of thousands go every day to watch the game.

There are boys in the country who love ball playing. They cannot get to see the big league games but they can play at home. And there is nothing in the world they enjoy so much as to build up a neighborhood "club" to play against clubs from other neighborhoods.

It is well to remember that in building home life on the farm, enjoyment is one of the most important parts of it. And as playing ball is one of the greatest enjoyments the farmer boys can have, it is worth serious consideration by the citizens of every rural community. To make farm life a better life, get all the enjoyment out of it you possibly can, by putting enjoyment into it. To keep the country boy from wandering away from country life, give him the pleasures his soul craves.

We made it a matter of neighborhood interest to have a baseball club composed of our own boys. To equip them with uniforms and supplies we gave oyster suppers in winter and ice cream festivals in summer. To make sure that the club would be a success, its officers were chosen, not from the boys, but from their fathers, who, in reality, "own" the club. This gives it stability, and keeps it together by avoiding the quarrels that are almost inevitable when the boys attempt to manage the club amongst themselves.

We not only encourage ball playing, but we go to the ball games. Every Saturday afternoon we have the half-holiday, and go somewhere to "root" for our club. We enjoy it, and so do the boys. It instills a spirit of fellowship and local pride and makes our neighborhood more alive. It is not much trouble for our farmers to secure hired help, for we enjoy our lives as we live them.—Mrs. J. C. Brown, Ohio.

HINTS FOR THE HOME DRESSMAKER

FEW women understand the principles of becoming apparel. Every woman who makes her own dresses should study the lines that suit her figure, so as to be able to bring out and emphasize her good points. Because a certain style looks well on one person, is no reason why it would be becoming to another, but more likely is in itself a reason why it would not.

* * *

The kind and size of the placket should be determined by its position in the garment. Their purpose is solely to have the garment slip on easily, and fit smoothly when fastened.

* * *

Dame Fashion seems to be leading us back to the simple fashions of our frugal grandmother, though in the attempt to be real up-to-date and "classy," she cuts capers that would throw staid old grandma into conniption fits. The slit skirt, for example.

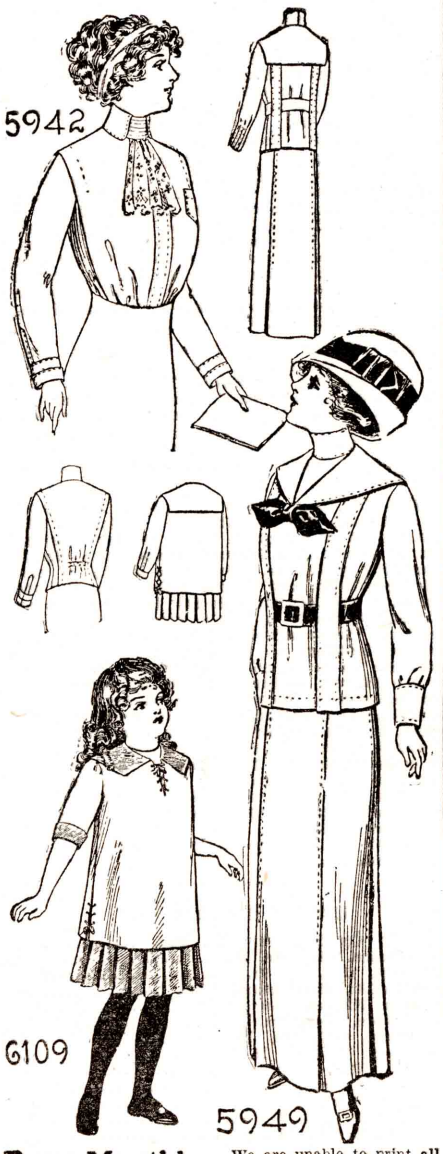
* * *

If you have a hand embroidered linen waist that is worn at the neck, you can make it almost as good as new by setting in a small yoke of the same material, embroidered with small eyelets about two inches apart, with a collar of the same. Before cutting out the top of the waist, embroider an edge of scallops where the yoke will be set in.

* * *

A pretty bag for handkerchief, purse, gloves, and the other little accessories is a very attractive addition to a costume for calling or a shopping expedition. Made of corded silk, moire, or heavy satin, to match the color of the gown, finished with gold cord, and hand embroidered, they are exceedingly pretty.

PATTERNS OF FASHION



Free Monthly Fashion Guide We are unable to print all the fashion illustrations each issue that we would like to publish. However, with each pattern order mailed we will include free an advance Monthly Fashion Guide. Monthly Guide alone, without pattern, for 2c for mailing. All patterns are very latest and only 10c each, postpaid.

5942. LADIES' SHIRT WAIST.—The tailored blouses of the moment must be well cut and severe. A broad stitched plait over the shoulder of this model and the jabot of lace worn are sufficient trimming.

Cut in sizes 32 to 42 inches bust measure. Medium size will require 2½ yards of 36-inch material.

5949. LADIES' MIDDY DRESS.—Very modish. The frock is cut on Norfolk lines and is well adjusted at the waist line, a touch which makes for comfort in outing dresses and suits. The skirt is a six-gored model. Cut in sizes 32 to 40 inches bust measure. Medium size will require 6⅝ yards of 36-inch material.

6109. CHILD'S MIDDY DRESS. Very dainty and practical for play frocks fashioned of duck or any of the heavy cottons. Blouse slips on over the head. The skirt is joined to an underwaist. Cut in sizes 2 to 10 years. Medium size will require 2¾ yards of 36-inch material.

Price of Patterns, 10 Cents Each

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

Just as Easy!

Preserving is now a *pleasure*—thanks to Parowax! For fruits, vegetable, jellies, catsup and chow-chow, when sealed with Parowax, indefinitely retain their natural flavor. And their sealing is as simple as can be.

Dip the tops of jars and catsup bottles in melted Parowax. Or pour this pure paraffine directly on top of contents of each jelly glass. Result—a perfect air-tight, mould-proof seal.

It is even simpler than it sounds. It is as cheap as it is easy. Not even paper covers need be used.

Parowax

is pure, refined paraffine—tasteless and odorless. It has many valued household uses. In the laundry, for instance, it is invaluable. In the wash boiler, it cleans and whitens clothes. A bit of Parowax in the starch imparts a beautiful finish in the ironing. Parowax cannot injure the most delicate of fabrics or colors.

Remember to order from your dealer today.

Preserve and Jelly Recipes by Mrs. Rorer

114 Lbs. of Honey from this Hive in My Attic Last Season—I have kept bees in my city home in Grand Rapids, using THE PEARCE METHOD OF BEE KEEPING for the past two years. I had absolutely no experience with bees and gave them little care. I followed the instructions in THE PEARCE METHOD and in addition to harvesting 114 pounds of the finest clover honey last summer, I had such an increase in bees that I made another colony by following the Pearce instructions. There was no swarming during the entire year and both hives came through the winter in good, healthy condition. It took little time and no expense. This year's crop of honey was worth $22.80, besides the new colony of bees.—George W. Welsh, publisher of The Fruit Belt.

You can do as well with the Pearce Method of Beekeeping

—IF YOU LIVE IN THE CITY you can have one or more hives in your attic. The bees enter the hive room from the outside of the house and cannot escape into the room.

—THE PEARCE METHOD OF BEE KEEPING is not an experiment, but a scientific method that eliminates two-thirds of the danger that formerly attended bee keeping. It represents the life work of Joseph A. Pearce, the veteran bee man of Grand Rapids, Michigan. After perfecting his method. Mr. Pearce was induced to give his discoveries to the public. The complete detailed directions for handling bees by his method is to be found only in the book he was written.

—NEED ONLY ONE COLONY, and a few inexpensive apparatus to start a fascinating, profitable business that will make money for you, without taking your time from your other business.

—THE FRUIT BELT is a large illustrated magazine, devoted to the upbuilding of the fruit industry. It covers fruit growing from A to Z. It tells you what varieties to plant; when to set out the different varieties; how to combat insects and plant diseases; how and when to spray; how to prune; in fact, it is a monthly Guide to Successful Fruit Culture.

—In order that you may become acquainted with THE FRUIT BELT and at the same time receive a copy of this valuable book, we are making the following liberal offer:

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

WE WISH our writers and readers our readers to study the meanto study the meaning of the word Equity. If everybody practiced it toward each other what a different world we would have! We are doing our best to secure its establishment in business transactions with farmers—equality of rights, privileges and opportunities. Great gains have been made, and greater ones are in the not far distant future. We depend so much upon the young people who must soon be the country's rulers. That is why we take so much interest in the adet writers. Teach and practice Equity. Do unto others as you would have others do unto you. As persons increase in years they may travel up hill or down. Make every step take you a little higher in the scale of humanity, and determine that every thought shall be elevating.

DEAR CADETS: Will you allow a boy from the garden spot of the Sunny south to enter your circle? I am 18 years of age, and live on a farm of 120 acres, where we grow corn, tobacco, and sweet potatoes. I am a member of the Farmers Society of Equity, and I read every line in Up-to-Date Farming. I think all farmers should use it for a guide. I would be pleased to hear from all the boys and girls of this circle, and will answer all letters I receive.—Turpen Bankester, Robertsdale, Ala.

DEAR CADETS: We live on a 280-acre farm in southeast Missouri. I was raised in town, but I know something of farm life. We have a beautiful farm situated in a valley with great hills on all sides of it. I will be 17 in August. My parents are both dead, and I am making my home with my only sister. I would dearly love to exchange letters with boys and girls from every state. Let me hear from you all.—Frances H. V. Logsdon, Ava, Mo.

DEAR CADETS: I am 16 years old, and live in good old West Virginia; I think there is no state like it. We have much pretty scenery, and we have nearly all kinds of fruit, but it is all killed this year. I would like to hear from all Cadet boys and girls, and will answer all letters and cards I receive. —Pearl De Berry Elsey, Terre Alta, W. Va.

DEAR CADETS: I am a farmer's son, 18 years old, and live in the center of West Virginia. The hills are high, and the land is rich. We have 6 horses, 83 cattle, 9 hogs, 1 sheep and some chickens, ducks and geese. We raise corn, wheat, oats, hay, potatoes and vegetables. Crops are very backward this season, and the fruit is nearly all killed. I would be glad to hear from the Cadets.—Jerome Bourn, Rosedale, W. Va.

DEAR CADETS: I count 17 summers, and live on a farm of 182 acres in the state of Illinois. Land sells here at from $50 to $100 an acre. Papa takes Up-to-Date and thinks it a fine paper. I certainly enjoy reading the Cadet page. I am a lover of music, flowers and outdoor sports, especially horseback riding. Will exchange letters, cards and photos with Cadets and readers.—Ruth King, Hidalgo, Ill.

DEAR CADETS: I am a Minnesota girl of 20 years. I do not live on a farm, but I always read Up-to-Date Farming, and like it very much. I am a clerk in the post office, and would like to hear from all the Cadet boys and girls, for I get very lonesome here. Will answer all.—Pauline E. Stachourah, Claremont. Minn.

DEAR CADETS: I do not live on a farm, though I would like very much to do so, and I always look for Up-to-Date and think it a fine paper. My father is the postmaster here, and I work in the office quite a good deal. I like office work very much. We have a jolly bunch of young people here, and we have some dandy times at parties, picnics, etc. I am 16 years old, and would be glad to get letters or postals from the Cadet girls and boys; will answer all I receive.—Gladys E. White, Claremont, Minn.

DEAR CADETS: I am 21 years of age and have worked on a farm for 6 years, and like the work. I would be glad to hear from a Cadet in Florida as I have some land there. I work on a ginseng farm here in northern Wisconsin. I would like to hear from the Cadets, and will answer all.—Frank Mortincreb, Manitowish, Wis.

DEAR CADETS: I live on a farm of 80 acres in the central part of Michigan. Some of our crops are corn, wheat, oats, potatoes, garden truck, apples, plums, pears and cherries. We have 3 large patches of strawberries, and I guess there will be quite a lot of berries. The orchard trees were all white with bloom. They are now boring an oil well here. We have taken Up-to-Date Farming for a long time, and we like the paper. I want to hear from all the Cadet boys and girls, and will promptly answer all.—Nita Putnam, Mt. Pleasant, Mich.

DEAR CADETS: I am 20 years old and live on a farm of 180 acres. We take Up-to-Date and like it very much. I would like to hear from the Cadets and will try to answer all.—Alvin Feanan, Fort Gage, Ill.

DEAR CADETS: I am 22 years old, and live on a farm. Up-to-Date has been coming to our home for about a year, and we like it fine. I would like to hear from the Cadets, and will try to answer all cards and letters.—Herbert Stirnaman, Fort Gage, Ill.

DEA RCADETS: I certainly consider it a great privilege to become acquainted with girls and boys in different states. I am a farmer girl 16 years old, and have long taken a great interest in the Cadet letters. Would like to exchange letters, cards and photos with the Cadet boys and girls, and I will answer all I receive.—Timmie Potts, Bessie N. C.

DEAR CADETS: I have been reading Up-to-Date Farming for more than a year, and think it a fine paper. I am an orphan girl, but I have a good home on a farm of 360 acres. I wish all the Cadets would write to me. I will answer all mail I receive.—Anna Rider, Tullos, La.

DEAR CADETS: I am a California girl, and I hope I will be welcome. If any one wishes to know about my outdoor life on the plains of 2,460 acres, please write, and I know I will enjoy it. I have 2 ponies, 12 big dogs, a .32 revolver, a shot gun, and a 20-30 rifle. We have taken Up-to-Date 5 years, and think it fine. I am 19 years old. I know little or nothing about anything but riding, hunting, fishing and looking around. The first boy that sends me his photo will get mine in return.—Violet Marie Smith, Kearney Park, Fresno, Cal.

DEAR CADETS: We live on a 140-acre farm away out here in Pennsylvania, and our principal crops are corn, oats, rye and wheat. I am 19 years old, and have always lived on the farm. My father has taken Up-to-Date Farming for about 5 years, and we all like it very much. I would like to hear from the Cadet boys and girls, especially those in the west. I will answer all.—Robert M. Kocher, Flicksville, Pa.

DEAR CADETS: Won't you please make room for a Missouri girl? I will be 17 in August. We have a farm of 130 acres, though we are living in town at present in a 6-room bungalow, with electric lights, city water, etc. Sedalia is a city of over 23,000 population, and is called the "Queen of the Prairies." The Missouri state fair is held here every fall, and thousands of people attend from all over the state. The grounds cover about 65 acres, and has beautiful buildings and a race track. Missouri is noted for its prize mules. My father is organizer for the Farmers Society of Equity and organized a local union here, Progressive Local Union 7020. He is working hard to organize all the towns in Pettis county, but it seems hard to get the farmers to think of anything but their crops during the busy season. We anxiously wait for Up-to-Date Farming, especially myself, and I read the Cadet page first, but later I read all of it. I want all the Cadets to write to me, either post cards or letters, and those who send their photos will receive mine in return. I will answer all promptly.—Martha E. Kull, Lock Box 82, Sedalia, Mo.

Dear Old Songs

FREE TO YOU

All the Words and Music

Unusual talent was certainly employed to produce this bound volume of eighty songs. This book has 96 pages, size 6½ x 9 inches, with the front cover in four colors. Each song has the words and music printed on extra quality of paper from new, clear type. A few of the songs are "Sweet Genevieve," "Santa Lucia," "Come Where My Love Lies Dreaming," "How Can I Leave Thee?" "Angels, Ever Bright and Fair," "When the Swallows Homeward Fly," "In the Gloaming," "Juanita," "Maryland, My Maryland," "Then You'll Remember Me," "Flow Gently, Sweet Afton," "Oh, Don't You Remember Sweet Alice?" and sixty-eight others, which are considered as among the best. So many of our subscribers have written us for just such a collection that we have purchased a large number and by so doing are able to give one book free and prepaid, to every one who will send us 10 cents for a 3-months trial-subscription to The American Woman.

The American Woman is one of the oldest and most popular household magazines, that delights all with its thrilling serials, pleases all with its interesting short stories, and helps all with its famous departments on home and needlework topics.

Remember, you get these 80 songs, bound in large-size book form, and The American Woman 3 months, for only 10 cents.

Send to THE AMERICAN WOMAN, Augusta, Maine

Practical Organization and Co-operation

THE FARMERS SOCIETY OF EQUITY

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No Capital stock. Membership fee, $2.00; Dues, $1.50 annually. Unity of marketing through county and district clearing houses, ultimately to federate in one national clearing house, the plan.

National Union Officers

Pres., J. A. Everitt, Indianapolis; V.-Pres., W. H. Mitchell, Hutchinson, Kas.; Sec., M. K. Sleight, Indianapolis; National Organizer, H. F. Cutting, Portland, Ore., or Indianapolis. Directors, Robert Stevenson, Lebanon, Ind.; Jacob Bretz, Bretzville, Ind.; S. W. Morris, Rochester, Minn.; Fred N. Parkinson, Rexburg, Idaho; W. S. Shure, Summerdale, Ala.; J. A. Harmon, Shawnee, Okla.; C. Hayes Taylor, Indianapolis, Ind.

State Union Directory

Locals reporting dues and fees of new members in states having an organized state union will make reports to their state union secretaries.

Idaho

President, A. Y. Satterfield, Sterling.
Secretary, O. E. Scott, Shelley.

Oklahoma

President, P. H. Thomas, Shawnee.
Secretary, J. A. Harmon, Shawnee.

Oregon

President, Wm. Schulmeric, Hillsboro.
Secretary, F. G. Buchanan, Oregon City.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

Ten years ago only one paper—this one—claimed that farmers could exert any power to control and direct the marketing of crops to the end that they would be protected in the prices of the same.

—o—

Today nearly every paper you read has something on marketing and plans recommended to help the producer to get closer to the consumer, to get more than the average thirty-five cents of the consumer's dollar and incidentally to make it possible for the consumer's dollar to buy more of the products of the farms.

—o—

All of these plans are interesting, some of them edifying and a very few of them have elements that make them of some real value and thus help toward the solution of the greatest problem of our time—the finding of the straight, shortest and cheapest way between the farm and the consumer's kitchen.

—o—

One of our exchanges refering to to this said:

Before it comes the farmer will have to give up his individualism and learn to co-operate. He will have to develop in the country a type of civilization that will make life there satisfactory to the boys and girls, so that they will stay on the farm and increase production. The consumer will have to co-operate and get things in such shape that he can get farm products more directly from the farm. We will have to live more sanely than we have been living in the past. We must have more market places and get back to the old fashioned way of going to the markets, doing our own buying and then carrying our purchases home with us.

—o—

All of which means, according to this editor's belief, that the wheels of progress must be stopped and turned back a hundred years. We don't believe it. We contend for a successful business system on the farm that will make life there satisfactory for the boys and girls rather than waiting for a "type of civilization that will make life there satisfactory" before the change comes. In other words, a type of civilization that will make the people satisfied with present conditions is something we cannot conceive, but it is clear to us that with enough profits on the farm, life will be satisfactory.

—o—

Also, consumers will not give up their telephones and deliveries, and they will not all carry the purchases home from the stores and markets. So if telephones and deliveries must be maintained let them be for all rather than divide the efforts and multiply market places still further and thus multiply the expense. We have before expressed a doubt of the economy of the public market since there are retail stores all over our cities, because, the more trade is taken to the market the less is given to the stores and the higher the prices the stores must charge. The result appears to be that what is saved on the public market is lost on what is bought at the retail stores at the higher prices.

—o—

Similarly another editor expresses himself, when told that his readers are entitled to a remedy for the condition that the producers' share of the consumer's dollar has been only thirty-five cents, while the handlers took sixty-five cents. He said:

They are, and most of them realize the true remedy means a change in human nature. No remedy for the thirty-five-cent dollar will be worth much until human nature can be changed, and we realize that we cannot beat the politicians and the handling hogs at their own game. Our remedy is the slow one—education and making the wrongs of this thirty-five-cent dollar a part of popular thought.

—o—

This reminds us of our effort several years ago to enlist the president of the Indiana Agricultural College in our work to supply agriculture with a better marketing system. His reply was: "We must wait for Divine Providence to do that." There is too much shifting of responsibility. God has not promised to help except we help ourselves and these editors who assert that a new civilization, or a change in human nature must come first, simply don't want a change and talk this way to befuddle their readers. They are satisfied the way things are and they prefer to leave farmers in the wilderness rather than to help to lead them out, not knowing how the new order of things might affect their own business. They have friends, many of them among the handling class and kindred interests that might get jarred in the revolution. We claim their fears of injury to any necessary handler or useful business is groundless, but rather the prosperity of the farmer, following the establishment of a scientific marketing system will benefit all of them, including the publishers, enormously.

—o—

Another of our exchanges is publishing a series of articles from "actual experiences" of a southern producer in marketing. In an advance article, among the main conclusions reached by this man and which the five articles will emphasize are the following:

Farmers must organize and send representatives to the big markets in order to secure satisfactory prices.

Every co-operative selling society should have a representative in the leading markets to organize special selling methods when the commission merchants fail to take care of the shipments.

—o—

We quote these recommendations to point the obvious errors in the plans recommended. For each co-operative selling association to be represented on the markets "to organize special selling methods" would clearly further complicate an already complex system, and further increase the expense of a system already burdened with unbearable expenses. Any man who has worked for years to solve the marketing problem with this result has worked in vain.

—o—

It is not the further multiplying of market places and representatives, whether from the farm or from the ranks of middlemen, that is needed, but a system that gathers the reports of the supply together at one place where the demand can find it. Farmers have done all they should strive to do when they have produced the stuff and reported it to their own representative to sell. And when the growers of any one or more crops do this they can fold their arms because the people who represent the demand will absolutely be required to go to the place where the supply is represented and give their orders at prices the producers ask.

—o—

Amongst all the plans that have been formulated, or that may be formulated by individuals, companies, organizations or by the government, all those that ignore the fundamental principle that the supply must be known at a central place or places and how much it is, and controlled there until the demand goes to it, will sadly fail to give farmers their emancipation from present abominable marketing conditions. We've got to get away from the idea that a "special selling method" must be organized whenever a bad condition arises in the market and adopt a system that meets every contingency that can possibly arrise whether crops are great or small, and that always protects the producer.

—o—

We have said it before, and we say it again, that such a system is the Equity System of Marketing. As soon as a community of farmers organizes into the F. S. E. it has taken the first step toward the commonsense, satisfactory plan of marketing that, we are certain, the whole nation of farmers will eventually be working under. Also, as soon as a present independent farmers' association, or a local association of a national organization adopts the Equity System and accepts a Federation charter it has taken the necessary step to bring about county unity in marketing first, to be followed by national unity. It is clear that the first step must be taken before the second one is possible or the goal reached. The producers of every community are ready for the first step so will some person in each community send the coupon below?

* * *

A party in Michigan sent us a card from which we quote:

WANTED—A party to join me in building some elevators and warehouses. Excellent location, no competition. Can handle farm machinery in connection. Can double our capital annually.

—o—

The exact location we do not know but we may estimate that 200 farmers live in the community and that the capital required to "swing" the business will be $10,000, and it is represented that the annual profits will equal the capital. But regardless of what capital the party has in mind can the farmers of that community really afford to pay such a price to have an outsider come in and attend to their business for them? A point is made that there is "no competition" which means that the party would expect to pay just what he pleased for the crops and for that reason the capital can be doubled annually.

—o—

The best way to defeat this game and save the money for the farmers themselves is to organize a local of the F. S. E. and let the secretary fill the place that would be filled by the foreigners who selected the locality for easy pickings, because there would be no competition. And if warehouses and elevators are needed, let the farmers own them. The advertisers claim is that the farmers will pay for them each year anyhow, so why not pay for them ONCE and have them always?

—o—

The stronger the Equity Society grows in a community, county or state the bolder the farmers become in attending to their own business. As we write this additional reports come from Idaho to the effect that on June 30, Cassia County Union of the F. S. E. voted to incorporate for $50,000 and on July 13 Bonneville County Union voted to incorporate for $25,000. These county incorporations will do the business of selling and buying for the whole counties and will attend to the establishment of elevators and warehouses at local points in the county wherever needed, all under the supervision of the county board of directors. The Equity plan is to not incorporate for profits (dividends) but the organization is purely co-operative—the full advantage taken in each transaction less a small commission to meet necessary expenses and to accummulate a surplus fund for betterments. Organized along this line, instead of for the profit of the stockholders, there need be scarcely any risk of failure or even of dissatisfaction among the members.

—o—

Another example of the way producers are making it possible for others to amass huge fortunes is shown by this report taken from a produce paper:

The Irving National Bank (New York) now quartered in the palatial Woolworth

Old Folks What 15c will do
You have wished for a paper that is printed in type that you can read without straining your eyes; a paper that gives all the news of the world, and that tells the truth and only the truth. The Pathfinder is just the paper you have been longing for, and the little matter of 15c in stamps will bring it to you every Saturday for 13 weeks on trial The Pathfinder is an illustrated weekly, published at he Nation's Capital, for the Nation, now in its 20th year of increasing success. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time and money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, The Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at least. Send only 15c to show that you might like such a paper as this and we will send The Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. THE PATHFINDER, Box 7, Washington, D. C.

FREE FREE

United Bracelet Co., 46 Friend Bldg., Kansas City, Mo.

building has made a phenomenal growth during the past few years. Its assets in 1908 were $2,300,000. In 1913 they are $52,000,000. This strong institution has long enjoyed a steadily increasing patronage from the members of the fruit, produce, butter and egg trades.

—o—

As long as the producers remain unorganized, or are organized in separate and independent units without the ability to control their stuff and compel the demand to seek it and pay their asking price, they will be living on the husks and skimmed milk while non-producers garner to themselves most of the fruits of farmers' toil. It is the sixty-five cents out of the consumer's dollar that is making the little class between immensely wealthy while the two great classes on the ends are as yet powerless to protect themselves. But a change is coming. Every blank filled out and sent in, and every local union organized brings the time nearer.

—o—

Our purpose in all of this is to make the people on the farms dissatisfied with present conditions. We would not do this if we could not at the same time offer an alternative, a practical remedy. The way to freedom has always been through oppression, and the more thorns are along the way we travel the more likely we are to turn from it and seek a new path. We have in this article cited several cases where the farmer loses out and have shown what he should do. We will cite just one more case. This comes to us from Maryland, but is typical of the condition in very many sections of the south:

The commission man has absolute control of the truck farms of Anna Arundel County. The only part the farmer does is the work and that is no inconsiderable share, but it is unremunerative under the present conditions. The commission merchant furnishes the seed and fertilizer on credit and takes the crop. When the crop is delivered he deducts his charge for the seed and for the fertilizer with interest and 10 per cent. commission for selling the crop, oftentimes to himself, and turns over what is left, if anything to the farmer. It is not uncommon for the farmer to be still in debt to the commission man at the end of the season.

—o—

Here is a case where seed and fertilizers are needed at the beginning of the season. The remedy is the local union and the members should make a joint note and get the money at a local bank. We believe there would be no particular objection to this by the commission man. He is not particularly desirous of being the farmers' banker, but under the old condition the loan was one that the bank would not handle. The risk was unusual but the commission man took it so the produce would be raised for him to handle and naturally charged a high rate.

—o—

Each one of these localities must begin to solve its financial problems through the local organization.

—o—

If you will send the coupon now your community can begin to solve its business problems this year.

EXPERT NOT WANTED

THE farmers of Kosciuska County, Ind., believe they know more about farming than any young graduate from an agricultural school and because of this belief they have prevailed on the county council to refuse to make the appropriation for the payment of the county's share, according to the law passed last winter, in the expense of an expert. The vote of the council was five to one against the appropriation. Speaking of its action, Mr. Egbert Gawthrop, a member of the council said:

Our council is composed of six farmers and one banker. The six farmers are opposed to the law providing for a farm expert for several reasons. The main reason is that we do not need the expert to show us how to work, but we do need men that will work. We do not intend to make the appropriation unless ordered to do so by the supreme court.

We admire the stand taken by the farmers of Kosciusko County. Their action should be commended by every person, whether producer or consumer, who favors economy in the conduct of government and business and who is opposed to further goading farmers on to produce unprofitable surplusses to increase the tolls for handling, under the guise of a movement to benefit farmers but really in the interest of those who handle farm crops.

M. N. Drake

We take unusual pleasure in introducing to our readers the likeness of Organizer M. N. Drake, of Michigan. He has been a firm believer and advocate of the plans of the F. S. E. since August 28, 1905, when he wrote his first letter to headquarters asking for an organizer's commission.

Mr. Drake is a modest man, but an aggressive one, never-the-less, and a forceful speaker. It is said of him that when he can get an audience not a single man escapes. For a long time Mr. Drake has suffered severely with inflammatory rheumatism, but is now quite recovered and ready for work, and southern Michigan is destined to become a stronghold of the F. S. E. in a short space of time.—The Editors.

Condemns Dealing in Futures

Headquarters, Public Welfare Assn.
Kansas City, Kas.

Mr. J. A. Everitt.

My Dear Sir: Please be kind enough to furnish me about five copies of your "Open Letter to Bankers." I have been in harmony with your view all along. Hope to see the day when producers will transact their own business. Dealing in futures is the greatest crime of the century. During 1907 the K. C. Board of Trade handled 1,159,000,000 bushels in futures, and only 61,850,000 bushels cash grain. Ninety-five per cent. of all transactions being speculative. This controls the market, and makes bucketshop gamblers the market masters. I hope Congress at the regular session will deny them the use of the postoffice, phone and telegraph. They should be harpooned out of existence. Fraternally, W. T. Hopkins, Secretary.

This is the farmer who refused to join the F. S. E., and the agent who tells him the price he will pay for his produce and the price he will charge for farmer's supplies and who does the weighing—in fact, all the farmers' business.

Progress Tailoring Company
Dept. 2087, CHICAGO

THE FIELD

UP-TO-DATE FARMING will print in this department short letters from its subscribers on any subject of general interest and calculated to further the mission of the paper.

Information to Shippers

Probably many members and business agents of F. S. E. local and county unions fail to fully realize the importance of packing, grading and shipping farm products according to the standards established by the trade in the markets. In making shipments to market representatives it is important telligently describing the variety and quality of goods shipped, and giving the number of packages, marks, weights, shipping station, etc. This is not only good business practice, but it is co-operating with the representatives for prompt and satisfactory service.

Oklahoma State Union Meeting

The date of next meeting of the Oklahoma State Union, F. S. E., has been set for January 29, 1914. All local and county unions in the state take notice. J. A. Harmon, Secretary, Shawnee, Okla.

Incorporates for $50,000

I take great pleasure at this time in telling you of the largest and most successful meeting of a local union yet held in Fremont county, which was the meeting of the Ashton local to incorporate. In attendance was Fred S. Parkinson, director of the National union, and of the county union; C. E. Lloyd, and Thos. Smith, of the county union, and O. E. Scott, secretary of the state union, and myself. Every feature was thoroughly discussed. The local was incorporated for $50,000 and the Merrill string of grain elevators has been bought. Send me a good supply of literature. I will get into new territory in July, as Fremont county will be completely organized by the last of June.—O. S. Paul, County Organizer, Rexburg, Idaho.

Grass Seed Wanted

Irish Valley Local No. 6872 is in the market for timothy and clover seed, and desires to purchase direct from locals having such for sale. Tell what you have and price wanted. Address F. W. Peifer, Secretary, Fishers Ferry, Pa.

Bought Flour, Binding Twine and Sacks

We have purchased a car-load of flour at a saving of thirty cents a hundred to our members; also purchased a carload of binding twine and halw a car of grain sacks. We have paid $1,000 earnest money on our elevator deal and are arranging to take over the elevator August 15.—A. M. Slatery, Ashton Local 6994, Ashton, Idaho.

Cash for Grain and Hay

The Elwood Grain Company, special representatives of the Farmers Society of Equity at St. Joseph, Mo., will bid on grain and hay for cash sales. All local union secretaries and members-at-large in territory tributary to St. Joseph and Kansas City should write them before selling. The F. S. E. Directory of Marketing contains names of direct buyers in nearly all markets in the United States.

Southern Peaches in Demand

The Kalamazoo Cold Storage Company, of Kalamazoo, Mich.. the F. S. E. representatives for that territory, advise members that they handle large quantities of apples, peaches, cranberries, melons, citrus and subtropical fruits. Potatoes, onions, nuts and honey. The Michigan peach crop will be short and this firm will be able to handle southern stock to advantage.

How to Top the Market

C. H. Weaver & Co., our Chicago representatives, make the excellent suggestion that the producer at all times should have his goods put up in first-class condition, in standard packages, because only such can obtain top market prices. This work can, of course, be best done by means of a local union.

Car-lot Orders for Cash

F. W. Ormsbee, F. S. E., representatives on the Topeka, Kas., market, writes as follows:

"We are planning to deal extensively during the coming fall season in car-lot shipments of apples, cabbage and potatoes. By buying direct from the growers and selling direct to the consumers, eliminating every possible expense, we expect to do an extensive business. We will work the territory of southern Kansas, Oklahoma, northern Texas and western Arkansas."

Our members having crops of above products will do well to get in touch with Ormsbee. Address him at Box 86, Topeka, Kas.

Had Her Instructions

Mrs. Subbubs (to neighbor's child)—"Oh, this is the dozen of fresh eggs I asked your mother to send over. How much are they, Mary?"

Child—"Please'm, it's forty cents; but mother says, if you grumble, it's thirty-five."—Boston Transcript.

A NATIONAL CLEARING HOUSE

CONSIDERING the magnitude and value of the agricultural business in a county, do not the farmers need a board of trade or chamber of business as much as the business men of a town or city need one? Few cities or large towns are without their businessmen's organization for getting business and boosting their business. The F. S. E. plan of organizing a county supplies the ideal condition for a county board of trade. In the F. S. E. plan the presidents of the various local unions constitute the board of control or executive committee for all the farmers of the county. This board, made up of representatives from each community, has charge of selling the crops and buying important supplies and the business agent works under its instructions. Great economies in buying and selling are thus effected as soon as the organization is started with increasing benefits as other communities and counties adopt the same methods.

Nationality of organization is the great strength in the plan of the F. S. E. In all building processes the great, completed thing is built of small units. The house is built by putting one brick on another, the tree is built by adding one year-ring after another, the invincible army is built of soldiers. So the farmers' marketing system is being built of local units and state units. Each local union of the F. S. E. is a new piece of timber on the growing structure; each county union binds the local unions together and many county unions, all federated in the national union, will eventually make the farmers' national clearing house a complete success.

The farmers must do the real work. We can only supply the plans and specifications. They must see that stone by stone the structure is raised.

No Violation

"Oh, Willie, you must put your drum away. This is Sunday."

"I know, mother, but I am just beating hymns they play in the church."

We Want You to Know

Steel shingles are rapidly coming into general use because of their numerous advantages over wood shingles from the standpoint of durability and economy. The best grade of wood shingles cannot equal steel.

Edwards Steel Shingles are the best known and most widely used, and are sold direct.

A copy of Edwards New Roofing book can be had by writing direct to the Edwards Manufacturing Company, 841-891 Lock street, Cincinnati, O. If you give the size of your roof, the company will quote a lump price on the job.

Ruptured People—Get This On 60 Days Trial

You know you can't possibly tell anything about a truss or anything else for rupture merely by trying it on, for a truss or so-called "appliance" may seem all right at first and afterward prove utterly worthless.

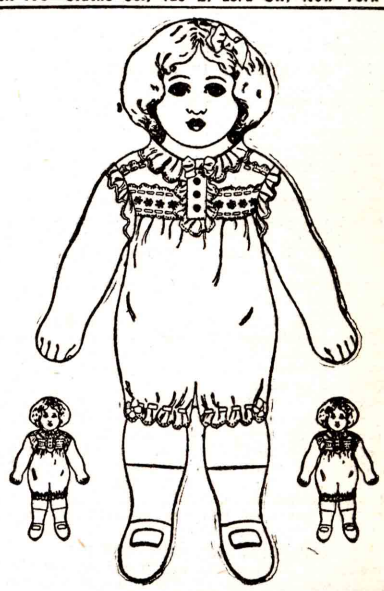
But here is something you can try sixty days—just as a test—without having to risk a single cent.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City



Do You Want These 3 Dollies

We want to give all these to any little girl who will do us a little favor. You can do it. Now do you want the three dollies? Read how to get them all:

The big doll is life size—2½ feet tall; she can wear your old baby clothes. The little twin dollies are six inches tall.

These dolls can not be broken. They are the prettiest dolls! Big brown eyes; red lips to kiss, and smiling pink cheeks.

You will just love these dollies so much. You can play and play with them and they will not break because they are beautifully printed on cloth in many colors. Mama will sow them up for you in a few minutes and then you will be delighted with my presents.

FREE TO YOU—All three dollies just as described, and sent post-paid if you send a new eight-months' subscription to UP-TO-DATE FARMING for 25c. This is a great offer. Hurry up your new trial subscription, girls.

FOR SALE—30,000 pounds best leaf tobacco, 3 and 4 years old. Mail stamps for sample to Anton Wavrin, Franklin, Ky. R. R. No. 5.

HELP WANTED

500 MEN 20 TO 40 years old wanted at once for electric railway motormen and conductors; $60 to $100 a month; no experience necessary; fine opportunity; no strike; write immediately for application blank. Address Box 35, Up-to-Date Farming.

U. S. GOVERNMENT POSITIONS open to men and women. Commence $65 to $100 month. Thousands of appointments. List of positions available, free. Franklin Institute, Dept. R 26, Rochester, N. Y.

WANTED—Salesman to sell large line to country trade. Reliable house, all products guaranteed. Pays from one to $200 per month. Reference, bond and a suitable horse and wagon required. Business permanent and profitable. Write for particulars. Mutual Medical Co., Canton, O.

PATENT ATTORNEYS

PATENTS THAT PROTECT AND PAY. Advice and books free. Rates reasonable. Highest references. Best results. Watson E. Coleman, Patent Lawyer, Washington, D. C.

IDEAS WANTED—Manufacturers are writing for patents procured through me. 3 books with list 200 inventions wanted sent free. Advice Free. I get patent or no fee. R. B. Owen, 49 Owen Bldg., Washington, D. C.

MEN OF IDEAS and inventive ability should write for new "Lists of Needed Inventions," "Patent Buyers" and "How to Get Your Patent and Your Money." Advice free. Randolph & Co., Dept. 28, Washington, D. C.

MISCELLANEOUS

FOR SALE—Bitter Root Villey fruit farm. Box 182, Hamilton, Mont.

FREE—Absolutely free. The Mining News will be sent you three months free just to get acquainted. Mining News, 2531 West 37th Ave., Denver, Colo.

MONEY in growing Golden Seal. Write for prices of roots. W. N. Long, Florence, Ky.

Letters from wheat growers, representing the entire winter wheat section, prove that we have the most wonderful wheat ever grown. If you want to make more money from your wheat send the coupon.

Read what others have done. You can do as well. Save money at the start and make big money in the end.

55 BUSHELS PER ACRE

I sowed one acre of the new wheat according to instructions, on the 10th of October, 1912. It stood the winter well and in the spring soon led all others. The straw grew 4½ feet tall, stood up well and when threshed it yielded 55 bushels. **This yield has beat any wheat ever raised in our section of the country.** Its fame spread all around and people came a long distance to see it. **I cannot furnish seed for all who want it.**—Charlie Houser, R. R. 3, Henry, N. C.

TWICE AS MUCH AS OTHERS

I sowed two acres of the new wheat on the 10th of October last fall. It grew faster than any other variety of wheat I ever raised. Stood the winter perfectly, better than other varieties. Yield is about twice as much as other varieties of wheat that I have will yield. I consider it an extra good wheat for medium soil.—J. B. Tomlinson, Culleoka, Tenn.

EVERYBODY IS ASTONISHED

I sowed three-fourths of an acre of the new wheat. It stood the winter better than any other wheat and there is nothing to compare with it in vigorous growth in the spring. Everybody is astonished at the way this new wheat grows. It will **outyield any wheat that I ever saw in this state.**—Eugene Burford, Palestine, W. Va.

BEATS OTHERS BY HALF

I sowed three-fourths of an acre of the new wheat October 1, 1912. It beats all other varieties in hardiness to stand the winter. This wheat has proven with me to beat any other wheat by a half, and I want to sow all that I raise this fall.—Jas. T. Cregger, Chatham Hill, Va.

MORE THAN DOUBLES OTHERS

The new wheat received from you was sown on one and three-fourths acres of ground about the 12th of October. In the spring it more than doubled other varieties in vigorous growth, and in a manner, is fly-proof, as the balance of the field was sown with another variety, and the fly killed one-third of it. It did not hurt the new wheat at all. It stands up the best of any wheat I ever saw. It will yield more than double as much as other varieties. Some heads have fifty to sixty grains each. **The wheat has fulfilled every claim made for it, and more too.** Every person who has seen this new wheat wants to raise it.—Geo. L. Orndorff, Bunker Hill, W. Va.

BEST PIECE IN NEIGHBORHOOD

I sowed two acres of the new wheat on October 10, 1912. It was the best of all to stand the winter, grew four to six feet high, stands up well. It will yield at least one-half more than other varieties. It is the **best piece of wheat in this neighborhood.**—Larkin Willis, Kyles Ford, Tenn.

IT IS "MARVELOUS"

I sowed four acres of the new wheat according to instructions, on October 5, 1912. This was late to sow, but it stood the winter as well as the best. As to its growth in the spring, I know of no other word to express it better than **"Marvelous."** I estimate the yield at 25 bushels per acre.—H. H. Flint, Greensburg, Ind.

50 TO 60 BUSHELS PER ACRE

I sowed one-half acre of the new wheat. The yield is estimated at 50 to 60 bushels per acre. Compared with other varieties **it beats them all.** It is the purest wheat of all and there will be a demand for seed. I just want to say that it is the **finest wheat ever raised in this neighborhood.** My neighbors say it is the finest they ever saw.—Larry Sowash, Amboy, Ind.

HAS EXCEEDED MY EXPECTATIONS

I sowed three-fourths of an acre of the new wheat according to your instructions on October 5, 1912. This was late for our section and it did not get much of a start last fall, but was very hardy in the winter. In the spring it soon made far better growth than most any other variety. It grew three to four feet high, and **will yield far ahead** of other varieties grown under similar conditions. This wheat has attracted much attention in this section. There were 50 to 60 heads from some grains. One of our threshermen visited this part and said that he **never saw larger heads.** It has exceeded my expectations.—O. V. Burt, Rexburg, O.

ONE ACRE EQUAL TO THREE

I sowed one acre of the new wheat in October. It made a good growth in the fall and stood the winter as well if not better than the others. In the spring it soon took the lead of other wheat sown in the same field. The one acre of the new wheat will make as much grain as three acres of other varieties.—W. J. Willis and Son, Kittyton, Tenn.

AT RATE OF 63½ BUSHELS PER ACRE

I sowed only six-tenths of an acre with the new wheat, the first week in October. It made a good growth in the fall and far excelled other varieties in standing the winter. It grew five feet high, stood up extra well and the yield was at the rate of 63½ bushels per acre, which is **fully three times more than other varieties** of wheat yield through this section. The wheat is perfectly pure. There will be a demand for seed of this wheat through this section.—H. B. Austill, Booneville, Ind.

ANOTHER PROFIT

Every bushel of this new wheat that is harvested in 1914, will be in demand for seed at high prices. This is another opportunity for profit over the increased yield.

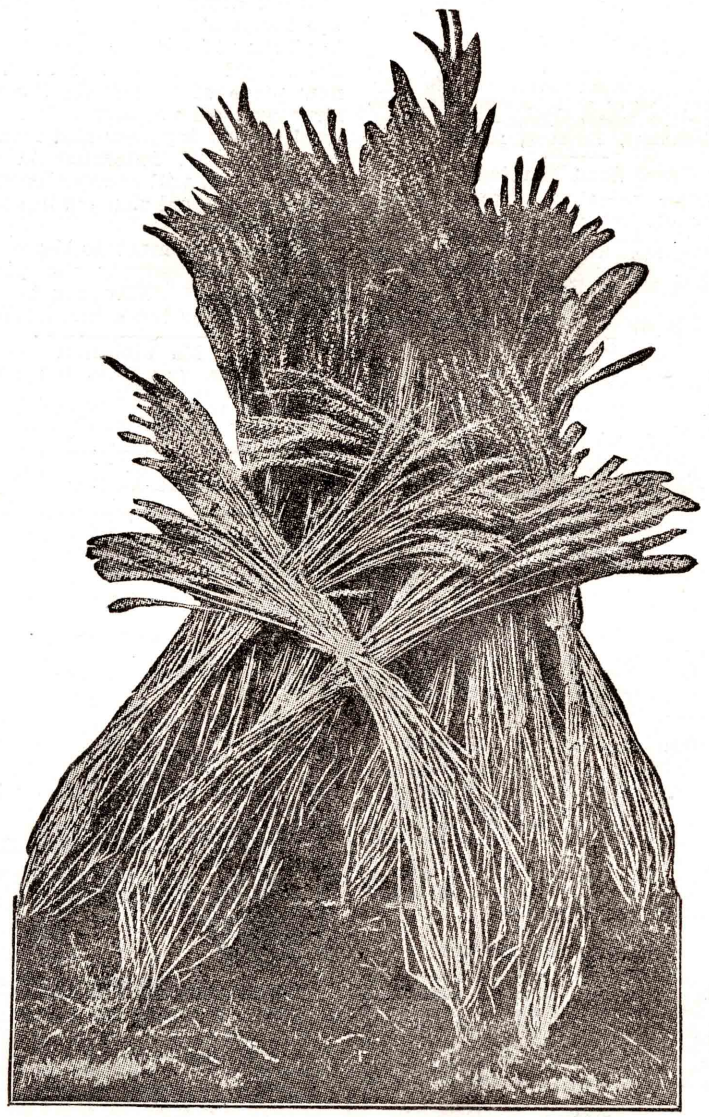
Mr. Wheat Grower—Everywhere

To sow 10 acres of wheat you will take 20 bushels of your wheat, clean and grade it down to 15 bushels, and sow 1½ bushels to the acre. Correct, isn't it?

Sell the 20 bushels at market price—$18. Keep $5.50 and send us the balance, $12.50, and we will send you a new variety to sow the entire 10 acres that will yield you much more than your own seed will.

EXAMPLE

20 bushels of your wheat at 90 cents	$18.00
Our proposition, wheat for 10 acres	12.50
YOU SAVE	$ 5.50



FIFTEEN STOOLS OF THE NEW WHEAT. EACH STOOL HAS OVER 1,000 GRAINS. THIS IS OVER 1,000 GRAINS FROM ONE GRAIN.

No, don't send us any money, but send the coupon below for our full proposition.

You're Skeptical? Well we don't blame you. But many others have done this very thing. So send the coupon and get our proposition if you are going to sow any wheat this year. The only expense to you will be a postage stamp.

If you are a wheat grower you should not wait a minute, but send the coupon before you lay this paper down. Get our whole proposition. It means money saved right now and more bushels of wheat after next harvest. Whether you intend to sow one acre of wheat or many, this ought to interest you more than anything else printed in this paper.

O. K. SEED STORE

Dept. A-4 **Indianapolis, Indiana**

Change your seed wheat, get new blood, life and vigor. Increase hardiness, productiveness and quality. Save money

BEATS EVERYTHING IN WAY OF WHEAT

I sowed one-half acre of ground to the new wheat, September 25, 1912. In the spring it outstripped every other variety of wheat growing in this section. The straw is 4½ feet high and stood up perfectly. This wheat beats anything that I ever saw in the way of wheat. I gathered some heads with 50 grains and upward. **I am highly pleased with the wheat.**—A. C. Leech, Salem, Mo.

CROP ENGAGED AT $5 A BUSHEL

The new wheat was sown on two acres of ground on September 25, 1912. It was not winter-killed in the least. No other wheat grew any better in the spring. **I estimate the yield at 50 bushels per acre,** which is much better than any other variety around here. All that I will have to sell is already **engaged at $5 per bushel.** I think it is the greatest variety of wheat ever introduced into this country. Dozens of my neighbors have seen my wheat and pronounce it wonderful.—J. H. Myers, Atchison, Kas.

MUCH BETTER YIELDER

The new wheat grew fine last fall and in the spring. As near as I can estimate the yield it was at the rate of **40 bushels per acre.**—W. W. HYLTON, Buffalo Ridge, Va.

WILL YIELD DOUBLE ANY OTHER

The yield is estimated at **40 bushels per acre** and it will yield double any other variety about here. I regard the new wheat as the **best I have ever sown.**—Hugh S. Espey, Rising Sun, Ind.

MORE THAN YOU CLAIMED FOR IT

The wheat is all that you claim for it and more too, as I gave it a very poor chance just to see if it was a hardy variety. The new wheat threshed 20 bushels per acre, while other varieties are threshing out 10 to 12 bushels per acre.—M. C. Franklin, Jefferson City, Tenn.

YIELD TWICE AS MUCH AS OTHERS

I sowed one-half acre of the new wheat. It stands 5 feet, 6 inches in height, with heads bent downward and just full of wheat grains. **It has about twice as many grains to the head as other varieties.** It will yield from 30 to 35 bushels to the acre, which is about twice as much as other varieties this year.—C. S. Manning, Elizabethtown, Pa.

FOUR TIMES AS GOOD AS MY OLD KINDS

I sowed seven-eights of an acre of the new wheat and the yield is 30 bushels from this plat. Stools of thirty to forty stalks were common. This new wheat is four times as good as my old kinds.—H. G. Ayre, Bradley County, Tenn.

I WILL NOT SOW ANY OTHER KIND

The new wheat was more hardy than our native wheat, and in the spring started off and was away ahead of any other wheat around here. The yield was at the rate of 30 bushels per acre, which is one-third more per acre than any other wheat. It is a great stooler. I counted 42 heads from one grain. I will not sow any other kind this year. **I am well pleased with** it and have highly recommended it.—Oscar Harvey, Arkport, N. Y.

WILL PRODUCE DOUBLE AS MUCH

I sowed the new wheat obtained from you on seven-eighth of an acre, on October 3, 1912. It started out with an extra growth in the fall and stood the winter forty per cent. better than other varieties. **It excelled all others in growth in the spring.** Average heighth 4½ feet. It stood up extra well, and will produce double as much as other varieties in this section. I sowed the wheat on thin land and the test is very pleasing to me.—Sumner Flippin, Lafayette, Ind.

Will you spend a stamp to save money and increase your next wheat crop?

Spend a stamp, send the coupon and get full particulars. Write to any of the people whose letters we print if you want to but they will sow all of their wheat or sell the surplus to their neighbors. It will be years before much of this wheat will reach the mills because it will be in demand for seed as no variety ever was before. We will be glad to hear from every wheat grower so we can send full particulars and place our proposition before them. Mailing this coupon places you under no obligation but, if you grow winter wheat investigate now

FOR BETTER WHEAT MAIL THIS

O. K. Seed Store, Dept. A-4, Indianapolis, Ind.
Without any obligation on my part to buy, please send me your proposition on seed wheat as advertised.

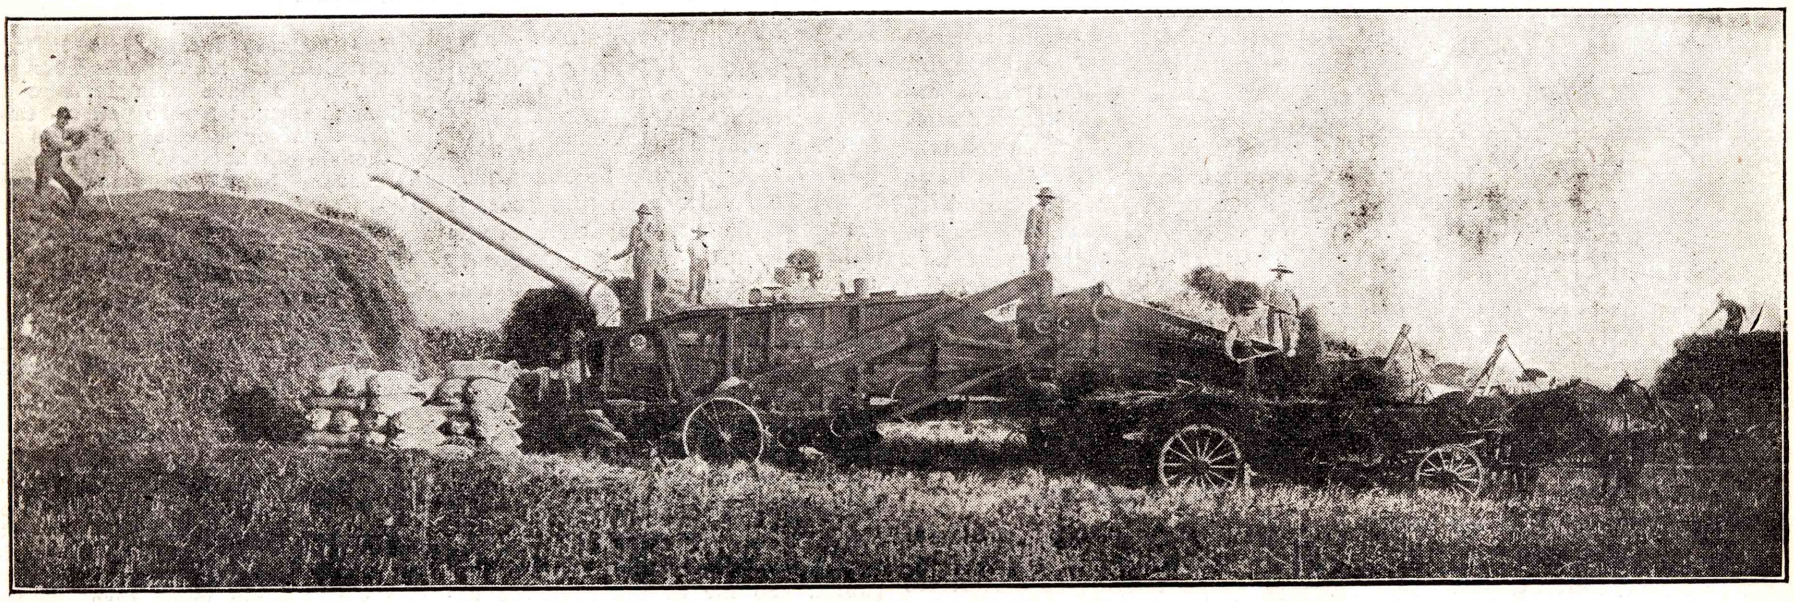
A Herald of Farm Progress and Prosperity. Published Twice a Month



GETTING GRAINS O'GOLD AT THE RATE OF 2,000 BUSHELS A DAY ON AN OHIO FARM BY SCIENTIFIC FARMING

With the Up-to-Date Farmers

A Department for Live Folks who want the best. Our readers are asked to contribute their thoughts. If you have a helpful idea pass it on. Be neighborly. Contributions always welcome.

Just keep on "keeping on."

Bees don't buzz where there isn't any honey.

Grumble and Grunt are boon companions of Grouch.

A good way to get beaten is to go around boasting of your ability to best somebody else.

The city home that has water in every room isn't ahead of the farm with water in every field.

Co-operation, in some men's minds, is for you to do what they tell you to do, and doing it willingly.

Getting the big head may be a bad thing for folks, but it is considered a virtue in cabbage and cauliflower.

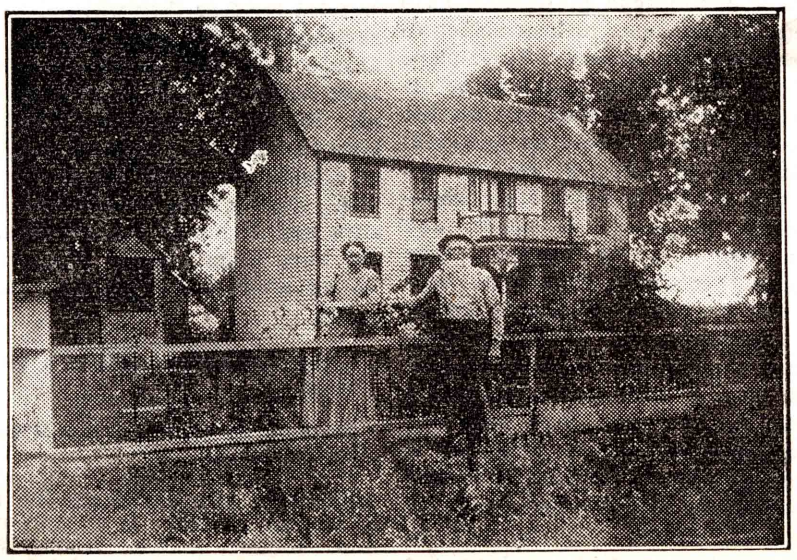
When crops or stock are not doing just right, why not write your agricultural college a letter telling them all about your troubles? They have the experiences of many successful farmers to help you.

Massachusetts began the construction of a modern system of highways in 1894—she has spent on them $12,500,000—she finds her investment profitable—she proposes to spend a million a year for the next five years on the same plan.

Making $100 Extra

I am a member of Geneva Local 7103, F. S. E., and the first of the local to sell through the Equity System. On two carloads shipped I received a little more than $100 above what I would have received at my local market.—W. W. Fuller, Geneva, Neb.

Where Life is Worth Living



HOME OF SUBSCRIBER P. P. PRAHER, RUSSELL, IOWA

Threshing a Science

A GOOD thresherman is a valuable man in a farming community. There is science in threshing and a good thresherman is one who has studied and mastered the science. There are too many threshermen who are not fitted for the job, and as a consequence the entire community pays the bill. It requires more than a knowledge of how to put on the belts, fire the engine, and use an oil can to do economical threshing. The machinery, of course, should be thoroughly understood, but a knowledge of machinery is not all that is required. The thresherman must know grain, and management of men. He must be a diplomat and an executive of ability. Economy of time and labor is an essential in threshing time. Threshing is a business of no mean proportions, and the thresherman should be a business man of no mean ability.

The average farmer gives his threshing to a thresherman on one or more of the following conditions: (1) Because the thresherman is a jolly good fellow. (2) Because he offers to do the work at a cut rate. (3) Because the machine is the one that happens to be in the neighborhood. (4) Because the thresherman is a member of the same community. Real ability is not often considered except in a vague, indefinite, general way. If the machinery does not frequently break down, and if not too much grain goes "into the straw," it is commonly accepted that these qualifications are all that are needed for the job of threshing.

In those states where the thresher-

OUR ADVERTISERS—GUARANTEE

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this UP-TO-DATE FARMING stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in UP-TO-DATE FARMING" when writing to the advertiser. Medical advertisements are not accepted.

Entered at the Indianapolis, Indiana, Postoffice as second class matter, under the Act of Congress of March 3, 1879.

Sardines and Suckers

THE United States Department of Agriculture has established a sardine laboratory at Eastport, Me., the idea being to improve the quality and reputation of American sardines. The sardine industry is said to be in a deplorable condition because it is said, "Competing packers have cut the prices of their products to a point where it is practically impossible to put up first-class sardines." A circular just issued by the department has some very interesting and suggestive statements regarding the industry. Here are a few of the most significant:

What was once a flourishing and money-making sea-food industry has through destructive competition been brought to a stage where many canneries are no longer packing and where those which do pack are compelled to sell their product at less than cost.

* * *

Those who have no capital behind them either have had to quit or else pack inferior fish in the cheapest possible way, so that they could continue to sell at prevailing prices.

* * *

The Maine sardine canners now realize that their policy is self-destructive, but heretofore they have been unable to get together to save the industry. These men have welcomed the coming of the representatives of the department and already are showing signs of getting together, stopping cut-throat competition, and restoring the industry to a place where they can afford to make a really superior brand of sardines.

* * *

Manufacturers have begun to realize that it is time to agree among themselves to discontinue the old methods of competition, and to work together to improve the quality and restore the good name of the American sardine.

Thus it is shown that the sardine manufacturers were a bunch of suckers impaled on the hook of competition, but are now going to get together to restore the industry. This means, of course, that the first thing to do is to "get together" on the price. That is the only way to eliminate cut-throat competition and make a profit sufficient to enable them to put out a superior brand of sardines.

There are lessons in this for our farmers. We are asked to increase our output, improve our product, and put crop farming on a highly profitable basis, and there is no business extant where cut-throat competition exists to a greater degree than in marketing farm crops. The sucker crop among the farmers is a bumper one in this respect. The need for the rural "get-together" movement is made all the more emphatic by this latest disclosure of the government's endeavor to save the sardine industry. With the strong arm of the government around them farmers will be as willing and as glad to "get together" as any class of bsiness men in the country. But they will demand that in getting together, genuine good will come of it in the shape of substantial profits, which, of course, can only mean that co-operation in maintaining profitable prices shall be made effective.

The Right Idea

BANKERS, business men, and others who are now taking a keen interest in agriculture are, as a rule, of the opinion the farmer needs education in the science of farming, and so he does. But he needs education in the science of business, as applied to both production and marketing even more than he needs to know more about soils, plant growth, stock-feeding, etc. It is a good sign, therefore, when we see the business men of the towns put forth an effort to increase the business efficiency of agriculture. They may not know the principles or practice of growing crops, but they do know the principles and practise of successful business. They can not teach the farmer how to farm, but they can teach him many things in business methods.

The directors of one of the largest banking institutions in Georgia have begun arrangements to loan money to farmers on farm products. Their plans are such that the farmers will be organized, shown just what the market calls for, how it should be prepared, stored, graded, shipped, etc., in the business manner in which other manufacturers prepare their goods and place them on the market. The movement comprehends a local market, the erection of a packing house, the organization of a holding company to buy hay, grain and other productts and a shipping organization among the farmers. This step will mean large warehouse facilities, a proper grading of produce, a system of marketing that produce, and organization among the farmers to properly prepare that produce for market.

More About Parcel Post

THE postmaster-general evidently knew what he was about when he issued an order changing the boundaries of the first and second zones, increased the maximum weight of parcels for transportation in these two zones from eleven to twenty pounds, and reduced the postage rate one-third in the first zone and two-thirds in the second zone. This order tread on the toes of somebody, for immediately after its issuance, certain members of Congress raised a tempest in a teapot, claiming the postmaster-general had exceeded his authority, and was about to entail his department in enormous losses; that the new rate would be a losing proposition for the government. The Interstate Commerce Commission, however, backed up the postmaster-general, who was able to demonstrate clearly and conclusively that he had full authority for making the changes, and they were fully justified

It was estimated that possibly 300,000,000 parcels would be handled by Parcel Post during the first year. It has proven far more popular than was estimated, for, with the proposed changes in effect, more than double that amount will be handled. Fully one-third of the parcels are handled wholly within the first and second zones, and by increasing the weight limit and decreasing the rate, this traffic will be immensely increased, and it is shown that at the new rate, the government will profit rather than lose. Indeed, the only loss to be considered is the loss to the express companies. So far as the postoffice department is concerned, the change may so increase its revenues that it will be fully self-sustaining hereafter, instead of having a deficit, as heretofore. The administration at Washington, and the public in general are to be congratulated on the rapid growth and success of the Parcel Post. The people should closely watch all attempts to handicap it and demand that it be encouraged and promoted as fast as practicable. At the present time, the railway companies are demanding more pay for hauling, claiming the Parcel Post traffic has greatly increased their labor and expense without a corresponding increase in payment. The railroads should, of course, be fairly paid for the services rendered. We are not particularly worried for fear they will not be paid sufficiently. The great interests have always been able to get all, and in most instances, more, than they earned. We are more concerned lest they keep on receiving the lion's share, and so cripple the public welfare in that way. Our readers should keep fully alive and awake to the situation. We can have a far greater prosperity if we go after it unitedly and intelligently.

Courtship often ends in a court room.

Keep up the farm and it will keep up the family.

The man who makes the big noise is running a bluff. It is the coward who whistles when going alone through a graveyard in the dead of night.

What Others Say

The community that works as a unit for the common welfare is the community that prospers.—Farm, Stock and Home.

None of the methods commonly advised will keep the boy on the farm if he feels better fitted for something else.—The American Cultivator.

Tillage of the orchard is very important. The longer you can keep tilling right up to the harvesting of fruit, the more fruit you get and the better quality. I cultivate as late as I possibly can.—Wm. I. Smith.

The use of automobiles on country roads is growing. For city people the automobile is a luxury or at least a convenience, but for country life it is becoming a necessity. In ten years it will revolutionize country life.—Farm and Ranch.

The keynote for success in any man's life is his "willingness to learn." We have seen farmers to whom it seemed severe pain to take information or advice or ideas or methods from another. Such are to be pitied.—Hoard's Dairyman.

The chief value of county extension work exists in the fact that it gives the personal touch to farm life; and if the county adviser does no more than bring farmers in closer touch one with another, the results of his efforts will be of incalculable benefit to agriculture.—The Farmer.

Bureau of Markets

A number of practical farmers have been discussing the project for a bureau of markets. The problem of selling and distributing farm products has received very little attention in Nebraska. A careful study of the subject would mean much cash for the farmers.—W. R. Mellor, Secretary, Nebraska State Board of Agriculture.

The Farmers' Hope

Organized marketing is now the hope of farmers everywhere. Tennessee alone has approximately a half-hundred fruit and vegetable growers' associations ,all working to lessen the cost of distribution of farm products, and thereby make more equitable the division of the fruits of farm labor. Every farmer has a duty to perform in assisting this movement to success.—Farm and Fireside.

Threshing Dinners

Communities in certain parts of the corn belt are doing away with what might be called the "picnic dinner" which is a real burden on many a housewife, and an added expense to threshing. Threshing "rings" are formed, every man bringing his own dinner, and getting his supper at home. This works a hardship on no one individual, and is a custom we predict will grow rapidly, as the practise means an enormous saving of household labor and expense.—The Homestead.

The Mote and the Beam

Railroad traffic men fear that when threshing begins in dead earnest, we may be up against a serious car shortage. One man states that the situation will have one redeeming feature—farmers will be unable to glut the markets as they might. Farmers often hold wheat; but never relish doing so. Prospects of a car shortage in crop moving time forces the conclusion that some of the money now being spent by railroads to show farmers how to produce bigger crops might better be used to build cars enough to carry to market the crops already grown.—The Nebraska Farmer.

Some Editorials

By John P. Stelle

Money to Move Crops

An Old Song With a New Tune

FOR years, in fact so long as the present marketing system has prevailed, there has been an outcry as harvest has approached for "money to move the crops." We have often referred to this as a kind of mixture of pretense and absurdity, an entirely abnormal condition, the result of the concentration and control of the country's money circulation in a way injurious to practical and general business, a condition supplemented by a very bad marketing system practiced by the farmers themselves.

High official life is not free from the delusion that farmers need more money at the time of marketing their stuff than at any other time, and Secretary McAdoo has taken the matter in hand, and, ostensibly, in the interest of the farmers, proposes to relieve the stringency by depositing government money in the banks of the south and west where there is the greatest surplus of farm products. This government money is really loaned to the banks by the treasury department at a rate of two per cent. on various securities even including ordinary commercial paper, and the amount to be thus deposited is from twenty-five to fifty million dollars.

If Mr. McAdoo's purpose is to aid the farmers it is difficult to see how his plans are to reach them. The money does not go to the farmers, but to the banks, and if the farmers get it they must go to the banks for it just as they must at any other time of the year. The banks pay for the use of it, say 2 per cent.; they loan it to whom they please at whatever per cent. they are accustomed to charge—six, ten, or even twelve per cent., with sometimes a commission to some one for procuring the loan, or a fee for making out the papers. Who are the beneficiaries, the banks or the people?

Again. Why do farmers need money at that time more than at any other time? They need the money to "move the crops." But the farmers do not move the crops except from the fields to the local shipping points, and that is done with the ordinary farm equipment. From the shipping points the purchasers move them to the congested centers where the prices are ruinously depressed and the farmers stand the loss. It is the purchasers, then, that need the money to "move the crops," and not the farmers. The buyers are the ones that will obtain these government deposits, the farmers get it only as they sell their stuff for it at as low a price as the government-aided buyers can compel them to accept, each load to the central markets congesting the markets that much more and so assisting in pulling down the price for that which is yet to come. After the stuff is bought, however, at the lowest possible prices and the crops have been "moved," it is discovered that they have been stored by the gatherers, and are thence dealt out to the users in stinted supplies at prices carrying most exorbitant profits. These are the people and these are the results that Mr. McAdoo's deposits from the national treasury most contribute to. The benefits do not reach the farmers at all. They get only what the buyers offer them, and the buyers are thus complete masters of the situation.

"Come now and let us reason together." The world does not need the stuff all at once. Each harvest includes a year's supply. The system in vogue pours the year's supply into private and speculating storage where it is held in spite of crying needs—held until it brings a price dictated by greed; and even then it is so badly distributed that large quantities, distressingly needed elsewhere, go to waste in the market centers or in the fields for lack of a demand at harvest time.

If the government would really help the farmers, and through them the millions who consume but do not produce, the way to do it is to encourage and assist them in HOLDING the year's supply until the demand requires it and then to so distribute it that every demand may be met in the most direct and least expensive way. This would, perhaps require means, not as deposits for the banks to gain profits on, but so arranged that the farmers themselves could obtain the money by some means safe to the government, and on terms that would enable them to accomplish the purpose so desirable. This course would effectually silence another annual complaint, that of a shortage of cars by the railroads. The distribution of shipments would make the ordinary car supplies abundant. To prevail on the government to do this is another reason for a strong organization of farmers.

Still Yelling More! More!

IN THE August 1st issue of this paper we had an article on the effect the agricultural department reports have upon the price and marketing of cotton. That article has attracted wide attention, and it has been the subject of earnest discussion not only in the cotton states, but throughout the entire country.

The effect so clearly shown in that article does not apply to cotton alone, but to every prominent marketable crop. We have received from Washington the following dispatches:

A cablegram dated July 3, 1913, from the International Institute of Agriculture, Rome, Italy, which has been received by the United States Department of Agriculture, states that in European Russia this year's winter wheat crop is estimated at 277,683,000 bushels, or 13.8 per cent. more than last year's production, and the winter rye crop 917,168,000 bushels, or 8.9 per cent. less than last year's production."

A cablegram dated July 23, 1913, from the International Institute of Agriculture, Rome, Italy, which has been received by the United States Department of Agriculture, gives the following estimates for European Russia: Production of spring wheat, 511,101,000 bushels; all barley, 530,297,000 bushels; all oats, 1,029,623,000 bushels; the estimated production compared with last year is for all wheat 26.5 per cent. more, for all barley 16.3 per cent. more, and for all oats 5.8 per cent. more.

It will be noted that these reports come at the time when these crops are going to the market in this country. The inevitable effect is a reduction in price. As the buyers and not the producers make the price, it is no wonder that these reports are displayed by the buyers and their reduction of price is justified by them.

What can the farmers do? They are selling. The stuff is already on the way to market. They are not prepared to store the grain even if they wished to do so, and these big figures of more and more constantly stare them in the face. They feel that they must sell or do worse. That is the meaning of the system, and that is why it is so rigidly maintained.

But those who favor the issuing of these reports say they only tell the truth and those who issue them are not responsible for the effects. If small crops are indicated, they contend, the reports say so as in the case of rye in the first dispatch above. We may concede that to be true, though there is abundant evidence that the large yield reports are exaggerated and emphasized. But it is a fact that the small yield reports, when they are forced on the department, do not benefit the farmers. Under the present system farmers do not make the prices, and, therefore, can neither put them up or down no matter what the reports may be. Hence the farmers can take no advantage of the small yield reports as the buyers do of the large yield reports. The entire system is for the speculating buyers, and is no benefit to either the producers or consumers. They enable the buyers and handlers to get the goods cheaper, but that is seldom followed by lower prices to the consumers. A system so notoriously one-sided should be abolished. If ever it is the farmers themselves, the producers and first owners, must do it.

What We Need Most

BIGGER yields to the acre is the thing we need most," says a leading paper of the south, and the idea is echoed and re-echoed by the agricultural departments, state and national, by the experiment stations and the experts, by the colleges and universities, by the state and county fairs, by the demonstration trains and by every farm booster including the fertilizer people.

Well, let us join in the chorus and declare with the others that we need "bigger yields to the acre," but is that really what we need most? Farm products are worth nothing unless there is a demand for them, unless they are needed, unless there is a use for them. And there may even be a demand, a hungry demand, and yet the stuff be worth nothing at all unless it can be used to supply the demand, and it is impossible to supply a demand unless the supply and demand be brought together. And there is yet another condition. The supply must find the demand on terms that make it available—on terms that the demand is able to meet. In other words, on such terms that the demand would rather pay the price than do without or substitute something that costs less.

Now, are there not several things here that we need more than we do greater yields per acre? Better marketing, more complete and cheaper distribution, a system of handling that will cut out excessive and extortionate profits. How often do we hear of crops wasting in the fields or rotting in congested market centers while in many places not far away there is a crying need that conditions do not allow to be supplied. Are bigger yields an acre most needed in cases like that? To secure bigger yields an acre requires study, careful application of the knowledge acquired, industry and perseverance, and the constant enrichment of the soil. Must all this be done for the mere sake of having bigger yields and adding to the surplus that annually goes to waste, or that keeps prices going up and down to such an extent that those who risk all in production cannot know from year to year, or from month to month, what reward they shall have for their labor, or whether any reward at all?

Let farm boosters step upon higher ground, whence they may view the entire situation. There are many things we need more than we do bigger yields per acre. Join in the securing of these things, and then the bigger yield fellows may find justification for their efforts.

A Triumph for Organized Farmers

IT IS entirely natural that the enemies of the control of farming by the farmers themselves will do all in their power to prevent or defeat such control. The Burley Tobacco Society and the fight that has been made on it afford a good example. The courts have been called on time and again to break up the society, and only recently a strong legal effort was made to over-throw it. But so far the society has been triumphant. A recent decision in Judge Harbeson's court in Kentucky is a signal triumph not only for the Burley society, but for all efforts put forth by farmers to properly control their business, not inordinately, but as other people control theirs.

We do not think the Burley society has always taken the wisest course, or done the best things in the best way, but it has measurably controlled the tobacco of the growers. The encouraging lesson we get is that what the Burley producers have done the producers of all crops may do. It is a travesty on modern education and business methods that farmers continue to plant, cultivate and harvest and then transfer to the markets with no more control of the price than if the stuff belonged to somebody else. It is time for this pretense of selling to stop. We have time and again shown how better markets and steady and more remunerative prices may be obtained. The press in recent years has strongly sustained us, as have many of the schools and colleges, and now the courts declare the farmers have a right to do it in spite of the opposition of those who would control these matters for their own benefit. What a great stride in the lines of agricultural progress it would be for the farmers everywhere to unite in the marketing and distribution of all crops. The courts say "Yes." Why do so many farmers by their inaction continue to say "No"?

Sam Saxon says that though aeroplanes will fly, and milking machines will milk, it takes a level head to make them work right.

A Weekly Letter

THE farmers of the country are to have a weekly letter from the Department of Agriculture at Washington. These are to be prepared by the department experts, and they are to go to the local crop reporters and thence to the farmers in general. Our opinion of the work of these people, so far as real benefit to the farmers is concerned, is pretty well known, hence we must see the letters before we can say much in their favor or have much hope of benefits to be derived from them. Theoretical farmers, and especially those who have never made a study of anything but the production side of agriculture, cannot be very effective teachers of practical farmers who need more than anything else instruction on the business or marketing side of farming. We note, however, that the effete Crop Reporter that has always been of more benefit to the price-making buyers than to the producing sellers is to be discontinued, and that, at least, is a hopeful sign. We trust the Department of Agriculture may yet awaken to the fact that it is neither a political machine nor an institution for the special benefit of speculating buyers of farm products at prices made by themselves, but that it is to aid practical farmers engaged in productive agriculture who need to be taught business as well as production. If the farmers would take proper steps to make themselves heard even in high official life, there is no question as to the results.

The Editor's Comment

OUR Ohio friend strikes a keynote to success. Intelligence is the greatest factor in profitable farming. It matters little how the intelligence is acquired, but it matters much that should we have it. A bright mind will acquire much from experience alone, but we learn more and faster from the experience of others, and we believe the agricultural press is the most efficient means of spreading profitable ideas. In this connection, we can say that Uncle Sam's most profitable crop is his crop of farm papers.

Mrs. Latham, also from Ohio, near a good market, did splendidly with an acre of sugar corn. All honor to the ladies.

B. F. S. has a method of raising turkeys that is simplicity itself, and practical without doubt. And we print his letter just as he wrote it. We like to see our friends ready to talk in their own way, freely, without reserve. That is the way they best express their ideas.

Tobacco is a profitable crop, where it can be grown advantageously, and is one crop that gives abundant proof of the value of good cultivation. There is an abundance of hard and painstaking labor in a tobacco crop, and being a luxury, it ought to pay even better than it does. It will, too, someday, when the tobacco growers become properly organized.

For "patch" farming, that is, utilizing the old corners, popcorn is usually a good crop. It is particularly a good crop to interest the young boy, especially if enough is grown to make it worth while. Less than half an acre is seldom an object, though our Kansas correspondent planted but half that area.

While our Texas friend only raised about half the quantity of potatoes on an acre that the Kaw Valley potato growers are able to produce, he made the land pay a higher average profit because he had a good local market. After all, the market is the principle thing in profitable farming. We think, though, O. P. should do much better than one hundred bushels of potatoes an acre on irrigated land.

A novel idea is given by another Texan. "Panned" cucumbers certainly "panned" out well. Our suburban and city readers should try it. A cellar where a furnace is installed would make it possible to secure a very early, or a very late crop, which would be doubly profitable. A sunny window would be a necessity, we judge.

Dairy cows, if properly selected and well treated, will make any farm fertile, and the farmer prosperous, if located where milk, cream, or butter can be handled and marketed to advantage. This is one of the most important matters to consider when planning a dairy business.

A Crop of Ideas

(First Prize)

I am one who believes we farmers fail or succeed according to our knowledge of what our possibilities are. Some men work hard and strive to the uttermost to succeed, and in spite of all their effort they meet with very indifferent success. Other men, with less to work with, and with less work as well, keep going ahead, and making more and saving more, until they are well fixed. They have no more days in which to work, no more muscle with which to perform their tasks, so it must be the difference in management that gives the difference in returns, and management is only knowledge applied. The good manager knows what is best to do, and why it is best. A man on the farm succeeds or fails according to his crop of ideas. This we have demonstrated to our entire satisfaction on our farm.

My father died when I was eighteen, and left me with 120 acres of worn clay hills, a mother, a sister and two brothers to support. He had been a hard worker himself, but worked in a groove. His idea of making more was to do more of the same kind of work, and it was his intention, as we boys grew up, to buy more land adjoining, and thus give us an opportunity for more labor. This was the common idea in the neighborhood, and it was a race between the farmers to see who would be able to buy when land was offered for sale.

Soon after father's demise, a young man came along selling subscriptions to an agricultural journal, and giving (?) with each subscription a household article that pleased my mother, who subscribed. I became greatly interested in the paper. It was a revelation to me. There were stories of crops and stock that seemed almost too good to be true. Our farm, which we had worked hard, could not produce as I read of other farms producing. I soon found out that there was a great deal about farming and feeding I didn't know, and I was surprised. I thought I knew all about farming.

The things I read opened a door to greater opportunity. Of course, I overdone the thing at first, and many things I did because some one else advocated the idea was a failure with me. I soon learned that ideas are much like fields and farms and horses and cows. They cannot be worked by rule, but require treatment according to what they are. Some bore good fruit, and some were barren, and some were "weeds." I have found that it is possible to tell pretty accurately whether or not an idea is a good one for me by knowing what I want to do, and just what I have to do it with.

I get some of my ideas out of my own head, by studying out things for myself, but I get the most valuable ones from the experiences of others, and these, of course, come principally from the farm papers. I take the best of them. And I can safely say that the crop of ideas I have harvested during my ten years of farm management have been most profitable, because every profitable crop I have produced was made profitable by them.—J. A. R., Ohio.

My Most Profitable Crop

(Second Prize)

Last year my husband had a scant acre of ground, located near the house that he did not intend to use. Believing it should be put to some use, I decided to plant it in sweet corn, if only to make it earn its taxes. With the exception of the plowing and harrowing, which my husband did, I was able to do all the work myself along with my regular household duties. At first I only had one-half of the ground plowed, which I planted with a very early variety of sweet corn, leaving the other half to be plowed and planted with a later maturing corn when the first had reached a height of about two feet. My object in so doing was to have roasting ears to sell as early and as late as possible, for the highest market prices are always obtainable at the beginning and close of the season.

After marketing my crop I found I had sold 187 dozen of the early and 212 dozen of the late corn. For the early corn I obtained eighteen to twenty cents per dozen, and for the late an average of fifteen cents per dozen, receiving for all corn sold a total of $68.32. At this time we had no cow and I sold the fodder to a man who cut it himself for $2.50, which sum more than paid for my seed corn, the only expense I had, leaving the $68.32 as profit for my labor. This is what I consider my most profitable crop, and I trust it will benefit other farmers' wives having a little good land near the house not earning its taxes.—Mrs. John Latham, East Liverpool, O.

Our Country Contributors

Semi-Monthly Prize Letter Competition:
Subject: My Most Profitable Crop

FIRST PRIZE $3.00
SECOND PRIZE 2.00
THIRD PRIZE 1.00

NOTICE TO SUBSCRIBERS

This department is designed to induce subscribers to contribute accounts of their most profitable crops. For the three best letters received each issue, the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell the story of what you consider your most profitable crop in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

Turkeys

(Third Prize)

Well, now, Mr. Editor, you've promised to polish up all contributions so they will look nice when printed. My neighbors wouldn't recognize old Farmer Smith in a stiff collar, plug hat and Florshime patent leather shoes, neither would they believe 'twas me if this 'ere piece was coated over with editor's varnish. Say, that feller from Kentuck that says "we" and "our" has got the right fling to his pen. But look here, I've watched that prize page for a big turkey story, bigger than I could tell, but I haven't seen it yet. Turkeys for a payin' crop with little work has got 'em all beat, you fellers that's ever tried raisin' 'em knows their habits—wild by nature, a natural forager and slyer than any fox.

The main thing is to correll them in the spring till they lay and hatch. I built a high woven wire fence around the orchard, turned some old barrels in on their sides for roosts and let 'em alone. We keep about six hens and a gobbler; they lay all the way from fourteen to twenty eggs to a litter by the last of May they are all hatched out. we keep them in just a week after hatching till the little fellers get a little strength. Feed a little Dutch cheese, dry bread crumbs and then turn 'em loose. They forage the fields for bugs, worms and grasshoppers, and always come home to roost before Thanksgiving. We never raise less than seventy-five. The hens average about fourteen pounds and the gobblers about twenty. We marketed them at home at fifteen cents a pound alive, figure it out yourself. Shucks, it's no trick to raise 'em if you get that fence.—B. F. S., Iowa.

Tobacco Gives a Profit

My most profitable crop is tobacco. I select my seed in the fall in the field and pick out the best stalks for seed that are in the field; hang it up till spring, when I hull it out and sow it in a plant bed. I make up my beds in the fall, manure them well, and in the spring hoe, manure it all over again, rake it nice and fine and sow my seed. When the seed comes up I tend just like you would other plants until ready for transplanting. For my tobacco ground I select good, high ground, well clovered and manured in the previous fall and plow it under, plowing no less than six inches in depth. Just previous to planting I disc twice and harrow until it is fine and level; the finer it is the better. I cultivate it as many times as possible, usually three to four times, and keep it clean. Tobacco is a well-paying crop to raise. It averages from $75 to $100 to the acre a crop.—John H. Miller, New Weston, O., R. F. D. 2.

Found Profit in Popcorn

My most profitable crop last year was popcorn. I had almost one-fourth of an acre. It was plowed in the spring and harrowed. It was then planted four kernels in a hill, about three feet between the hills, and rows about three and one-half feet apart. I cultivated it three times, and though the season was poor, it made about 400 pounds, which was sold at three and one-half cents a pound.—Glen Reed, Galesburg, Kas.

Finds Irish Potatoes Pay Best

I believe Irish potatoes is one of the most profitable crops that can be raised by irrigation. I had a small patch this year, and they made about 100 bushels to the acre. They can be raised in the early part of the year, before it gets very dry and it does not take much water to keep them well supplied. There is always a big local demand for Irish potatoes here, so I had no trouble in selling them for a good price. I got $1 a bushel for all I had and could have sold more. I raised a goodly amount of other stuff which did not pay as well. I planted the Red Triumphs, which are the only kind that can be successfully raised in this country. I think I will plant my whole crop in Irish potatoes for another year, as they seem to pay best.—O. P., Texas.

"Panned" Cucumbers

Last January I put five cucumber seeds in an old can filled with good soil and placed it in the cellar window. In six days the seed came up and in six weeks later my wife got one dozen eight to eleven-inch cucumbers from the vines. Four days later she filled a half-gallon jar with pickles from these cucumbers. Since that time she has filled seventeen jars besides all a family of eight could eat. On the 28th of May I took a basket of cucumbers to Dallas and sold it on sight for $5. The vines are full of bloom at the present time which promises future returns. Based on amount of expense and effort, I never had anything that paid me so well. Everybody could do this, even in the heart of Indianapolis, provided they have a cellar.

By the way, try this; slice a cucumber, dip slices into flour batter, fry and you will have something very much like fried oysters.—C. L., Texas.

"Our Cows"

Our cows, or rather our herd of cattle, is the most profitable "crop" on our farm. The reason I speak of our herd of cattle is because I believe when properly cared for young stock is as good money makers as cows. Such is my experience. Cattle certainly help improve the fertility of soil. The young stock eats rough feed which would otherwise be lost. We find feeding roots with other feed, makes a diet that gives a good result. The young stock is sold when two or three years old. Another secret in success with cattle is to be friendly with them. You will have better success than if they are in fear of you.—C. C. T., Michigan.

A Genuine Rupture Cure Sent On Trial To Prove It

Don't Wear A Truss Any Longer

After Thirty Years' Experience I Have Produced An Appliance for Men, Women and Children That Actually Cures Rupture

Are You Ruptured?

If so, the BROOKS APPLIANCE is made for You; You and all other Men, Women and Children who are sufferers from this annoying and dangerous trouble. That truss you have been wearing—one of many you have tried—chafed and irritated you and was worse than nothing. It had springs and pads and harness and straps and fixings galore and was continually getting out of shape—slipping down or working up and always needing attention. Then, there were salves and washes and ointments to make the case worse and harder to bear. I want to say that you will find none of these annoyances and vexations in the BROOKS APPLIANCE. At least they are reduced to a minimum. This APPLIANCE was made with a view to eliminate, to do away with, just such trouble. I would have been foolish to work half a lifetime thinking out and perfecting a thing that had no advantage or was not better than scores of other inventions upon the market. In my APPLIANCE you will find the old objectionable features LEFT OUT. You will find it easy to wear You will scarcely realize you are wearing it. There is no binding, drawing and slipping out of place. It does its work effectively and with comfort to the wearer. I want you to read my book, in which I have taken pains to give full particulars about it. Then, there are a few letters printed in it—selected at random from among hundreds written by men and women who have been cured. You can write these folks and see what they say. If I were you I would see to this matter without waiting. You can put off some things without running much risk, but a rupture is a dangerous proposition to neglect. A rupture is not only bad and serious of itself, but it leads to things infinitely worse. Fill out coupon and mail TODAY. Tomorrow will do, but today is better.

Don't Make the Child Wear a Truss Through Life

I Want to Reach the Parents of Every Ruptured Child in the Country.

The Truss Is a Flesh Torturing Invention Fit Only as a Relic of Barbarity

The Brooks Appliance Cured His Rupture. Now He Is as Sound and Whole as if He Had Never Been Ruptured.

I WANT them to know about the Automatic Air Cushion Rupture Appliance that I make for children who are afflicted in this way.

My Appliance can be put on any child with perfect safety to the little one. For growing children there is nothing better to be had—no matter how much you pay—than my Appliance.

I want the parents or others who may have children in their care to understand that there should be no delay in getting proper help for ruptured children.

Every day that the rupture is allowed to go on without the right means of correcting it—just so much harder will it be for the child to get rid of it.

No ruptured child can ever be free from the thought of the rupture and it is not fair to any child not to have an equal chance with other children.

The above is C. E. Brooks, of Marshall, Mich., the Inventor who has been curing rupture for over 30 years If Ruptured write him today.

If you have tried most everything else, come to me. Where others fail is where I have my greatest success. Send attached coupon today and I will send you free my illustrated book on rupture and its cures, showing my Appliance and giving you prices and names of many people who have tried it and were cured. It is instant relief when all others fail. Remember, I use no salves, no harness, no lies.

I send on trial to prove what I say is true. You are the judge and once having seen my illustrated book and read it you will be as enthusiastic as my hundreds of patients whose letters you may also read. Fill out free coupon below and mail today. It's well worth your time whether you try my appliance or not.

No matter what we may wish to think—ruptured children do *not* have an equal chance.

Common trusses do not help.

Thousands of men and women know that from their own experiences with such trusses.

But it is not necessary for children to wear harsh, cumbersome, steel trusses any more.

You may have had to wear something like this but don't make your child do it. Give the child something better.

My Appliance is better and I want to prove it to you.

I will make an Appliance to the child's measure, send it on TRIAL—put it into your hands to see and use and then you can say whether it is what I claim or not.

The Automatic Air Cushion conforms with every movement of the child; there is an even, gentle pressure which gradually binds the broken parts together—as you would bind a broken limb—and then no matter how much the child jumps, runs, rolls over or falls down—the pressure is kept up just the same—always drawing the parts together.

Write me today and get all the information—send the coupon.

Others Failed But The Appliance Cured

C. E. Brooks,
Marshall, Mich.
Dear Sir:—

Your Appliance did all you claim for the little boy and more, for it cured him sound and well. We let him wear it for about a year in all, although it cured him 3 months after he had begun to wear it. We had tried several other remedies and got no relief, and I shall certainly recommend it to friends, for we surely owe it to you. Yours respectfully
WM. PATTERSON.
No. 717 S. Main St., Akron, O.

Pennsylvania Man Thankful

Mr. C. E. Brooks,
Marshall, Mich.
Dear Sir:—

Perhaps it will interest you to know that I have been ruptured six years and have always had trouble with it till I got your Appliance. It is very easy to wear, fits neat and snug, and is not in the way at any time, day or night. In fact, at times I did not know I had it on; it just adapted itself to the shape of the body and seemed to be a part of the body, as it clung to the spot, no matter what position I was in.

It would be a veritable God-send to the unfortunates who suffer from rupture if all could procure the Brooks Rupture Appliance and wear it. They would certainly never regret it.

My rupture is now all healed up and nothing ever did it but your Appliance. Whenever the opportunity presents itself I will say a good word for your Appliance, and also the honorable way in which you deal with ruptured people. It is a pleasure to recommend a good thing among your friends or strangers. I am

Yours very sincerely,
JAMES A. BRITTON,
80 Spring St., Bethlehem, Pa.

Remember

I send my Appliance on trial to prove what I say is true. You are to be the judge. Fill out free coupon below and mail today.

Ten Reasons Why

You Should Send For Brooks' Rupture Appliance

1. It is absolutely the only Appliance of the kind on the market today, and in it are embodied the principles that inventors have sought after for years.
2. The Appliance for retaining the rupture cannot be thrown out of position.
3. Being an air cushion of soft rubber it clings closely to the body, yet never blisters or causes irritation.
4. Unlike the ordinary so-called pads, used in other trusses, it is not cumbersome or ungainly.
5. It is small, soft and pliable, and positively cannot be detected through the clothing.
6. The soft, pliable bands holding the Appliance do not give one the unpleasant sensation of wearing harness.
7. There is nothing about it to get foul, and when it becomes soiled it can be washed without injuring it in the least.
8. There are no metal springs in the Appliance to torture one by cutting and bruising the flesh.
9. All of the materials of which the Appliances are made is of the very best that money can buy, making it a durable and safe Appliance to wear.
10. My reputation for honesty and fair dealing is so thoroughly established by an experience of over thirty years of dealing with the public, and my prices are so reasonable, my terms so fair, that there certainly should be no hesitancy in sending free coupon today.

Cured at the Age of 76

Mr. C. E. Brooks, Marshall, Mich.
Dear Sir:—

I began using your Appliance for the cure of rupture (I had a pretty bad case) I think in May, 1905. On November 20, 1905, I quit using it. Since that time I have not needed or used it. I am well of rupture and rank myself among those cured by the Brooks Discovery, which, considering my age, 76 years, I regard as remarkable.

Very sincerely yours,
SAM A. HOOVER.
High Point, N. C.

Child Cured In Four Months

C. E. Brooks,

Dear Sir:—The baby's rupture is altogether cured, thanks to your Appliance and we are so thankful to you. If we could only have know of it sooner our little boy would not have had to suffer near as much as he did. He wore your brace a little over four months and has not worn it now for six weeks. Yours very truly,
ANDREW EGGENBERGER.
21 Jansen St., Dubuque, Iowa.

Confederate Veteran Cured

Commerce, Ga., R. F. D. No. 11.
Mr. C. E. Brooks.

Dear Sir:—I am glad to tell you that I am now sound and well and can plough or do any heavy work. I can say your Appliance has effected a permanent cure. Before getting your Appliance I was in a terrible condition and had given up all hope of ever being any better. If it hadn't been for your Appliance I would never have been cured. I am sixty-eight years old and served three years in Eckle's Artillery, Oglethorpe Co. I hope God will reward you for the good you are doing for suffering humanity.

Yours sincerely,
H. D. BANKS.

Free Information Coupon

C. E. BROOKS, 35 H. State St., Marshall Mich.

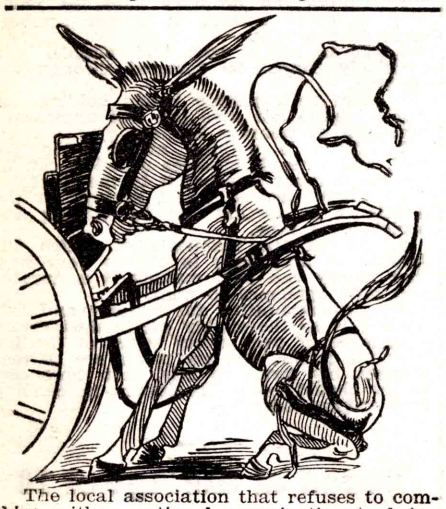
Our Market Review

Semi-Monthly Review of Crops, Market and Trade

CROP reports are more mixed than heretofore. Over a large extent of territory the drought has reached a degree that is almost unprecedented. This refers to large areas, and small areas surrounded by country visited by timely rains. For instance, Indiana has fared about as well as any central or central western state, yet there are districts where vegetation is literally burned out. Oklahoma, Kansas, Southern Nebraska, much of Missouri, Iowa and Southern Illinois have been hit hard. These are in the corn belt and comprise a large part of it. Because of the long continued drought and extreme heat and the damage that is now evident to the corn crop, that cereal has advanced in price 6 cents at Chicago to over 10 cents at Kansas City. Rains will help very much if they come soon, but the damage cannot be repaired. While on the other hand should the drought continue much longer the recent prospect of a three billion crop may more nearly equal the short crop of 1901, one and one-half billion bushels. The visible supply of corn decreased over four million bushels which shows a disposition on the part of farmers to hold old corn against the probability of a short crop and very high prices. The price of this crop last December was around 46 cents a bushel against 71 cents now and 75 cents a year ago.



The local association that refuses to combine with a national organization to bring about unity in marketing.

As threshing of winter wheat progresses the estimates of the crop are increased. If the spring wheat turns out an average crop the record yield will probably be broken this year. The wheat visible has increased over five million bushels against a decrease of one and a half million in the same period last year, and the price declined about 1 cent at Chicago to two cents advance at Kansas City. It seems a shame that the only grain crop that is exceptionally good this year should thus be turned over to those who produce nothing, at unprofitable prices to the growers, but to be let out later at $1 or more. Remember the record-breaking crop of corn last year selling in the 40 cents, but a few months later selling at almost double.

The oats yield is around 1,000,000,000 bushels. Last year was 1,400,000,000 bushels. This great difference in yield coupled with a certainty of a short corn crop and a short hay crop suggests higher prices than have prevailed. The price declined about 1 cent at Chicago and advanced about 2 cents at Kansas City since our last report. We believe it will be difficult to find a way to make money faster than for the farmer who has oats to hold them.

Hay is about 20 per cent. short of last year. The price is in the ascendency.

Cotton reports are generally good and the present prospects seem to indicate a crop the second largest produced. But there's many a slip twixt the cup and the lip, and it is not safe to count a crop until it is made. Because of the good crop prospect the price has been put down about 40 cents a hundredweight since our last report.

ADVICE—Hold wheat. Market old corn gradually unless it will be needed for feeding stock, but be sure to get what it is worth. Farmers having corn to sell should seek markets in the drought stricken sections where the highest prices will be paid. HOLD OATS. Hold good barley. Market cotton gradually. Market potatoes. The sections most affected by dry weather offer good markets. Nothing will be lost by holding hay, but the price is good now if you get what it is worth. Through the Equity System is the best way to market all crops.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on July 26, 1913, with comparisons, are shown in the following table: (The sign — before figures means decrease, X means increase.)

	Bushels July 25, 1913	Change from 2 wks. before Bushels
WHEAT	37,211,000	X 5,349,000
CORN	9,498,000	—4,355,000
OATS	20,191,000	X 2,565,000
BARLEY	2,483,000	— 181,000

The visible supply of wheat in Canada on the same date was 11,088,000 bushels. This is 4,718,000 bushels less than two weeks before and 2,377,000 bushels less than a year before. The visible supply of oats was 8,294,000 bushels on the same date, which is 1,216,000 bushels less than two weeks before and is 3,482,000 bushels more than a year before.

Closing Prices of Cash Grain

WHEAT, No. 2 RED

Aug. 6		2 Wks before		AYr. before
Chicago	.86 @86¾	87	@88	1.03
St. Louis	.85¾@88	84	@85	1.01

Future Grain Prices

Chicago grain futures closed on August 6, 1913, and two weeks before, as follows:

WHEAT—September, 86⅜c; December, 90⅜c; May, 95⅞. Two weeks before, 87¼c and 90⅞c respectively.

CORN—September, 70⅜c; December, 67⅛c; May, 69⅛c. Two weeks before, 63¼c, 60¼c, respectively.

OATS—September, 41⅞c; December, 44¼c; May, 47½c. Two weeks before, 41¼c⅛ 43⅛c, respectively.

Cotton

New York, August 6.—Cash cotton closed, middling upland, 12c; middling gulf, 12.25c. Two weeks before, 12.40c, and 12.65c, respectively. The price is 40 cents a hundredweight lower than two weeks before. A year before the price was 12.90c and 13.15c respectively.

Chicago Produce Market

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets address the Farmers Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars with comparisons follow:

	This week	Last week	Last year
Monday	90	80	60
Tuesday	50	65	41
Wednesday	25	45	35
Thursday	30	50	35
Friday	25	40	40
Saturday	10	30	45
Total, 6 days	230	310	246

Fresh receipts were reported at only 10 cars and the market was firm to a shade higher, although there was enough stock around to meet all the requirements of the trade. The light run gave receivers an opportunity to reduce the accumulation on track, however, and the market closed in a healthy condition.

Sales reported were: Per barrel, Virginia Cobblers, 7 cars, at $2.60; per sack, Jersey Cobblers, 3 cars at $2.10; per bushel, Jersel Cobblers, 1 car heated at 87c, 1 car at 90c; Early Ohios, 1 car stale at 65c; Kansas Cobblers, 1 car at 78c.

Per bbl., Virginia white, Cobblers $2,50@2.60
Per bu., in bulk, Jersey Cobblers .85@ .90
Sacked, Jersey Cobblers ..... .90@ .95
Per bu., Kaw Valley, Early Ohios and Cobblers ..... .65@ .80

The price is about 10 cents to 15 cents a bushel lower than two weeks before.

OLD POTATOES—Two cars of old potatoes were sold out of cold storage at 30c a bushel.

SWEET POTATOES—There is a fair supply of Alabama hampers and Virginia barrels. They are meeting with a fair demand and the market is steady. Quoted as follows:

Barrels, Virginia ..... $5.50@....
Hampers, Alabama ..... 1.50@1.75

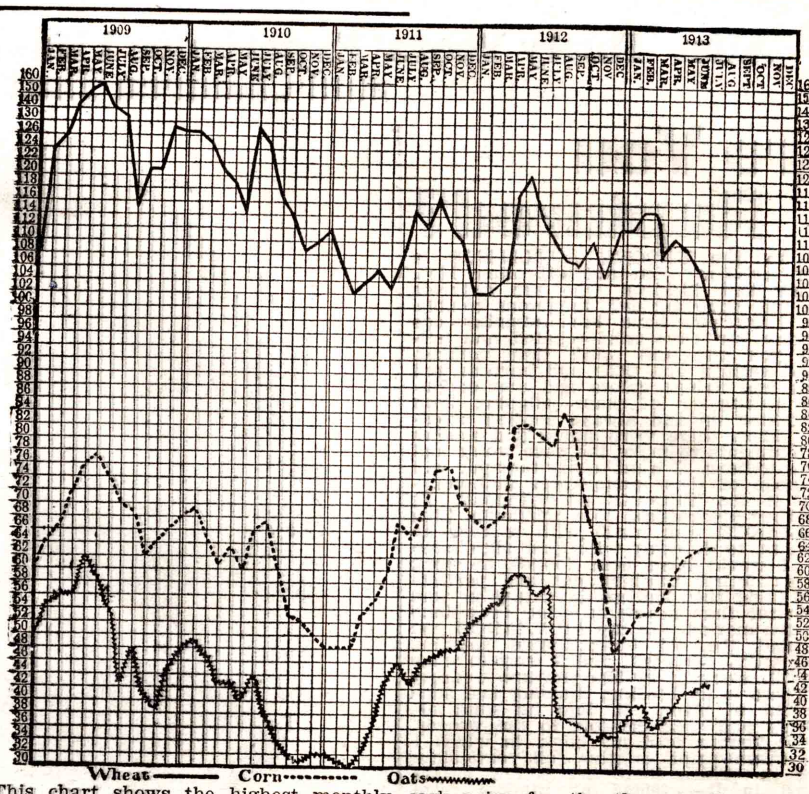
BEANS—No changes of note are reported in the market and prices are steady. Buyers are not taking much stock at present, and although the offerings are not large they appear excessive in face of the restricted inquiry.

Pea Beans—
Hand-picked, choice ..... $1.90@1.95
Stock faulty, lower ..... 1.15@1.65
Mediums nominally about same as pea beans.
Red Kidneys, choice ....@1.80
Prime ....@1.65
White Kidney nominal ..... 3.00@....
Brown Swedish, long ..... 1.00@....
Round ..... 1.25@....

The price of pea beans is 10 cents a bushel lower than two weeks before. Other varieties about unchanged.

STRAW—Rye Straw quotable at $8@9.

Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
—1,620,000	X 16,188,000	—8,363,000
—2,987,000	X 4,543,000	X 323,000
—1,756,000	X18,496,000	X 7,131,000
— 118,000	X 2,982,000	X 1,661,000



This chart shows the highest monthly cash price for the three leading grains at Chicago, for a period, 1909 to July, 1913, inclusive. The figures on right and left margins are prices in cents.

Oat straw at $6@6.50. Wheat straw, $6@6.50.

Rye straw is unchanged to 50 cents a ton higher. Wheat straw is $1 a ton higher than two weeks before.

HAY—Receipts, 767 tons; Market quite but firm. Demand good and offerings light.

Choice Timothy hay ..... $18.00@18.50
No. 1 Timothy ..... 16.50@17.50
No. 2 Timothy ..... 15.00@16.00

The price of hay is $1.50 to $3.00 a ton higher than two weeks before.

BROOMCORN—Dull market is reported and unchanged prices prevail. Offerings are moderate. The prices remain unchanged from two weeks before at $100 to $120 for Illinois, and $50 to $90 for Oklahoma.

Dull market is reported and unchanged prices prevail. Offerings are moderate. The prices remain unchanged from two weeks before at $100 to $120 for Illinois and $50 to $90 for Oklahoma corn.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week Cases	Last week Cases	Last year Cases
Monday	9,811	13,552	10,221
Tuesday	10,462	11,617	12,211
Wednesday	...11,428	10,440	10,850
Thursday	.... 9.801	10,061	8,921
Friday	 9,006	8,911	10,754
Saturday	 7,362	9,238	10,539
Total	57,870	63,819	63,496

Receipts, April 1, 1912, to August 2, 1913, 2,224,086 cases.

Receipts, April 1, 1912, to August 3, 1912, 187,283 cases.

Receipts, April 1, 1911, to August 5, 1911, 1,855,906 cases.

Receipts, April 1, 1910, to August 6, 1913, 2,183,019 cases.

No important change to note in the market.

There is some good stock, but nearly all of it needs rehandling to make the eggs desirable or to satisfy buyers. Shippers should bear in mind that it is only fine stock for which top quotations are being paid—they must not imagine that heated and shrunken mixed in with some good eggs will command full prices.

Some eggs are being taken out of storage, and the demand apparently not as urgent as a few days ago.

Miscellaneous lots, 13@17½c, depending on quality. Ordinary Firsts quotable at 16½@17½c. Firsts quotably 19c.

The price of eggs is about 3 cents a dozen higher than two weeks before.

VEGETABLES

BEETS—Quiet and easy. There is a good supply of home-grown.

CELERY—Receipts were 3,100 boxes. It was not expected the market would clean up, but prices remained without change.

CABBAGE—Home-grown is supplying the trade. Not much demand today.

CUCUMBERS—Illinois stock is beginning to show age, coming coarse, soft and shrunken. Best trade is taking home-grown. Market is weak and receipts clear slowly.

CAULIFLOWER—Home-grown now in good supply. Demand is fair and market steady.

GREEN ONIONS—Fair sale and steady. Home-grown are plentiful.

GREEN PEAS—Fancy, fresh, green Telephones sold fairly, but supply included many that were dry, heated or spotted. These were dull.

LETTUCE—Dull and easy. More eastern head lettuce was received in a heated condition and had little value. The home-grown was leafy and poor.

ONIONS—Market steady. There is a good supply of home-grown and Iowas, and a fair demand.

PEPPERS—Market easy under liberal offerings of home-grown and southern. Demand moderate.

PICKLES—Some of the Michigans are coming mixed. Dills, salts and cucumbers in the same basket. Such goods do not sell. General demand is small and only for the most desirable goods.

RADISHES—Home-grown meet the requirements of the trade.

SWEET CORN—Home-grown supplies the trade. It is in good supply and cheap.

SQUASH—Market does not clean up. Receipts are moderate but there is no reliable demand.

SPINACH—Market is firm under moderate offerings.

STRING BEANS—Market was overloaded with stock, principally Michigan and home-grown. The demand was only fair and prices were weak, with no reasonable bids refused to clean up stale stock.

TOMATOES—Market a shade easier today. Receipts were 6 cars, and the quality was only fair as usual. Most of the Tennessees on hand were green, not desirable. Illinois stock was just fair, while the St. Louis were the most desirable offered. Some fancy Indianas in climax baskets sold well, while others in the same style package were soft and had to be discounted.

TURNIPS—Home-grown supply the trade. Demand is moderate.

We Want You to Know

Seed graded and cleaned will grow bigger crops of better quality than the seed that comes from the separator. It pays to clean the seed with a Racine Fanning Mill. Write to Johnson and Field Manufacturing Company, Dept. F., Racine, Wis., and they will tell you how you can get a seed cleaner without costing a dollar.

It can and will be said that every farmer is paying for an Iceless Refrigerator if he has none. Paying for it by the inconvenience in other methods of preserving food or paying for it in spoilage. Better far to get one and pay for it—it will soon "pay for itself" by saving. Write Iceless Refrigerator Company, Box 75, Winchester, Ind., for free catalog.

After the good housewife sweeps she dusts. And where does the dust go? How clean is it afterwards. With a vacuum cleaner you get dirt and dust. Then it is clean. Write Warner Vacuum Cleaner Company, Dept. I, Muncie, Ind., if you want to clean right.

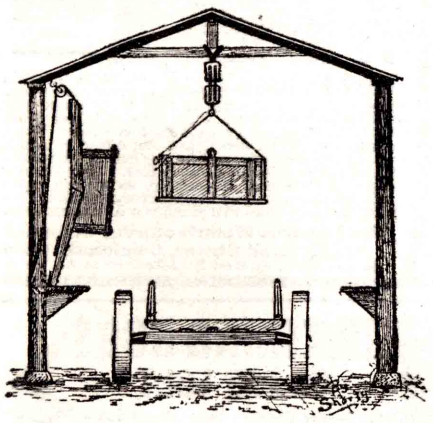
The real up-to-date farmer doesn't forget the wife and her work. A great machine to save work, worry, body and soul is made by the Newton Washing Machine Co., Newton, Iowa, to wash the clothes. Write them about it and wash day can lose its dread.

Play ball! Boys, do you want to learn to pitch like the big league pitchers do? You can learn easily. Write W. D. Boyce Company, Dept. 206, Chicago, Ill.

Shorty's Shortcuts

(By Himself)

MR. EDITOR, do you think it is possible for a fat man to have an artistic temperament? Now, please take me seriously, and, seriously, now, why don't people take fat folks seriously. Let me tell you, it's no joke to be fat. But, getting back to where I started, what is funny about the idea of a fat man being an artist? Is it because he isn't supposed to have anything but a paunch and heart disease? What makes me ask is this: Every time I attempt to illustrate some of my little time-saving ideas, my wife looks at what I am doing, and then at me, and goes away greatly amused. She seems to think I'm performing for her especial benefit. Of course, I'm glad to give her great joy, and all that, but I'll be goll-durned (pardon the use of foreign language) if I see anything to laugh at in this picture of a wagon shed.



When I built this shed, I intended it to be more than a mere shelter. I built it high enough so I could run a load of hay under it, if I so desired, and I have had many occasions to do that very thing.

Material for this shed was secured mostly from the wood lot. It is covered with corrugated iron roofing. The posts are of white oak, set in cement.

Along one side, at the proper height, I attached strong brackets to the posts so that when I should drive the hay wagon in, the outer edge of the rack just cleared above them. I have a rope and pulley, as shown in the cut, and by tying one end of the rope to the opposite side of the rack. I tip it up edgeways with the utmost ease, keeping it in shelter, and taking up little room in the shed. No more lifting the heavy hay rack off and on for mine.

The wagon box, body, or bed (just whichever way you were raised) I swing up above the wagon, high enough to clear the rack. Without moving the wagon I can put on either the rack, or the box, or change from one to the other in less time than it takes to tell it, and lots easier than making a picture of it.

On the opposite side from where the rack is kept, I have a long board shelf where I keep axle-grease, an extra wrench, a wagon jack, neck-yoke and double-trees, for quick action. Not that I'm always in a hurry, though a successful farmer must be a rather busy man, but if I have any time to waste, I want to waste it in a more pleasant way than running around hunting up materials that should be right at hand. I'd rather use that ten minutes sitting in the shade. And, honestly now, for my farm books will prove it, I raise more corn, wheat, oats, hay and hogs, and do more productive work now, working a nine-hour day in the field, and taking a Saturday half holiday, than I formerly could do working twelve hours with no holiday. These little time-savers are saving ME.

I was glad to see that article about the Saturday ball game in your last issue. We are advocates of the national game, ourselves, and attend regularly. They won't let me play, for they say they can't see the game when I'm on the field, but they let me umpire, because I make a good backstop if a pitched ball gets past the catcher.

I must go now. My wife says I may use my artistic temperament in drawing a bucket of water from the well. After dinner she is going to town, and I can also draw a check for a X. An artistic temperament has its draw-backs.

Yours as ever

Shorty.

A Well Known Trade-Mark Protects You

A trademark may be an emblem or seal or merely a name. When placed on good goods and advertised it becomes well known and favorably known to thousands, even millions.

A trademark may be unfavorably known. Inferior quality, dishonest treatment and over-drawn statements attached to an articie will kill it sure. If advertised it cannot so continue, because no business can continue that does not please its customers.

It is a pretty good rule to buy advertised products which must keep up to the standard. It is business suicide to lower quality.

Read and answer the advertisements in UP-TO-DATE FARMING; we guarantee them.

COW PEAS AS A GRAIN FERTILIZER

PROBABLY there are few timbered areas where the natural productive ability of the soil is lower than in the Ozarkian hills or southwestern Missouri and northwestern Arkansis. The soil is woefully deficient in humus and nitrogen. This territory is subject to droughts that would not be at all serious in the deep, level, humus-filled prairies of the west, or the cleared plains of the upper Mississippi and Ohio valleys. The farms of that section are for the most part in that condition said to be "worn-out," having been "cropped" for fifty years.

Wm. R. Lighton, writing in the Country Gentleman, the owner of one of those worn-out farms, tells an interesting story of its restoration. The farm was purchased in 1908, at which time Mr. Lighton says that "every blessed one of our neighbors came to tell us how badly we had been fooled. The soil had long since been "worn plumb out, and never would make nothing no mo!" They were awfully sorry for us. The tenant didn't earn much more than his salt. The wheat yielded only six bushels an acre. Clover only half a ton, and it was twice cut to get that. Corn, less than twenty bushels, and potatoes next to nothing at all. The tenant worked early and late, which did make that farm look pretty poor. But listen: Three years later, the very ground that had been in corn three years before yielded ninety-eight bushels to the measured acre, and this year, our fourth on the farm, the same fifteen acres that in 1908 yielded six bushels of wheat gave us thirty bushels to the acre. Clover grew so thick it choked the mower to death many a time, and I had a very live team on the tongue. And, please listen to this, too: In the four years of our work we have not spent one cent for fertilizer nor spread as much as a ton of manure."

Mr. Lighton's marvelous success was due to deep plowing, thorough tillage, and the liberal use of the cow-pea, sowing it broadcast immediately after taking off a crop of small grain.

My Famous $1.00 Offer

Manson Campbell

My special "ONE DOLLAR OFFER" has pleased so many farmers that I have decided to keep it up for another month and thus let everybody take advantage of it. Here it is:

You send me one dollar and I will ship you, ALL FREIGHT PAID BY MYSELF, this, my new 1914 Chatham Grain Grader and Cleaner. Use the machine a month. If satisfied at end of 30 days, pay me my low cash price or give me your note, without interest, payable January 1, 1914. If not satisfied, return the machine at my freight expense and I'll return your dollar.

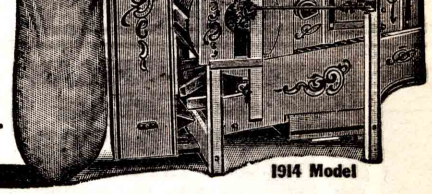
As a matter of fact, $1.00 won't half pay me for the freight. **I only want the dollar to hold as evidence of good faith.**

Chatham Grain Grader and Cleaner

After 41 years' experience, I know every grain and noxious weed grown in America. I know the section where each one grows. I know every grain and weed that grows on your farm. Experience has shown that a Grain Grader and Cleaner should have the special equipment for the particular farming section to which it goes. For example, I send an **entirely different equipment of screens**, riddles and gangs to Maine from what I send to California. **There are scarcely two states in the United States to which I send the same equipment. Thus you** get the exact outfit to handle the grains and weed seed on your farm. If you want more or different screens, **I will send them free.** Not a penny would I ask for extra screens and riddles.

The Chatham now handles over 70 seed mixtures—wheat, oats, peas, beans, corn, barley, flax, clover, timothy, etc. Takes cockle, wild oats, tame oats and smut from seed wheat; any mixture from flax; buckhorn from clover; sorts corn for drop planter. Removes foul weed seed and all shrunken, cracked or sickly grains. Takes out all dust, dirt and chaff. It is also a bully chaffer. Handles 60 bushels grain per hour. Gas power or hand power. Easiest running mill on earth.

$1.00 Brings It—Freight Paid



1914 Model

DON'T BUY AN ENGINE

until you have investigated the Temple Gas-Gasoline-Distillate-Kerosene-Alcohol Engines. Sizes: 1¾-2-3-4-5-6-7-8-9-10-12-15-18-20-25-30-40-50 H. P. One Cylinder, Double Cylinder and Four Cylinder Engines made to secure highest efficiency and lowest operating cost. All Temple Engines are Slow Speed, Heavy Duty Engines; they occupy less than one-third of the space of the Horizontal Engine; they weigh from one-third to one-half less than the weight of the Horizontal Engine and notwithstanding less bulk and less weight, they are built stronger in proportion to strains. Explosions are located low down on a flat base, which overcomes violent vibrations. These advantages greatly increase their range of use.

The Temple Engines cost nothing, as they pay for themselves in fuel saving and in securing from the machines operated their highest efficiency. They save from one-quarter to one-half the fuel of the average engine.

The Temple Engines deliver a steady stream of power. Delivering a steady stream of power, with vibrations overcome, they operate all farm machinery, Electric Generators, Traction Outfits, Portables, Saw Machines, River and Lake Boats, up to exceptionally low cost.

Temple Engines have won five first premiums for low operating cost, for stability and steadiness of power.

"My engine consumes half the oil of my neighbor's, doing the same work."

Another: "My Temple Engine saves grain in threshing, due to its steady stream of power."

Another: "**I have all** the contracting power business in my section, as no other engine can compete with the Temple which I own.

THEREFORE—Don't buy an engine before investigating the Temple. This is the Company's 61st year as manufacturers. It is one of the Pioneer Engine Makers of the country, which means reliability and durability of its product.

New Process Mfg. Co. Salina, Kansas

Live Stock and Dairy

A good dairyman never sells his best cows.

Water the work team as often as possible.

Heavy drafters should never be driven faster than a walk.

The first principle in building up a good dairy herd is correct breeding.

The best order of feeding work horses is: Water, hay, water again, grain.

Salt the stock at least once a week. Better yet, keep rock salt where they can help themselves.

Never give grain to a tired horse. Let it rest and nibble hay for an hour or so before feeding grain.

The heifer that "puts on fat" too freely is of not much promise as a breeder for the dairy herd.

When the calf is two months old add wheat shorts or ground oats to its skim milk diet. Keep it growing.

Feed young calves with nipple feeders. They learn to "drink" in this fashion immediately. In fact, they "know how" without teaching. And experiments have demonstrated that nipple feeding gives best results.

The United States Department of Agriculture is organizing cow-testing experiments in all parts of the country, and in a recent statement asserts there are over five million dairy cows that do not pay for their feed, kept on the farms in the United States.

Thirty years ago the dairy cow of Denmark produced a smaller annual average in butter than the average dairy cow in the United States at the present time. Today, however, the average Denmark cow is able to produce annually eighty pounds of butter more than the average American cow.

THERE'S SCIENCE IN THRESHING

(Concluded from Page 1)

man employs a "crew" and does the entire job under contract, supplying all the labor, threshing has been reduced to a real scientific basis, and the thresherman becomes what every thresherman should be—a business scientist, to whom the engine and thresher are but parts of the real threshing machine. The men and the system of work are as thoroughly studied and as carefully manipulated as the engineer manipulates his engine. The work itself is manipulated to get maximum effect. Every man is selected for his fitness for a particular task, and "team work" becomes as great a factor in economical threshing as in baseball

Threshing "rings" are now being formed in localities in the central west, and the work is being put on a more economical and efficient basis. There are great opportunities for practical co-operation in threshing. Practical co-operation places each man in the place for which he is best fitted, and naturally he works with greater efficiency. In a given neighborhood the same men should occupy the same position on each job, and each year, so far as possible. Sufficient help should always be had so relief can be given those who have the most burdensome and undesirable tasks.

The farmer can often greatly facilitate threshing by the manner in which he prepares his grain. The length of the straw, the size of the bundles, the location of the straw stack, the threshing site, and the condition in which the grain goes to the machine, all are factors to be considered.

Get rid of the hit-or-miss, hap-hazard methods of threshing. Form a threshing club and make a study of the matter. Insist on having a thresherman who understands his business, and co-operate with him.

Threshing is hard work at best, but it can be vastly improved by co-operative and intelligent action. Try it.—A Thresherman.

Mr. Dooley on the Mexican War

"I see by th' poipers, Misther Dooley, thim Mexicans air killin' aich other wid cacktus shillalies, an' its me privut opinyun if they kape at it sumbody is loikely to git hurted." said Hennessy, looking up frum the "Chicago Charger."

"Hinnissy, I give ye credit fer bein' of shtatesmon loike capacity. Ye're as far-sighted as a tillyscope. I begin to have hopes of yez, Hinnisy," replied Mr. Dooley.

"Ye flatther me entoirely, Misther Dooley; but at the same toime I'm a thinkin' if we let thim be, they'll go ahead wid the good wurruk, until finally they'll be loike thim Kilkenny cats which I've heard kept foightin' until there wuz nuthin' left av thim but their reppytashuns, an' they wuz scratched and clawed till they were onrecognizable."

"Ye're roight about thim cats," replied Mr. Dooley, as he bit off a liberal section of Battle Axe. An' ye wud loikewoise be roight about the Mixicans, IF we let thim be. Now, did ye ivir notis what a big pahrt in the affairs av min that little word "if" plays? But while ye're focusin' yer great tilyscopic intillict on Mixico, let me raymind ye there's soights to be seen nigher home. Ye don't nade to look 'tother soide the Rio Grand river to see human eggsamples of Kilkenny cats. And in passin', let me raymark thot its not a farseein' man after all that starts throwin' rocks at a naybur whin its himself that lives in a glass apartmint av his own."

"What d'ye mane by thot, Misther Dooley?"

"I mane what the Shcripchure manes where it says a mon wid a beam sthickin' in his good eye, an' bloind in the other is a poor surgeon to pick shplinters out of his brother's eye. Now here in Ameriky is a lot of fahrmers organized in little bands thrying to git a fair show in the great markets. Then these little bands go to foightin' wan another fer first chance in the market. They grab onto the idee that co-operation is the loife av economy, but they can't let loose of the idee that compytition is the loife av trade. Maybe it is, Hinnissy, but it's often the death av profut. Instead of bein' ahrganized in bands loike the clans av ancient toimes, foightin' and losin' by ut, why don't they shtand shoulder to shoulder, and march along togither peaceable? The clans found it didn't pay to be clans, so they ahrganized the nashun. The fahrmers sh'd larn a lesson frum histry."

"Phwat histry wud yez ricomind, Misther Dooley?"

"The histry av the clans an' the Kilkenny cats, as ancient and the histry of Mixico fer modern." A mon that can't larn the lesson of co-operashun frum thim sh'd have bin born a duck, an' not a mon at all, at all, f'r he don't know enough to go in whin it rains."

Wood Shingles Won't DO!

In this **20th Century AGE OF STEEL**, wood shingles are fast disappearing. They cost too much; they rot out too quickly; too much trouble to put on; too apt to catch fire. That's why 100,000 men have come to put these beautiful **Edwards STEEL** Shingles on their buildings.

Edwards Steel Shingles **never** burn nor rot. Come in big clusters of 100 or more, which makes them ten times as easy to put on as **wood** shingles. Each Edwards **STEEL** Shingle is dipped in **molten zinc AFTER** it is cut. No raw or exposed edges. No chance for rust ever to get a foothold. And the patented Edwards Interlocking Device, which allows for expansion and contraction, gives **PERMANENTLY water-tight joints.**

Edwards STEEL Shingles

Get Prices As to prices, these **STEEL** Shingles are far below wood. For we sell direct from factory to user and pay the freight ourselves. Just get our latest Steel Shingle Books and Prepaid Factory Prices. Then **compare.** Then see if you can afford common wood shingles when you can buy genuine Edwards **STEEL** Shingles at these prices. Give dimensions of your roof if possible, so we can quote price on entire job. Send postal today and our Catalog 891 and Prices will reach you by return mail.

POULTRY PICKINGS

It takes care, knowledge, and ability to make poultry pay.

Within the past ten years the poultry industry has doubled.

With high-priced meats, eggs will be more and more in demand.

The old hen is becoming one of the most important of farm animals.

Clean out the nests, burn the trash, and then take care to keep the nests clean.

Eternal vigilance in watching for signs of lice and mites is the price of the safety of the flock.

It is both possible and practical to keep the farm flock free from vermin. Use whitewash, kerosene, emulsion, lice powder and paint.

The moulting season is now on. Don't think because the hens are not laying they need no care. They need extra care, and will pay well for it when moulting is over.

NEST MATERIAL

Excelsior is good stuff to put in the bottom of your nest boxes. It is cheap, cleanly, convenient. After it has served its day spray it lightly with kerosene, remove the nest box from the house and then touch a match to the excelsior. You get rid of the excelsior and the red mites at the same time.

FRESH AIR IMPORTANT

Did you ever think that it is possible to have the hen house too dry as well as to have it too damp? In a curtain front house, where the hens have plenty of fresh air, the hens will stand a certain amount of dampness, especially in the dirt of the floor. They seem to enjoy the damp earth better than they do earth that is dry or powdered. The fresh air house is causing us to revise many of our notions as to what is best for fowls.

PREVENTION OF EGG LOSSES

The Bureau of Chemistry regards the investigation of the methods of preventing egg breakage as particularly important because the many millions of dozens of eggs now broken in shipment naturally tend to keep the price of this valuable food higher than if there were no breakage, or breakage were materially reduced. The bureau through the food research laboratory, is now engaged in shipping eggs handled in different ways on long journeys to different points in the United States, and is carefully noting their condition on receipt at their destination.

HOW TO FUMIGATE HEN HOUSES

FUMIGATION is a means of reaching germs and insect life in the air of the room in the cracks and crannies of the wood work. The house or room should be tightly closed and all fowls excluded during fumigation.

A simple method is to burn the sulphur candles now sold at drug stores or stores dealing in poultry supplies. The fumes of brimstone may also be produced by burning in a metallic basin (such as an old iron kettle) a number of rags previously soaked in melted sulphur. Sulphur may be mixed with a little alcohol or kerosene and burned, or it may be sprinkled upon live coals placed in a chafing dish.

The house or room should be kept closed for several hours and then opened as thoroughly as possible to allow the wind to drive out any remaining trace of poisonous gas. In fumigating by burning substances, be careful not to set the building on fire.

SUCCESSFUL POULTRY FEEDING

THE Maine method of feeding, at the state experimental station is as follows:

Early in the morning for each 100 hens, four quarts of screened cracked corn are scattered on the little, which is six or eight inches deep on the floor. This is not mixed into the litter, for the straw is dry and light and enough of the grain is hidden so the birds commence scratching for it almost immediately. At 10 o'clock they are fed in the same way, two quarts of wheat and two quarts of oats. This is all of the regular feeding that is done.

Along one side of the room is the food trough, with its slatted front. In it is kept a supply of dry meals mixed together. This dry meal mixture is composed of the following materials: 200 pounds good wheat bran, 100 pounds cornmeal, 100 pounds middlings, 100 pounds glutten meal or brewers' grain, 100 pounds linseed meal and 100 pounds beef scrap. About five pounds of clover hay cut into half-inch lengths is fed daily to each 100 birds in winter.

The average amounts of the materials eaten by each of them during the last year are about as follows:

	Lbs.
Grain and the meal mixture	90.0
Oyster shell	4.0
Dry cracked bone	2.4
Grit	2.0
Charcoal	2.4
Clover	10.0

These materials cost about $1.45. The hens average laying 144 eggs each. In the Maine station alfalfa and clover are found the most satisfactory green foods for summer. The free use of rape is believed to make the yolks of the eggs green when boiled. boiled.

YOUR FALL SUIT FREE

Made to Your Measure

$30 to $40 would not buy a better one, but you get it for nothing. Not a cent to pay. Simply wear it, tell your friends where you got it and make

$10 to $15 a Day

Tire Prices Down

Now the Costliest Tires—No-Rim-Cut Tires Cost You No More Than Others

Goodyear No-Rim-Cut tires used to cost one-fifth more than other standard tires. The reasons are told below.

These tires, despite that extra cost, came to outsell any other. As our output grew the cost came down.

Now you pay no more for No-Rim-Cut tires than for any other standard tire. Yet notice what you get.

Rim-Cutting Ended

You save in these tires all the ruin of rim-cutting. And that's an enormous item.

We had public accountants lately gather statistics. They examined thousands of ruined clincher tires—the old-type hooked-base tires. And they found that 31.8 per cent had been discarded for rim-cutting only.

That's almost one in three.

No-Rim-Cut tires, made by a costly method which we control, end that loss completely. That we guarantee.

Save Blow-Outs

We give these tires the "On-Air Cure." That is, they are final-vulcanized on air bags shaped like inner tubes.

That's to save wrinkling the fabric.

All other tires are vulcanized on iron cores alone. The fabric often buckles. And that buckled fabric leads to countless blow-outs.

This "On-Air Cure," which we alone employ, adds to our tire cost $1,500 per day.

Save Loose Treads

We use another costly method to prevent tread separation. The rights to it cost us $50,000.

Millions of dollars have been lost to tire users through the loosening of the treads. No other tire in the world employs the effective method we use to combat it.

Yet No Extra Price

You get all these savings in No-Rim-Cut tires. All these features used by no one else. Yet no other standard tire today costs less than No-Rim-Cut tires.

The reasons are mammoth output, new factories, new equipment. In one item alone—in overhead cost—we have saved 24 per cent.

Another reason is that we keep our profits within 8½ per cent.

Judge for yourself if tires lacking these features are worth the Goodyear price.

Our dealers are everywhere.

Old Folks What 15c will do

You have wished for a paper that is printed in type that you can read without straining your eyes; a paper that gives all the news of the world, and that tells the truth and only the truth. **The Pathfinder** is just the paper you have been longing for, and the little matter of 15c in stamps will bring it to you every Saturday for 13 weeks on trial **The Pathfinder** is an illustrated weekly, published at he Nation's Capital, for the Nation, now in its 20th year of increasing success. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time and money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, The Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at least. Send only 15c to show that you might like such a paper as this and we will send The Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. THE PATHFINDER, Box 7. Washington, D. C.

Woman's Work

The Farmer's "Hurry Call"

That pussy willow by the bog,
That bullfrog sitting on a log,
The prairie chickens, blackbirds, too,
Are running the same hullabaloo.
That same old tune they always sing
To us old "Reub's" this message brings:

"Hop to it now, the frost is out,
Can sow the oats without a doubt,
Put in the barley right away,
Will harvest that before we hay.
In two weeks if the weather's warm
We'll sow the flax and plant the corn;
In rows so straight we checked the field,
Then harrowed it to get a yield.
A gentle shower in the night,
And lo, the corn hove into sight.
With sulky plows the earth we turned,
And each night's rest each day we earned.

The clover field we next laid low,
Then timothy began to mow.
Well, boys, I guess the oats will do;
That wild hay'll wait a day or two.
Hey, all hands out, 'tis four o'clock,
We'll thresh that barley in the shock.

Now stack the oats and that wild hay,
But pshaw! we can't lay off a day.
Turn up the sod for another crop.
We'll fall behind if we should stop.
That late flax over on the knoll
Today I see is in the boll.

There's corn to cut, silos to fill,
Potatoes to dig, Quack grass to kill,
Grain to thresh, manure to spread;
Don't stop to fret, just drive ahead.

"Woman's work is never done,"
But, Gosh! I guess we're going some.
—Bill Billings.

FIRESIDE SOCIAL CHATS

By Aunt Sophia

IT'S A FINE thing to start the day right by having a good, well-cooked, and appetizing breakfast. One of the best breakfast foods is bacon. Contrary to some people's ideas, bacon properly prepared is both nourishing and healthful, and it certainly is a delight to the palate. The best way to cook it is to cut it very thin, lay the slices on a wire broiler, and put over a pan in a hot oven, and in three minutes it will be crisp, brown, tender and altogether delicious. Eggs, bacon, bread and coffee is a breakfast fit for a king. Eat plenty of eggs and bread, lightly of bacon and take just one cup of coffee.

* * *

One of the finest things to cultivate is laughter. A bright, happy laugh clears up the atmosphere wonderfully. How we all love to hear it, and we just can't help loving a laughing person. Not many of us know how to laugh, and no wonder. We don't get enough practice. Laughter isn't made with tight lips, and little puckers between the eyes. It takes an open mouth and little crinkly wrinkles around the eyes, and a good deal of joyful noise to make a laugh. Ever try it when you had nothing else to do? Try it now, just for fun. You can feel it coming so let it come right out. Altogether, Now! Feel better already, don't you?

* * *

Making a home is the greatest work of woman. And woman can make or mar it, as she will. A home doesn't have to possess the luxuries of a mansion to be a home—oh, not a bit of it. It is words and deeds that make a home, and according to the words spoken and the deeds performed, so will the home build up or break down the best qualities of its inmates. To be a good home, there must be comfort, healthfulness, happiness, righteousness and inspiration. Only healthy, happy, and comfortable folks can do their best, so what busy, busy mortals we mothers are, doing those things that make for comfort, health, happiness. And if we work well, we are as happy as we are busy.

* * *

Good manners is the greatest oil in the world. It keeps many a stormy sea of conversation quite smooth and pleasant. It lubricates the wheels of common conversation so no squeaking hurts the ears. Respect and thoughtfulness are the chief ingredients of this wonderful oil. Now, some people wonder why children are not good mannered when they are told what good manners are. I think I know. Children do not learn by being told. They learn by doing what they see and hear others do. They begin to learn "manners" before they know what words are or mean. They learn by actions, not words. And it is a pretty sure thing that if children are not courteous, there is a lack of courtesy in the home life in which they are brought up. We demand courtesy from children. We must give them the same courtesy we expect from them. We sometimes scold when a child interrupts our conversation. But we don't hesitate to interrupt it, or others in its hearing. We punish a child for speaking sharply to us, when we taught it sharp speaking by speaking so to it. If we do things that are not right, we cannot have success in teaching children such things are wrong, for they will do as we do, and not as we tell them they should do. Let us teach courtesy, kindness, and consideration by practise, not by precept.

They Were Lucky

"Did your children get through the Fourth all right?"

"Yes, as luck would have it, they were both sick in bed."

No Mistaking It

"Is your husband a sound sleeper?"

"I should say he is. He makes sound enough to keep everybody else awake."

CANNING AND PRESERVING RECIPES

By Miss Helen Synan

Grape and Apple Jelly—Prepare apples and grapes by paring and removing stones; cook and press out the juice. When the juice has been well pressed from apples and grapes, take one-third apple and two-thirds grape juice. Boil two quarts in a dish, adding six cups of sugar about ten minutes, pour into jelly cups, seal when cold.

Grape Preserves—Cut grapes open and remove seeds, add sugar to the fruit, pound for pound, cook slowly for thirty minutes or until well done. Preserve in pint jars.

Green Tomato Preserves—Seven pounds of sugar, six of green tomatoes, juice of three lemons, little mace, and ginger. Make syrup of sugar, with a little hot water, and boil with mace, ginger and lemon juice. Prick them with fork and pour into the boiling syrup. Boil until fruit is clear. Take fruit from syrup and pack in jars. Thicken syrup by boiling more, pour over fruit. Put in small jars.

HINTS FOR THE HOME DRESSMAKER

THE simplicity of the present day modes make it extremely easy for the home dressmaker to turn out charming frocks, negligees and lingerie which if purchased ready made would be more expensive and not nearly as satisfactory.

One-piece frocks and separate blouses and skirts vie for favor this season. The separate skirt is more in favor than it has been for several seasons, although it has never quite gone out. The extra blouse is seen plain or elaborate, but the prettiest ones are simple, relieved by lace frills and plaiting, quaint bows and sashes. Panel effects, coat tops, and the sailor blouse are all modish and pretty.

"Children Teething

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

A Cart Load of Fun

This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in **"A Cart Load of Fun"** are the following: "A Man With a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded Not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jones' Baby," "Breaking up a Cat Concert," and 148 others. **"A Cart Load of Fun"** is a book of sixty-four large double column pages, neatly bound in attractive colored paper covers. Price 10 cents each, 3 for 25c; postpaid.

COONER & FORTUNE, Indianapolis, Ind.

For 10 Cts

One of the season's prettiest notes is the contrasting collar, cuffs and sash which are seen on many of the simpler dresses. The collar plays a very important part and there are numberless fetching little designs. The simple round collar, very becoming to most faces, or the broad sailor collar, girlish and pretty, and the broad reveres are often the sole trimming on many frocks. Many of them can be made separate of chiffon, lace or finely embroidered muslin, making it very easy to keep them fresh looking and clean.

PATTERNS OF FASHION

Free Monthly Fashion Guide We are unable to print all the fashion illustrations each issue that we would like to publish. However, with each pattern order mailed we will include free an advance Monthly Fashion Guide. Monthly Guide alone, without pattern, for 2c for mailing. All patterns are very latest and only 10c each, postpaid.

6227—Draped Three-Gore Skirt. The draped skirt is worn by everybody. This skirt has three gores and closes at the side of the front, where it is slightly draped. In the back there is a wide panel in the box plait effect. The pattern is cut in sizes 22 to 30 inches waist measure. Medeium requires 3⅛ yards of 44-inch material.

6265—Misses' Dress. This dress shows a novel adaption of the Middy. The plain blouse is gathered into a hip belt in Balkan style. It has the drop shoulder, sailor collar and inner shield of older models. The skirt is cut in four gores. The pattern is cut in sizes 14, 16 and 18 years. Size 16 years requires 5 yards of 36-inch material.

6246—Ladies' Shirtwaist. This shirtwaist can be worn with separate skirts. Long or short sleeves can be used. The pattern is cut in sizes 34 to 42 inches bust measure. Medium size requires 2⅝ yards of 36-inch material.

Price of Patterns, 10 Cents Each

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

To Save Him Trouble

"DARLING, did you see anything of that pile of bills I laid here this morning?"

"Yes, dear, I feared they might make you trouble and I burned them up."

"The —"

He Was It

"Is Miss Smith at home?" asked the young man at the door.

"Yes," replied the father, "but she is engaged."

"Oh, I know that, and it's me she's engaged to."

Something to Think About

"I like you better than I do any of the other fellows that come to see sister," said the girl's little brother.

"I'm glad you do, my little man; but why do you?" asked the suitor.

"Sis always lets me stay in the room when you are here, but when the other fellows come she makes me go out and play," was the answer.

No Danger

He—That is a splendid view; it nearly takes my breath away.

She—No danger; your breath is too strong for that.

Lacked Experience

"You musn't destroy the sparrows," said the teacher, "for they destroy the worms. Which would you rather have, worms or sparrows?"

"I never had sparrows," was a quick reply, "but mamma says I've allers got worms!"

Things Change

"I used to have many relations in this city, but I can't find a person of the name now," said the guest from another state.

"What was their name?" asked the host.

"Hack," was the reply.

"I expect they call 'em surry or taxicab now," said the interested six-year-old.

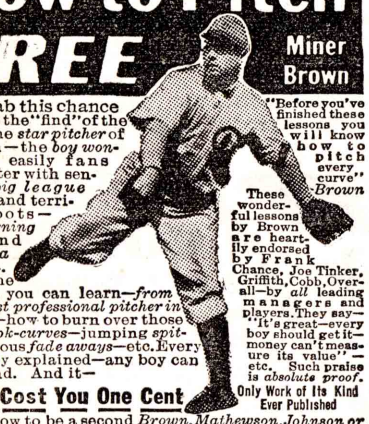
BOYS Let Brown Teach You How to Pitch FREE



Miner Brown

Boys, grab this chance to become the "find" of the season—the *star pitcher* of your team—the *boy wonder* who easily fans every batter with sensational *big league* curves and terrible shoots—with *burning speed*—and *never a sore arm.* Now, for the first time, you can learn—*from the greatest professional pitcher in the world*—how to burn over those deadly *hook-curves*—jumping *spitballs*—vicious *fade aways*—etc. Every curve fully explained—any boy can understand. And it—

"Before you've finished these lessons you will know how to pitch every curve" *Brown*

These wonderful lessons by Brown are heartily endorsed by Frank Chance, Joe Tinker, Griffith, Cobb, Overall—by *all* leading managers and players. They say—"It's great—every boy should get it—money can't measure its value"—etc. Such praise is *absolute proof.*

Doesn't Cost You One Cent Only Work of Its Kind Ever Published

to learn how to be a second *Brown, Mathewson, Johnson or Walsh.* Think how wild the town will be about you—how they will cheer. They'll want you to be *captain*—you'll be pointed out on the streets—your name will strike terror in the hearts of rival nines. *For Brown will tell you everything.* All the tricks of *his* craft and cunning—*that made him the wizard of flying curves*—all this is yours for the asking—*FREE.*

Send For the First Lesson Now

If you like baseball just *let us know where you are* and the First Lesson *comes to you by return mail.* You can't buy it—you must accept it—*FREE.* Let *Brown* start teaching you all these inside "secrets" and "fine points—*at once.* Yes, this is the *same* great Brown who won 4 championships and two worlds series for the *Chicago Cubs.* You couldn't have a better teacher. Delivering a few papers in spare time, earns this costly, *complete personal instruction*—by mail—no matter where you live—the whole course *FREE*—doesn't cost you a cent. So send no money—just your name and address on a postal—NOW. Don't delay—address like this,

W. D. BOYCE CO., Dept. 206 CHICAGO

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

WHAT of the future of America's young people? What of the future of America? One would just as well ask, for the future of America depends upon what her young people become. If her young people of today grow into nobler men and women America will be greater and nobler in future than it is today. If anything could stimulate progress that truth ought to do so. Nothing should occupy a greater place in the progressive heart than the future greatness of the country, and in that we include the happiness, prosperity, refinement and nobility of the people.

Our young writers are in the path of this accomplishment. They are of aspiring minds, broadened thought, glowing hope, and elevated and elevating purpose. Read their letters.

DEAR CADETS: I am a Texas boy, 18 years old, and live on a farm of 223 acres. We raise cotton, corn and wheat. Cotton is looking pretty good this season and corn is fine. I like farm life, and I like to plow and pick cotton. I am fond of reading and writing, and I want the Cadets all to write to me. I will try to answer all.—Charlie Farries, Leonard, Tex.

DEAR CADETS: I am 19 years old and live in Missouri on a farm of 120 acres. I raise all kinds of grain. My mother takes UP-TO-DATE FARMING, and I think it is a fine paper. I would like to hear from all the Cadet girls and boys, and will answer all who write.—Willie Hughes, Holden, Mo.

DEAR CADETS: I do think UP-TO-DATE FARMING is the best farm paper there is, and that is a fact which its readers cannot help knowing. I have lived four years in the state of Washington, and the fruit raised here is second to none. I would like a card shower September 11, for then I will be 18 years of age. But at any time send me a card or a letter of at least a page.—Roy A. Jorgensen, College Place, Wash.

DEAR CADETS: I have taken UP-TO-DATE for two years, and it pleases me very much. I am a country girl, 17 years old, and live on a 400-acre farm. I am very fond of the piano and I want to learn the violin. I would like very much to exchange letters and cards with the Cadets.—Una DeRouen, New Iberia, La.

DEAR CADETS: I am a girl 21 years old, and during the summer months I stay with my parents on the farm, but I work in the city in a retail millinery store during the trimming season. I would be only too glad to answer all letters and cards from the Cadet boys and girls.—Grace B. Quick, Oak Hill, O.

DEAR CADETS: I have been a reader of UP-TO-DATE FARMING for two years, and I think it is the best paper published. I always turn to the Cadet page as soon as I get the paper. I live in the southeastern part of Wyoming, half a mile north of Colorado, and 50 miles from Cheyenne. We raise all kinds of small grain, such as wheat, rye, oats and some corn. I am 17 years old, and would like to get cards and letters from all of the Cadets. I will answer all I receive.—Orvie J. Monger, Albin, Wyoming.

DEAR CADETS: I am 24 years old and live two and a half miles from Oregon City, the oldest town in the state. I have a farm of only 6 acres, on which I raise poultry and berries. The F. S. E. is very strong in this state, and it is growing fast. There have been about 60 locals organized since last October. I am secretary of one of them. We think UP-TO-DATE FARMING the very best farm paper printed, for the simple reason that instead of teaching merely how to make two blades of grass grow where but one grew before, it teaches how to market the one, and we believe that is what the farmers need to know more about. I have a camera, and would be glad to exchange photos with the Cadets. —G. F. Mighells, Oregon City, Ore.

DEAR CADETS: I am a farmer's daughter, age 17, and I enjoy farm life very much. We take UP-TO-DATE FARMING and think it the best farm paper we ever read. I live on a farm of 80 acres near Frisco. We have fine crops here now, principally corn, cotton, wheat and oats. I keep house for my father and brothers and sisters as my mother has been dead two years. I would like to exchange cards and letters with the Cadet boys and girls, and will answer every one.—Effie Bishop, Frisco, Tex.

DEAR CADETS: I do not live in the country, but I did when I was small. I enjoy reading the Cadet letters. I am 18 years of age, and would be glad to hear from the Cadet boys and girls; will answer all who write.—Ruth Haskins, 204 Hunt street, Jackson, Tenn.

DEAR CADETS:

Here comes a girl dressed up in blue,
Who'd like to hear from all of you.
My hair and eyes are darkest brown,
And I live about six miles from town.
I'd like to hear from those out west;
The pretty ones I like the best.
So send your photo when you write
So I may see what you are like.
My age is sensible nineteen,
Though in the country I'm not so green.—

Fannie E. Colvin, Holden, Mo., R. F. D. 30.

DEAR CADETS: I am a Tennessee girl 18 years old, and my home is in the small town of Kingston. It is very quiet, but it is a pleasant place. I am very fond of UP-TO-DATE. I will answer all cards or letters. I like to write to the girls and boys from other states.—Mary Edna Pope, Kingston, Tenn.

DEAR CADETS: I am living on a homestead here in the mountains, and I was raised here. I am 23 years old, and have 140 head of cattle, 90 horses, and 500 acres of land. So, you see, I am kept pretty busy. But I would like to hear from the Cadets, so write, one and all, and receive an answer.—F. H. Brack, Clancy, Mont.

DEAR CADETS: I am a farmer of 22 years, and live in the good state of Oklahoma. I came to this country when it was new. I would like to correspond with the Cadet girls and boys.—A. W. McClurg, Logan, Okla.

Practical Organization and Co-operation

THE FARMERS SOCIETY OF EQUITY

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No Capital stock. Membership fee, $2.00; Dues, $1.50 annually. Unity of marketing through county and district clearing houses, ultimately to federate in one national clearing house, the plan.

National Union Officers

Pres., J. A. Everitt, Indianapolis; V.-Pres., W. H. Mitchell, Hutchinson, Kas.; Sec., M. K. Sleight, Indianapolis; National Organizer, H. F. Cutting, Portland, Ore., or Indianapolis. Directors, Robert Stevenson, Lebanon, Ind.; Jacob Bretz, Bretzville, Ind.; S. W. Morris, Rochester, Minn.; Fred N. Parkinson, Rexburg, Idaho; W. S. Shure, Summerdale, Ala.; J. A. Harmon, Shawnee, Okla.; C. Hayes Taylor, Indianapolis, Ind.

State Union Directory

Locals reporting dues and fees of new members in states having an organized state union will make reports to their state union secretaries.

Idaho

President, A. Y. Satterfield, Sterling.
Secretary, O. E. Scott, Shelley.

Oklahoma

President, P. H. Thomas, Shawnee.
Secretary, J. A. Harmon, Shawnee.

Oregon

President, Wm. Schulmeric, Hillsboro.
Secretary, F. G. Buchanan, Oregon City.

J. A. Everitt, Pres.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

The future of agriculture rests entirely with the farmers.

—o—

The federal government and the state governments and institutions and individuals may help as they can but it will still remain for the farmers, themselves, to work out their own salvation.

—o—

It matters not how many millions of dollars are spent for crop reports and the dissemination of the same; or how many millions are spent for scientific research on the producing side; or how many commissions investigate in foreign countries all for the supposed benefit of agriculture. To pour money and commissions' reports on the farmers while they are not properly organized, will be like pouring water on a duck's back.

—o—

While these good-intentioned people are legislating, and investigating, and advising, we constantly see the anomaly of the little crops selling for the most money and the biggest crops selling for the least money. While millions of dollars of the nation's and corporations' wealth are being showered on the farmers to make agriculture more prosperous we see farmers losing hundreds of millions of dollars in the sale of their crops because they are not in a position to save to themselves the fruits of their wisdom and toil and investments.

—o—

It is a case of pouring into a tub which has no bottom.

—o—

To prove it: The corn crop of 1912 was 3,124,746,000 bushels. The very size of the crop forced the price down to an average farm value of forty-eight cents (government report) on December 1, 1912. (The Chicago cash price on December 9 was forty-six cents, consequently the average country price for NEW corn in heavy producing sections, could not have been more than forty cents.)

—o—

On the basis of forty-eight cents a bushel, and estimating that one-third only of the corn was sold at this price, which was about the prevailing price for the period of heavy marketing, we have 1,041,582,000 bushels at forty-eight cents, $499,959,360 as the sum it brought the growers.

But we see that what is left of the same crop is now selling at seventy cents in Chicago to seventy-seven cents in Kansas City. The point is this: The farmers have no control over the situation in any case. First we see an enormous crop, uncontrolled, thrown on the market to the sacrifice of values. Later, in the face of a coming short crop, the same corn sells at nearly double the price. The growers get little benefit from this high price because the corn has passed out of their hands. But the point is, the early price was too low and the present price is too high, because the growers have not sufficient organized control to affect the price.

—o—

We claim that sixty-five cents at Chicago is a fair, equitable price for corn year after year. At sixty-five cents, year after year farmers would prosper in years of big yields and little yields. And when they are organized to the point that they can hold the surplusses of the long years to add to the shortages of the short years, we may expect to see the price of corn the same over a number of years. We can very conservatively estimate the loss on the 1912 crop at 17 cents a bushel on 1,041,528,000 bushels, or $177,059,760.

—o—

And a similar illustration could be made for wheat, oats, cotton, and all other crops.

—o—

So the great need of the hour is more organization along the right lines and more co-operation of the right kind.

—o—

FIRST, A BOTTOM MUST BE PUT IN THAT TUB. THE BOTTOM WILL BE THE WILL OF THE PRODUCERS TO AGREE ON A PRICE AND HOLD FOR IT, AND THE WILL IS PRESENT WITH EVERY PRODUCER NOW BUT HE WANTS TO BE IN A POSITION TO EXERCISE IT.

—o—

So the organization along right lines must be extended. We know the kind of organization this paper is teaching is RIGHT—it is the local organization, the county organization and the central organization.

—o—

There must be more local unions of the Farmers Society of Equity. Then there are hundreds of local unions of the Farmers Union that have no plan or system to do business. We hear of them every day. These can federate with us. Also, we quote this from a grange paper: "Sometimes granges do their little work and die. They do so little they just naturally have to die." There's the whole story in a nutshell. Farmers will not stick to any organization that does not do business and pay them, no matter what the name. And then there are probably ten thousand independent local organizations all over the land.

—o—

All of these "societies" and "unions" and "granges" and "associations" WORKING INDEPENDENTLY CANNOT NOTICEABLY HOLD CROPS, OR DIRECT THEM TO THE RIGHT MARKETS TO MAKE AND MAINTAIN PRICES. But if all of them, or a considerable number of them, will get together on a common plan for doing just one thing—marketing—the bottom can be put into the tub in a short time.

—o—

When the tub has a bottom it will be worth while for the friends of farmers to pour their money and advice on them, but not before. Millions of dollars are being wasted on agriculture now. Yes, worse than wasted, because whatever increases crops beyond a point that has not been definitely determined, is an actual loss to the grain, vegetable, fruit, cotton, tobacco and other farmers.

—o—

We do not want the impression to go out that some of the local unions of the F. S. E. are not as bad as the locals of other organizations, as regards doing business and making the organization PROFITABLE, because they are. Some farmers will get enthusiastic over organizing and then their enthusiasm will pass off, like some men are more enthusiastic in persuit of an invention than in putting it to practical and profitable use after they get the patent.

—o—

An appeal was just sent to such locals of the F. S. E. through the presidents of the locals from which we make these extracts:

* * * The members of your local union undoubtedly joined it because they thought they saw certain and immediate benefits to be derived therefrom and they hoped that ultimately they would find through it a complete solution of their business problems. These are the inducements the organizer held out.

We want to say that the local union has benefitted the members. The very fact that you have an organization, a part of a great and growing national organization, makes the local buyers wary of offering very low prices for your produce. They know they must pay a reasonable price as they know you have it in your power to send your produce direct to the final markets. They don't dare to exact the unreasonable margins that they often did before you organized. Your members may not have thought about it this way, but thinking about it, they will want to maintain the organization to keep the local handlers up to the notch. But we don't want you to stop with this. If your members are not as enthusiastic as they were at first it is because your local is not doing enough business and giving them enough benefits. If this is the case, the secretary is to blame, partly at least and the members may be to blame too, for permitting such conditions. If the secretary is too busy to attend to the business of the local, then select a BUSINESS AGENT who will be constantly on the job of finding out what the members have to sell and what they want to buy and then sell and buy in community units. Sell and buy at home if you want to, but do it co-operatively through your own agent. But if you are not given the right prices at home, remember the Society has its representatives on nearly all the large markets to co-operate with your business agent.

—o—

A local union, or grange, or independent association may be sleeping now but it can be awakened; or it may be considered dead, but it can be resurrected by injecting into it the business system the F. S. E. has established. And in doing this it need not change its plans or practices more than to get in line for unity in marketing.

—o—

So we repeat: The one thing needed is organization where there is no local organization now, and where there is a local organization, no matter what its name, it should now federate for improvement in marketing at once to eventually lead to national unity in marketing and the complete solution of farmers' problems.

—o—

See the coupon and blank. If the problem of marketing is bothering your community fill out the coupon and send the names of a few farmers, like yourself, who want a change and get full instructions for organizing a new local union, or federating.

—o—

The future of American agriculture rests entirely with the farmers.

— — — — THE BLANK — — — —

Farmers Society of Equity,
Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them would be glad for improvements in our system of marketing.

Idaho All for Equity

We have had rousing meetings in Franklin and Bannock counties, where county conventions were held. The utmost harmony prevailed. The Franklin county union incorporated for $50,000, and in a short time practically every farmer in the county will be enlisted in the Equity movement. The Equity local at Burley, in Cassia County is incorporated for $50,000; Bonneville, in Bonneville county, for $25,000; Menan, Fremont county, for $10,000; the Ashton local has just purchased the Merrill line of four elevators, paying $20,500, and expect to handle 400,000 bushels of grain this year. Arimo, in Bannock county, will be incorporated by the time you receive this, and the Fremont county convention will have been held. A big meeting is promised, for Fremont county members are alive, and are each day realizing results.

We have purchased five cars of bags and twine, saving each purchaser from three to seven cents on each bag. On coal, we are saving members $25 a car. We shipped grain the local dealers would not bid on, and secured a very satisfactory price. The largest farm implement company in the west has made us concessions. Members are arranging to build grain elevators at several shipping points, and are erecting potato cellars.

Cache county, Utah, adjoining us, sent a representative to the Franklin county convention to learn more of Equity, and to ask to be admitted to the Idaho organization until Utah becomes sufficiently organized to have a state union. A. Y. Satterfield, our state organizer and state union president, will go to Cache county as soon as possible. He cannot possibly supply the demand for himself in Idaho, but will take time to start the work in Utah. Our local organizers report additions at every meeting. We are getting results, and the farmers realize it. By November we will have 10,000 members in Idaho, all our principle points will be in-

Why Not Get All the Profit From Your Corn?

EVEN the most unprogressive farmer of today would consider himself badly treated if he were compelled to harvest his grain with a cradle. He is too familiar with the easier and more profitable grain binder method.

Why then do farmers continue to cut corn in the old back-breaking, time-wasting, extravagant corn-knife way? What good reason is there why every corn raising farmer should not use I H C corn binders?

Cut your corn with a binder and you get the stalks and leaves at the time when they are full of nutritious juices and when their feeding value is greatest. The stalks and leaves contain more than one-third of the digestible nutriment of the corn plant. Hand cutting is too slow to enable you to harvest this valuable fodder properly, or it is too expensive on account of the extra help involved to make it worth while. You avoid the waste, the expense and the worrying trouble of securing extra help when you cut your corn with an

I H C Corn Binder

Deering, McCormick, Milwaukee or Osborne

It cuts and binds five to seven acres per day, saves you a deal of labor and trouble, and gives you a plentiful supply of nutritious stover; good for winter feeding because of its warming qualities.

I H C corn binders are built to do the best work under all conditions, whether corn is tall or short, straight, down or tangled, or on hilly or rough ground; and they leave clean fields behind. To get the most out of your crop you need an I H C corn binder. Then when your corn has been cured for a time in the shock, run it through an

IHC Husker and Shredder

Deering, McCormick or Plano

You will save the added labor of husking by hand, and more important, secure at no additional expense the clean stalks, leaves and husks, shredded into palatable fodder—an excellent substitute for your hay, which can then be baled and sold in the best market. It will pay you well to look over the I H C line of corn machines at the local dealer's. Write us for catalogues and full information.

corporated and we will be in position to pay cash for our supplies. The trade of 10,000 organized farmers, on a cash basis, will be worth considering, and this trade will be open to the firms who will make prices right.

We are proud of the fact that we have a state board of directors that are business men, and made a success of other undertakings. They have the loyal support of the best farmers in the Snake River Valley. We have a legislative committee, and will be fully represented at the state capitol so the Equity of Idaho will be considered when future laws are made.

We thank headquarters for its loyal support in the past, and solicit the same in the future.—O. E. Scott, State Union Secretary.

Direct Marketing of Cotton Was Profitable

On direct shipping I made from five to seven dollars extra a bale on nine bales of cotton. I shipped to Galveston, Tex. For the last three years crops have been very short here on account of drought, and this season is no better.—F. A. Ringold, Ripley, Okla.

Question Box

Q. I am enclosing a clipping from "The Packer" of July 26th. Your reply or comment on this article in the next issue of Up-to-Date Farming will do a world of good in our county where the Society is gaining ground.—Truman O. Smith, Loxley, Ala.

A. The article referred to is too long to reproduce here, so suffice it to say that it contained several false and misleading statements calculated to weaken the confidence of farmers in general, and the members of the Farmers Society of Equity, in the organization and in the integrity and sincerity of its officers. The following communications that have passed between the headquarters of the F. S. E. and the publishers of the paper will explain:

"Indianapolis, Ind., August 2, 1913.
"Publishers of the Chicago Packer
"185 N. LaSalle St., Chicago, Ill.

"Gentlemen: In your issue of July 26, you published an article on the first page, fifth column, beginning at the top of column, headed "Working on Both Ends," in which statements are made relative to the business methods of this Society, that are false and the publication of which are damaging to the reputation and business of this organization.

"I particularly call your attention to your charge that the market representatives of the Society are asked to hold out of the growers' money three per cent. and pay it to the Society. Also, the statement that the representative was asked to revise his own rating. Also, other unwarranted statements and charges and insinuations regarding this Society, that are false and misleading.

"This is notice to you to retract all false statements in as public a manner as you have given them publicity, which means that they be retracted on the first page of your paper, top of column. Failing to do this, this Society will institute suit against you for such damages as we believe we have and will suffer as the result of your false publication, and we will prosecute the suit to a conclusion.

"A copy of this letter is sent to your Kansas City office.

"Yours very respectfully
"J. A. Everitt, President.
"Farmers Society of Equity."

On August 5 we received the following lettergram:

"Kansas City, Mo., August 4, 1913.
"J. A. Everitt, President,
"Farmers Society of Equity,
"Indianapolis, Ind.

"Referring to story you complain of: Is the Society the exclusive representative of farmers who are members and have all these members shared in the profits that have been earned from membership fees and three per cent, charged commission mrchants? If no profits have been earned in the past then what would the Society do with a surplus profit in the future, i. e., would it go to all the former members or to a limited few? This question was raised in the first story and it occurs to us that you might want to make a detailed statement on this point. Do you mind stating what salaries or commissions are paid to the officers? Please answer night press rate collect message."—The Packer.

We did not wire as it was necessary to place before them some of the literature of the Society, so the following letter was sent.

"Indianapolis, Ind., August 5, 1913.
"The Packer, Kansas City, Mo.

"Gentlemen: Reply to your night lettergram:

"The co-operative marketing plan of the Farmers Society of Equity is explained by the circular accompanying this, 'A National Marketing System.' The members and local and county unions are expected to so conduct their marketing as to maintain and develop this plan. The Society supplies each union with a 'Directory,' a copy of which is enclosed. It is not required that all crops be sold to or through the houses in the Directory, but each secretary or business agent is at liberty to sell to the best advantage, and headquarters co-operates with him to that end (See 'Important Point VI', page 4).

"The Farmers Society of Equity is incorporated without capital stock. It is not a profit, or dividend paying corporation, except, as by its marketing system its members sell for better prices and make more money. The money received from membership fees and dues is used to meet the running expenses of the Society, to maintain organizers in the field and to extend the organization. The same way with the small share of the handlers' commission (not an extra commission charged the producer). The purpose of the Society is to equip agriculture, all over the country, with a better marketing system. This will call for the expenditure of much money. When this is done, if the membership fees and dues, and what our co-operating handlers contribute eventually produce more revenue than to maintain the Society, they will be reduced. The president is allowed a yearly salary of $500. The secretary is not an elective officer but is hired by the executive board at current rates for such service. There are no other salaries except $3 a day to the members of the Board of Directors when called to meettings. The people at the head of this organization are actuated by the wish to benefit the farmers and all the people and not to enrich themselves. No officer receives any commission of any kind from any source.

"Our plan of organization and marketing has had a high endorsement from a late business manager of the National League of Commission Merchants. We have many letters also from the best produce houses in the country commending our plan of getting the producers together in large units to market.

"We now ask that you take steps to mend the damage you have done this Society by the false publication in a recent issue and promptly apprize us of what you will do."

" Yours truly,
"J. A. EVERITT, Pres.
"Farmers Society of Equity."

We are now awaiting further developments. "The small share of the handlers' commission" referred to above is in no sense charged against members, but it is what some of the representatives will allow because they do not need to send their own men into the country to solicit the business. This was formerly provided to be remitted to the union or member, as the "Directory" will show. But very few of them demanded it and got it. So in the next Directory it will provide for it to be sent to headquarters to advance the organization. It is simply a matter of having it for this purpose or the Society get no benefit from it whatever.

Only 7½c an acre additional expense

for seed will increase your yield 5, 10, 15 or 20 bu. per acre. Read what other farmers have done

Indiana Red Wave winter wheat is taking the country by storm wherever introduced. It is recognized as the farmer's standby—the money-maker wherever grown.

Many farmers have doubled their yield with Indiana Red Wave wheat. The same work of plowing, cultivating, sowing, harvesting has resulted in greatly increased yield because this strong, vigorous, heavy yielding seed was sown. You can do what others have done.

There is not a particle of doubt about you raising such crops as reported by our customers if you sow **INDIANA RED WAVE WHEAT** this year. If you did not raise such crops it is to your interest, more than ours, to order this seed at once. Notice the low price we make for round quantities.

HEADS OF INDIANA RED WAVE WHEAT FROM A PHOTOGRAPH, EXACT SIZE. THESE ARE NOT EXTRA SELECT HEADS.

RED WAVE WHEAT was produced by crossing Early Red Clawson and a hardy Russian variety. It is a new wheat and like a young man, has all the vigor of youth. It is extremely hardy to withstand winter. The straw grows from three to five feet, and is strong. The head which is the true test of every variety of wheat, is large, both as to length and breadth; is closely set with meshes which are well filled with large amber grains. The illustration on this page shows four heads exact size. The meshes on these heads except at the butts and tips had four grains each. You can count the meshes and estimate the grains. The head is beardless. This is an excellent milling variety and is desired by millers.

The **INDIANA RED WAVE WHEAT** is without a peer for standing hard winters and droughts, or repairing damage in the spring if any was done, because of its vigor and for big yields. Those farmers who have been depending on the old standard sorts, which have lost much of their original vigor can afford to discard them now and sow their main crop of **INDIANA RED WAVE. We make a special low price for such.**

Can I afford to buy Indiana Red Wave Wheat to sow a field or my crop?

This is a natural question. We will give you some facts and figures then you can answer it.

If you sow your own wheat you will take 2 bus. and clean and grade it down to 1½ bus, and sow it on an acre. 20 acres will take 40 bus. of your wheat, which is worth say, 90 cents in the market, $36.

If you sow Indiana Red Wave wheat you should order 10 bags full, 25 bus., from us and the cost will be $37.50. There will be a little for freight, but the bags, which we throw in, are worth something toward the freight. Thus the difference is only about $1.50 against the cost of Indiana Red Wave Wheat, or 7½c an acre.

EXAMPLE

25 bu. of Indiana Red Wave wheat, cleaned and graded	**$37.50**
40 bu. of your wheat at market price about	**36.00**
The Difference	**1.50**

We offer this example because some people, without figuring it out, think that what they send to us for seed wheat is all outlay, while for a fact, only an inconsiderable sum is. Against the extra outlay can be offset the extra yield the *Indiana Red Wave* will make and the extra price it will sell for until all growers in your part of the country are growing it. This is an exceptional opportunity to make your next wheat crop and future ones more profitable. Twenty acres cost only $1.50 more, 7½c an acre.

A fraction of a peck extra yield per acre will pay all the extra expense. But the person who has been sowing Poole, Fultz, Rudy, other old varieties and changes to *Indiana Red Wave*, will be very sure to get 5, 10, 15 or 20 bus. more per acre. Read reports from farmers like yourself who sow and harvest under ordinary conditions.

Red Wave, 49.4 bushels, at Indiana Experiment Station. It led all, in this year's test of 36 varieties. Read report.

Every day farmers come to our store or write to us and say **"I wish I had** sown my whole crop of *INDIANA RED WAVE."* They have in mind the big yields it made on their own or neighbor's farm. It pays to make a wise change of seed. It will pay big to sow this wheat. So if you order a bag full or two you will probably be sorry at next harvest time that you did not order more.

Order from this advertisement. All the evidence is before you. Don't hesitate. It's practically no *extra* expense; but the harvest will give you many extra bushels per acre—10 acres maybe a couple hundred extra bushels.

We refer to Continental National Bank or any business house in Indianapolis.

Price

We have a very large supply of Indiana Red Wave wheat and can fill orders up to carloads. We have put the price low in round lots to induce sowing liberally.

By freight or express:

¼ bushel, 75c.
½ bushel, $1.25.
1 bushel, $2.25.
2½ bushels (1 bag for two acres), $5.
5 bushels (2 bags for 4 acres), $9
10 bushels (4 bags for 8 acres), $17.50.
25 bushels (10 bags for 20 acres), $37.50.

Larger quantities at $1.50 a bushel. No extra charge for bags. Wheat is graded, ready to sow.

By mail, postpaid: 1 lb., 30c; 4 lbs., $1; 10 lbs., $2.

O. K. Seed Store, Dept. 6A, Indianapolis, Ind.

Central Location **Prompt Shipment** **Low Freight Rates**

This Is Evidence to Convince You that It Pays. Don't take *our* Word for It—Our Former Customers tell You Below How Red Wave Paid Them

We do not print complete address of former customers for the obvious reason that our advertising would sell their wheat. In most cases they sell to neighbors at an extra price. All letters are on file in our office and reports are guaranteed genuine.

INDIANA—Red Wave Leads at Experiment Station

Newspaper Bulletin No. 191, dated July 26, 1913, from the Indiana Experiment Station reported on the varieties of wheat tested at the experiment farm this year. There were thirty-six varieties grown. The greatest yield per acre reported was Red Wave, 49.4 bus. The average of all tests was 35.8 bus.

This official test should establish the Red Wave wheat as the peer of all varieties. Red Wave beat the average about 16 bus. an acre.

MICHIGAN—The Best Yield on Record—42 Bushels

The Indiana Red Wave wheat made a yield of 42 bus. to the acre when threshed. This is the best yield of record for this county.—Guy A. T., Monroe Co., Mich.

TENNESSEE—Glad He Sent

Indiana Red Wave heads are six inches long and there is probably 80 grains to the head. It is not threshed yet, but I have guessed it to make 50 bus. an acre. It is the best wheat I ever saw grow. We had a hard storm and some of it blew down, otherwise I believe I would have gotten 100 bus. from the two bus. sowed. I certainly am glad that I sent for this seed. Already more people have spoken to me for seed than I will be able to supply.—R. B. Whittacry, Sullivan Co., Tenn.

OHIO—45 to 50 Bus. an Acre.

Indiana Red Wave wheat is simply all right. It is not threshed yet, but it is sure to make 45 to 50 bus. an acre. It can't be beat.—W. S., Montgomery Co., Ohio.

ILLINOIS—50½ to 55 Bus. an Acre

I sowed 19 acres of Indiana Red Wave and threshed 1,009 bus., one-half of the field averaged 50½ bus., and the other half, which I fertilized, averaged 55 bus. an acre. The wheat is the finest I ever raised and tests 62 pounds. Just before cutting many people in the neighborhood called to see it and they all pronounced it the finest they ever saw.—J. H. C., Morgan Co., Ill.

MISSOURI—Indiana Red Wave Beats All Other Kinds

Indiana Red Wave wheat has proven to be the hardiest wheat of any that is grown in this country. 60 grains to the head. It was pastured close all last winter. Considering the conditions under which this wheat was grown, it has beaten all other kinds as it made 35 bus. to the acre. Everybody who has seen it likes this wheat fine—Nathan B., DeKalb Co., Mo.

ILLINOIS—The Best I Ever Saw

Red Wave is the best I ever saw. It makes more vigorous growth, has longer and better filled heads, will yield five bushels or more an acre more than our old kind, which we call the Red Chaff.—Hilary Herbert, Hancock Co., Ill.

MISSOURI—60 Bus. an Acre

I let my Indiana Red Wave wheat get too ripe before I cut it. As a result a good deal of it was wasted. Notwithstanding this, when I threshed I had 60 bus. an acre and a little over. It is the wheat for this state. I am going to sow 100 acres of it this fall.—A. J. S., Holt Co., Mo.

INDIANA—35 Bus. Against 15 Bus.

The only variety of wheat I sowed last fall is the Indiana Red Wave. It is rather early to estimate it, but I put it at 35 bus. an acre. The wheat crop is not extra good in this locality, but I am well pleased with the Red Wave and I believe that if we would have had a favorable season that it would go 40 bus. an acre. My neighbor, who has wheat just over the fence, will do well if he gets 15 bus. an acre.—J. C. Fallman, Marshall Co.

KENTUCKY—Far Ahead of Any Other

My old variety of wheat is Fultz. This fall I sowed some of your Indiana Red Wave also. Heads on the Fultz are 3 in. long, with two grains to the mesh, the Red Wave heads are 4 to 5 in. long with three big grains to the mesh. It has got all other kinds of wheat beat. It is the best that I ever saw. I never grew such good wheat before. It is far ahead of any other in my neighborhood in every way.—W. H. Bryant, Boyd Co., Ky.

ILLINOIS—60 Bus. an Acre

I will let you know how the Indiana Red Wave wheat has done for me, as we threshed yesterday. First I will say that it turned out wonderful. We got 60 bus. an acre, and old farmers say it is the first time they ever saw anything like it Everybody around here wants the seed of this wheat.—Mrs. Anna Baurer, Tazewell Co., Ill.

NORTH CAROLINA—100 Bus. From One Bag of Seed

I bought one bag of Indiana Red Wave seed wheat (2½ bus.) and have just threshed 100 bus. of fine wheat from it. It is beter than any other wheat I have seen.—J. E. G., Rowan Co., N. Car.

NEBRASKA—Finest In All Our Neighborhood

The Indiana Red Wave wheat is the finest of any wheat in all of our neighborhood. It stood the winter fine. Its straw is small and the heads very large. My estimate is that it will yield 35 bus. an acre.—J. L. Hilliard, Hamilton Co., Neb.

ILLINOIS—Made 42 Bus. an Acre

I like the Red Wave wheat fine. It is certainly the greatest wheat I ever raised. The straw is stiff, clean and long. When threshed it surprised us by yielding 42 bus. an acre, which is much better than any other wheat I raised. A man from Idaho visited me this summer and saw the field of wheat and said it was the finest he ever saw.—J. C. B., Christian Co., Ill.

PENNSYLVANIA—Yields One-Half More

Indiana Red Wave stood winter better. It will yield one-half more than my other varieties.—G. H. S., Cambria Co., Pa.

VIRGINIA—Will Yield a Third More

Indiana Red Wave was of stronger growth than any other wheat I ever raised. Some heads 5 inches with 5 grains in a mesh. It will make a third more than that by the side of it. Everyone that sees it says it is the best headed wheat they ever saw and all speak for seed.—V. H. P., Floyd Co., Va.

MARYLAND—Withstands Black Rust

The Indiana Red Wave wheat obtained from you is better than my other kind. Five pecks sown per acre of the Indiana Red Wave last fall stands as thick on the ground as seven pecks of the other, and the heads are better and have more grains. The other wheat wont make 15 bus. an acre, while the Red Wave will make 20 or 25. It has very little black rust, while the other is nearly eaten up with it.—Hansen G. Cashell, Montgomery Co., Md.

MICHIGAN—35½ Bus. an Acre

I raised one acre of Indiana Red Wave wheat and it yielded 35½ bus. Very satisfactory.—E. W. Oakland Co., Mich.

INDIANA—Yield Twice as Much

Indiana Red Wave grows much taller than others. Heads 4 to 5 ins. long and about twice as many grains to the head. It will yield about twice as much as my other wheat.—H. M. H., Paoli, Ind.

MISSOURI—Heads 5 to 6 Ins. Long

My Red Wave is one of the best varieties I ever grew compared with other kinds. It is not threshed yet but will make 35 to 40 bus. to the acre. It grows strong straw, and has long heads. I have heads that measure 5 to 6 inches long. I am well pleased with Indiana Red Wave.—Wm. H. S., Jefferson Co., Mo.

PENNSYLVANIA—Will Stand a Hard Winter

Indiana Red Wave is hardier than most others; grows more vigorous, has longer and stronger straw. I think Red Wave will go over the average yield by one-half.—W. B. A., Snyder Co., Pa.

OHIO—Finest Wheat in This Section

I have the finest wheat in this section. The other wheat I sowed won't make the seed. Red Wave has good length and large, fine heads. It is the hardiest I have seen in Wayne and Medina counties this year.—J. A. H., Rittman, O.

MISSOURI—One-Third Better than Others

Indiana Red Wave is one-third better than other varieties; straw bigger, heads bigger, better filled.—J. J. C., Russellville, Mo.

Our seed wheat catalog with fuller description and more reports will be sent to all customers from this advertisement, or will send the catalog in advance, if requested.

O. K. SEED STORE

Get Your Cream Separator NOW

Most Women Prefer the New Butterfly

Only $2 DOWN

One Year To Pay

Here is the opportunity you have been waiting for—a chance to get one of these big-capacity, light-running, easy-cleaning, close-skimming New Butterfly Cream Separators without taking the money out of your pocket.

By paying only $2 down, you can get the biggest machine we make, use it 30 days free, then if you decide to keep it pay us the rest of our low factory-to-farm price (only $24 and up) in small, easy installments. You can make these payments monthly out of the extra cream profits which the machine will save for you. You buy direct from the manufacturer and save half. You try the machine 30 days on your own farm before you decide to keep it. You get a signed lifetime guarantee. You have the benefit of this great labor-saving machine while it is earning its own cost and more. You don't risk a single penny. We pay the freight both ways if the separator fails to please you. Get your separator NOW at factory prices and on terms so easy you won't feel the cost at all.

New Butterfly Cream Separators

will make you $10 to $15 a year more profit from every cow you own. They are handsome, high-grade, durable machines. The most modern and convenient separator you can buy. No other separator costs more to make, has so many patented improvements or gives you as much value for your money. We will prove this on your own farm, or no sale. Thousands are in daily use all over the United States. Read the letter at right.

Davenport, Iowa.

Dear Sirs: I like the separator; I think it is a daisy. It certainly is everything you claim it to be. I would not exchange it for any other separator, regardless of make or price. The——, which I am shipping you today, took all the strength a man had to run, but my little 8-year-old boy can run this one easily. It skims perfectly clean, and is so easy to wash.

EDWARD SCHMIDT.

No. 5½
One-Piece Aluminum Skimming Device
Frictionless Pivot Ball-Bearings; Open, Easily-Cleaned Milk and Cream Spouts; Self-Draining Bowl and Tank.

30 Days' Free Trial

Lifetime Guarantee

Fill out the coupon below—mail it to us right away for free catalog folder. Get our big special offer on the five sizes of machines we make, so you can pick out the one that exactly suits your requirements. We will ship it to you on our easy payment terms of only $2 down and let you try it 30 days on your own farm. When the 30 days are up, **if for any reason** you are not pleased—if you don't prefer the New Butterfly to any other separator you ever saw or used—just return the machine to us. We will pay the freight both ways and refund your first payment. You won't be out a single penny.

TEAR ALONG DOTTED LINE

Every New Butterfly Separator is guaranteed against defects in material and workmanship, regardless of how many years you have used it. No other separator manufacturer will give you this signed lifetime guarantee.

Direct from Factory

Only $24 and Up

—according to size. We make two styles and five sizes of the New Butterfly Separator. Our Free Catalog Folder describes all of them. Every machine we build is beautifully finished throughout and guaranteed a lifetime. Note these special features: No disks to wash and rust out. The New Butterfly Skimming Device is complete in one piece—made of aluminum—the "everlasting," easy-cleaning metal. Shelby Seamless Steel Bowl—phosphor bronze bearings, vertical shafts, adjustable cream platter, ratchet crank, self-draining bowl, low-down self-draining milk supply tank, closed bottom, open milk and cream spouts, oil-bathed ball-bearings, and many other exclusive features.

UP-TO-DATE FARMING

16th Year, Number 17 **SEPTEMBER FIRST, 1913** Indianapolis, Ind.

A Herald of Farm Progress and Prosperity. Published Twice a Month

With the Up-to-Date Farmers

A Department for Live Folks who want the best. Our readers are asked to contribute their thoughts. If you have a helpful idea pass it on. Be neighborly. Contributions always welcome.

Make way for co-operation.

A long purse is a big help in short years.

Keep posted. It is what you don't know that hurts you.

Better farming may not make you a millionaire, but it will make you a better man.

Try a smile when something goes wrong. If that don't make you feel better, laugh.

A successful farmer; one who farms with the industry of an enthusiast and the intelligence of an expert.

The man who says it can't be done is kept on the jump to keep from being run over by the man who is doing it.

Nothing like looking on the bright side of things. "Root, hog, or die," might have been written, "Root, hog, and die."

If there is any virtue in the dust mulch, Kansas should have made the most of it this year. Dust has been plentiful, we hear.

The tobacco growers down in Kentucky have long been troubled by horn worms, so an exchange tells us. Let's see: Is that a new name for the Hook worm?

If the agricultural department in Washington will show the farmers what to do with an organization, then it is all right for it to teach them how to organize.

It was an Englishman who said that he had no doubt but that Jehovah could have made a better berry than the strawberry had he tried to do so, but he never did. The Lord left the job for Luther Burbank.

Weeds make the most of their opportunities during these days. Their business now is chiefly making seed for next year's weed crop. Scattered through the cultivated fields, along the ditches, creek banks, hedge and fence rows, members of the weed tribe are busy making germs of trouble for the farmer another year. Take time now to destroy them completely. Mow and as soon as dry, burn them. Weeds are more than robbers—they give aid and shelter to insect enemies. Every hour spent in weed destruction is well spent, and lasting in effect.

Good Material---But a Poor Fit

Lessons in Co-Operation

Lesson No. 1

Co-operation has paid many profits which would otherwise have been lost to the co-operator. The principle is a sound business principle. True co-operation has never suffered a failure. When a so-called co-operative venture failed, the real cause of that failure was not co-operation, but the lack of it on the part of one or more of the co-operators. Not standing together, but falling apart has been the cause of the dissolution of every co-operative movement that failed. Successful co-operation demands and must have the intelligent, loyal, consistent and harmonious support of not a few, but all of the co-operators. To attempt to succeed on any other basis is not only to invite but to insure disaster.

There are thousands of farmers in this country today who are receiving better returns than others who have equally as desirable products. This is not a theory, but a condition that actually exists. The reason is found in co-operation. Those who are succeeding beyond the average are those who are winning success by means of co-operation. A certain degree of success can be won without it, but the greatest successes are won with it. The highest prices paid for apples are paid to members of an apple-growers association. The highest prices paid for wheat are received by members of farmers' associations. The lowest prices paid for fertilizers, groceries and other supplies are the prices paid by members of a farmers' purchasing club. There may be exceptions to this, but, reader, are YOU that exception? If not, then co-operation will pay YOU.

Get the facts, and think them over.

Give Farmers a Chance

CONGRESS, and the Secretary of the Treasury are wrestling with the money question. Congress is taking up a bill to reorganize the whole monetary system, in order to place it on a basis that money can be had when and where it is needed, so panics and money stringencies may be avoided, and business may not be all tangled up because of money matters. Business is to be helped in going right along smoothly, the government seeing to it that there is plenty of money available at reasonable rates for all good business endeavor. That is what the country needs, and is at least what the administration declares it shall have before Congress adjourns.

The Secretary of the Treasury, not waiting for remedies through acts of Congress, and having in the treasury a few millions not needed for a few months, has made arrangements to put that money at work, as right now is money's busy time. When crops are ready for market, there is almost more work than money can do—there isn't enough working money to go around. Money speculators take advantage of this fact, and what money they control is held tight, for big rates of interest, and speculators in stocks also try to hold as much money in control as possible. Money being scarce and high, farmers have to give more wheat, more oats, more butter and eggs in order to get a dollar than they would if money were more plentiful. Such a condition is bad all around, except for the money speculators and the successful stock manipulators, who grow in wealth while everybody else suffers. This is the condition Secretary McAdoo took steps to avert, by placing many million dollars through the country for the use of the real business men transacting sound and necessary business.

In both the plans of Congress and of the Secretary of the Treasury, there is a plain disposition to favor other classes in preference to farmers. The farmers are expected to be benefited in a general way, but bankers are to be benefited in a direct way, with the expectation, perhaps, that they will permit some of the benefits to filter through their fingers and reach the farmer. Now, a bank is only a business institution. A farmers' organization is also a business institution, if it is properly organized. The bank can borrow some of this money from the treasury at a low rate of interest, but the farmers' organization cannot borrow at the same rate. This is manifest injustice. It is discrimination. There is no better security for loans than warehouse receipts for the necessaries of life—the products of the farms. And wherever a local, or county organization of farmers can put a supply of grain, hay, cotton or other staple article in a bonded warehouse,

OUR ADVERTISERS—GUARANTEE

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this UP-TO-DATE FARMING stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in UP-TO-DATE FARMING" when writing to the advertiser. Medical advertisements are not accepted.

Entered at the Indianapolis, Indiana, Postoffice as second class matter, under the Act of Congress of March 3, 1879.

A Chance for the Boy

AGRICULTURE is fast becoming a field of larger opportunities, especially for trained ability. Agriculture, in which the individual farmer is but a single cog (a highly important cog, it is true, but a cog, nevertheless, when we consider agriculture as a whole, and as a people we are fast becoming to look upon it in just that way). Agriculture, we say, as a business, and as a profession, is being reorganized, and the reorganization is calling for specialists along new lines of endeavor.

The county farm demonstrator is but a beginning. In course of time every agricultural county will have more than one specialist to assist in promoting greater success in the production and distribution of farm products. This is the beginning of the age of specialists. The "general purpose" county agent will become a back number, especially in progressive counties of diversified interests, for the simple reason that such counties will have more work than one man can do, and it is impossible for a general purpose man to be as proficient in a special work as the specialist in that work. So there will come the crop specialist, the live stock specialist, the dairy specialist, the fruit specialist, the veterinary specialist, and others; but chief amongst these others will be the marketing specialists, for methods of marketing are to be revolutionized also. Indeed, right there is the greatest need. So, it is no longer necessary for the bright boy on the farm to go outside of agriculture to enter a business or a profession. The business end of farming will offer him opportunities as great. The demand for trained men in the various branches of agriculture will exceed the supply for many years to come.

Will Farmers Become Bankers

SENATOR FLETCHER, of Florida, and Representative Moss, of Indiana, are working on a gigantic scheme for a national system of rural credit banks operated by farmers for farmers. It is expected that each will introduce a bill, one in the senate, the other in the house, authorizing the creation of local rural national banks of a minimum capital of $2,000 in any community. Capital stock to be owned entirely by local farmers. It will be provided that there shall also be a state "national rural bank" for each state, owned and controlled by the local rural banks, and a national rural bank of the United States over all.

Until the farmers, who once a year own and should control the entire food and clothing supply of the nation, organize a business system for marketing their own crops, whereby a reasonably profitable price is assured them, we shall seriously doubt the advisability of encouraging them to undertake a national banking business, Until the farmers of each community and all communities organize locally to handle their own crops through a marketing organization, it is doubtful if they should undertake to organize a banking business and try to operate it. And when farmers are organized, locally and nationally, and market in the right way, getting the right price for what they produce, there will not be need for such a great volume of rural credit, for rural cash will make it unnecessary.

Bubbles Will Burst

Cotton Corporation Bubble Bumps Into a Stubborn Fact With Natural Results

THE attorney-general of Arkansas, after a thorough examination of the contracts being issued to Arkansas cotton planters by the Southern States Cotton Corporation guaranteeing fifteen cents for cotton, on a basis of eleven cents cash, balance in interest-bearing scrip, payable when the cotton finally is sold by said corporation, has rendered an opinion on the contracts stating that the only security the grower has is the cotton itself. If the corporation is unable to sell the cotton for enough more than fifteen cents to pay interest on the scrip, pay expenses of operation, etc., the planter will not receive the guaranteed price. In other words, the corporation cannot make good its guarantee, and the planter will receive for his cotton just what it sells for, less expense of selling through the corporation. There is, and can be no such thing as a guarantee of fifteen cents for cotton.

We are informed that shortly after this opinion was delivered the state auditor issued an order denying the cotton corporation authority to do business in the state of Arkansas.

UP-TO-DATE FARMING has from the first pointed out that inevitable failure must come to the Southern States Cotton Corporation. We would be glad to see the cotton planters receive fifteen cents for their crops, and no one will do more to assist them to get it. But it is worse than folly to attempt it by means which cannot possibly succeed. There is but one way to make cotton bring its real worth, whether it be ten, twelve, or fifteen cents a pound, to the man who produces it, and that is through right organization, co-operative controlled production and controlled marketing. Sooner or later, the planters must turn to this way, and it is most unfortunate that the way must be first cleared of the debris caused by wrecks of impractical and impossible schemes which destroys the hope and cripples the confidence of the farmers in a real remedy. It is high time for the leading agricultural organizations to form a federation, and appoint a board of capable committeemen to sift the grist that is offered the farmers as panaceas for their ills, and eliminate the trash, which hinders the establishment of a sound organization, the only means whereby the farmer can protect his interests.

Must Tell the Truth

How Uncle Sam Acts as a Fraud Bouncer

THINGS are not what they seem, wrote the poet in an immortal poem. "Things must seem what they are," wrote Uncle Sam across one of the pages in his statute book, and put his signature thereto, his sign and seal thereon. And having said it must be so, his legal machinery has been put in motion to make it so. The pure food and drugs act is to compel those who offer a product for sale to sell exactly what they claim to sell. Uncle Sam does not guarantee that whatever we may purchase will be just what the dealer, distributor, manufacturer says it is, or that it is just what the label thereon proclaims it to be. Often, in fact, in nearly all things offered for sale under label, that label proclaims the fact that the product is "guaranteed under the pure food and drugs act." That guarantee, however, is not Uncle Sam's. He guarantees no product he does not make himself. The guarantee is the guarantee of the manufacturer and is worth just what the honesty and integrity and financial responsibility of the manufacturer is worth. Uncle Sam, however, guarantees that if the goods do not come up to the description, the person who perpetrates the fraud can be made to suffer for it. He guarantees that those who sell things that "are not what they seem" will be duly punished upon proof of deception.

Seven judgments were published by the Department of Agriculture on July 18. The Lewy Chemical Company, of New York City had been selling a preparation called "Cedar of Lebanon and Camphor for Prevention of Moths." There was nothing in it but cedar chips—not a bit of camphor. The same firm sold what they called "Extra Refined Ta Na Chinese Camphor," supposedly made in China. There was no camphor in it at all, and it was never any nearer to China than it was when offered for sale. Still another product of this firm was found to be deceptive. It was called "Extra Refined Camphorated Flake Compound—Destroys Moths and Insects." Uncle Sam's scientists found these flakes contained no camphor, and wouldn't destroy the most delicate insect, though it might drive them away. The Sherwin-Williams Company, of Cleveland, O., put some labels on Arsenate of Lead that were not quite accurate, and were taken to task for it. The company was fined and promised to be more careful in the future. The manufacturers of Zenoleum neglected to mention on the label the fact that a part of their excellent preparation consisted of water, and because of this a quantity of the product shipped from Michigan to Massachusetts was confiscated and destroyed. The Kibler Chemical Company, of Indianapolis, puts up paris green in cans and states thereon that the cans contain "Half-pound, net weight." Some of the cans shipped to Mississippi were not up to specifications—there was a deficiency in quantity. So the poison was seized, and held until the owners gave bond that it would be sold for just what it was, and nothing more. Conkey, who manufactures a sheep dip, a "fly knocker," and a nox-i-cide" made careless claims for these products, which chemical analysis found was not according to fact. Conkey was fined for his carelessness.

Now, in most of these cases, the articles in question may do the work for which they were intended. The government did not take this into consideration. Uncle Sam only insists that hereafter manufacturers be absolutely accurate in describing their products, so no one may be mislead.

What Others Say

The man who is satisfied with things as they are never makes them better.—System.

Some farmers seem to think co-operation means making money out of a neighbor's efforts.—The Co-Operative Manager and Farmer.

Of no use to the world are the men who study to do exactly as was done before; who can never understand that today is a new day. We want men who can take steps forward.—Emerson.

Farm arithmetic: Multiplying weeds adds to labor, subtracts profits, and divides production. Subtracting weeds divides labor, adds to production and multiplies profits.—Sam Saxon.

Some time in the future the question of land monopoly is bound to arise. In the past our captains of industry have been busy corraling railroads, steel plants, water power sites and mines. Some day they will take a fancy to own all the land and then a fancy to own all the land. Are the people going to wake up before that time comes?—Valley Farmer.

The county fair should be an exposition of county resources and a mirror of agricultural progress and domestic endeavor. By way of variety amusement features are necessary but they should not be in such number as to overbalance or overshadow the serious business of the fair.—Courier-Journal, Louisville, Ky.

Stopping future trading would not stop speculation in farm products. In fact, until farmers are better organized the abolishing of future trading might result in even greater speculation. Nothing can stop speculation in farm products but the refusal of farmers to allow them to fall into the hands of speculators.—The Nebraska Farmer.

The extreme low prices farmers are frequently forced to take for their products are usually the direct result of lack of co-operation among themselves. So long as farmers allow middlemen to set the price on the products they have to sell, just so long will they fail to obtain an equitable share of the profits.—Farmer and Breeder.

Railroad companies are calling upon shippers to co-operate that there may be a full supply of cars. If cars are loaded and unloaded promptly, there will be plenty to go around, but only prompt release of cars once loaded will allow the crop to move easily and rapidly. An especial appeal is made at this time to prevent congestion and it is believed that users of railroad equipment will respond.—The Business Farmer.

There are three fundamental propositions facing the rural people today. The first is, the getting of knowledge regarding the best methods in existence for growing crops and feeding animals. The second, to take up and solve the economic problem of getting the farmer a fair, square deal on the market, and third, to give the farmer the opportunity of obtaining money at low rates of interest on long time to enable him to market his crop to best advantage, and to enable him to make permanent improvements on his farm. The first proposition is to produce the articles the markets need as cheaply as possible; the second is to obtain the best market for it.—Braddford Knapp, U. S. Department of Agriculture.

Rural Credit---The Fletcher Bill

PUBLIC sentiment is various, impulsive, changeable, almost freakish. Not long ago the all prevailing idea in upper circles was that the farmers must be educated to do better farming. Experts must take science into the fields, and even the weeds and the pests must be dealt with scientifically—not so much as experience has taught, but as the books say. Capitalists offered millions to aid in that work, the railroads put on their demonstration trains, and bills were introduced in Congress and state legislatures appropriating other millions to the one great agricultural need, scientific farming. The world was bent on teaching farmers how to farm, and a casual looker-on would have concluded that very soon every field would be a page of applied science printed in big letters.

Then came another fad. It was discovered that farmers needed a chance to borrow money worse than they need scientific farming. Hence, there must be devised a system of rural credit. It was understood that some place in the Old World such a thing was in vogue and a company of great men were sent across the seas to find it. They went, they hunted, and they discovered, and now we have the Fletcher bill.

There has never been a time in this country when an honest, deserving farmer could not borrow money and on land mortgages or crop warehouse receipts at that, but such borrowing and such mortgages were individual and local in character and were not of a nature to appeal to the big financial institutions, the money trust. The accumulators of money want all there is in it. They gather it up and hoard it for profits, and letting it go out again they reap the profits. They will continue to do that whether it is called commercial loans, real estate loans, individual paper well secured, or rural credit. But rural credit is the new name, and it is, therefore, the latest fad.

Senator Fletcher's bill proposes a system of local national banks, owned and operated by farmers (?), a state rural national bank in each state to be owned and controlled by the local banks as stockholders, and a national rural bank of the United States to be located in Washington, and to be owned entirely by the state rural banks. As a kind of cap sheaf there is to be created in the treasury department a division of rural banking under the direction of a rural banking board to consist of the Secretary of the Treasury, the Secretary of Agriculture and the Secretary of Labor. But the whole thing is at last to be under the direction of a director of rural banking to be chosen by the President.

Could there be a more complicated system? The local banks, it is said, are to be owned by the farmers, but in each state a state bank is to take them all under its wing. Then the state banks are to be huddled together with their hats off to a national bank in Washington. Then that bank is to be controlled by a board of political office holders, themselves appointed by the President, and subject to a party man to be appointed by the President. Rural credit thus provided for reminds us of a grand stand at a state fair provided with luxurious seats for a multitude of common place hunters.

Still, those who teach the public should treat such propositions seriously. The alleged purpose of these banks is to furnish funds to farmers on long term farm bonds or notes secured by liens on farms. The loans, it is said, are to be secured first by a local bank, then by a state bank, and last by the national rural bank of the United States. In other words, the local banks are first to get a lien on the farms and homes of the people, then the liens are to be transferred to the respective state banks, and thence to the central bank at Washington.

But where is the money to come from? The bill alleges that the farmers are to own the local banks. We scarcely know how, for they are not to own and lend the money but to BORROW it by giving liens on their homes. Senator Fletcher himself says "the money must be borrowed from the investing public," the very class that now controls both the money and the business of the country. It furnishes an opportunity that class has wanted for many years, an opportunity to get liens upon and control of the farms and homes of the people. They have long had control of the commercial institutions, the manufacturing enterprises, and the railroads and steamship lines, but the farms have been beyond their reach. But, as we have previously said, a system like that provided for in the Fletcher bill removes every barrier and makes the real estate of the country subject to the same control so disastrously manifest in other business affairs. Under pretense of lower interest and long-time loans farmers will be induced to become a borrowing people. The money they get will be expended by them in raising crops that other people decide the price of, and it will soon make its way back to the accumulating centers, but the notes and mortgages or land bonds may remain unpaid, if prices for farm crops are low and like vampires will draw upon the agricultural resources of the country. The speculating buyers will still continue to prey upon the crops and rob the farmers of the just rewards for their labor, and in addition the loan sharks will claim their toll.

If any system like that provided by the Fletcher bill be adopted we predict it will not be fifty years until the farmers will be as much beholden to the money power as the commercial interests are now, and in less than a hundred years the lands and homes of the United States will be owned and controlled by the same power that now dominates the other business of the country. Then will come the collapse that has closed the history of the older nations. In spite of education and civilization the human race seems to travel from age to age in much the same path, a path that ascends or descends as the many or a few control. We are writing in all seriousness, for we want the people to think.

Before this step is taken we would like to see farmers selling right. Then their needs for credit would not be great. Also then their credit would be good at the present banks. It is the uncertainty of prices and profits that puts farmers at a disadvantage with other business men. And it is to provide a way around this, while still continuing the iniquitous marketing system, that the farmers may be asked to pool the assets of a community to make them desirable borrowers. There are now about 7,400 national banks, about 18,000 state banks, savings banks and trust companies and, a person connected with the Indianapolis Postal Savings bank gave us 30,000 as the estimated number of banks of this class. These figures are approximately correct and make a grand total of 55,400 banks in the country. As there are only 3,000 counties in the country this gives 18 1-3 banks to a county now, one bank for about 325 families.

But there are still classes of business that cannot be reached on terms satisfactory to the money lenders. For instance, the farmer wants to borrow money to buy lean cattle to feed. The present bank would like to furnish the money, but the uncertainty as to the price the fat cattle will bring makes it an undesirable risk. Farmers want to borrow money to buy fertilizers, to drain the land, to buy machines, or build a barn or hold crops. But for the same reason the risks are not desirable **because of the uncertainty of prices for the farmers' products.** So a way must be found without disturbing the marketing system, to make the farmers gilt-edge risks. The rural banks receive the backing of the present banks and the financial interests, and the speculators in farm crops. The law, if it becomes such, and God forbid that it does, will inflict about 50,000 more banking institutions on the country for the people to support.

The present agitation of rural credits and for rural banks reminds us of the time when the postal savings banks bill was in Congress. If the new bill becomes a law it will simply create another line of feeders for the present great banks and money lending institutions as the postal savings banks did, all to be paid by the common people.

If the farmers permit this scheme to be worked, rather than to complete the simple marketing system that is offered them, to sell right, then let them forever hold their peace and there should never be heard another murmur against heavy taxes and the high cost of living.

Farm Unions and Labor Unions

THE editor of the Appeal to Reason, discussing farm organizations and labor unions, says of the Farmers' Society of Equity:

The Society of Equity makes its strong plea in its system of marketing and has devised a union label which it uses. Some of its startling claims relative to the power of the farmers working in unison are that the farmers in three states named might absolutely control the corn market of America; farmers of four states might control the cotton market; of four states the wheat market; and so on down the list. The figures are undoubtedly correct—providing all the farmers of those states could be brought into the movement, and that they did not fall under penalty of the law against monopoly in restraint of trade.

With a frankness and fairness we have seldom seen equaled, the farm organizations and labor unions are compared and their different fields of labor and purpose and the necessity for harmonious action are elucidated as follows:

It is true that the trade unions and the farmers' unions necessarily have different methods. In some ways each has an advantage over the other. The trade union is composed exclusively of wage workers. The farmers' union is composed of farm owners and renters. The one is, therefore, a working class, and the other a middle class in nature. Both, however, are combatting certain phases of the capitalist system, while neither at this time is fighting it as a whole. The farmers may be charged with seeking to advance the price of eatables at the expense of wage working purchasers. The same argument, however, will apply against the wage workers, for their effort to advance wages it is claimed often reacts in an advance on the manufactured articles the farmer uses. The argument resolves itself into a conclusion that half-way measures must be inadequate on both sides and that nothing but the full control of the machinery of production and distribution will solve the problem.

The farmer has the advantage of having a commissarial—that is, he raises his food. He, therefore, exercises an immediate influence on politics as the trade unionists cannot do. On the other hand, the trade unionist has the advantage of long training and open fighting in the industrial field. As a result there is a solidarity with him which the farmer does not possess. The farmers' movement of the eighties completely collapsed, but the trade union movement remained. The new farmers' movement in America has already suffered reverses, indicating the lack of permanent solidarity. On the other hand the farmers have from the first demanded socializing propositions, especially government control of railroads and money. Trade unionists, on the other hand, have for the most part held aloof from socializing propositions. The trade unionists, because they are dependent for their daily food on the men they are fighting, exercise on politics only a shifting and temporary influence, while the farmers, because of being producers themselves, exercise a permanent influence, as shown by the adoption of populistic measures by the progressives of both old parties, even after the old farmers' movement had collapsed.

The wage worker is under disadvantage of having a million workers from Europe brought to America every year, when already there are more than two million idle men in America. This so gluts the labor market that every advantage gained by a strike is speedily neutralized and rendered null. On the other hand, the farmer must feed the incoming hordes, and because the number of farmers is increasing scarcely at all, it follows naturally that the farmer must exercise a stronger and stronger industrial and political influence. In agitational work, therefore, the farmer has a decided advantage over the wage worker, since conditions favor the one and hinder the other.

The one great lesson that should be learned is the identity of interest between the producing workers of the world. They should co-operate. They should co-operate temporarily, as the farmers suggest, in buying and selling so as to cut out part of the profit that now goes to the middleman.

Seeing Things Aright

The Truth About Production and Prices

HOWEVER devoted people may be to the cause of farming, and however anxious to aid farmers and lead them in the better ways, those who are not actual farmers cannot understand the situation nor can they realize what their teaching, if followed by all, would lead to. A reader of a prominent agricultural journal wrote as follows to the editor:

What benefit is it to the farmer to use heavy amounts of fertilizer and increase production when the market manipulators cut the price four times the increase and not only take the increase, but four fold more? Tell the farmer how to put the increase in his own pockets if you want to help the farmer, or if you will tell us how to sell what we already produce we would be greatly relieved."

The editor in question replied that he was sorry any farmer could be in such a state of mind as that expressed in the above paragraph, and declared the price of wheat would be the same whether the writer of the paragraph raised ten bushels to the acre or thirty, and that if he doubled his yield he would receive double the amount of money for it. Perhaps so if nobody but the writer increased his yield. But the press expects ALL its readers to do the same. Articles are not written and printed for the benefit of special favorites or a favored few. We expect every reader to follow good advice given, and when farm experts and experiment stations and agricultural departments teach good things they teach for all, not for one or a few. Would our friendly contemporary say the price of a bushel of wheat would be the same if every wheat grower raised thirty bushels instead of ten? Official statistics and reports are full of the fact that excessive yields and bumper crops bring less money in the aggregate than more moderate yields. When demands are supplied the surplus is worth nothing. Nobody wants it; and the only reason it sells at all is that the effect on the price reacts, and the loss is divided by a reduction of price paid for what is needed.

Our teaching, therefore, is not for farmers to quit producing, nor for them to cease their efforts for better farming or increased production, but to co-operate so as to control the supply so that it will go to market to meet the demand and be so distributed as to supply every need, thus constantly increasing the demand and maintaining an equitable price for all that is produced. This is of far more importance than fertilization and increased production to which so many educators devote their entire efforts, undoubtedly knowing that should all the farmers follow their instruction and meet with success there would be a collapse in agriculture because of a bankrupting reduction in price. The only thing that saves them is that only a very few act upon their advice. Secure the demand first, or teach how to reach it, and then pull for bigger yields.

Our Country Contributors

Semi-Monthly Prize Letter Competition:
Subject: My Most Profitable Crop

First Prize $3.00 Second Prize $2.00 Third Prize $1.00

NOTICE TO SUBSCRIBERS

This department is designed to induce subscribers to contribute accounts of their most profitable crops. For the three best letters received each issue, the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell the story of what you consider your most profitable crop in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

Has Hay and Hold s It

(First Prize)

Hay is not, as a rule, a very profitable market crop unless it brings a fancy price. The important thing is to have hay to sell when the price is right. The crop this year is very light, but I have on hand most of my 1912 crop, which was good, for which I expect a good price, possibly $20 a ton. Formerly, I sold my crop at about $8 a ton as soon as I could for fear if I did not I could not sell at all; but, thanks to the teachings of UP-TO-DATE FARMING, I learned that the time comes when the crops are wanted, and I have no more $8 hay. If I cannot get $15 at the barn I don't sell. I had a two-years' crop on hand in the spring of 1912, and sold it all out at the barn for $20 a ton. I keep my hay in the stack until I get ready to sell, and by expert stacking on a good foundation it keeps perfectly. I can keep it three years.

When ready to bale, I rake the stack down, throw off the outside to itself, and bale the semi-bright and the pure bright grades separately. I have found the best time to sort hay is when it is baled, and I have no mixed grades. Though my crop is light this year, I shall save it all carefully, and expect it to be my most paying crop.—G. F. S., Illinois.

Makes Money and is Content

(Second Prize)

Fourteen years ago I bought an 80-acre farm for $2,500. Today I can sell it for $8,000, but it is not for sale. Part of the increase is due to the natural rise in price of land, but most of it is due directly to improvements made by hogs, sheep and cattle. They have been my chief crops for the entire fourteen years, and not once have they failed to produce a good cash profit. On account of physical disability I am farming by proxy, but have had the same tenant for seven years. Last year the farm's income was $2,350 (nearly as much as the original cost of the farm), of which $1,575 was profit. This year we will do better still. This report does not include the returns of one cow, 75 to 100 chickens, and the "living" that came from the farm. We do just plain, not fancy farming. We can't all raise $40 roosters, $100 hogs and $300 cows—if we did, you editors might howl more than you do of the high cost of living. We don't consider our children as "crops," but as Nature's gifts more precious than gold. For money, give us hogs, sheep and cattle. Stock farming calls for corn, but you can have corn when you have stock. Our aim is to live Christian lives, be good American citizens, and feed the world with the best the soil can produce. We are content with our lot. What more does one wish?—S. B. M., Indiana.

Black-Cap Berries Our Most Profitable Crop

(Third Prize)

In August, we bend down the canes of our raspberry bushes, covering the tips with soil, and thus obtain our plantings for the next season, as the tips soon take root. These we also find market for at a price ranging from $1 a hundred upward, and the revenue from the sale of plants goes far toward paying the expenses of the vinyard.

The plants are dug and re-set in April. When from twenty-four to thirty inches high they are cut back to induce branching, and in July the branches are also topped, or cut back. The planting bears considerable fruit when one year old, each vine yielding from one to four quarts of fruit. We call this first year harvest "low bush picking," for which we pay two cents a quart. The average price received is ten cents a quart, although this season we sold our crop for twelve cents, baskets returned. The average income an acre is from $125 to $150. In western New York, where berries are largely grown, each vinyardist having from five to thirty acres, the bulk of the crop is evaporated, the average yield being 800 pounds, of dried fruit, which brings from twenty-five to thirty cents a pound. The cost of harvesting, evaporating and cleaning approximates five cents a pound, leaving a nice margin of profit. In berry time evaporators run day and night, and long rows of wagons laden with trays may be seen during all daylight hours.

Berry culture is not too difficult for a woman to undertake. Those who will keep the patch free from weeds, and give the vines proper attention have better days ahead.—Mrs. G. W., New York.

Keeping the Land Busy

I sowed oats very early, and notwithstanding some freezing had a fine crop, which I mowed instead of binding, as I consider baled oats equal to any feed and superior to most. These oats I store in a rat-proof barn.

Immediately after the oats were off and following a rain I put the land in redtop cane and have a most promising forage crop, the cane being over two feet high and growing rapidly. Hard on land? Possibly; but not so hard on farm management as to let the land produce a crop of weeds, which are also hard on land, on crops, and on mankind. Keep the land busy, and the weeds down. What is more "meat" to the eye than a well-kept farm, and I have always heard "a thing of beauty is a joy forever."—G. W. Miles, Texas.

Onions By Irrigation

Onions is one of the most profitable of irrigated crops. I made 100 bushels to the acre though I planted six weeks later than I should. I planted in rows two feet apart, cultivated with a horse, and watered them three times. Have sold part of my crop for $1 a bushel, but will hold balance for better prices. I have the yellow Bermuda sweet onion, the kind everybody likes.—O. P., Texas.

From Florida

I farm on a moderate scale, being sixty-seven years old, and no help of my own. Cucumbers, potatoes and tomatoes are my crops, though I raise other crops, such as corn, strawberries, and vegetables. Last year I planted an acre each to cucumbers, potatoes and tomatoes. The cucumbers took the downy mold when in their prime, and went by the board. I sold $60 worth. The potatoes were not more successful, and the expense of growing was considerably more. My tomatoes were my best crop. They were planted January 22, and on April 24 I sold the patch for $75 cash. We have many large packing houses here, and farmers sell their tomato crops in the field. The cucumber and tomato patches are now in sweet potatoes, the potato patch in corn, and all thriving.—S. J. C., Fla.

Bush Beans

I manured a plot heavily last fall, and plowed it under deep. Just before time to plant beans I plowed again, and planted white bush beans in rows three feet apart. Cultivated three times. Believing in UP-TO-DATE marketing, I contracted the beans to private customers in town. These beans paid me a net profit at the rate of $285 an acre, besides supplying me with seed for another year.—N. P. G., Kentucky.

Experience is Profitable

I got the turkey raising "bee" in my bonnet some years ago and will tell you of my profitable experience. I bought two settings of bronze eggs and set them under hens. We were having extremely dry weather and when the time came for hatching about half of them died in the shell from lack of moisture. I have since learned to sprinkle eggs two or three times before hatching in dry weather. I had twelve little turks to commence with. I did not know anything about them. I found they were very different from little chicks. They would not eat and several died from starvation. I learned one must feed them for a few days, as I did the rest of them. I do not feed milk curd, boiled eggs or anything hard to digest for in feeding those flocks I lost a few more birds. I feed sweet milk and bread and lots of green lettuce or rape. The milk furnishes animal food sufficient for the first three or four weeks. By that time they can get their own food to a great extent. I always call them the same way, and in case of storm, they would come as far as they could hear my voice. Getting wet is fatal to young turkeys. Regarding lice, some woman told me to grease them with lard and coal oil, on the head and wings. It killed the lice all right, also some of the turkeys. I learned to use vaseline or olive oil and I clip or pull the big wing feathers until the poults are two months old at least. About sleeping, they must have fresh air, so must sleep in open sheds. Well, I raised three of those first turkeys, and my experience was certainly profitable to me for the next year I hatched out ninety poults and raised eighty-seven. Now, I think turkey raising the most profitable crop, after my most profitable experience.—Mrs. Ettie Alphonso, Union, Mo.

Sow Seeds of Kindness

I have been an interested reader of your paper, especially the letters in regard to the best paying crop. They are all interesting, instructing. The best paying crop is not always the one that brings us the greatest gross proceeds, but the one that benefits us the most.

I will give you my idea of the most paying crop that has ever been raised here or elsewhere, one that every one can raise regardless of country or clime, each individual has the soil exactly right to receive the seed. All we have to do is to sow and cultivate and we will always raise a bounteous crop. That crop is brotherly love. Our corn and wheat may be ruined by a drought, or chinch bugs; our cotton by boll-weevil, our hogs by cholera, but you may go from the rock-bound shore of the Atlantic to the Golden Gate of the Pacific; from the icebergs of the frozen north to the burning sands of the sunny south, and at each place seeds of kindness will bring forth a glorious yield. It does not require money to raise this crop. We do not need costly machinery and fertilizers. A poor man without land can raise just as good a crop as a rich man. It always brings a larger dividend than all other crops combined. The beauty of this crop is that it bears fruit from the time it is planted as long as we live.—Taylor Mills, Mo.

The Laying Leghorns

I wish to enter my little experience story in your semi-monthly contest. I am fifteen years, six months old. A year ago last February I bought twelve thoroughbred white Leghorns, and paid $2 apiece for them. I kept an account of all I took in and paid out. I raised 125 out of what I hatched that spring and sold them when they were frys, varying from two to three pounds, at seventeen and one-half cents a pound and received $57.68 and had forty young hens and the twelve old hens left. One old hen died in the fall and that was all the sickness. I received $58.75 for eggs last fall and winter and sold $77.50 worth of frying size chickens, and thirty-one hens. My expenses were $116. My profit was $77.93, besides I have twenty good hens left.

I think this is pretty good for a boy only fifteen and one-half years old, and if there is another boy who can beat me, I want to hear from him.—Courtney Green, Stillwater, Okla.

Editor's Comment

THAT kind of farming pays best which takes best care of the marketing. G. E. F. has found the way to make hay profitable. This may not be possible for all farmers today, but by getting together they could quickly make it possible.

Our Hoosier friend has proven what needs no proof, so self-evident is the fact that live stock is the best foundation for successful farming. And though he says he is content, he isn't—he's trying to excel his past record. Contentment is no factor in progress.

There are sections with fruit growing possibilities wholly undeveloped. The hints given in the letter of Mrs. G. W. should bear fruit.

Never were more truthful words penned than those of Taylor Mills. It is man's inhumanity to man that makes the hard spots in life. Real enjoyment comes far more from giving than from getting.

Mrs. Alfonso has most interestingly shown how to make experience pay. The more experience we have, of the right kind, the more profit we can make it yield us, if we heed the lessons, and study into the causes. Just a part of the truth without the rest is often as misleading as an error.

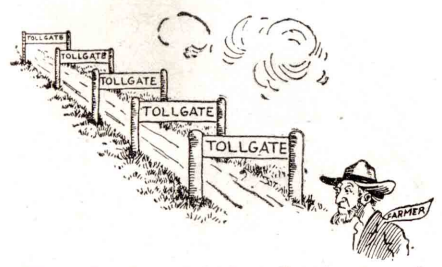
I find, dear friends, that our letters are becoming so interesting, and valuable I shall have to limit my comments to just a few, possibly but one or two contributions each issue. I should like to say a word to all, but there isn't room. This is the contributors' page, anyhow, and must not be encroached upon by any one, not even

The Country Contributors' Editor.

Our Market Review

Semi-Monthly Review of Crops, Market and Trade

WHILE the drought situation is greatly relieved, there still are many places where the precipitation was insufficient, or none at all. Oklahoma and northern Texas are now the greatest sufferers. The rains will help growing crops everywhere, but the damage to corn in Kansas, Oklahoma and Texas was past repair. Charges are made that the real condition is concealed, as far as possible to prevent injury to the interests of the state. But every state is liable to just as severe droughts and we doubt the wisdom of withholding the real facts. Certainly, as far as the farmers and their crops are concerned, they should know whether these states will raise enough corn or must look for a supply from other states. A member of the F. S. E. in Reno county, one of the best corn counties in Kansas, wrote that the yield will not exceed three bushels an acre, and he wants to import corn direct from more fortunate members in other states. Oklahoma is worse off than Kansas. Even cotton and kaffr corn, which are hot, dry weather crops, are badly damaged, the latter, while making a small grain yield, has lost nearly all its value as fodder because the leaves withered and dropped off. While our sympathies are due these drought stricken states, they are far from ruined. Wheat was a good crop; oats fair, and alfalfa will supply them with much feed, except possibly where the drought has not been broken. In 1912, Indiana nearly lost her wheat crop, raising only about one-fourth of a full crop. But she came back this year and beat all records on wheat. Spring wheat is being harvested and threshed. The crop will be around 230,000,000 bushels. This is 100,000,000 less than the final estimate for last year and has frequently been exceeded in former years. Added to



What is always before the farmer who markets the old way.

the winter wheat though it will make the largest wheat crop the country ever raised. The world's crop of wheat, however, is not now considered as a big one, and there is actually no good reason other than too free marketing, for the low price that has prevailed.

Cotton crop conditions are good except in parts of Texas and in Oklahoma. Hay is a short crop, but will be helped out much by the yields of alfalfa, the cultivation of which is rapidly increasing. No reliable estimate can be made on the potato crop yet. One thing should, however, be kept in mind. Last year the crop was large wherever potatoes were planted. This year some important districts that usually produce great quantities of potatoes for the mid-season had light crops. This will leave the markets more open to the northern producing fields. Low estimates are being placed for the yield of apples, but we still claim the yield will be large.

Crop moving seems to be going on at a normal or above a normal rate, even without the Secretary of the Treasurery's money, as evidenced by the increase in the wheat visible of nearly thirteen million bushels against only 2,131,000 bushels in the same period last year and oats, 3,429,000 bushels against 1,472,000 last year. The corn visible, however, made a big decrease —4,398,000 bushels—compared with a decrease of one-fifth this quantity the year before. The price of wheat advanced about 2 cents a bushel; corn advanced about 7 cents at Chicago, and oats scored a gain of about 1 1-2 cents.

ADVICE—Hold wheat, or, if short on corn and other grain, feed it. Mix with other grain, and grind. Wheat is cheaper feed than corn. The price will go down when the new crop moves. Hold oats. Market old potatoes as ready. The dry sections of the country are paying highest prices. It is usually a good rule to keep away from Chicago market with potatoes. Market some hay, but be sure to get what it is worth. There ought to be a local union of the F. S. E. at every marketing town and a county union in each county for marketing in county units, which is a tremendous improvement over individual marketing.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on August 16, 1913, with comparisons, are shown in the following table: (The sign — before figures means decrease, X means increase.)

	Aug. 16, '13 Bushels	Change from 2 wks. before Bushels
WHEAT	49,953,000	X 12,742,000
CORN	5,100,000	— 4,398,000
OATS	23,620,000	X 3,429,000
BARLEY	1,700,000	— 783,000

The visible supply of wheat in Canada on the same date was 7,324,000 bushels. This is 3,764,000 bushels less than two weeks before and 3,302,000 bushels less than a year before. This visible supply of oats was 6,332,000 bushels on the same date, which is 1,962,000 bushels less than two weeks before and is 1,254,000 bushels more than a year before.

Closing Prices of Cash Grain

WHEAT, No. 2 RED

	Aug. 20	2 Wks before	AYr. before
Chicago	.88 @88¾	86 @86¾	1.06
St. Louis	...90 @92½	85¾@88	1.04
Kansas City	84½@85½	83 @84	1.06
Cincinnati	..90½@91½	87½@88½	1.06
New York	..94 @95½	93¼@93½	1.07

MINNEAPOLIS—Spring wheat, No. 1 hard, 90c; No. 1 northern, 88@89½c. Two weeks before, 90⅛c and 88½@88⅝c respectively.

CORN, No. 2 WHITE

Chicago	....77½@78	70½@71	80½
St. Louis	...78½@79	73 @73½	81
Kansas City	77½@78½	77½	
Cincinnati	..80 @81	74 @74½	83
New York	..	78	

OATS, No. 2 WHITE

Chicago	....43½@44	42 @42½	35
St. Louis	..43½@44	42½@43	35½
Kansas City	42½@43	43½	
Cincinnati	..44 @44½	43 @43½	37
New York	..	48½	40½

Future Grain Prices

Chicago grain futures closed on August 20, 1913, and two weeks before, as follows:

WHEAT—September, 87⅛c; December, 90½c; May, 95⅝c. Two weeks before, 86⅜c, 90⅜c and 95⅞c respectively.

CORN—September, 75¼c; December, 69¼c; May, 70⅛c. Two weeks before, 70⅜c, 67⅛c and 69⅛c respectively.

OATS—September, 42¾c; December 45c; May, 48c. Two weeks before, 41⅞c, 44¼c and 47⅛c respectively.

COTTON—New York, Aug. 25, 1913—Cotton prices advanced on continued drought in southwest and some private reports placing the condition 10 per cent. under last month's government figures. Cash, middling uplands, 12.45c; middling gulf, 12.70c. This is 5c a cwt. higher than two weeks before and 45c a cwt. lower than a year before.

Chicago Produce Market

Chicago, August 20, 1913.

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets address the Farmers Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars with comparisons follow:

	This week	Last week	Last year
Monday	80	80	60
Tuesday	65	60	40
Wednesday	25	50	35
Total, 3 days	.170	190	135

Market was firmer today on light receipts, reported at only 25 cars. There was a fair demand, especially for nice, sound, ripe stock. As formerly, there were many cars of ordinary stock in from Minnesota. These had to sell at a discount and were not moved as promptly as more desirable goods.

Sales reported were: Per bushel—Jersey Cobblers, in bulk—3 cars at 90c, do., sacked—2 cars at 95c. Jersey Giants, in bulk—2 cars at 85c; do., sacked—2 cars at 90c. Minnesota Ohios—1 car at 54c, 2 cars at 55c, 1 car at 57c, 2 cars at 58c, 3 cars at 60c.

Per bushel, Jersey Cobblers, outside sacked .....90@95c
Jersey Giants, outside sacked ..80@90c
Minnesota Ohios, fair to good ....50@60c

The price is a shade higher than two weeks before and Minnesota Ohios are the same to 3 cents a bushel higher than a year before.

SWEET POTATOES—Are moderate sale. Demand only moderate. Offerings not large, but supply is ample.

Barrels, Virginia, Red Star ...$3.65@3.75
North Carolina ..... 2.75@3.00
Hampers, Jerseys ..... 2.00@....
Hampers, Alabama ....@1.10

The price is about $2 a barrel and 40 to 65 cents a hamper lower than two weeks before. A year before the prices were about 50 cents a barrel and 40@50c a hamper lower.

HAY—Receipts, 387 tons. Offerings very light and prices higher. Demand good.

Choice Timothy Hay .....$19.00@19.50
No. 1 Timothy ..... 18.00@19.00
No. 2 Timothy ..... 18.00@19.00

The price is 50c to $1 a ton higher than two weeks before. The price of choice old timothy a year before was $4 to $4.50 a ton higher.

STRAW—Rye Straw quotable at $7@7.50. Oat straw at $6@6.50. Wheat straw $5@6.

The price is $1@1.50 lower on rye straw; unchanged on oats and $1@1.50 lower on wheat straw.

BROOM CORN—Higher prices are asked. This is due to reports of dry, hot weather in Oklahoma having caused a short crop. Demand remains tame. Large broom makers are said to be still well supplied. A good deal of old corn remains in the hands of dealers here and in the country.

Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
X 2,131,000	X 26,799,000	—2,933,000
— 862,000	X 2,007,000	—1,454,000
X 1,472,000	X 20,453,000	X 1,763,000
— 15,000	X 1,314,000	X 891,000

Per ton, Illinois corn .....$110.00@140.00
Oklahoma ..... 110.00@120.00

The price for Illinois corn is $10@20 higher and Oklahoma is $30@60 higher than two weeks before.

BEANS—Market quiet. Dealers report just moderate business in pea beans and very little doing in others.

Hand-picked, choice .....$1.90@1.95
Stock faulty, lower ..... 1.15@1.65

Mediums nominally about same as pea beans.

Red Kidneys, choice ....@1.80
Prime ....@1.65
White Kidney nominal ..... 3.00@....
Brown Swedish, long ..... 1.00@....
Round ..... 1.25@....

The price is unchanged from two weeks before. A year before the price of pea beans was 90c to $1 a bushel higher and other kinds correspondingly higher.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week Cases	Last week Cases	Last year Cases
Monday	 8,624	9,515	10,557
Tuesday	10,977	11,166	9,474
Wednesday	.. 9,183	10,615	8,233
Total	28,784	31,296	28,264

A firm feeling exists for fine eggs; prices favor sellers for what desirable stock is being received; ordinary lots are dull and do not share in the improvement.

Miscellaneous lots, cases returned, 14@19½, depending on quality.

Ordinary Firsts quotable at 18@19c.

Firsts quotably 21½@22c. To bring this price eggs must run mostly to new-laid eggs, with not over 30 eggs loss to the case.

Dirties—In good supply and in only moderate request. Quotable 10@13c, depending on quality.

The price is 1@2 cents a dozen higher than two weeks before.

Fruit

APPLES—Choice to fine eating apples are salable and steady. Supply of such goods is rather small. All other fruit quiet and easy. Any very poor or heated have to be let go as soon as possible to peddlers.
